Persons dealing in Slaves, or exporting or importing Slaves, &c., guilty of Felony. — And (except in such special cases as are by this act permitted) if any persons shall deal or trade in, purchase, sell, barter, or transfer, or contract for the dealing or trading in, purchase, sale, barter, or transfer of slaves, or persons intended to be dealt with as slaves; or shall, otherwise than as aforesaid, carry away or remove, or contract for the carrying away or removing of slaves or other persons, as or in order to their being dealt with as slaves; or shall import or bring, or contract for the importing or bringing into any place whatsoever, slaves, or other persons, as or in order to their being dealt with as slaves; or shall, otherwise than as aforesaid, ship, tranship, embark, receive, detain, or confine on board, or contract for the shipping, transhipping, embarking, receiving, detaining, or confining on board of any ship, vessel, or boat, slaves or other persons, for the purpose of their being carried away or removed, as or in order to their being dealt with as slaves; or shall ship, tranship, embark, receive, detain, or confine on board, or contract for the shipping, transhipping, embarking, receiving, detaining, or confining on board of any ship, vessel, or boat, slaves or other persons, for the purpose of their being imported or brought into any place whatsoever, as or in order to their being dealt with as slaves; or shall fit out, man, navigate, equip, despatch, use, employ, let or take to freight or on hire, or contract for the fitting out, manning, navigating, equipping, despatching, using, employing, letting, or taking to freight or on hire, any ship, vessel, or boat, in order to accomplish any of the objects, or the contracts in relation to the objects, which objects and contracts have herein-before been declared unlawful; or shall knowingly and wilfully lend or advance, or become security for the loan or advance, or contract for the lending or advancing, or becoming security for the loan or advance of money, goods, or effects, employed or to be employed in accomplishing any of the objects, or the contracts in relation to the objects, which objects and contracts have herein-before been declared unlawful; or shall knowingly and wilfully become guarantee or security, or contract for the becoming guarantee or security, for agents employed or to be employed in accomplishing any of the objects, or the contracts in relation to the objects, which objects and contracts have herein-before been declared unlawful, or in any other manner to engage, or contract to engage, directly or indirectly, therein, as a partner, agent, or otherwise; or shall knowingly and wilfully ship, tranship, lade, or receive or put on board, or contract for the shipping, transhipping, lading, receiving, or putting on board of any ship, vessel, or boat, money, goods, or effects, to be employed in accomplishing any of the objects, or the contracts in relation to the objects, which objects and contracts have herein-before been declared unlawful; or shall take the charge or command, or navigate or enter and embark on board, or contract for the taking the charge or command, or for the navigating or entering and embarking on board of any ship, vessel, or boat, as captain, master, mate, surgeon, or supercargo, knowing that such ship, vessel, or boat is actually employed, or is in the same voyage, or upon the same occasion, in respect of which they shall so take the charge or comamnd, or navigate or enter and embark, or contract so to do as aforesaid, intended to be employed in accomplishing any of the objects, or the contracts in relation to the objects, which objects and contracts have herein-before been declared unlawful; or shall knowingly and wilfully insure, or contract for the insuring of any slaves, or any property or other subject matter engaged or employed in accomplishing any of the objects, or the contracts in relation to the objects, which objects and contracts have herein-before been declared unlawful; or shall wilfully and fraudulently forge or counterfeit any

certificate, certificate of valuation, sentence or decree of condemnation or restitution, copy of sentence or decree of condemnation or restitution, or any receipt (such receipts being required by this act), or any part of such certificate, certificate of valuation, sentence or decree of condemnation or restitution, copy of sentence or decree of condemnation or restitution, or receipt as aforesaid; or shall knowingly and wilfully utter or publish the same, knowing it to be forged or counterfeited, with intent to defraud his Majesty, or any other person or persons whatsoever, or any body politic or corporate; then, and in every such case the persons so offending, and their procurers, counsellors, aiders, and abettors, *shall be felons, and shall be transported* for a term not exceeding 14 years, or shall be confined and kept to hard labour for a term not exceeding 5 or less than 3 years, at the discretion of the court before whom such offenders shall be tried.—§ 10.

Seamen, &c. serving on board such Ships guilty of Misdemeanour.—And (except in such special cases or for such special purposes as are by this act permitted) if any person shall enter and embark on board, or contract for the entering and embarking on board of any ship, vessel, or boat, as petty officer, seaman, marine, or servant, or in any other capacity not herein-before specifically mentioned, knowing that such ship, vessel, or boat is actually employed, or is in the same voyage, or upon the same occasion, in respect of which they shall so enter and embark on board, or contract so to do as aforesaid, intended to be employed in accomplishing any of the objects, or the contracts in relation to the objects, which objects and contracts have herein-before been declared unlawful; then, and in every such case, the persons so offending, and their procurers, counsellors, aiders, and abettors, shall be guilty of a misdemeanour only, and shall be punished by imprisonment for a term not exceeding 2 years.—§ 11.

Abolition of Slavery.—We have already alluded (*antè*, p. 342.) to the memorable act of 1833, for the ABOLITION OF SLAVERY throughout the British colonies. In enacting this celebrated statute, parliament endeavoured to reconcile the apparently conflicting claims of humanity and justice, by providing for the emancipation of the slaves, without prejudice to the just rights and claims of their proprietors. This was effected by assigning to the latter the sum of *twenty millions* sterling, which was distributed amongst them on their complying with the provisions of the act. This is, perhaps, the greatest pecuniary sacrifice ever voluntarily made by any nation in vindication of the right of property. But it was not too great for the object in view; for had that right been violated in this instance, a precedent would have been set for its violation in others, and the consequences would have been most disastrous. The measure, in fact, reflects quite as much credit on the wisdom and honesty, as on the generosity, of the British nation.

We gave, in the previous edition of this work, an abstract of this celebrated statute, to which we beg to refer the reader who may wish to become minutely acquainted with its provisions. It is sufficient, now, to mention that it enacted that slavery should cease in all our possessions on the 1st of August, 1834; when the slaves were to become apprenticed labourers, their final and complete emancipation taking place partly on the 1st of August, 1838, and partly on the 1st of August, 1840. But a clamour having been raised against the duration of the apprenticeship, its period was shortened, and the blacks became universally free in 1838.

Distribution of Slave Compensation.—The commissioners for the apportionment of the 20,000,000*l.* granted by parliament as compensation to slave owners, under the act 3 & 4 Will. 4. cap. 73., issued the following table, showing the average value of a slave in each colony; the number of slaves in each; the total value of the slaves, supposing the annual value of each were realised; and the proportion of the 20,000,000*l.* received by each colony.

Colony.	Average Value of a Slave from 1822 to 1830.	Number of Slaves by the last Registration in this Country.	Relative Value of the Slaves.	Proportion of the 20,000,000*l.* to which each Colony is entitled.

SMALTZ, OR SMALT (Ger. *Schmalz*; Du. *Smalt*; Fr. *Smalt*; It. *Smalto azzurro*, *Smaltino*; Sp. *Esmalte*, *Azul azur*; Rus. *Lasor*), an oxide of cobalt, melted with siliceous earth and potash. It is a sort of glass, of a beautiful deep blue colour; and being ground very fine, is known by the name of powder blue. The colour of smaltz is not affected by fire; and it is consequently in great demand in the painting of earthenware. It is also employed in the colouring of paper, and for other purposes in the arts. Beckmann has proved that the process used in the preparation of smaltz was invented about the end of the 15th or the beginning of the 16th century; and that the blue

glass of the ancients owes its colour, not to the presence of cobalt or of smaltz, but to that of iron. — (*Hist. of Inventions*, vol. ii. art. *Cobalt.*)

Smaltz is principally manufactured in Germany and Norway. Of 118,638 lbs. imported into Great Britain in 1840, 97,751 lbs. came from Norway, and the remainder from Germany and Holland. The entries of smaltz for home consumption have latterly decreased. In 1842 they amounted to 145,470 lbs.

SMUGGLING, the offence of importing prohibited articles, or of defrauding the revenue by the introduction of articles into consumption, without paying the duties chargeable upon them. It may be committed indifferently either upon the excise or customs revenue.

Origin and Prevention of Smuggling. — This crime, which occupies so prominent a place in the criminal legislation of all modern states, is wholly the result of vicious commercial and financial legislation. It is the fruit either of prohibitions of importation, or of oppressively high duties. It does not originate in any depravity inherent in man; but in the folly and ignorance of legislators. A prohibition against importing a commodity does not take away the taste for it; and the imposition of a high duty on any article occasions a universal desire to escape or evade its payment. Hence the rise and occupation of the smuggler. The risk of being detected in the clandestine introduction of commodities under any system of fiscal regulations may always be valued at a certain average rate; and wherever the duties exceed this rate, smuggling immediately takes place. Now, there are plainly but two ways of checking this practice,— either the temptation to smuggle must be diminished by lowering the duties, or the difficulties in the way of smuggling must be increased. The first is obviously the more natural and efficient method of effecting the object in view; but the second has been most generally resorted to, even in cases where the duties were quite excessive. Governments have uniformly almost consulted the persons employed in the collection of the revenue with respect to the best mode of rendering taxes effectual; though it is clear that the interests, prejudices, and peculiar habits of such persons utterly disqualify them from forming a sound opinion on such a subject. They cannot recommend a reduction of duties as a means of repressing smuggling and increasing revenue, without acknowledging their own incapacity to detect and defeat illicit practices; and the result has been, that, instead of ascribing the prevalence of smuggling to its true causes, the officers of customs and excise have almost universally ascribed it to some defect in the laws, or in the mode of administering them, and have proposed repressing it by new regulations, and by increasing the number and severity of the penalties affecting the smuggler. As might have been expected, these attempts have, in the great majority of cases, proved signally unsuccessful. And it has been invariably found, that no vigilance on the part of the revenue officers, and no severity of punishment, can prevent the smuggling of such commodities as are either prohibited or loaded with oppressive duties. The smuggler is generally a popular character; and whatever the law may declare on the subject, it is ludicrous to expect that the bulk of society should ever be brought to think that those who furnish them with cheap brandy, geneva, tobacco, &c. are guilty of any very heinous offence.

"To pretend," says Dr. Smith, "to have any scruple about buying smuggled goods, though a manifest encouragement to the violation of the revenue laws, and to the perjury which almost always attends it, would, in most countries, be regarded as one of those pedantic pieces of hypocrisy, which, instead of gaining credit with anybody, seems only to expose the person who affects to practise them to the suspicion of being a greater knave than most of his neighbours. By this indulgence of the public, the smuggler is often encouraged to continue a trade, which he is thus taught to consider as, in some measure, innocent; and when the severity of the revenue laws is ready to fall upon him, he is frequently disposed to defend with violence what he has been accustomed to regard as his just property; and from being at first rather imprudent than criminal, he, at last, too often becomes one of the most determined violators of the laws of society." — (*Wealth of Nations*, p. 406.)

To create by means of high duties an overwhelming temptation to indulge in crime, and then to punish men for indulging in it, is a proceeding completely subversive of every principle of justice. It revolts the natural feelings of the people; and teaches them to feel an interest in the worst characters — for such smugglers generally are — to espouse their cause, and avenge their wrongs. A punishment which is not proportioned to the offence, and which does not carry the sanction of public opinion along with it, can never be productive of any good effect. The true way to put down smuggling is to render it unprofitable; to diminish the temptation to engage in it: and this is not to be done by surrounding the coasts with cordons of troops, by the muliplication of oaths and penalties, and making the country the theatre of ferocious and bloody contests in the field, and of perjury and chicanery in the courts of law; but by repealing prohibitions, and reducing duties, so that their collection may be enforced with a moderate degree of vigilance; and that the forfeiture of the article may be a sufficient penalty

upon the smuggler. It is in this, and in this only, that we must seek for an effectual check to illicit trafficking. Whenever the profits of the fair trader become nearly equal to those of the smuggler, the latter is forced to abandon his hazardous profession. But so long as prohibitions or oppressively high duties are kept up, or, which is, in fact, the same thing, so long as *high bounties* are held out to encourage the adventurous, the needy, and the profligate, to enter on this career, we may be assured that armies of excise and customs officers, backed by the utmost severity of the revenue laws, will be insufficient to hinder them.

It would be useless to enter in this place into any lengthened details to prove the truth of these statements. Unluckily the entire financial and commercial history of this country and others abounds with instances in point, many of which must be familiar to every reader. The prohibition of foreign products, or the imposition of heavy duties on foreign or native products, does not take away the taste for them. On the contrary, it would seem as if the desire to obtain prohibited or over-taxed articles acquired new strength from the obstacles opposed to its gratification.

"Per damna, per cædes, ab ipso
Ducit opes animumque ferro."

The prohibition of foreign silks which existed previously to 1826 did not hinder their importation in immense quantities. The vigilance and integrity of the custom-house officers were no match for the ingenuity, daring, and *douceurs* of the smugglers. And at the very moment when the most strenuous efforts were made to effect their exclusion, the silks of France and Hindostan were openly displayed in Almack's, in the drawing-rooms of St. James's, and in the House of Commons, in mockery of the impotent legislation by which it was attempted to shut them out. There is, in truth, great room for doubting whether the substitution of an *ad valorem* duty, for the old system of prohibition, was at first productive of any material increase in the imports of foreign silks. The repeal of the prohibition was a most judicious measure; but the duty being unfortunately fixed at too high a limit it gave an overwhelming stimulus to smuggling. The expense of the clandestine importation of silks from France has been roughly estimated at about 15 per cent. *ad valorem;* and as the duty on silks, down to 1845, was double that amount, or 30 per cent., we need not wonder that it was estimated, by well-informed parties, that from a third to a half of the total quantity of imported silks escaped the duty. Indeed, every one is aware that their clandestine importation was carried on to a great extent, within the port of London, and in the custom-house itself, by the corruption and connivance of the officers! And this, we may be assured, is not a solitary instance. The corruption of the officers is in truth an inevitable consequence of the over-tax system.

The enormous duties that were imposed previously to 1823 on home-made Scotch and Irish spirits produced, as is seen in the art. SPIRITS, an extent of smuggling and demoralization of which it is not easy for those who have not attended to such matters to form an idea. At present, however, the duties on tobacco, brandy, and hollands, but especially the first, are the great incentives to smuggling. The preventive water-guard, the expense of which exceeds 365,000*l.* a year, is kept up for little other purpose than to hinder the clandestine importation of these articles. But notwithstanding its efforts, considerable quantities of them find their way into the country without being subjected to any duty. And how should it be otherwise? The price of tobacco, brandy, and hollands in the contiguous continental ports may, at an average, be taken, the first at from 4*d.* to 6*d.* per lb., and the two latter at about 4*s.* or 4*s.* 6*d.* a gallon: and as the duty on tobacco is 3*s.* per lb., and on brandy and hollands 15*s.* a gallon, need we be surprised to learn that, allowing for the expenses of smuggling, if one cargo out of three be safely landed, the business is as profitable as it is adventurous and exciting? A trade that would otherwise have been harmless, or advantageous, has thus, through fiscal rapacity, been perverted into a source of vice and crime. The excess of duty tempts numbers of people to despise and trample on the law. It renders smuggling, though probably the most direct road to the gallows, a favourite occupation; and makes the smuggler, even when soiled with the blood of some revenue officer, an object of public sympathy and support.

It may, however, be right to state that it must not be imagined that the mere diminution of an oppressive duty on any article will put down the smuggling to which the duty may have given rise. The diminution may not be sufficiently great; and if so, it will have but little influence. Thus, taking as above the cost of smuggling French and other silks into England at 15 per cent. *ad valorem*, a reduction of the late duty of 30, to 25 or even 20 per cent. would, it is plain, have done little or nothing to prevent their clandestine importation. But its reduction, in 1845, to 15 per cent., by taking away the supposed advantage on the side of the smuggler, has all but destroyed his occupation. In reducing duties, either for the prevention of smuggling or the

increase of consumption, the reduction must be effectual to its end; that is, in the former case, it must be such as to bring the duty below, or nearly to the level of, the cost of smuggling, and in the latter it must be such as to bring the article within the command of a decidedly larger class of consumers. A reduction of 5*s.* or 6*s.* from the late duty of 22*s.* 10*d.* a gallon on foreign brandy and hollands would have been of no use; for it would not have had any sensible influence either in lessening smuggling or increasing consumption. Even the reduction effected in 1845, by Sir Robert Peel, of 7*s.* 10*d.* a gallon, though advantageous, was too small to have the desired effect. It should have been 10*s.* a gallon.

These considerations show the degree of weight which should be attached to the statements of those who endeavour to excuse or apologise for exorbitant duties, by showing that they have sometimes been reduced without any material increase taking place in the consumption of the articles on which they are laid, or any material diminution of smuggling. In exemplification of this, it has been stated that though the duty on tobacco was reduced in 1825 from 4*s.* to 3*s.* per lb., the consumption was not increased in any thing like the same proportion; and that, notwithstanding the rapid growth of population, a period of 10 years elapsed before the tobacco revenue rose to its former level. But no one acquainted with the facts could have anticipated any other result. Taking the cost of tobacco at an average at 6*d.* per lb. (which is beyond the mark), the duty previously to and since the reduction has been respectively 800 and 600 per cent. *ad valorem!* And it is needless to say that the least of these duties holds out an overwhelming temptation to smuggling and fraud. The truth is, that the reduction of duty in 1825 was an ill-advised measure; and there is perhaps no great reason to conclude that the further reduction of the present duty of 3*s.* per lb. to 2*s.* would be much wiser, or that, while it sacrificed revenue, it would be at all sufficient to suppress illicit practices. It is idle, therefore, by referring to instances of this sort, to endeavour to make it be believed that an adequate diminution of taxation is not followed by a corresponding increase of consumption. Had the duty on coffee, instead of being reduced, in 1808, from 1*s.* 8*d.* per lb. to 7*d.*, been reduced only to 1*s.* 3*d.* (the proportion in which the tobacco-duty was reduced), the effect would have been all but imperceptible; and instead of the consumption being immediately increased from about 1,000,000 lbs. to 9,000,000 lbs., the presumption is it would not have been increased to 1,500,000 lbs. In taxation, as in everything else, unless the means be adequate to the desired ends, the result will be nothing. If you offer a premium of 8 to 1 on smuggling, do you imagine you will abate the nuisance you have called into existence by reducing the premium to 6 to 1 or 4 to 1? It will be found in every case in which a reduction of duty is not followed by a more than corresponding increase of consumption, that the article continues to be over-taxed, or that the duty left upon it either exceeds the cost of smuggling, or places it beyond the reach of those who might otherwise become its consumers. We are bold to say that no instance can be found in the financial history of this or any other country of an adequate reduction of the duty on an over-taxed article not being followed by a cessation of smuggling and a great increase of consumption. (See *Treatise on Taxation*, by the author of this work, Part. ii. c. 9. 2nd ed.).

Law as to Smuggling in England. — The penalties imposed on illicit dealing in commodities subject to duties of excise have been specified in the articles on such commodities. The following extract from the Customs Consolidation Act, the 16 & 17 Vict. c. 107., refers expressly to smuggling. The importance of the subject has induced us to give a full abstract of the clauses.

RESTRICTIONS ON SMALL CRAFT, AND THE REGULATIONS FOR THE PREVENTION OF SMUGGLING.

Commissioners may make General Regulations for Vessels and Boats not exceeding 100 *Tons.* — The commissioners of customs may from time to time, by order under their hands, make such general regulations as they shall deem expedient in respect of vessels and boats not exceeding 100 tons burden, for the purpose of prescribing, with reference to the tonnage, build, or description of such vessels or boats, the limits within which the same may be employed, the mode of navigation, the manner in which such vessels or boats shall be so employed, and, if armed, the number and description of arms, the quantity of ammunition, and such other terms, particulars, conditions, and restrictions as the said commissioners may think fit, and also from time to time may revoke, alter, or vary such regulations; and the general regulations made under any former act, and in force at the time of the passing of this act, shall remain and continue in force until altered, varied, or revoked. — § 196.

Vessels and Boats used contrary to Regulations forfeited. — Every ship or boat which shall be used or employed in any manner contrary to the regulations prescribed by the commissioners of customs shall be liable to forfeiture, unless the same shall have been specially licensed by the commissioners of customs to be so used or employed, as next herein-after provided. — § 197.

Commissioners of Customs may grant special Licences, on Terms. — The commissioners of customs may, if they shall so think fit, grant licences in respect of any vessels or boats not exceeding 100 tons burden, upon such terms and conditions, and subject to such restrictions and stipulations, as in such licences mentioned, notwithstanding any general regulations made in pursuance of this act, whether the said regulations shall be revoked or not; and if any vessel or boat so licensed shall not comply with the conditions imposed by or expressed in any such licence, or if such vessel or boat shall be found without having such licence on board, such vessel or boat shall be forfeited. — § 198.

Commissioners may revoke Licences.— The commissioners of customs may revoke, alter, or vary any licence or licences granted under any former act, or which may hereafter be granted under this or any other act relating to the customs. — § 199.

Vessels made use of in Removal of uncustomed or prohibited Goods forfeited. — If any such vessel or boat shall be used in the importation, landing, removal, carriage, or conveyance of any uncustomed or prohibited goods, the same shall be forfeited, and the owner and master of every such vessel or boat shall each forfeit and pay a penalty equal to the value of such vessel or boat, not in any case exceeding 500*l*. — § 200.

Regulations to extend to Channel Islands. — All the regulations which shall be so made by the said commissioners of customs relating to vessels and boats, and the power to grant, revoke, or vary such licences, shall extend to the Channel Islands. — § 201.

Ships not to sail from Channel Islands without Clearance. — No ship or boat belonging wholly or in part to H. Majesty's subjects shall sail from the Channel Islands without a clearance, whether in ballast or having a cargo; and if with cargo, the master shall give bond to H. Majesty in double the value of such cargo for the due landing thereof at the port for which such ship or boat clears; and every such ship or boat not having such clearance, or which, having a clearance for her cargo, shall be found light, or to have discharged any part of her cargo before arrival at the port or place of discharge specified in the clearance, shall be forfeited. — § 202.

Boats of Vessels to bear Name of Vessel, Port, and Master. — The owner of every ship belonging wholly or in part to any of H. Majesty's subjects shall paint or cause to be painted upon the outside of the stern of every boat belonging to such ship the name of such ship and the port or place to which she belongs, and the master's name within side the transom, in white or yellow Roman letters, not less than 2 inches in length, on a black ground, on pain of the forfeiture of every such boat not so marked, wherever the same shall be found. — § 203.

Boat not belonging to Ships to have Name of Owner and Port thereon. — The owner of every boat not belonging to any ship shall paint or cause to be painted upon the stern of such boat, in white or yellow Roman letters, of 2 inches in length, on a black ground, the name of the owner of the boat and the port or place to which she belongs, on pain of the forfeiture of such boat not so marked, wherever the same shall be found. — § 204.

British Vessels having secret Places for concealing or Devices for running Goods, and Foreign Vessels having Goods in secret Places, forfeited. — All ships and boats belonging wholly or in part to H. Majesty's subjects having false bulkheads, false bows, double sides or bottoms, or any secret or disguised place whatsoever, adapted for the purpose of concealing goods, constructed in such ships or boats, or having any hole, pipe, or device in or about such ships or boats adapted for the purpose of running goods, shall be forfeited; and all foreign ships or boats coming into any port of the U. K. having on board any goods liable to the payment of duties, or prohibited to be imported into the U. K. concealed in false bulkheads, false bows, double sides or bottoms, or in any secret or disguised place whatsoever, constructed in such ships or boats, shall be forfeited. — § 205.

Goods unshipped without Payment of Duty, and prohibited Goods, liable to Forfeiture. — If any goods liable to the payment of duties shall be unshipped from any ship or boat in the U. K. (customs or other duties not being first paid or secured), or if any prohibited goods whatsoever shall be imported or brought into any part of the U. K., or if any goods whatever which shall have been warehoused or otherwise secured in the U. K., either for home consumption or exportation, shall be clandestinely or illegally removed from or out of any warehouse or place of security; or if any goods which are prohibited to be exported shall be put on board any ship or boat, with intent to be laden or shipped for exportation, or shall be brought to any quay, wharf, or other place in the U. K., in order to be put on board any ship or boat for the purpose of being exported; or if any goods which are prohibited to be exported shall be found in any package produced to any officer of customs as containing goods not so prohibited; or if any goods subject to any duty or restriction in respect of importation, or which are prohibited to be imported into the U. K., shall be found or discovered to have been concealed in any manner on board any ship or boat within the limits of any port of the U. K., or shall be found either before or after landing to have been concealed in any manner on board any such ship or boat, within such limits as aforesaid; then and in every of the foregoing cases all such goods shall be forfeited, together with any goods which shall be found packed with or used in concealing them. — § 206.

Spirits and Tobacco found removing to be deemed run. — All spirits and tobacco which shall be found removing without a legal permit or certificate for the same shall be deemed to be spirits or tobacco respectively liable to and unshipped without payment of duty, unless the party in whose possession the same shall be found or seized shall prove to the contrary. — § 207.

Restricted Goods to be deemed run. — All goods the importation of which is in any way restricted, which are of a description admissible to duty, and which shall be found or seized in the U. K. under any law relating to the customs or excise, shall, for the purpose of proceeding for the forfeiture of them, or for any penalty incurred in respect of them, be described in any information exhibited on account of such forfeiture or penalty as and on the trial or hearing thereof be deemed and taken to be goods liable to and unshipped without payment of duties, unless the contrary be proved. — § 208.

Vessels found within certain Distances of the Coast of the U. K. or Channel Islands with certain Goods on board, forfeited, with the Goods. — If any ship or boat, belonging wholly or in part to H. Majesty's subjects, or having half the persons on board subjects of H. Majesty, shall be found or discovered to have been within 4 leagues of that part of the coast of the U. K. which is between the North Foreland on the coast of Kent and Beachy Head on the coast of Sussex, or within 8 leagues of any other part of the coast of the U. K., or if any foreign ship or boat having 1 or more subjects of H. Majesty on board shall be found or discovered to have been within 3 leagues of the coast of the U. K., or if any foreign ship or boat shall be found or discovered to have been within 1 league of the coast of the U. K., or if any ship or boat shall be found or discovered to have been within 1 league of the Channel Islands, any such ship or boat so found or discovered, having on board or in any manner attached thereto, or having on board or in any manner attached thereto, or conveying or having conveyed in any manner, any spirits, not being in a cask or other vessel capable of containing liquids of the size or content of 20 gallons at the least, or any tea exceeding 6 pounds weight in the whole, or any tobacco or snuff not being in a cask or package containing 200 pounds weight of tobacco or snuff at the least, or being separated or divided in any manner within any cask or package, or any tobacco stalks, tobacco stalk flour, snuff work, or any cordage or other articles adapted and prepared for slinging or sinking small casks, or any casks or other vessels whatsoever of less size or content than 20 gallons, of the description used for the smuggling of spirits, then and in every such case the said spirits, tea, tobacco, snuff, tobacco stalks, tobacco stalk flour, and snuff work, together with the casks or packages containing the same, and the cordage or other articles, casks, and other vessels of the description aforesaid, and also the ship or boat, shall be forfeited. — § 209.

Vessels or Boats arriving within any Port of the U. K. or of the Channel Islands having prohibited Goods on board or attached thereto forfeited. — If any ship or boat shall be found or discovered to have been within any port, bay, harbour, river, or creek of the U. K. or the Channel Islands, having on board or in any manner attached thereto, or having had on board or in any manner attached thereto, or conveying or having conveyed in any manner, any spirits, not being in a cask or other vessel capable of containing liquids of the size or content of 20 gallons at the least, or any tobacco or snuff, not being in a cask or package containing 200 pounds weight of such tobacco or snuff at the least, or being separated or

divided in any manner within any cask or package, or any tobacco stalks, tobacco stalk flour, or snuff work, every such ship or boat, and such spirits, tobacco, snuff, tobacco stalks, tobacco stalk flour, and snuff work, shall be forfeited; but if it shall be made to appear to the satisfaction of the commissioners of customs that such spirits, tobacco, snuff, tobacco stalks, tobacco stalk flour, or snuff work were on board without the knowledge or privity of the owner or master of such ship or boat, and without any wilful neglect or want of reasonable care on their parts, then and in such case the said commissioners shall deliver up the said ship or boat to the owner or master of the same.—§ 210.

Forfeiture not to extend to Ships and Goods in certain Cases. — Nothing herein contained shall extend to render any ship of 120 tons burden or upwards liable to forfeiture on account of any tobacco coming direct from the East Indies or the Turkish dominions, including Egypt, if in packages each containing not less than 100 lbs. net weight of such tobacco; nor on account of any snuff or negrohead tobacco the produce of and imported direct from the U. S. of America, if in packages each containing not less than 180 lbs. net weight of such snuff or tobacco; nor on account of any tobacco imported from Malta in packages each containing not less than 80 lbs. net weight of such tobacco; nor on account of any tobacco the produce of Porto Rico, Mexico, South America, St. Domingo, Cuba, the British Possessions in America and the West Coast of Africa, if in packages each containing not less than 80 lbs. net weight of such tobacco, and imported direct from those places or from the U. S. of America; nor on account of any cigars, if in packages each containing not less than 100 lbs. net weight of such cigars; nor on account of any cigarillos or cigarettos, if in packages each containing not less than 75 lbs. net weight of such cigarillos or cigarettos; nor to render any ship of 150 tons burden or upwards liable to forfeiture on account of any tea, or of any spirits in glass bottles or stone bottles not exceeding the size of 3 pints each, such tobacco, snuff, cigars, cigarillos or cigarettos, tea, and spirits being really part of the cargo of such ship; nor to render any ship liable to forfeiture on account of any spirits, tea, or tobacco really intended for the consumption of the seamen or passengers on board during their voyage, and not being more in quantity than is necessary for that purpose; nor to render any ship liable to forfeiture if really bound from one foreign port to another foreign port, and pursuing such voyage, wind and weather permitting.—§ 211.

Ships in Port with a Cargo, and afterwards found in Ballast, and Cargo unaccounted for, forfeited.— If any ship or boat whatever shall be found within the limits of any port of the U. K. with a cargo on board, and such ship or boat shall afterwards be found light or in ballast, and the master is unable to give a due account of the port or place within the U. K. where such ship or boat shall have legally discharged her cargo; such ship or boat shall be forfeited.—§ 212.

Certain Ships from which Goods are thrown overboard to prevent Seizure to be forfeited.—Every ship or boat belonging wholly or in part to H. Majesty's subjects, or having on board one or more of H. Majesty's subjects, which shall be found or discovered to have been within 4 leagues of that part of the coast of the U. K. which is between the North Foreland on the coast of Kent and Beechy Head on the coast of Sussex, or within 8 leagues of any other part of the coast of the U. K., from which any part of the lading of such ship or boat shall have been thrown overboard, or on board which any of the goods shall be staved or destroyed to prevent seizure, shall be forfeited.—§ 213.

Ships throwing overboard any Goods during Chase, forfeited, and Persons escaping deemed Subjects.— When any ship or boat belonging wholly or in part to H. Majesty's subjects, or having half the persons on board subjects of H. Majesty, shall be found within 100 leagues of the coast of the U. K., and shall not bring to upon signal made by any vessel or boat in H. Majesty's service or in the service of the revenue, hoisting the proper pendant and ensign in order to bring such ship or boat to, and thereupon chase shall be given, if any person or persons on board such ship or boat so chased shall during the chase, or before such ship or boat shall bring to, throw overboard any part of her lading, or shall stave or destroy any part of such lading, to prevent seizure thereof, then and in any such case such ship or boat shall be forfeited; and all persons escaping from any such ship or boat, or from any foreign ship or boat, during any chase made thereof by any vessel or boat in H. Majesty's service or in the service of the revenue, shall be deemed subjects of H. Majesty, unless the contrary be proved.—§ 214.

Ships not bringing to may be fired into.—If any ship or boat liable to seizure or examination under this or any act for the prevention of smuggling shall not bring to when required so to do, on being chased by any vessel or boat in H. Majesty's navy having the proper pendant and ensign of H. Majesty's ships hoisted, or by any vessel or boat duly employed for the prevention of smuggling, having a proper pendant and ensign hoisted, it shall be lawful for the captain, master, or other person having the charge or command of such vessel or boat in H. Majesty's navy, or employed as aforesaid (first causing a gun to be fired as a signal), to fire at or into such ship or boat, and such captain, master, or other person acting in his aid or by his direction, shall be and is hereby indemnified and discharged from any indictment, penalty, action, or other proceeding for so doing.—§ 215.

Ships may be searched within the Limits of the Ports.—Any officer or officers of the army, navy, or marines duly employed for the prevention of smuggling, and on full pay, or any officer or officers of customs, producing his or their warrant or deputation (if required), may go on board any ship which shall be within the limits of any port of the U. K., and rummage and search the cabin and all other parts of such ship for prohibited or uncustomed goods, and remain on board such ship so long as she shall continue within the limits of such port.—§ 216.

Officers of Customs may, on probable Cause, stop Carts, &c., and search for Goods.—Any officer of customs or excise, or other person acting in his or their aid, or duly employed for the prevention of smuggling, may, upon reasonable suspicion, stop and examine any cart, waggon, or other means of conveyance, for the purpose of ascertaining whether any smuggled goods are contained therein; and if no such goods shall be found, the officer or other person so stopping and examining such cart, waggon, or other conveyance, having had probable cause to suspect that such cart, waggon, or other conveyance had smuggled goods contained therein, shall not, on account of such stoppage and search, be liable to any prosecution or action at law on account thereof; and all persons driving or conducting such cart, waggon, or other conveyance, refusing to stop or allow any such examination when required in the Queen's name, shall forfeit the sum of 100*l*.—§ 217.

Officers authorized by Writ of Assistance may search Houses for uncustomed or prohibited Goods.— Any officer of customs, or person acting under the direction of the Commissioners of Customs, having a writ of assistance issued from the Court of Exchequer, may, in the daytime, enter into and search any house, shop, cellar, warehouse, room, or other place, and in case of resistance break open doors, chests, trunks, and other packages, and seize and bring away any uncustomed or prohibited goods, and put and secure the same in the Queen's warehouse, and may take with him any constable, headborough, police or other public officer, duly sworn as such, who may act as well without the limits of the parish or other place for which he shall be so sworn as within such limits; and all writs of assistance so issued shall continue in force during the reign for which they were granted, and for six months afterwards.—§ 218.

Ships and Boats used in Removal of run Goods to be forfeited.—All ships, boats, carriages, or other means of conveyance, together with all horses and other animals made use of in the removal, carriage, or conveyance of any goods liable to forfeiture under this or any other act relating to the customs, shall be forfeited.—§ 219.

Ships, Boats, Goods, and Persons may be seized or detained, and Goods delivered to the proper Officer.—All ships and boats, and all goods whatsoever, liable to forfeiture, and all persons liable to be detained for any offence under this or any other act relating to the customs, shall and may be seized or detained in any place, either upon land or water, by any officer or officers of H. Majesty's army, navy,

or marines, duly employed for the prevention of smuggling, and on full pay, or by any officer or officers of customs or excise, or by any person having authority from the Commissioners of Customs or Inland Revenue to seize, or duly employed for the prevention of smuggling; and all ships, boats, and goods so seized shall, as soon as conveniently may be, be delivered into the care of the proper officer appointed to receive the same; and the forfeiture of any ship or boat shall be deemed to include her tackle, apparel, and furniture, and the forfeiture of any goods shall be deemed to include the package in which the same are found, and all the contents thereof.—§ 220.

Police Officers seizing Goods to carry them to the Customs Warehouse.—If any goods liable to forfeiture under this or any other act relating to the customs shall be stopped or taken by any police officer or other person acting by virtue of any act of parliament, or otherwise duly authorized, such goods shall be carried to the customs warehouse next to the place where the goods were stopped or taken, and there delivered to the proper officer appointed to receive the same, within 48 hours after the said goods were stopped and taken.—§ 221.

Goods stopped by Police Officers may be retained until Trial of Persons charged with stealing them.—If any such goods shall be stopped or taken by any police officer on suspicion that the same had been feloniously stolen, the said officer may carry the same to the police office to which the offender is taken, there to remain until and in order to be produced at the trial of the offender, and in such case the officer is required to give notice in writing to the Commissioners of Customs of his having so detained the said goods, with the particulars of the same; and immediately after the trial of such offender all such goods shall be conveyed to and deposited in the customs warehouse as aforesaid, to be proceeded against according to law; and in case any police officer making detention of any such goods shall neglect to convey the same to such warehouse, or to give the notice of having stopped the same as before prescribed, such officer shall forfeit the sum of 20*l.*—§ 222.

Notice to be given by seizing Officer to Owner of Ships or Goods seized, and Seizures to be claimed within One Month.—Whenever any ship, boat, or goods shall be seized as forfeited under this or any act relating to the customs, the seizing officer shall forthwith give notice in writing of such seizure, and of the grounds thereof, to the master or owner of such ship, boat, or goods, if known, either by delivering the same to him personally, or by letter addressed to him at his place of abode, if known, and transmitted by post; and all ships, boats, or goods so seized under any law relating to the customs shall be deemed and taken to be condemned, and may be sold, in the manner directed by law in respect to ships, boats, and goods seized and condemned for breach of any law relating to the customs, unless the person from whom such ships, boats, and goods shall have been seized, or the owner of them, or some person authorized by him, shall, within one calendar month from the day of seizing the same, give notice in writing, if in London, to the person seizing the same, or to the secretary or solicitor for the customs, and, if elsewhere, to the person seizing the same, or to the collector, comptroller, or other chief officer of the customs at the nearest port, that he claims the ship, boat, or goods, or intends to claim them.—§ 223.

Commissioners of Treasury or of Customs may restore Seizures.—The Commissioners of the Treasury or of the Customs may, by any order made by them for that purpose, direct any ship, boat, goods, or commodities whatever seized under this or any act relating to the customs to be delivered to the proprietor thereof, whether condemnation shall have taken place or not, upon such terms and conditions as the said commissioners respectively may see fit.—§ 224.

Ships and Goods seized may be disposed of as Commissioners of Customs direct.—All ships and boats and all goods whatsoever which shall have been seized and condemned for breach of any law relating to the customs shall be disposed of, as soon as conveniently may be after the condemnation thereof, in such manner as the commissioners of customs may direct; and any nets, dredges, instruments, or implements of fishing liable to seizure or forfeiture, and seized under the act 6 & 7 Vict. c. 79. and the convention and articles therein referred to, shall and may be sold or otherwise disposed of, as the commissioners of customs may direct, unless claimed within one month after seizure thereof, or within one month after the passing of this act as to such as may be then under seizure, such claim being made in the same manner as is prescribed by the 223rd section of this act with respect to ships, boats, or goods seized under this act.—§ 225.

AS TO OFFENCES COMMITTED BY AND PENALTIES ATTACHING TO PERSONS.

Persons may be searched if Officers have Reason to suspect smuggled Goods are concealed upon them.—Any officer of customs, or of the army, navy, or marines, duly employed in the prevention of smuggling and on full pay, may search any person on board any ship or boat within the limits of any port in the U. K. or the Channel Islands, or any person who shall have landed from any ship or boat, provided such officer shall have good reason to suppose that such person has any uncustomed or prohibited goods secreted about his person; and if any person shall obstruct any such officer in going, remaining, or returning from on board, or in searching such ship or boat or person, every such person shall forfeit the sum of 100*l.*; and if any passenger or other person on board any such ship or boat, or who may have landed from any such ship or boat, shall, upon being questioned by any such officer whether he has any foreign goods upon his person or in his possession, deny the same, and any such goods shall after such denial be discovered to be or to have been upon his person or in his possession, such goods shall be forfeited, and such person shall forfeit treble the value of such goods.—§ 226.

Person before Search may require to be taken before a Justice or Officers of Customs.—Before any person shall be searched by any such officer as aforesaid, such person may require such officer to take him or her before any justice, or before the collector, comptroller, or other acting principal officer of the customs, who shall, if he see no reasonable cause for search, discharge such person, but if otherwise, direct such person to be searched, and if a female, she shall not be searched by any other than a female.—§ 227.

Penalty on Officers for Misconduct.—Any officer required to take any such person before such justice, collector, comptroller, or other superior officer of customs shall do so with all reasonable despatch; but if such officer shall require any person to be searched, not having reasonable ground to suppose that he has uncustomed or prohibited goods about his person, such officer shall forfeit and pay any sum not exceeding 10*l.*—§ 228.

Persons concerned in importing prohibited or restricted Goods, &c. to forfeit treble the Value, or 100*l.*—Every person who shall be concerned in importing or bringing into the U. K. any prohibited goods, or any goods the importation of which is restricted, contrary to such prohibition or restriction, and whether the same be unshipped or not; and every person who shall unship or assist or be otherwise concerned in the unshipping of any goods which are prohibited or of any goods which are restricted and imported contrary to such restriction, or of any goods liable to duty, the duties for which have not been paid or secured; or who shall knowingly harbour, keep, or conceal, or shall knowingly permit or suffer or cause or procure to be harboured, kept, or concealed, any such goods, or any goods which shall have been illegally removed without payment of duty from any warehouse or place of security in which they may have been deposited; or to whose hands and possession any such goods shall knowingly come; or who shall assist or be concerned in the illegal removal of any goods from any warehouse or place of security in which they shall have been deposited as aforesaid; or who shall be in any way knowingly concerned in conveying, removing, depositing, concealing, or in any manner dealing with any goods liable to duties of customs, with intent to defraud H. M. of such duties or any part thereof; or who shall be in any way knowingly concerned in any fraudulent evasion or attempt at evasion of such duties

or any part thereof; shall in each and every of the foregoing cases forfeit either treble the value of the goods or the penalty of 100*l.*, at the election of the commissioners of customs.—§ 229.

If Goods be removed prior to Examination, Penalty upon the Party concerned in the Removal.—Every person who shall remove any goods imported into the U. K. from any ship, quay, wharf, or other place previous to the examination thereof by the proper officer of customs, unless under the care or authority of such officer; or who shall remove or withdraw from any quay, wharf, or other place any goods entered to be warehoused after the landing thereof, so that no sufficient account is taken thereof by the proper officer, or so that the same are not duly warehoused, and every person who shall assist or be otherwise concerned in such removal or withdrawal, or shall knowingly harbour, keep, or conceal, or shall knowingly permit or suffer, or cause or procure to be harboured, kept, or concealed, any such goods, or to whose possession any such goods shall knowingly come, every such person shall forfeit either treble the value thereof or the penalty of 100*l.*, at the election of the commissioners of customs.—§ 230.

Persons unshipping or concerned in the carrying away or concealing Spirits or Tobacco to forfeit 100*l. and may be detained.*—Every person who shall unship or be aiding or concerned in the unshipping of any spirits, tobacco, snuff, tobacco stalks, tobacco stalk flour, or snuff-work, or of any tea or silk, such tea or silk being of the value of 10*l.* or upwards, liable to forfeiture under this or any other act relating to the customs or excise, or who shall carry, convey, or conceal, or be aiding, assisting, or concerned in the carrying, conveying, or concealing of any such spirits, tobacco, snuff, tobacco stalks, tobacco stalk flour, or snuff-work, or of any such tea or silk as aforesaid, shall forfeit for each such offence treble the value of such goods, or the sum of 100*l.*, at the election of the commissioners of customs; and every such person may be detained, to be dealt with as hereinafter directed.—§ 231.

Persons found or discovered to have been on board Vessels liable to Forfeiture subject to be committed to any House of Correction.—Every subject of H. M. who shall be found or discovered to have been on board any ship or boat liable to forfeiture under this or any act relating to the customs for being found or discovered to have been within any of the distances in this act mentioned from the U. K. or the Channel Islands, having on board or in any manner attached thereto, or having had on board or in any manner attached thereto, or conveying or having conveyed in any manner, such goods or things as subject such ship or boat to forfeiture, or who shall be found or discovered to have been within any such distances as aforesaid on board any ship or boat from which any part of the cargo or lading shall have been thrown overboard, or staved or destroyed, to prevent seizure, and every person, not being a subject of H. M., who shall be found or discovered to have been on board any ship or boat liable to forfeiture for any of the causes last aforesaid within one league of the coast of the U. K. or of the Channel Islands, shall, upon being duly convicted of any of the said offences before any justice, be adjudged by such justice, for the first of such offences, to be imprisoned in any house of correction, and there kept to hard labour, for any term not less than 6 nor more than 9 months, and for the second of such offences for any term not less than 9 nor more than 12 months, and for the third or any subsequent offence for 12 months; and every such person may be detained, and taken before any justice, to be dealt with as hereinafter directed.—§ 232.

Persons on board Vessels within Ports of the U. K. with Contraband Articles, subject to Penalty of 100*l.*, *and Detention.*—Every person who shall be found or discovered to have been on board any ship or boat liable to forfeiture under this or any other act relating to the customs for being found or discovered to have been within any port, bay, harbour, river, or creek of the U. K. or of the Channel Islands, having on board or in any manner attached thereto, or having had on board or in any manner attached thereto, or conveying or having conveyed in any manner, such goods or things as subject such ship or boat to forfeiture, or who shall be found or discovered to have been on board any of H. Majesty's ships or vessels, or on board any ship or vessel in H. Majesty's employment or service, or on board of any foreign post office packet, being a national vessel, employed in carrying the mails between any foreign country and the U. K., such last-mentioned ships, vessels, or packets being found or discovered to have been within any port, bay, harbour, river, or creek of the U. K. or the Channel Islands, having on board or in any manner attached thereto, or having had on board or in any manner attached thereto, or conveying or having conveyed in any manner, any spirits, not being in a cask or other vessel capable of containing liquids of the size or content of 20 gallons at the least, or any tobacco or snuff, not being in a cask or package containing 200 lbs. of such tobacco or snuff at least, or being separated or divided in any manner within any cask or package, shall forfeit the sum of 100*l.*; and every such person shall and may be detained, and taken before any justice, to be dealt with as herein-after directed.—§ 233.

Persons in H. Majesty's Service detained, to be secured on board until Warrant procured.—Where any person or persons, being part of the crew of any of H. Majesty's ships or vessels, or of any ship or vessel in H. Majesty's employment or service, and liable to detention, shall have been detained under any law relating to the customs, such person or persons, upon notice thereof by the detaining officer to the commanding officer of the ship or vessel, shall be placed in security by such commanding officer on board such ship or vessel, until such detaining officer shall have obtained a warrant from a justice for bringing such person or persons before him or any other justice or justices, to be dealt with according to law, which warrant such justice is required to grant upon complaint made to him by such officer of customs stating the offence for which such person or persons is or are liable to detention.—§ 234.

Any Person escaping may afterwards be detained.—If any person liable to be detained under this or any other act relating to the customs shall not be detained at the time of committing the offence for which he is so liable, or shall after detention make his escape, such person shall and may at any time afterwards be detained, and taken before any justice, to be dealt with as if detained at the time of committing such offence.—§ 235.

Magistrates to proceed to Conviction of Smugglers in certain Cases without an Order of Customs.—Whenever any person shall have been detained, and taken before any justice, for being found or discovered to have been on board any ship or boat within any port, bay, harbour, river, or creek of the U. K. or the Channel Islands, such ship or boat having on board or having had on board spirits or tobacco in such casks or packages as would under this or any other act relating to customs subject the same to forfeiture, or for unshipping or for aiding or being concerned in the unshipping of any spirits or tobacco liable to forfeiture under this or any other act relating to the customs or excise, or for carrying, conveying, or concealing, or for aiding or being concerned in the carrying, conveying, or concealing of any such spirits or tobacco, and it shall appear to such justice that the quantity of spirits in respect of which such person has been so detained does not exceed 2 gallons, or that the quantity of tobacco in respect of which such person has been so detained does not exceed 10 lbs. weight, such justice may proceed summarily upon the case without any information, and although no direction shall have been given by the Commissioners of Customs, and convict such person of such offence, and adjudge that such person shall, in lieu of any other penalty, forfeit any sum not less than the single value nor more than treble the value of such goods, including the duties of importation due thereon, and in default of payment of such sum of money commit such person to any of H. Majesty's gaols for any time not exceeding one month.—§ 236.

Where Persons are taken before a Justice under any Act relating to the Customs, such Justice may order them to be detained a reasonable Time, or admit to Bail.—When any person shall have been detained for any offence against this or any other act relating to the customs, and taken before any justice, such justice may, if he see reasonable cause, order such person to be detained in gaol, or in the custody of the police or constabulary force, a reasonable time, to obtain the order of the Commissioners of Customs or Inland Revenue, and to prepare the necessary informations, convictions, and warrants of commitment,

and at the expiration of such time to be brought before him, or any other justice or justices, who may then finally hear and determine the matter: but any person so detained may be liberated, on giving, by recognizance, security to the satisfaction of such justice in the sum of 100*l.*, or in the amount of the penalty sought to be recovered, to appear at such time and place as shall be appointed by such justice for hearing the case.—§ 237.

Penalty on Persons offering Goods for Sale under Pretence of being run or prohibited. — If any person shall offer for sale any goods under pretence that the same are prohibited, or have been unshipped and run on shore without payment of duties, all such goods (although not liable to any duties or prohibited) shall be forfeited, and every person so offering the same for sale shall forfeit treble the value of such goods. — § 238.

No Subjects except Officers, to take up Spirits in small Casks sunk or floating upon the Sea. — No subject of H. Majesty, other than officers of the navy, customs, or excise, shall intermeddle with or take up any spirits, being in casks of less content than 20 gallons, which may be found floating upon or sunk in the sea within 100 leagues of the U. K., and if any spirits shall be so intermeddled with or taken up the same shall be forfeited, together with any ship or boat in which they are found. — § 239.

Commissioners of Treasury or Customs may restore Seizures, &c. — The Commissioners of the Treasury or Customs may mitigate or remit any penalty or fine, or any part of any penalty or fine, incurred under this or any act relating to the customs, or release from confinement any person committed under this or any act relating to the customs, on such terms and conditions as to them shall appear proper. — § 240.

Persons signaling Smuggling Vessels may be detained, and forfeit 100l. or be kept to Hard Labour for One Year. — No person shall, after sunset and before sunrise between the 21st day of September and the 1st day of April, or after the hour of 8 in the evening and before the hour of 6 in the morning at any other time of the year, make, aid, or assist in making any signal in or on board or from any ship or boat, or on or from any part of the coast or shore of the U. K., or within 6 miles of any part of such coast or shore, for the purpose of giving notice to any person on board any smuggling ship or boat, whether any person so on board of such ship or boat be or not within distance to notice any such signal; and if any person, contrary to this act, shall make or cause to be made, or aid or assist in making, any such signal, such person so offending shall be guilty of a misdemeanor; and any person may stop, arrest, and detain the person so offending, and convey him before any justice, who, if he see cause, shall commit the offender to the next county gaol, there to remain until delivered by due course of law; and it shall not be necessary to prove on any indictment or information in such case that any ship or boat was actually on the coast; and the offender being duly convicted, shall, by order of the court before whom he shall be convicted, either forfeit the penalty of 100*l.*, or, at the discretion of such court, be committed to the common gaol or house of correction, there to be kept to hard labour for any term not exceeding one year.—§ 241.

Proof of a Signal not being intended on Defendant. — If any person be charged with or indicted for having made or caused to be made, or for aiding or assisting in making, any such signal as aforesaid, the burden of proof that such signal so charged as having been made with intent and for the purpose of giving such notice as aforesaid was not made with such intent and for such purpose shall be upon the defendant against whom such charge is made or such indictment is found. — § 242.

Any Person may prevent Signals, and enter Lands for that Purpose. — Any person whatsoever may prevent any signal being made as aforesaid, and may go upon any lands for that purpose, without being liable to any indictment, suit, or action for the same.— § 243.

Persons assembling, to the Number of Three or more, to run Spirits, Tobacco, &c. or obstructing Officers, to be sent to House of Correction. — All persons assembled to the number of 3 or more, for the purpose of unshipping, carrying, conveying, or concealing any spirits or tobacco, or any tea or silk (such tea or silk being of the value of 10*l.* or more), liable to forfeiture under this or any other act relating to the customs or excise, and every person who shall by any means procure or hire, or shall depute or authorise any other person to procure or hire, any person or assemble for the purpose of being concerned in the landing or unshipping, or carrying, conveying, or concealing any goods which are prohibited to be imported, or the duties for which have not been paid or secured, and every person who shall obstruct any officer or officers of the army, navy, or marines, being duly employed for the prevention of smuggling, or any officer or officers of customs or excise, or any person acting in his or their assistance, or duly employed for the prevention of smuggling, in the execution of his or their duty, or in the due seizing of any goods liable to forfeiture by this act or any act relating to the customs, or who shall rescue, attempt or endeavour to rescue, or cause to be rescued, any goods which have been duly seized, or who shall before or at or after any seizure stave, break, or otherwise destroy, or attempt or endeavour to stave, break, or otherwise destroy, any goods, to prevent the seizure thereof or the securing of the same, shall, upon being duly convicted of any of the said offences before any justice of the peace, be adjudged by such justice for the first offence to be imprisoned in any house of correction, and there kept to hard labour, for any term not less than 6 nor more than 9 months, and for the second offence for any term not less than 9 nor more than 12 months, and for the third or any subsequent offence for 12 months. — § 244.

Three or more armed Persons assembled to land or rescue smuggled Goods guilty of Felony. — If any persons, to the number of 3 or more, armed with firearms or other offensive weapons, shall, within the U. K., or within the limits of any port, harbour, or creek thereof, be assembled in order to be aiding and assisting in the illegal landing, running, or carrying away of any prohibited goods, or any goods liable to any duties which have not been paid or secured, or in rescuing or taking away any such goods as aforesaid after seizure from the officer of the customs, or other officer authorised to seize the same, or from any person or persons employed by or assisting them, or from the place where the same shall have been lodged by them, or in rescuing any person who shall have been apprehended for any offence made felony by this or any act relating to the customs, or in the preventing the apprehension of any person who shall have been guilty of such offence, or in case any persons to the number of three or more, so armed as aforesaid, shall, within the U. K., or within the limits of any port, harbour, or creek thereof, be so aiding or assisting, every person so offending, and every person aiding, abetting, or assisting therein, shall, being thereof convicted, be adjudged guilty of felony, and shall be liable, at the discretion of the court before which he shall be convicted, to be transported beyond the seas for the term of his natural life, or for any term not less than 15 years, or to be imprisoned for any term not exceeding 3 years. — § 245.

Persons shooting at Boats belonging to Navy or Revenue Service, guilty of Felony. — If any person shall maliciously shoot at any vessel or boat belonging to H. Majesty's navy, or in the service of the revenue, within 100 leagues of any part of the coast of the U. K., or shall maliciously shoot at, maim, or wound any officer of the army, navy, or marines, being duly employed for the prevention of smuggling, and on full pay, or any officer of customs or excise, or any person acting in his aid or assistance, or duly employed for the prevention of smuggling, in the execution of his office or duty, every person so offending, every person aiding, abetting, or assisting therein, shall, upon conviction, be adjudged guilty of felony, and shall be liable, at the discretion of the court before which he shall be convicted, to be transported beyond the seas for the term of his natural life, or for any term not less than 15 years, or to be imprisoned for any term not exceeding 3 years. — § 246.

Any Person in company with Four others, having smuggled Goods, or with one other, armed or disguised, guilty of Felony. — If any person in company with more than 4 others, be found with any goods liable to forfeiture under this or any other act relating to the customs or excise, or in company with 1 other person, within 5 miles of the sea coast or of any tidal river, and carrying offensive arms or weapons, or disguised in any way, every such person shall be adjudged guilty of felony, and shall, on conviction of such offence, be transported as a felon for the term of 7 years. — § 247.

Persons assaulting Officers by Force or Violence may be transported. — If any person shall, by force or violence, assault, resist, or obstruct any officer of the army, navy, or marines, being duly employed for the prevention of smuggling, and on full pay, or any officer of customs or excise, or other person duly employed for the prevention of smuggling, in the due execution of his or their duty, or any person acting in his or their aid, every person so offending, being thereof convicted, shall be transported for 7 years, or sentenced to be imprisoned in any house of correction or common gaol, and kept to hard labour for any term not exceeding 3 years, at the discretion of the court before whom such offender shall be tried and convicted as aforesaid. — §248.

Clause 249. enacts that the commanding officers of boats for the prevention of smuggling may haul them on shore without being liable to be sued for so doing.

Clause 250. authorises officers of army, navy, and marines, to patrol the coasts for the prevention of smuggling without being liable to suit for so doing.

As to Compensations and Rewards.

Officers wounded to be provided for, &c. — If any officer or seamen employed in the service of the customs or inland revenue shall be killed, maimed, wounded, or in any way injured in the due execution of his office, or if any person acting in his aid, or duly employed for the prevention of smuggling, shall be so killed, maimed, wounded, or in any way injured while so aiding such officer or seaman, or so employed, the Commissioners of Customs or Inland Revenue respectively may, with the sanction of the Commissioners of the Treasury, make such provision for such officer or person, or for the widows and families of such as shall be killed, as they may see fit. — § 251.

Rewards for detaining Smugglers. — The Commissioners of Customs may award to any officer or other person detaining

any person liable to detention under this or any other Act relating to the customs, if convicted, such reward as they may think fit, not exceeding the sum of 20*l.* for each person. — § 252.

Rewards out of Penalties. — The Commissioners of Customs may order such reward as they see fit out of any pecuniary penalty or composition to any officer or other person by whose means the same is recovered. — § 253.

Rewards to Officers making Seizures. — The Commissioners of Customs may order to be paid in respect of any seizure made under this or any Act relating to the customs, to the person or persons making the same, such rewards as they may see fit, not exceeding the value of the goods or things so seized, and for this purpose the value of spirits and tobacco seized as aforesaid shall be deemed and taken to be such as the Lords of the Treasury or the Commissioners of Customs may think fit. — § 254.

How Value is to be ascertained. — In all cases where any penalty the amount of which is to be determined by the value of any *goods*, is directed to be sued for under any Act relating to the customs or excise, such value shall, as regards proceedings in any court or before justices, be estimated and taken according to the rate and price for which goods of the like kind but of the best quality upon which the duties of importation shall have been paid were sold at or about the time of the offence, or according to the rate and price for which the like sort of goods were sold in bond at or about the time of the offence, with the duties due thereon added to such rate or price in bond, except as to tobacco stalks, tobacco stalk flour, and snuff-work, the value of which shall, for the purpose of any suit or proceeding under this or any Act relating to the customs, be estimated at the same rate as that of unmanufactured tobacco upon which the duties of importation shall have been paid. — § 255.

All Rewards and Seizures payable to Officers of Army, Navy, or Marines to be regulated by Order in Council. — Every reward or share of any such seizure, or of the value thereof, payable to any officer or officers, non-commissioned officers, petty officers, seamen, or privates of H. Majesty's army, navy, or marines, or acting under the orders of the Lord High Admiral or Commissioners of the Admiralty, shall be divided and distributed in such proportions, and according to such rules, regulations, and orders, as H. Majesty shall by royal proclamation in that behalf be pleased to direct and appoint. — § 256.

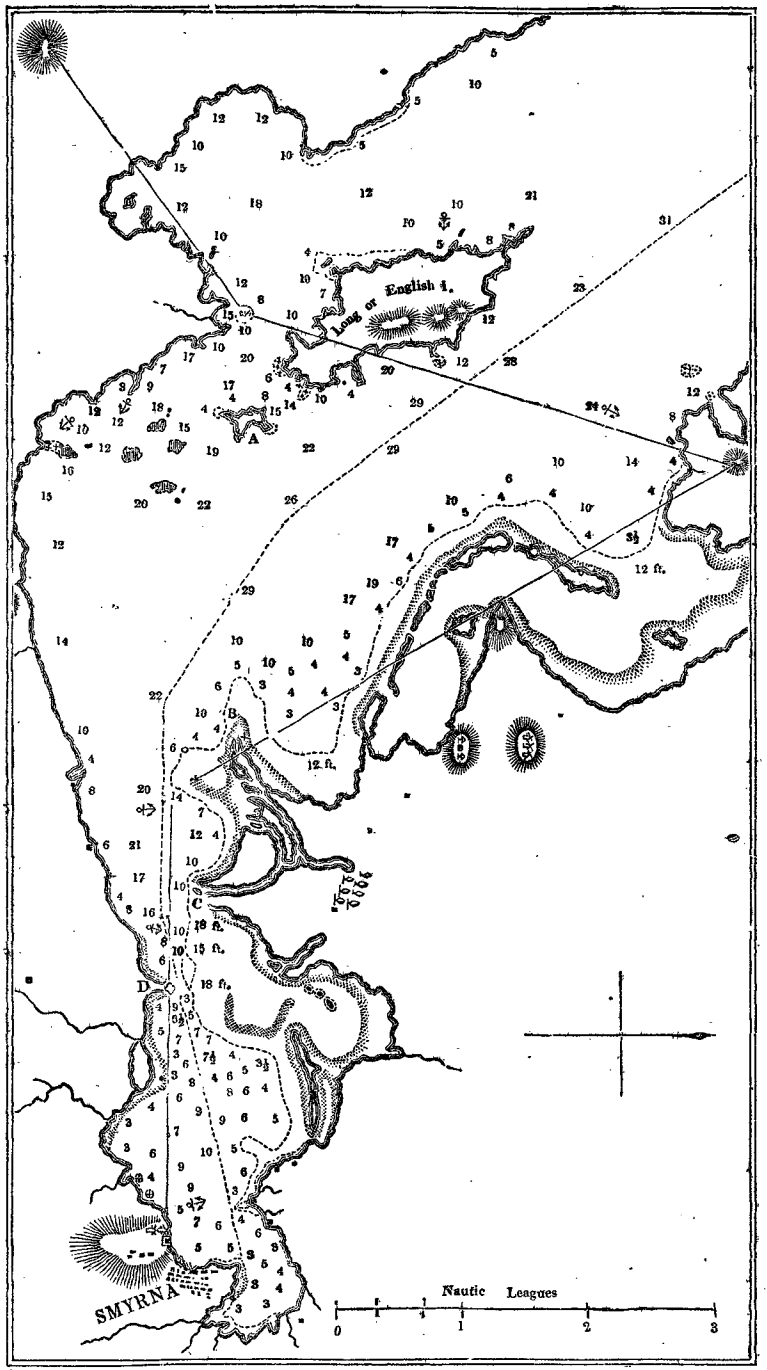
Commissioners may distribute Officers' Shares of Seizure so as to reward Persons not actually present. — The Commissioners of Customs or Inland Revenue respectively may, in case of any seizure of ships, boats, or goods, or of the apprehension of any parties, under this or any other Act relating to the customs, direct the distribution of the seizor's share of such ships, boats, or goods, or of any penalties or rewards that may be recovered on account of any seizure, so that any other person through whose information or means such seizure shall have been made or penalty recovered or party apprehended, and who may by them be deemed to be so entitled, may participate in such proportions as the said commissioners shall respectively deem expedient. — § 257.

Rewards to Persons giving Information of Goods floating or sunk in the Sea. — If any person shall discover any spirits in casks of less content than 20 gallons found floating upon or sunk in the sea, and shall give information to any officer of the customs, or other person duly authorised to make seizure of such spirits, so that seizure shall be made of the same, the person giving such information shall be entitled to and shall receive such reward as the Commissioners of Customs may direct. — § 258.

As to collusive Seizures.

Penalty on Officers and Persons making collusive Seizures, or taking Bribes, and on Persons offering them. — If any officer of customs or excise, or of the army, navy, or marines, duly employed for the prevention of smuggling, and on full pay, or any other person or persons whomsoever duly employed for the prevention of smuggling, shall make any collusive seizure, or deliver up, or make any agreement to deliver up or not to seize any vessel or boat, or any goods liable to forfeiture, or shall take any bribe, gratuity, recompence, or reward for the neglect or nonperformance of his duty, or conspire or connive with any person to import or bring into the U. K. or the Channel Islands, or any of the British possessions abroad, or be in any way concerned in the importation or bringing into the U. K., or the said islands or possessions, of any goods prohibited to be imported or liable to duties of customs for the purpose of seizing any ship, boat, or goods, and obtaining any reward for such seizure or otherwise, every such officer or other person shall forfeit for every such offence the sum of 500*l.*, and be rendered incapable of serving H. Majesty in any office whatever, either civil or military; and every person who shall give or offer, or promise to give or procure to be given, any bribe, recompence, or reward to, or shall make any collusive agreement with, any such officer or person as aforesaid to induce him in any way to neglect his duty, or to do, conceal, or connive at any act whereby any of the provisions of any Act of Parliament relating to the customs may be evaded, shall forfeit the sum of 200*l.* — § 259.

SMYRNA, a large city and sea-port of Asiatic Turkey, on the western side of Asia Minor, lat. 33° 25′ 36″ N., lon. 27° 6′ 45″ E. Population, in 1852, estimated at about 150,000, of whom 45,000 may be Turks, 50,000 Greeks, and the remainder Armenians, Franks, Jews, &c. Smyrna is situated at the bottom of a deep gulph; the entrance to which lies between Mytilene on the north, and Cape Carabourun, in lat. 38° 41′ 30″ N.; lon. 26° 21′ E., on the south. The woodcut on the next page gives a better idea of the Gulph of Smyrna than could be derived from any description. The dotted line shows the course inwards. The passage between James' Castle (D) on the south and the opposite sand-bank is narrow; but there is from 9 to 10 fathoms water, with blue clay bottom. Merchant ships anchor abreast of the city in from 7 to 8 fathoms; but the water is so deep that they may come close to the quays. The *inbat*, or sea breeze, blows from morning till evening, and is always waited for by ships going up to the city. There is excellent anchorage in most parts of the gulph, merely avoiding the shoals on the north side. Smyrna is a place of great antiquity. The excellence of its port, and its admirable situation, have made it be several times rebuilt, after being destroyed by earthquakes. On approaching it from the sea, it has the appearance of an amphitheatre: the castle is at the back of the town, which it commands, on the top of the hill; but it is in a state of decay, and could oppose no resistance to an invading force. The interior of the city does not correspond to its external appearance; the streets being, for the most part, narrow, dirty, and ill paved. Owing to the want of cleanliness, and of all sorts of precautions, on the part of the Turks, Smyrna is frequently visited by the plague. In 1814, from 50,000 to 60,000 of the inhabitants are said to have been cut off by this dreadful scourge. The trade of this city is more extensive than that of any other in the Turkish empire. The caravans from Persia are chiefly composed of Armenians. They arrive and depart at fixed periods, which are nearly identical with those of the arrival and departure of most of the foreign ships frequenting the port. But it is now about to be connected by a railway constructed by English engineers, and by means of English capital, with Ghuzel-Hissar, or Aidin, near the Mendere, 62 miles S.E. Smyrna. Bargains are principally effected by Jew brokers, many of whom have amassed considerable fortunes. The principal articles of import consist of furs, iron, butter, &c. from Odessa and Taganrog; and of cotton-stuffs and twist, silk and woollen goods, coffee, sugar, cochineal, and dye-woods, iron, coal, tin, and tin plates, rum, brandy, paper, cheese, glass, wine, &c. from Great Britain, France, Italy, the United States, &c. The exports consist principally of madder, which is the most valuable article, dried fruits, valonia, opium, sponges, carpets, silk, wool, box-wood, emery-stone, drugs, yellow-berries, olive oil, galls, wax, copper, hare-skins, goats' wool, &c.



References to Plan.—A, Partridge Island, on the south side of which there is excellent anchorage in from 15 to 7 fathoms, muddy bottom. B, a mud point. C, Pelican Point. D, James' Castle. E, Low narrow islands. Soundings, except where otherwise marked, in fathoms.

The admirable Report* of Mr. Rolleston on Smyrna, contains the latest and most authentic details, in regard to the population, trade, &c. of that city. We are indebted to it, and to information communicated to us by a house in Smyrna, for most part of the following details.

"The business," says Mr. Rolleston, "of exporting and importing goods to and from Europe is becoming more and more monopolised by the Greek merchants. They are compelled by the conditions of the insurance companies to employ European bottoms and sailors to transport their freight, and they have a line of English steamers in their employment, several of them reaching a tonnage of 1,200 tons, and numbering already five or six vessels named after the several countries of ancient Hellas, the 'Arcadia,' the 'Laconia,' &c. It is in great measure their local knowledge and connections which enable them to compete with merchants of other nations at so great an advantage in this particular branch of business. There are many instances to be pointed out in Smyrna of Greek merchants who have raised themselves by their own exertions and industry from a very poor condition to one of opulence, and on the other hand it is said that their very wealthiest merchants are in the habit of furthering their own interests by methods which, though not positively dishonest, are yet such as none but the pettiest tradesman of another race would condescend to employ."

But this natural result of the brutal tyranny under which (thanks to the jealousies and selfishness of the principal Christian powers) they have so long groaned, is now rapidly wearing away; and at the present time there are many Greek merchants who are not more distinguished by their intelligence and enterprise than by their straightforwardness and integrity.

"The Greek is to be found in all the employments of humble life, whether as a small tradesman, artisan, boatman, or day labourer. The profits of the small tradesmen cannot easily be estimated, but in several instances we have found the master of a shop of very humble pretensions to be the owner and occupier of a house in some other part of the town, the rent of which in Smyrna would have been 35*l.* to 40*l.* per annum. The wages paid to day labourers during the time that we were in Smyrna varied from 8 piastres = 16*d.*, up to 12 piastres = 2*s.* per diem. Previously to the war 7 piastres = 14*d.*, was the amount usually paid. The condition of the labouring population was at this time one of well-being, as the price of bread was 2 piastres per oke = 4*d.* for 2¾ lbs., and a whole sheep might be purchased for 80 piastres, *i.e.*, about 13*s.* Indeed, squalid visages and ragged clothes are seldom, if ever, to be seen among the Greek population."

Mr. Rolleston says that hatred of the Turks is so deeply rooted in the heart of every Greek, as to constitute a part of their moral nature; and it would have been extraordinary indeed had such not been the case.

The Turkish population is almost wholly occupied in agricultural labour, or in the rudest sorts of manufactures. The porterage of Symrna gives employment to about 3,000 of the lowest order of Turks.

Monies, Weights, and Measures, same as at Constantinople; which see. Accounts are kept in piastres of 40 paras, or medini. The value of the piastre fluctuates according to the exchange. It has been very much degraded; and is at present (1843) worth about 2*d.*, the exchange being 119 or 110½ piastres per 1*l.* sterling. The oke is the principal weight used. It is equivalent to 2 lbs. 13 oz. 5. dr. avoirdupois; 45 okes = 1 kintal = 100 rottolas = 127·48 lbs. avoirdupois. The kintal of Constantinople is only 44 okes. A teffee of silk = 4⅝ lbs. avoirdupois. A chequee of opium = 1⅛ lbs.; a chequee of goats' wool = 5¾ lbs. Corn is measured by the killow = 1·456 Winch. bushels. The pic, or long measure, = 27 Eng. inches; But for an account of what the Turkey weights usually render in England, see *post.*

Commerce of Smyrna.

Charges on Selling and Buying.—As we conceive that a correct list of selling and buying charges is an essential piece of information for those interested in the commerce of the Levant, we annex the same, including every item of expense, namely:—

On Selling.	Per cent.
Freight (according to the rate agreed upon in England) say	2
Custom duty (on general goods)	3
Porterage from 1 to 2 piastres per package (according to the size).	
Shroffage	0½
House and street brokerage	2
Commission for effecting sale	3
Ditto, if proceeds are remitted by bill or specie	1½
Del credere ditto (when required to be charged)	2
Warehouse rent	0½

On Buying.	Per cent.
Custom duty (according to the quality of the article)	1 to 3
Porterage (included in the cost of packages, which vary according to the quality of the goods packed).	
House and street brokerage	1½
Commission (except on figs, which is 6 per cent)	3
Warehouse rent	0½

Sales are effected by a merchants' broker, and what is termed a street or out-door broker; the former receiving his instructions from the seller, and the latter acting on behalf of the buyer. When the terms are mutually agreed upon, the real buyer and seller personally meet; and a bond or obligatory note stating the terms and amount of the transaction is drawn out and signed by the buyer, and when not much approved of, one or more signatures are required to the bond, who individually and collectively become responsible for the fulfilment of it.

Purchases are similarly made, except that the purchaser or agent himself, in the first instance, and his brokers, inspect the goods he is about to treat for: cash down is generally expected; and it is but seldom that a short credit of 1 or 2 couriers is obtained: it not unfrequently happens, also, that ¼ or even ½ of the purchase amount is advanced to the seller, when an insufficient quantity of the article wanted by the buyer is in the place, and which must then be procured from the interior or place of growth. The money advanced (which is to be returned if the quality does not suit) is sent by a confidential person on the part of the purchaser, accompanied either by the seller in person, or by some one representing him.

Barters are generally attended with delay, impediments, and sacrifices to the European agent who exchanges his constituents' goods for native produce, and are never completed without his paying a large portion in cash, which is mostly ½, sometimes even ⅔, but never less than ⅓ of the full amount; besides always paying a higher price for the produce than if it were bought for ready money. On the other hand, so far as the agent's transaction goes in goods, the price of which he also advances, it is equal to an advantageous cash sale, deducting a discount; but still he loses, as we have just stated, on that part of the operation which subjects him to the necessity of giving ready money for such part of the produce as remains above the counter-value given in goods, at a higher rate than it is worth in the open market. Thus the advantage is all in favour of this country, and against the agent. Indeed, barters are seldom undertaken unless when a profitable result is anticipated, when European goods are difficult to be placed upon saving conditions, either from the want of demand or a glutted market, or when (which is mostly the case) the holder of such goods has orders from the owners of them to remit them in produce, and thus realise their property, if not upon profitable terms, at least without the risk arising from bad debts: sometimes, also, outstanding bonds are taken in part payment, to the extent occasionally of ⅓; another ⅓ is taken in goods at an advance of from 5 to 10 or 12 per cent. above current prices; and the remaining ⅓ in cash against produce, at from 5 to 10 per cent. more than it

* Addressed to the Secretary-at-War, November 1, 1836.

fetches in the bazaars. However it is by barter alone that any extensive transaction ever takes place, or that it can be either readily or safely effected.

Sales on Credit. — The terms of credit vary considerably, and depend entirely upon the quality of the goods which the agent sells.

Sales for Cash.—These very seldom occur, indeed, and then only when money is abundant, or the article sold scarce and in great demand; in fact, not 1 sale in 100 is made on these terms; and in about the same ratio is a discount taken off from a bazaar bond at even an exorbitant rate, however short the period may be that it has to run; occasionally a sale is, however, effected for ¼ cash, and the other ¼ short credit, for some very current goods.

IMPORTS.

Coffee.—This is one of the most current articles received here, and is sent from England, France, Holland, Trieste, Marseilles, Leghorn, Genoa, and America; but first, and principally of late years, from the latter country; the vessels of which are frequently laden with coffee, and always partly so: the next in point of quantity comes from England; but is shipped mostly in small parcels at a time of from 300 to 600 sacks, although occasionally that amount is doubled. France follows, but on a less extensive scale; and Austria, Holland, and the small ports in the south of Europe, do not together export more than what is received from England alone. We have 4 different qualities of coffee in our markets; namely, Mocha, St. Domingo, Havannah, and Brazil: the first is sent from Alexandria, and by American vessels, and but seldom from Europe; the consumption is, however, limited, and does not exceed 60,000 okes annually. At Constantinople the consumption is much greater. An Asiatic cannot do without his coffee; and it is well known that in Smyrna alone not less than perhaps 400,000 cups of it are daily drunk, which, computed at the cost price of 2 paras each, amount to 20,000 piastres! St. Domingo and Havannah coffees are preferred to the Brazil, although, when the latter is of a fair round quality, there is not more than 5 per cent. difference in price; the small green West India berry certainly commands a ready sale; but, for the finest sort, not more than 6 or 8 per cent. can be obtained above the middling and sound quality. Coffee is amongst the very few articles which occasionally meet with a partial and entire cash sale and short credit; and is, moreover, from the means and character of the dealers in it, the least liable to risk from insolvency. It is also the easiest through which an advantageous barter can be effected, as a much larger quantity of coffee will be taken in exchange for produce than almost any other item of European merchandise.

Sugar is the next in consequence. This article is supplied from the same sources as coffee, and is attended in its disposal with similar results. We receive the following qualities: — White crushed, white Havannah, brown do., white East India, refined in small loaves of 4 lbs. and in large of 8 lbs. each: the 2 latter are mostly shipped from America and England. The brown and ordinary sorts are not so current.

Indigo always meets a ready sale, and not unfrequently a profitable one; it is attended likewise with all the advantages and facilities attached to coffee and sugar, and is furnished by Europe and America, but principally by England. The qualities we receive consist of East India purple and copper, ditto common, and Guatemala. The first of the 3 is the kind best adapted for our markets, and is placed sooner and better than the other 2; but, as is the case with coffee, the *very fine* will not pay cost price, and ought therefore never to be sent. The pieces suited for our buyers ought to be good sized, with about an equal proportion of purple and copper in each piece.

Manufactures.—White or unprinted cotton goods are most in demand during the warm weather, and the coloured or printed stuffs during winter, although a considerable quantity of all sorts is regularly and largely sold throughout the whole year. East Indian manufactures are supplied by America and England exclusively; the latter country also sends fair imitations of the East Indian loom, in long cloths, seersuckers, &c. The native consumers are exceedingly fastidious in their choice of designs and colours, which ought very frequently to be altered, in order to meet their capricious taste. Manufactured goods are always sold at long credits, but large barters are often effected through them. A person desirous of entering into this item of our commerce is almost certain ultimately to reap an advantage; but he must have patience, a large capital, and must not be disheartened at the first or second result of his enterprise, should it disappoint his hopes of profit. He must also enter into the thing with spirit, and keep his agent always supplied with the goods he may recommend; and he is to remember that many months must elapse before he can expect a return by bills of exchange, but sooner if he order a barter. The capital employed must also at least be to the amount of 20,000*l.* to do any good; and further, this sum ought to be disbursed by him without any pecuniary embarrassment or inconvenience. For a person willing to undertake such a step, he would require to be regularly furnished with patterns, and advices of the manner in which they ought to be printed and varied; and we again repeat, that with *competent means*, a real desire to follow the branch up firmly, and full information hence of what is required, a most extensive and finally lucrative business would be done: and we recommend the matter strongly to your best consideration.

Cotton Twist forms no inconsiderable article in our trade, and is supplied exclusively from England. Mule twist has, however, superseded, in some degree, the demand which formerly existed for water twist, and is consequently more in request. Water twist is nevertheless saleable, and both qualities ought to be of rather high numbers. This article is often given in barter, but mostly sold at rather long credits, and hardly ever for cash.

Iron, machinery, and *coal*, are all largely imported, especially since the commencement of the railway to Aidin. They are wholly supplied by England.

Rum and Brandy.—Leeward Island and Jamaica are furnished by America and England; the former particularly in the lower qualities, of which we have a full market at low prices. The better kind and brandy are supplied from England, but do not obtain a proportionate advance compared with the common sorts. Brandy is but of limited demand, and 2 or 3 puncheons are sufficient at a time. It ought, as well as rum, to be deeply coloured.

Spices are all saleable in small parcels at a time, particularly pepper and pimento; the latter of which, in small sound berries, is demanded at good prices. Nutmegs are very abundant, and offering very low without finding purchasers. France, America, and England supply us with spices, but France more so in cloves than in other kinds; and it may be remarked that the qualities received from England are preferred. Credit on selling is generally short.

Cochineal is a fair article now and then in small quantities; and when in demand, at times fetches good prices, occasionally a cash sale, and always one of the shortest credits. Annual consumption, 4,500 okes.

In concluding our observations on imports, we could wish to impress the conviction, that a poor man's purpose cannot be answered in speculating to this country; for, should his circumstances require a speedy remittance in bills, he must submit to a heavy sacrifice, in order to meet his wants, by selling his property for whatever it may fetch in cash; and such a measure cannot but be attended with very heavy loss. On the contrary, when an opulent person finds that his property cannot be realised at saving prices, he can afford to wait until a more favourable moment presents itself; and such a moment, in less than 12 months, is almost certain to arrive, when he retires his money with an advantage more than equal to any interest he could obtain for it in Europe.

EXPORTS.

The following condensed Statement shows the Values of the Principal Articles, classed according to their importance, exported from Smyrna in 1854, with the Value of those shipped for the U. K.

Articles.	Total Value.	Value to England.
	Piastres.	*Piastres.*
Madder	18,497,970	18,133,270
Valonia	17,512,270	15,300,850
Figs	13,225,100	5,421,800
Raisins	17,943,350	5,330,000
Opium	13,271,510	2,882,265
Sponges	4,515,500	3,456,000
Carpets	3,844,600	2,300,000
Sorted gums	3,139,700	1,093,500

It is seen from this statement that nearly the whole of the two great articles of madder and valonia comes to England; and we, also, share largely in the other leading articles. In the year now referred to (1854) a greater quantity of opium was shipped for the U. States (278 cases, valued at 3,000,000 piastres) than for England. Large quantities are, also, shipped for Alexandria (in 1854, 724 cases) in transit for China. It is principally brought from Afiom (or Opium), Kara Hissar, and other places in the interior of Asia Minor. "It is," says Mr. Rolleston, "packed in hampers of matting, which again are packed within coarse haircloth, and it is thus transported on camels from the place of growth. Whatever adulterations it is subjected to, it undergoes previously to its arrival in Smyrna. When it arrives there it is unpacked in the presence of an authorised person, and the process of sorting commences. The opium is in cakelike masses, seldom weighing more than 2 lb.; each mass is enveloped in a dry leaf, and covered thickly with the adherent *achænia* of some species of dock. Lump after lump is handed to the assayer, whose process is more rough and empirical than any process in the world which is exercised on objects of such value. He seizes each lump as it is handed to him, and plunges a knife into its substance; then, according to the odour evolved, to the appearance of its fracture, to the presence or absence of cretaceous, gummy, or amylaceous impurities, he tosses the lump, after one instant's examination, into one or other of three heaps, the *first*, *second*, and *third* qualities. The same process is repeated upon the rest of the lumps, and from beginning to end the knife is never wiped; and thus the test of smell, the most valuable criterion furnished in the whole process, is rendered wholly nugatory. It is obvious that the decisions passed after such an examination as this must often be quite other than the value, *i.e.* the per-centage of morphia in each piece would warrant."

Figs are exported in larger quantity for America than for England, but those intended for the English market are of a finer quality. A considerable quantity of the figs intended for America are shipped on board the Liverpool line of steamers for England, and are subsequently transhipped at that port. The certainty and expedition of this route to America has begun to cause a diminution in the number of clippers employed in the fruit trade between America and Asia Minor.

Carpets.—"England takes more than 2-3rds of the carpets manufactured in Anatolia. These carpets are made in the interior, and by the aid of very simple machinery, manual labour entering largely into the means employed. Women and children work the carpets; the dyeing is done by men. Orders are given by an agent, and it is generally necessary for him, on account of the poverty of the workers, to advance a considerable sum of money to enable them to purchase materials. As much as 2-3rds of the entire value of the carpets is thus advanced sometimes previously to their completion. In some of the villages where this branch of industry is carried on the work-people can make carpets of one pattern only, but there are other villages in which numerous patterns are worked. As regards the dyeing of the carpet, the red colour in the Turkey carpet is generally, and ought to be always, produced by madder. Logwood is, also, employed, and cochineal; but where the latter is made use of the colour of the carpet is apt to fade. Blue comes from indigo, and yellow from the yellow Persian berries. By referring to the table of exports it will be seen that carpets, silk, paper, and spun cotton, are the only manufactures which it contains; and though the silk manufacture cannot be said to be in a declining condition, the carpet manufacture is the only one that has made some advances within the last few years. At present the carpet manufacture of Anatolia is competing successfully with that of Persia."

Silk.—Much of the silk exported from Smyrna is brought from Brusa and other places in the interior; but within the last few years a good deal has been prepared in Smyrna in a very extensive establishment belonging to a French company.

Drugs and Gums form a principal branch of commerce, and is almost entirely in the hands of the Jews. At present, gum Arabic and mastic are exceedingly scarce; and it is only when that is the case, or the demand for exportation is very brisk, that much variation exists in the price of drugs. Trieste, and occasionally America, consume a considerable portion of gums, but the largest quantity goes to the English markets. Barters are often effected through this medium. It is impossible to ascertain the quantities of drugs received in Smyrna, and equally so to know the quantity remaining, as they are dispersed all over the city, and consumed so irregularly in Europe, as bids defiance to all regular calculation.

Sponges are an article of considerable moment, particularly for the English markets, and are found among the islands in the Grecian Archipelago, brought here, and cleaned for exportation. They vary in price from 6 to 90 piastres per oke, according to fineness and quality: the better sort alone answers for speculation, and which, it would appear, from the considerable quantity sent to London, turns to good account. The produce depends so entirely on chance, that no correct estimate of the yearly quantity can be formed; however, we are seldom in want of a moderate supply.

Galls are shipped in considerable quantities for the English, German, and French markets; the two former, however, being the largest consumers: for England, the blue galls are those principally sent; though the market there for their sale being dull and low, prices with us, moderate as they are compared to last year, will still further decline, should a demand not spring up, of which there is no appearance. Annual produce of all sorts, 5,500 kintals.

Valonia employs more British shipping for full cargoes of only one article, than any other species of produce, if we except, perhaps, fruit. The annual produce is sufficient to meet the wants of all Europe. It can be had to any extent, and at all periods.

Fruit.—This is an article which occupies the attention of all Smyrna, more or less, and produces, during the season, great interest and activity. Figs come to market early in September, and raisins are ready for shipping early in October; the former are procurable only at Smyrna, where the latter in all their qualities may be procured; but the shipments are generally made at Cesné, Vouria, Carabourna, Usbeck, &c., from which ports the name of the raisin takes its origin. Large sums are frequently gained in fruit speculations; and when the demand in England is brisk, and the prices and quality fair with us, it very seldom happens, indeed, that any loss is sustained: it is, however, attended with risk; must be shipped dry; and ought only to go in a very fast, sound vessel, as much depends upon a first, or at least an early arrival, which obtains in general a higher price than the later arrivals. The quantity produced is always uncertain.

Accounts are kept in piastres composed of 40 paras and 80ths.

Exchange.

London, 119 to 119½ piastres per £ sterling.

Turkey weights generally render as follows in England :—

A quintal - - = 117 to 124 lbs.
An oke - - - = 2½ — 2·79
A chequee of goats' wool = 5 — 5¼
18 quintals of oil - = 1 ton.
A chequee of opium - = 1¼ to 1⅜

A teffie - - - = 4 lbs.
6½ metsals - - = ½ oz. troy
9 drams - - = 1 oz.
A pike - - = 27 inches.

English weights at Smyrna render generally, viz.:—

126 lbs. = 1 quintal of 45 okes.
112 = 40 okes.
$2\frac{79}{100}$ = 1 oke.

Pro Formâ Invoice of 10 Chests Opium bought and shipped at Smyrna.

Russia - - - —	4,190,860		Total - -	275,588,270	296,213,270

In 1857, the value of the imports amounted to 305,936,710 piastres, and that of the exports to 299,667,790 piastres. The diminution is to be ascribed to the influence of the crisis of 1857.

The *English* imports were coals, linen, iron, machinery, inc. steam-engines, indigo, cotton stuffs, hardware, and a great variety of other goods.

French. — Coffee, fezes, hats, nails, woollens, watches, precious stones, wrought hides, warm stuffs, paper, salted fish, hardware, silks.

Austrian.—Woodware, coffee, hemp, woollens, warm stuffs from Switzerland, paper, hardware.

United States.—Woven goods, coffee, flour, salted fish, hardware, rum, brandy, sugar, tobacco.

The goods exported from Smyrna were figs, raisins, madder, valonia, galls, gums, opium, hides, leeches, silk, and carpets.

Shipping in 1856.—The total number of vessels which entered the port of Smyrna, by steam and sail, were 1,772, having 442,253 tons. The total number of those which left it was 1,759, with 436,975 tons, as follows:—

Arrivals.					Departures.

Lines of Steamers of the three nations—Austria, France, and England—call regularly at Smyrna, and it is seldom that a less number than 2 or 3 steamers is to be seen in the harbour at any one time. Every merchant steamer carrying either the Austrian or the French flag which came into Smyrna during our sojourn there of more than a year, was, with the exception of an occasional French transport, either in the Austrian Lloyd, or the Messageries Impériales Company. Both these companies are richly endowed by their respective governments, and the latter of the two has for some time carried the English mails, but, as a rule, their boats are ill-appointed and unpunctual, and they are small, brig-rigged, and propelled by paddles in the immense majority of cases. Each of these companies sends two boats to Smyrna every week—one from Constantinople, and one from the west; and fortnightly each company has a line running to Alexandria, the boats of which call here also. Though these steam companies aim especially at securing passenger traffic, they nevertheless afford considerable facilities for shipping cargo, and goods of all kinds are weekly exported and imported by their agency.

There are several lines of steam-ships between Smyrna and Liverpool, but no mail is carried by any of the English ships. These ships are all, without exception, propelled by the screw; the majority are barque and a few ship-rigged. Their average tonnage is much larger than that of the other two lines, and they direct their attention to the securing of good freights rather than passengers, who, though well provided for in other respects, might be inconvenienced in these boats by the long stay which their waiting for cargo sometimes entails upon them in Smyrna and Alexandria. The Liverpool ships generally go to Constantinople first, and having discharged cargo there, they return to Smyrna. If they succeed in getting a full cargo there they return direct to England; but if not, they go round by Alexandria. Besides the English lines belonging to English houses, there is, also, as already mentioned, a line of English steam-ships in the employ of a company of Greek and Armenian merchants. Though there is no regular line of steam communication between Smyrna and London, yet this means of intercourse between the two places does exist, and about once every month a steamer sails direct for London.

This profuse supply of steam ships has begun to affect the interests of sailing vessels engaged in the Smyrna trade. A good average passage for a sailing vessel, when favoured by the wind, from England to Smyrna, may be estimated at 30 days; it is not unfrequently done in less time; and we have heard of an instance in which a ship arrived in Smyrna in 21 days after leaving Cardiff. But these are all voyages performed under favourable conditions, and these favourable conditions are very frequently wanting. The Liverpool steamers will, under the most unfavourable circumstances, reach Liverpool within 17 days from the date of their leaving Smyrna. It is obvious that sailing vessels must compete with great disadvantge with these steamers, in all cases where certainty and expedition are required; and in the fruit trade it is said that steam will at no distant period enjoy almost a monopoly in freights. The merchant in America finds it answer his purpose better in many cases to have his cargo of figs shipped in a steamer at Smyrna for Liverpool, and subsequently transhipped at the latter port, than to have them brought direct without any transhipment in a sailing ship from Smyrna to America. The same causes will operate still more powerfully upon the European fruit ships. In fact, the peculiarities of the Mediterranean navigation seem to require steam more than most other seas. The Mediterranean possesses no trade winds, and is, on the contrary, especially liable to sudden changes and dead calms. Schooners and brigs were the favourite class of vessels employed in the Smyrna fruit trade, but within the last few years a somewhat higher style of vessel has been introduced for this purpose.

In his *Lettres sur la Turquie* (i. 425.), the well informed M. Ubicini estimates the value of the imports into Smyrna in 1851 at 28,473,000 fr., and that of the exports at 36,682,000 fr. The coasting trade, as that between Smyrna, Constantinople, Syra, Alexandria, and the Levant generally, is usually denominated, is almost entirely in the hands of the Greeks, and is very extensive. Excluding Greeks, the port is annually visited by from 550 to 600 foreign ships. Ubicini reckons the value of the imports of English and Swiss cottons at above 14,000,000 fr.: the other leading articles of import are English and German woollens, French silks, and colonial products.

SNUFF (Ger. *Schnupftaback*; Fr. *Tabac en poudre*; It. *Tabacco da naso*; Sp. *Tabáco de polvo*; Rus. *Nosowoi tabak*), a powder in very general use as an errhine. Tobacco is the usual basis of snuff; but small quantities of other articles are frequently added to it, to vary its pungency, flavour, scent, &c. Though substantially the same, the kinds and names of snuff are infinite, and are perpetually changing. There are, however, 3 principal sorts: the first, granulated; the second, an impalpable powder; and the third, the bran or coarse part remaining after sifting the second sort. Unless taken in excess, no bad consequences result from its use.

Dealers in tobacco and snuff are obliged to take out a licence, renewable annually, which costs 5*s.* 3*d.* They are also obliged to enter their premises, and have their names written in large legible characters over their door, or on some conspicuous part of their house, under a penalty of 50*l.* The dyeing of snuff with ochre, amber, or any other colouring matter except water tinged with colour, is prohibited under a penalty of 100*l.*; and its intermixture with fustic, yellow, ebony, touchwood, sand, dirt, leaves, &c. is prohibited under a penalty of 100*l.* and the forfeiture of the article.—(1 & 2 *Geo.* 4. c. 109.) If snuff be found to contain 4 per cent. of any substance, not being tobacco, and other than water only, or water tinged with colour, or flavoured only, such snuff shall be deemed adulterated, and shall be forfeited, and the parties subjected to a penalty of 100*l.* over and above all other penalties and forfeitures — (*Ib.*) No quantity of snuff weighing above 2 lbs. shall be removed by land or water without a permit.—(29 *Geo.* 3. c. 68.) (See Tobacco.)

SNUFF-BOXES are made of every variety of pattern, and of an endless variety of materials. We only mention them here for the purpose of giving the following details, not elsewhere to be met with, with respect to the manufacture of Laurencekirk or Ayrshire boxes. These are made of wood, admirably jointed, painted, and varnished.

These beautiful boxes were first manufactured at the village of Laurencekirk, in Kincardineshire, about 60 years since. The original inventor was a cripple hardly possessed of the power of locomotion. Instead of curtains, his bed (rather a curious workshop) was surrounded with benches and receptacles for tools, in the contrivance and use of which he discovered the utmost ingenuity. Instead of taking out a patent, the inventor confided his secret to a joiner in the same village, who in a few years amassed considerable property; while the other died, as he had lived, in the greatest poverty. The great difficulty of the manufacture lies in the formation of the hinge, which, in a genuine box, is so delicately made as hardly to be visible. Peculiar, or, as they are called, secret tools, are required in its formation; and though greatly improved by time and experience, the mystery attached to their preparation is still so studiously kept up, that the workmen employed in one shop are debarred having any communication with those employed in another.

About the beginning of this century, an ingenious individual belonging to the village of Cumnock, in Ayrshire, of the name of Crawford, having seen one of the Laurencekirk snuff-boxes, succeeded, after various attempts, by the assistance of a watchmaker of the same village, who made the tools, in producing a similar box; and by his success greatly enriched his native parish and province. Unfortunately, however, he did not improve his own fortune by his ingenuity; and died early in 1844 in very poor circumstances. For a while, the Laurencekirk boxes were most in demand; but Crawford and his neighbours in Cumnock not only copied the art, but so improved and perfected it, that in a few years for every box made in the north there were, probably, 20 made in the south. In 1826, the Cumnock trade was divided among 8 master manufacturers, who employed considerably more than 100 persons. But we are sorry to say that it has greatly declined in the interval; and that at present it does not employ more than 5 per cent. of that number. Mauchline is now the principal seat of the manufacture, and there about 213 hands are at present (1853) engaged in it and in the manufacture of work-boxes, tea-boxes, and other fancy wood work, principally the latter. About 1664 doz. snuff-boxes are annually produced, of which about 75 per cent. are exported. The popularity of the boxes has of late years declined in Britain (they never had any sale in Ireland); but, on the other hand, the taste for them has gained ground in several parts of the continent and in America, and the demand for them is brisk and gradually increasing. The manufacture is also carried on, though to a very limited extent, at Auchinleck, and one or two other places. Plane is the wood in common use, and the cost of the wood in an ordinary sized box does not exceed 1*d.*; the paints and varnish are rated at 2*d.*; and though something is lost by selecting timber of the finest colour, the whole expense of the raw material falls considerably short of ½ per cent. on the return it yields, which consists almost wholly of the wages of labour.

The snuff-box manufacture, like most other departments of industry, has been greatly facilitated by the division of labour; and in all workshops of any size 3 classes of persons are employed, — box-makers, painters, and checkers or polishers; the wages of which may at present amount, the 1st class from 16*s.* to 20*s.* per week; the 2d from 18*s.* to 27*s.*, and the 3d from 10*s.* to 14*s.* per do. When Crawford first commenced business, he obtained almost any price he chose to ask; and many instances occurred, in which ordinary snuff-boxes sold at 2*l.* 12*s.* 6*d.*, and ladies' work-boxes at 25*l.* But as the trade increased, it became necessary to employ apprentices, who first became journeymen, and then masters; and such have been the effects of improvement and competition, that articles such as those specified above may be obtained at the respective prices of *two* and *twenty-five shillings*; while common boxes, which, in 1837, sold for 18*s.* a dozen, might, in 1850, be bought for 7*s.*! By means of the *Pentagraph*, which is much employed, the largest engravings are reduced to the size most convenient to the workman, without injury to the prints; so that a snuff-box manufacturer, like a Dunfermline weaver, can work to order by exhibiting on wood his employer's coat of arms, or any object he may fancy within the range of the pictorial art. Some of the painters display considerable talent, and, when they put forth their strength, produce boxlids worth being preserved as pictures. At first, nearly the whole subjects chosen as ornaments were taken from Burns's poems; and there can be no doubt that the "Cotter's Saturday Night," "Tam O'Shanter," "Willie brewed a peck o'maut," &c. &c. have penetrated in this form into every quarter of the habitable globe. Now, however, the artists take a wider range; the studios of Wilkie, Landseer, &c. have been laid under contribution; landscapes are as often met with as figures; and there is scarcely a celebrated scene in the county that is not pictured forth more or less perfectly on the lid of an Ayrshire snuff-box. Some very wretched imitations of Ayrshire boxes have been produced in different parts of England: but they can deceive no one who ever saw a genuine box. The hinge, as well as the finishing, is clumsy in the extreme.

*** The article on this curious manufacture in our former editi n was written by our esteemed friend, the late John M'Diarmid, Esq., editor of the *Dumfries Courier*; but the business has materially changed during the last 10 years. The statements in the present article have been derived from Mauchline and other seats of the manufacture.

SOAP (Ger. *Seife*; Fr. *Savon*; It. *Sapone*; Sp. *Jabon*; Rus. *Mülo*; Lat. *Sapo*). The soap met with in commerce is generally divided into 2 sorts, *hard* and *soft*: the former is made of soda and tallow or oil, and the latter of potash and similar oily matters. Soap made of tallow and soda has a whitish colour, and is, therefore, sometimes denominated *white* soap: but it is usual for soap makers, in order to lower the price of the article, to mix a considerable portion of rosin with the tallow; this mixture forms the common *yellow* soap of this country. Soap made of tallow, &c. and potash does not assume a solid form; its consistence is never greater than that of hog's lard. The properties of soft soap as a detergent do not differ materially from those of hard soap, but it is not nearly so convenient to use. The alkali employed by the ancient Gauls and Germans in the formation of soap was potash; hence we see why it was described by the Romans as an unguent. The oil employed for making soft soap in this country is whale oil. A little tallow is also added, which, by a peculiar management, is dispersed through the soap in fine white spots. The soap made in countries which produce olive oil, as the south of France, Italy, and Spain, is preferable to the soap of this country, which is usually manufactured from grease, tallow, &c. — (*Thomson's Chemistry.*)

The use of soap as a detergent is well known: it may, in fact, be considered as a necessary of life. Its consumption in most civilised countries is immense. Pliny informs us, that soap was first invented by the Gauls; that it was composed of tallow and ashes; and that the German soap was reckoned the best. — (Lib. xviii. c. 51.)

Down to 1833, a duty was charged on hard soap, which is by far the most extensively used, of 3*d.* per lb., or 28*s.* per cwt., while the price of soap duty paid rarely exceeded 6*d.* per lb., or 56*s.* per cwt., so that the duty was fully 100 per cent.! But besides this high duty, the substances of which soap is made, viz. tallow, barilla, and turpentine, or resin, were respectively charged with duties of 3*s.* 4*d.*, 2*s.*, and 4*s.* 4*d.* a cwt.; and taking these indirect taxes into account, it may be truly stated that soap was taxed from 120 to 130 per cent. *ad valorem!* The imposition of so exorbitant a duty on an article indispensable to the prosecution of many branches of manufacture, and to the comfort and cleanliness of all orders of persons, was in the last degree inexpedient. During the 5 years ending with 1832, the consumption of duty-paid soap was nearly stationary; though there can be little doubt, from the increase of manufactures and population during that period, that it would have been very considerably extended, but for the increase of smuggling. This practice was facilitated by the total exemption which Ireland enjoyed from this duty; for it not unfrequently happened that the soap made in this country, and sent to Ireland under a drawback, was again clandestinely introduced into Great Britain. It is, perhaps, needless to say that nothing but the effectual reduction of the duty could put a stop to the smuggling and fraud that had been so generally practised. So long as the profit to be made by breaking the law was so high as 120 or 130 per cent., so long was it sure to be broken, despite the multiplication of penalties and the utmost activity and vigilance of the officers. But the duty having been reduced 50 per cent. in 1833, the temptation to

smuggle was materially diminished. And the increased consumption which followed the reduction of duties hindered the revenue from declining more than ¼th part, or 25 per cent. Hence the advantages resulting from the diminished temptation to smuggling and fraud, and the influence of the reduced price of the article, in facilitating manufacturing industry, and in promoting habits of cleanliness, were obtained without any very considerable sacrifice.

In the last edition of this work we took leave to observe that "the entire repeal of the soap duty would be a popular measure; but, seeing that a large amount of revenue must be raised, and that those taxes only are productive which affect all classes of the community, we should not be disposed to recommend such a measure. It is not the tax itself, but the oppressive extent to which it was carried, that made it objectionable. Instead of proposing its repeal, we think it should be extended to Ireland. The exemption of one part of the empire from a duty of this sort imposed on another part, is contrary to all principle, and is fraught with pernicious results. It will be impossible to get rid of smuggling so long as this unjust distinction is suffered to exist. Were the duty extended to Ireland, the necessity for granting drawbacks on the soap exported to it, and of laying countervailing duties on that imported from it, would, of course, fall to the ground. And we feel pretty confident that, though a still farther deduction were made from the rate of duty, its productiveness would not, under such circumstances, be impaired even in England."

Government, however, not feeling disposed to support an unpopular, and, in some respects an objectionable tax, consented in the course of the present year (1853) to its repeal.

The following table is interesting, inasmuch as it shows the extent of the manufacture during the last year but one that it was subject to a duty, and as it will be an authentic standard with which to compare its future progress.

The total nett revenue derived from soap amounted in 1852 to 1,126,046*l.* In 1851, 13,487,270 lbs. soap were exported, the drawback on which amounted to 88,468*l.*

Drawbacks and allowances were also made during the same year of 104,420*l.* to the woollen, silk, flax, and cotton manufacturers on account of the soap used by them. And the trouble to the manufacturers arising from this system, with the opportunities which it afforded for the commission of fraud, constituted the principal objections to the duty.

The declared value of the soap and candles exported in 1852 amounted to 315,649*l.*

SODA. See Alkali.

SOUTH SEA DUTIES. The act of the 9 Ann. c. 21., establishing the South Sea Company, conveyed to them the exclusive privilege of trading to the Pacific Ocean, and along the east coast of America, from the Orinoco to Cape Horn.

This privilege was taken away by the 47 Geo. 3. c. 23.; and in order to raise a guarantee fund for the indemnification of the Company, a duty of 2 per cent. *ad valorem* was imposed by the 55 Geo. 3. c. 57. on all goods (with the exception of those from Brazil and Dutch Surinam*; and with the exception of blubber, oil, &c. of whales, or fish caught by the crews of British or Irish ships) imported from within the aforesaid limits. A duty of 1*s.* 6*d.* per ton was also imposed on all vessels (except in ballast or importing the produce of the fishery of British subjects) entering inwards or clearing outwards from or to places within the said limits. The duties are to cease when the guarantee fund is completed.

SOY, a species of sauce prepared in China and Japan from a small bean, the produce of the *Dolichos soja*. It is eaten with fish and other articles. It should be chosen of a good flavour, not too salt nor too sweet, of a good thick consistence, a brown colour, and clear; when shaken in a glass, it should leave a coat on the surface, of a bright yellowish brown colour; if it do not, it is of an inferior kind, and should be rejected. Japan soy is deemed superior to the Chinese, It is worth, in bond, from 6*s.* to 7*s.* a gallon. It is believed to be extensively counterfeited. — (*Milburn's Orient. Com.*)

SPELTER, a name frequently given to Zinc; which see.

SPERMACETI (Ger. *Wallrath*; Fr. *Blanc de Baleine, Sperme de Baleine*; It. *Spermaceti*; Sp. *Esperma de Ballena*; Rus. *Spermazet*), a product obtained from the brain of the *physeter macrocephalus*, a species of whale inhabiting the Southern Ocean. The brain being dug out from the cavity of the head, the oil is separated from it by dripping. The residue is crude spermaceti, of which an ordinary sized whale will yield 12 barrels. After being brought to England, it is purified. It then concretes into a white, crystallised, brittle, semitransparent, unctuous substance, nearly inodorous and insipid. On being cut into small pieces it assumes a flaky aspect. It is very heavy; its specific gravity being 0·433. It is used in the manufacture of candles, in medicine, &c.

SPICES (Ger. *Spezereyen*; Du. *Speceryen*; Fr. *Epiceries, Epices*; It. *Spezj, Spezierie*; Sp. *Especias, Especerias*; Port. *Especiaria*; Rus. *Pränüe korenja*). Under this denomination are included all those vegetable productions which are fragrant to the smell and pungent to the palate; such as cloves, ginger, nutmegs, allspice, &c. These will be found under their proper heads.

SPIRIT OF WINE. See Alcohol.

SPIRITS. All inflammable liquors obtained by distillation, as brandy, rum, geneva, whisky, gin, &c., are comprised under this designation. The term *British spirits* is applied indiscriminately to the various sorts of spirits manufactured in Great Britain and Ireland. Of these, gin and whisky are by far the most important.

The manufacture of spirits are placed under the *surveillance* of the excise, and a very large revenue is obtained from it. The act 6 Geo. 4. c. 80. lays down the regulations to be followed by the distillers in the manufacture, and by the officers in charging the duties. This act is of great length, having no fewer than 151 clauses; it is, besides, exceedingly complicated, and the penalties in it amount to many thousand pounds. It would, therefore, be to no purpose to attempt giving any abstract of it in this place. Every one carrying on the business of distillation must have the act in his possession, and be practically acquainted with its operation.

1. *Spirit Duties. Consumption of British Spirits in Great Britain and Ireland.*—There are, perhaps, no better subjects for taxation than spirituous and fermented liquors. They are essentially luxuries; and while moderate duties on them are, in consequence of their being very generally used, exceedingly productive, the increase of price which they occasion has a tendency to lessen their consumption by the poor, to whom, when taken in excess, they are exceedingly pernicious. Few governments, however, have been satisfied with imposing moderate duties on spirits; but, partly in the view of increasing the revenue, and partly in the view of placing them beyond the reach of the lower classes, have almost invariably loaded them with such oppressively high duties as have entirely defeated both objects. The imposition of such duties does not take away the appetite for spirits; and as no vigilance of the officers or severity of the laws has been found sufficient to secure a monopoly of the market to the legal distillers, the real effect of the high duties has been to throw the supply of a large proportion of the demand into the hands of the illicit distiller, and to superadd the atrocities of the smuggler to the idleness and dissipation of the drunkard.

During the latter part of the reign of George I., and the earlier part of that of George II., gin-drinking was exceedingly prevalent; and the cheapness of ardent spirits, and the multiplication of public houses, were denounced from the pulpit, and in

* The provinces of the Rio de la Plata have since been added. — (*Treas. Order*, 12th of March, 1828.)

the presentments of grand juries, as pregnant with the most destructive consequences to the health and morals of the community. At length, ministers determined to make a vigorous effort to put a stop to the further use of spirituous liquors, except as a cordial or medicine. For this purpose, an act was passed in 1736, the history and effects of which deserve to be studied by all who are clamorous for an increase of the duties on spirits. Its preamble is to this effect; — "Whereas the drinking of spirituous liquors, or strong water, is become very common, especially among people of lower and inferior rank, the constant and excessive use of which tends greatly to the destruction of their health, rendering them unfit for useful labour and business, debauching their morals, and inciting them to perpetrate all vices; and the ill consequences of the excessive use of such liquors are not confined to the present generation, but extend to future ages, and tend to the destruction and ruin of this kingdom." The enactments were such as might be expected to follow a preamble of this sort. They were not intended to repress the vice of gin-drinking, but to root it out altogether. To accomplish this, a duty of *twenty shillings* a gallon was laid on spirits, exclusive of a heavy licence duty on retailers. Extraordinary encouragements were at the same time held out to informers, and a fine of 100*l.* was ordered to be rigorously exacted from those who, were it even through inadvertency, should vend the smallest quantity of spirits which had not paid the full duty. Here was an act which might, one should think, have satisfied the bitterest enemy of gin. But instead of the anticipated effects, it produced those directly opposite. The respectable dealers withdrew from a trade proscribed by the legislature; so that the spirit business fell almost entirely into the hands of the lowest and most profligate characters, who, as they had nothing to lose, were not deterred by penalties from breaking through all its provisions. The populace having in this, as in all similar cases, espoused the cause of the smugglers and unlicensed dealers, the officers of the revenue were openly assaulted in the streets of London and other great towns; informers were hunted down like wild beasts; and drunkenness, disorders, and crimes increased with a frightful rapidity. "Within 2 years of the passing of the act," says Tindal, "it had become *odious and contemptible*, and policy as well as humanity forced the commissioners of excise to mitigate its penalties." — (*Continuation of Rapin*, vol. viii. p. 358. ed. 1759.) The same historian mentions (vol. viii. p. 390.), that during the 2 years in question, no fewer than 12,000 persons were convicted of offences connected with the sale of spirits. But no exertion on the part of the revenue officers and magistrates could stem the torrent of smuggling. According to a statement made by the Earl of Cholmondeley, in the House of Lords — (*Timberland's Debates in the House of Lords*, vol. viii. p. 388.), it appears, that at the very moment when the sale of spirits was declared to be illegal, and every possible exertion made to suppress it, upwards of SEVEN MILLIONS of gallons were annually consumed in London, and other parts immediately adjacent! Under such circumstances, government had but one course to follow — to give up the unequal struggle. In 1742, the high prohibitory duties were accordingly repealed, and such moderate duties imposed, as were calculated to increase the revenue, by increasing the consumption of legally distilled spirits. The bill for this purpose was vehemently opposed in the House of Lords by most of the bishops, and many other peers, who exhausted all their rhetoric in depicting the mischievous consequences that would result from a toleration of the practice of gin-drinking. To these declamations it was unanswerably replied, that whatever the evils of the practice might be, it was impossible to repress them by prohibitory enactments; and that the attempts to do so had been productive of far more mischief than had ever resulted, or could be expected to result, from the greatest abuse of spirits. The consequences of the change were highly beneficial. An instant stop was put to smuggling; and if the vice of drunkenness was not materially diminished, it has never been stated that it was increased.

But it is unnecessary to go back to the reign of George II. for proofs of the impotency of high duties to take away the taste for such an article, or to lessen its consumption. The occurrences that took place in later reigns, though they would seem to be already forgotten, are equally decisive as to this question.

Duties in Ireland. — Perhaps no country has suffered more from the excessive height to which duties on spirits have been carried than in Ireland. If heavy taxes, enforced by severe fiscal regulations, could make a people sober and industrious, the Irish would be the most so of any on the face of the earth. In order to make the possessors of property join heartily in suppressing illicit distillation, the novel expedient was here resorted to, of imposing a heavy fine on every parish, town land, manor land, or lordship in which an unlicensed still was found; while the unfortunate wretches found working it were subjected to *transportation for seven years*. But instead of putting down illicit distillation, these unheard-of severities rendered it universal, and filled the

country with bloodshed, and even rebellion. It is stated by the Rev. Mr. Chichester, in his valuable pamphlet on the *Irish Distillery Laws*, published in 1818, that "the Irish system seemed to have been formed in order to perpetuate smuggling and anarchy. It has culled the evils of both savage and civilised life, and rejected all the advantages which they contain. The calamities of civilised warfare are, in general, inferior to those produced by the Irish distillery laws; and I doubt whether any nation of modern Europe, which is not in a state of actual revolution, can furnish instances of legal cruelty commensurate to those which I have represented."—(Pp. 92—107.)

These statements are borne out to the fullest extent by the official details in the *Reports of the Revenue Commissioners*. In 1811, say the commissioners (*Fifth Report*, p. 19.), when the duty on spirits was 2*s.* 6*d.* a gallon, duty was paid in Ireland on 6,500,361 gallons (Irish measure); whereas, in 1822, when the duty was 5*s.* 6*d.*, only 2,910,483 gallons were brought to the charge. The commissioners estimate that the annual consumption of spirits in Ireland was at this very period not less than TEN MILLIONS of gallons; and, as scarcely *three* millions paid duty, it followed that *seven* millions were illegally supplied; and "taking *one* million of gallons as the quantity fraudulently furnished for consumption by the licensed distillers, the produce of the unlicensed stills may be estimated at *six millions of gallons*."—(*Ib.* p. 8.) Now, it is material to keep in mind that this vast amount of smuggling was carried on in the teeth of the above barbarous statutes, and in despite of the utmost exertions of the police and military to prevent it; the only result being the exasperation of the populace, and the perpetration of revolting atrocities both by them and the military. "In Ireland," say the commissioners, "it will appear, from the evidence annexed to this Report, that parts of the country have been absolutely disorganised, and placed in opposition not only to the civil authority, but to the military force of the government. The profits to be obtained from the evasion of the law have been such as to encourage numerous individuals to persevere in these desperate pursuits, notwithstanding the risk of property and life with which they have been attended."

To put an end to such evils, the commissioners recommended that the duty on spirits should be reduced from 5*s.* 6*d.* to 2*s.* the wine gallon (2*s.* 4*d.* the Imperial gallon), and government wisely consented to act upon this recommendation. In 1823, the duties were accordingly reduced; and the annexed official account will show what has been the result of this measure: (see p. 1225.)

It may appear, on a superficial view of this Table, as if the consumption of spirits in Ireland had been nearly trebled in consequence of the reduction of the duty in 1823; but, in point of fact, it was not in any degree increased. The reduction of the duties substituted legal for illicit distillation, and freed the country from the perjuries and other atrocities that grew out of the previous system; but it would be wholly erroneous to say that it increased drunkenness. We have already seen that the commissioners, who had the best means of obtaining accurate information, estimated the consumption of spirits in Ireland, in 1823, at TEN millions of gallons; and when greatest, in 1838, 15 years after, the consumption was only 12,296,342 gallons. No doubt, therefore, the measure deserves to be considered as having been in every point of view most successful. It will be seen that the increase of duty from 2*s.* 10*d.* to 3*s.* 4*d.* in 1830, perceptibly diminished the quantity of spirits brought to the charge; and as it was found to give a considerable stimulus to illicit distillation, which had previously been nearly extinct, the duty was reduced to 2*s.* 4*d.* in 1835. The extraordinary decrease in the consumption of spirits after 1839, though in some degree, perhaps, ascribable to the addition of 4*d.* a gallon made to the duty in 1840, was no doubt principally owing to the exertions of Father Matthew, and the spread of temperance societies; and notwithstanding the loss of revenue it occasioned, the change was certainly of great public advantage; and provided it had been maintained, it is not easy to suppose that anything should have occurred better fitted to improve the physical and moral condition of the people. The addition of 1*s.* a gallon made to the duty in 1842 was repealed in 1844; for while it gave a stimulus to clandestine distillation, it was pretty obvious it would not have added anything to the revenue, or given any additional impetus to the temperance movement. It remains to be seen what will be the effect of the late additions to the duty.

Duties in Scotland.—The experience of Scotland is hardly less decisive as to this question. The exorbitancy of the duties produced nearly the same effects there as in Ireland. Mr. John Hay Forbes, sheriff-depute of Perthshire, and afterwards a Lord of Session, stated in evidence before the commissioners, that, according to the best information he could obtain, the quantity of illegally distilled spirits annually produced in the Highlands could not amount to less than TWO *millions of gallons*. In corroboration of this, he stated that, in 1821, only 298,138 gallons were brought to the charge in the Highlands; and of these, 254,000 gallons were permitted to the

Lowlands, leaving only 44,000 gallons for the consumption of the whole country; — a supply which. we are well assured, would hardly be sufficient for the demand of two moderately populous parishes. In a letter of Captain Munro of Teaninich to the commissioners, it is stated that, "at Tain, where there are upwards of 23 licensed public houses, *not one gallon had been permitted from the legal distilleries for upwards of twelve months*," though a small quantity of smuggled whisky had been purchased at the excise sales, to give a colour of legality to the trade. The same gentlemen thus expresses himself in another part of his letter: — "The moral effects of this baneful trade of smuggling on the lower classes is most conspicuous, and increasing in an alarming degree, as evidenced by the multiplicity of crimes, and by a degree of insubordination formerly little known in this part of the country. In several districts, such as Strathconon, Strathcarron, &c., the excise officers are now often deforced, and dare not attempt to do their duty; and smuggled whisky is often carried to market by smugglers escorted by armed men, in defiance of the laws. In short, the Irish system is making progress in the Highlands of Scotland."

To arrest the progress of demoralisation, government, pursuant to the judicious advice of the commissioners, reduced the duties on Scotch to the same level as those on Irish whisky; and the consequences were equally salutary. The opposite official statement sets the influence of the reduction of the duty in 1823 in the most striking point of view, the consumption of duty-paid spirits having more than doubled in the course of two years, at the same time that illicit distillation was all but suppressed. But we much doubt whether the existing duties (1859) be not a great deal too high. They are now, it is true, more easily collected than formerly, and spirit drinking is, no doubt, much too prevalent in Scotland. But the latter will not be lessened by any increase of duty that gives a stimulus to smuggling.

Duties in England.— Previously to the reduction of the duty on Irish and Scotch spirits, the duty on English spirits had been as high as 11*s.* 8*d.* a gallon. This high duty, and the restrictions under which the trade was placed, were productive of the worst effects. They went far to enable the distillers to fix the price of spirits, "and consequently" (we quote the words of the commissioners of excise inquiry) "to raise it much beyond that which was sufficient to repay, with a profit, the cost of the manufacture and the duty advanced to the crown." And, in proof of this, the commissioners mention, that in November, 1823. "when corn spirits might be purchased in Scotland for about 2*s.* 3*d.* a gallon, raw spirits could not be purchased in England for less than 4*s.* 6*d.* ready money, and 5*s.* 9*d.* credit, omitting, in both cases, the duty." In consequence of this state of things, the adulteration of spirits was carried on to a great extent in England; and the large profits made by the smuggler occasioned clandestine importation in considerable quantities from Scotland and Ireland. To obviate these inconveniences, and at the same time to neutralise the powerful additional stimulus that the reduction of the duties in Scotland and Ireland would have given to smuggling, had the duties in England been continued at their former amount, the latter were reduced, in 1826, to 7*s.* a gallon, facilities being at the same time given to the importation of spirits from the other parts of the empire. Many complaints have been made of the influence of this measure in increasing drunkenness; but nothing can be imagined more completely destitute of foundation. The commissioners estimated the consumption of British spirits in England and Wales, in 1823, at 5,000,000 gallons (*Supp. to Fifth Report*, p. 8.); and it appears from the opposite account, that it amounted, for the year ending 5th of January, 1844, to 7,724,051 gallons; producing 3,025,245*l.* of revenue; so that, making allowance for the increase of population since 1823, and for the check given to adulteration and smuggling, and considering, also, that the consumption of foreign spirits was not greater in 1843 than in 1823, it may be safely affirmed that the practice of spirit-drinking had not increased in England during the 20 years ending with 1844; nor has it since increased. No doubt, however, it is still a great deal too prevalent, and large sums of money are wasted by the poor on gin, which had far better be expended on other things. But how much soever we may deplore the prevalence of gin-drinking, we may be assured that the evil is not one that can be cured, or even mitigated, by increasing the existing duties on spirits. Such increase would substitute illegitimate for legitimate channels of supply; it would injure the public revenue; and diffuse among the populace the idle, disorderly, and predatory habits that mark the character of the smuggler; and it would do all this without lessening in any degree the vice of drunkenness.

Spirit Drinking in Scotland.—The extraordinary prevalence of spirit drinking in Scotland, and the many abuses to which it gives rise, have occasioned a great deal of discussion, and led to sundry efforts for its diminution. But, speaking generally, we doubt whether these have been bottomed on sound principles. They all, or mostly all, have too much of a puritanical spirit about them; and expect to bring that reformation about by dint of police regulations, that would be more likely to be introduced and promoted by a less officious system.

An act was passed in 1853, the 16 & 17 Vict. c. 67., (applicable to Scotland only,) which, among other things, gave the justices of the peace increased power over the licensing of public houses, and added considerably to the duties on licences. Much discussion has taken place with respect to the real influence of this very questionable measure; and there would seem to be no little exaggeration in the statements both of its opponents and defenders. It has certainly reduced, though in a very arbitrary manner, the number of licensed taverns; and if the facilities for getting whisky or aught else be diminished, the chances are ten to one that its consumption will also be diminished. But it is alleged that the diminution in the number of public houses in Scotland is not real but apparent only; and that those that have been legally shut up have been balanced or more by the number of those that have been surreptitiously opened, while the latter are at the same time of a comparatively worthless description. And

the convictions that have taken place of parties for selling spirits without licences, show that this statement is in the main well-founded; and that in endeavouring to put down one form of abuse, we seem to be introducing another and a much more dangerous one in its stead.

The better, as well as the more constitutional plan, would be to make an end of the system of interference. Why should not A., or B., or C. be entitled to open a house for the sale of spirituous liquors, and be permitted to keep it open so long as he pays the licence duty, and conducts his establishment in an orderly and proper manner? To weaken the taste for liquor let all sorts of cheap, interesting, and innocent amusements be open to the public. To prohibit the sale of spirits on Sundays, and at the same time to shut up museums, parks, and public places, and to prevent as far as possible (as is done at Glasgow) all travelling by sea or land, is a contradictory as well as an oppressive policy; and wherever it is carried to the greatest extent, there the population is the most brutalised and debased.

It is not easy, since the equalisation of the duties, to obtain any accurate information in regard to the consumption of spirits in any one of the great divisions of the empire. But though great in Scotland, it is not so very great as is commonly supposed. Spirits may be sent from one part of the U. K. to another under bond, under permit, or under certificate from the dealer's stock. In the first case the duty is not paid till the spirits are taken for consumption; whereas in the last two cases it is paid before the spirits are removed. And hence, unless we knew the quantity of spirits removed from and brought into Scotland under permits and certificates, the fact of so many gallons having been charged in it with the consumption duty, would not enable us to specify what the consumption really amounted to. Thus, in 1858, duty was paid in Scotland on 6,836,037 gallons; but the commissioners of inland revenue, after making the previously mentioned allowances, estimate the consumption at only 5,301,000 gallons. This amount being, of course, exclusive of foreign spirits, and of all such British spirits as may be illegally brought into consumption.

Equalisation of the Duties on Spirits. — It would require very cogent reasons to vindicate the policy of imposing different duties on the same article in the different divisions of the U. K. And it was supposed that in the case of the duties on spirits, the greater facilities for illegal distillation in Scotland and Ireland afforded a valid plea for the duties being less in them than in England. But though this may have been the case formerly, the more perfect civilisation of both countries has tended, in this respect, to assimilate them more and more to England. And there cannot, as we think, be a doubt of the expediency of the recent equalisation of the duties. But it does not, therefore, follow that 8*s.* a gallon is a proper sum at which to fix the general duty. We apprehend that it will be found to be too high; and that, while a lower duty would yield as large, or perhaps a larger revenue, it would do this without stimulating drunkenness, by checking smuggling and adulteration.

Trade in Spirits. — All persons whatsoever, not being licensed distillers, rectifiers, or compounders, having more than *twenty* gallons of spirits in their possession, shall be deemed dealers in spirits, and subject to the survey of the officers of excise, and to all the regulations, penalties, &c. to which such persons are liable.—(6 Geo. 4. c. 80. sect. 122.)

Dealers in British spirits are prohibited selling or having in their possession any plain British spirits, except spirits of wine, of any strength exceeding the strength *of 25 per cent.* above hydrometer, or of any strength below 17 per cent. under hydrometer proof, or any compounded spirits, except shrub, of any greater strength than 17 per cent., under hydrometer, under pain of forfeiting all such spirits, with the casks, &c. — Sect. 124.

Dealers in foreign and British spirits are to keep them separate, in cellars, vaults, or other places specially entered, for that purpose, under a heavy penalty; and any person mixing, selling, or sending out any British spirits mixed with foreign or colonial spirits, shall forfeit 100*l.* for every such offence. — Sect. 126.

No retailer of spirits, or any other person licensed or unlicensed, shall sell or send out from his stock or custody any quantity of spirits exceeding 1 gallon, unless the same be accompanied by a true and lawful permit, under pain of forfeiting 200*l.*; and any rectifier, compounder, or dealer in spirits, receiving the same into their stock, or allowing any one else to receive it, and any carrier, boatman, or other person knowingly carrying the same, shall forfeit the sum of 200*l.*, with the boat, horse, cart, &c. used in the carriage.—Sect. 116.

No licence to be granted for retailing spirits *within* gaols, houses of correction, or workhouses for parish poor; nor are spirits to be used there, except medicinally prescribed by a regular physician, surgeon, or apothecary. Penalty for a first offence of this sort committed by gaolers, &c. 100*l.*; a second offence to be deemed a forfeiture of their office.—Sect. 134.

Persons *hawking spirits* to forfeit them and 100*l.*; and if the penalty be not immediately paid, they are to be committed to the house of correction for 3 months, or until paid. — (Sect. 138.) Any person is authorised to detain a hawker of spirits, and give notice to a peace officer, who is to carry the offender before a justice.—Sect. 140.

Any officer of excise, or other person employed in the excise, taking any sum of money or other reward from, or entering into any collusive agreement with, any person, to act contrary to his duty, to forfeit 500*l.*, and be incapacitated; and any person offering such reward or proposing such agreement, to forfeit 500*l.*— Sect. 145.

For the regulations as to the importation, &c. of foreign spirits, see BRANDY, GENEVA, and RUM.

SPONGE (Ger. *Schwamm*; Fr. *Eponge*; It. *Spugna*; Sp. *Esponja*), a soft, light, very porous, and compressible substance, readily imbibing water, and as readily giving it out again.

It is found adhering to rocks, particularly in the Mediterranean Sea, about the islands of the Archipelago. It was formerly supposed to be a vegetable production, but is now classed among the zoöphytes; and analysed, it yields the same principles as animal substances in general. The inhabitants in several of the Greek islands have been trained from their infancy to dive for sponges. They adhere firmly to the bottom, and are not detached without a good deal of trouble. The extraordinary clearness of the water facilitates the operations of the divers. Smyrna is the great market for sponge. The price varies from 6 to 16 piastres per oke for ordinary and dirty, and from 80 to 100 piastres per oke for fine and picked specimens. Sponge is also fished for in the Red Sea. (*Ure's Dictionary*; *Savary's Letters on Greece*, Eng. ed. p. 109.; and *private communications*.)

About 20 miles S. E. from Napoli di Romania, (Nauplia), in the gulph of that name, is the small town of Cranidi, the inhabitants of which are the principal sponge-fishers of the Archipelago and Levant. The fishery is carried on partly by spearing, and partly by diving; the latter securing the sponge free from injury, which is not the case with the former. The Cranidiots are most expert divers, and anecdotes approaching to the marvellous are told of their feats. After the sponge is fished up, when perfectly free from sand, and dry, it is so very light that large pieces of it are moved with the slightest breath of air. It is customary, however, to impregnate it with sand. This is done by stringing the sponges together, and laying them on the sand to allow the ripple of the sea to slush them with the finest particles. They are then placed in heaps under piles of stones which press them closely together, so that they become when dry hard and flat, and have to be beaten and sifted. But though this be done, and though they are sometimes farther washed and sifted, they will, though apparently quite clean, weigh three or four times their original weight! It is, perhaps, needless to add that they are always sold by weight. (We are indebted for these interesting details to the excellent art. on Greece, by Mr. Consul Green, in the *Supp. to the Geographical Dictionary*.)

Sponge is used in surgery, and for a variety of purposes in the arts. It was formerly charged with a duty of 6*d.* per lb., which was repealed in 1845. In 1857, the imports and exports of sponge were respectively 490,008 and 172,173 lbs.

SQUILL (Ger. *Meerzwiebel*; Fr. *Scille, Oignon marin*; It. *Scilla, Cipolla marina*; Sp. *Cebolla albarranna*), or, as it is sometimes denominated, the *Sea onion*, is a plant with a large bulbous root, which is the only part that is used.

It grows spontaneously on sandy shores in Spain and the Levant; whence we are annually supplied with the root. They should be chosen large, plump, fresh, and full of a clammy juice: some are of a reddish colour, and others white; but no difference is observed in the qualities of the two sorts. The root is very nauseous, intensely bitter, and acrimonious; much handled, it ulcerates the skin. The bulbs are brought to England preserved fresh in sand. The acrimony of the roots, on which their virtue depends, is partially destroyed by drying and long keeping, and is completely destroyed by exposure to heat above 212°. Squill is one of the most powerful and useful remedies in the materia medica. (*Lewis's Mat. Med.*; *Thomson's Dispensatory.*)

STADE, a small city of Hanover, on the Schwinge, 22 miles W. by N. of Hamburg, lat. 53° 36′ 32″ N., lon. 9° 28′ 34″ E. It has very little trade, and would be quite unworthy of notice in a work of this sort, except for the circumstance that a toll or duty, charged by the Hanoverian government on goods conveyed up the Elbe to Hamburg, whether for consumption or transit, used to be charged at the castle of Brunshausen, contiguous to this town.

All vessels bound for Hamburg had to heave-to (and those of some countries to anchor) in passing the guard-ship opposite to the castle, and send their papers, including manifests, bills of lading, cockets, &c., on shore, that the duty, which was in general about ½ per cent. *ad valorem*, might be computed from them. This being done, the ship was allowed to proceed, and the duty was paid at Hamburg. (See art. STADE, in the last edition of this work.)

On former occasions we expressed our surprise, "that an obstruction of this sort should have been tolerated for so long a period. The duties fall heavily on certain descriptions of goods; and are, at an average, decidedly higher than the duties charged in Hamburg. They are most objectionable, however, from their requiring many troublesome regulations to be complied with; the unintentional deviation from any one of which exposes the cargo to confiscation, and never fails to occasion a great deal of delay, trouble, and expense. As the principal part of the foreign trade of the Elbe is in our hands, we are, of course, principally affected by the Stade toll; and considering the source of the nuisance, it is not a little astonishing it should not have been abated long ago. The sum which the Hanoverian government derives from the duties is but trifling compared with the injury they inflict on our trade. It would, consequently, be good policy for the former to sell, and for the British government to buy, an exemption from so vexatious a duty; and few things would do more to extend our trade with Hamburg than the completion of an arrangement of this sort."

This anticipation has not, however, been realised. By an agreement effected with Hanover in 1844, the duties were reduced and placed on an improved footing; and British vessels, with those belonging to countries having reciprocity treaties with Hanover, are no longer obliged to *heave-to* in passing the guard-ship at Brunshausen, but may proceed direct to Hamburg, and pay the duties in the toll-office in that city. Still, however, this arrangement is merely an improvement of what is in its nature incurably bad. The toll on the Elbe is an outrage on all commercial nations; and instead of being modified, should be wholly repealed.

We have shown in the art. HAMBURG, to which we beg to refer, that the abolition of the Stade duty would be of the greatest consequence to that city and to all the extensive countries traversed by the Elbe. But we doubt whether considerations of this sort will be enough to procure the abolition of the toll; and if so, the better plan will be to follow the precedent set by the abolition of the Sound dues; that is, to buy up the tax by a contribution imposed on the different countries which trade with Hamburg in proportion to the number of their ships engaged in the trade.

But it is not enough that the Stade duties be abolished. All the duties imposed on the traffic carried on by the Elbe above Hamburg ought, also, to be suppressed. This great highway should be open to the free use of those who may be inclined to avail themselves of the facilities which it affords for the importation and exportation of products into and from the centre of Europe. It is quite monstrous that it should be in the power of the governments of petty states like Hanover or Mecklenburg to shut up or encumber one of the principal channels of the trade of this quarter of the world. For full details with respect to the Stade duty, see the Report of the Committee of the House of Commons on the subject, Paper No. 429, Sept. 1858.

STARCH (Ger. *Amidan*; Fr. *Amidon*; It. *Amodi, Amito*; Sp. *Amidon, Almidon*; Rus. *Kruchmal*), a substance obtained from vegetables.

It has a fine white colour, and is usually concreted in longish masses; it has scarcely any smell, and very little taste. When kept dry, it continues for a long time uninjured, though exposed to the air. It is insoluble in cold water; but combines with boiling water—forming with it a kind of jelly. It exists chiefly in the white and brittle parts of vegetables, particularly in tuberose roots, and the seeds of the gramineous plants. It may be extracted by pounding these parts, and agitating them in cold water; when the *parenchyma* or fibrous parts will first subside; and these being removed, a fine white powder diffused through the water will gradually subside, which is the starch. Or the pounded or grated substance, as the roots of potatoes, acorns, or horse chesnuts, for instance, may be put into a hair sieve, and the starch washed through with cold water, leaving the grosser matters behind. Farinaceous seeds may be ground and treated in a similar manner. Oily seeds require to have the oil expressed from them before the farina is extracted. Potato starch goes a good deal further than wheat starch—a less quantity of it sufficing to form a paste of equal thickness with water. It has a very perceptible crystallised appearance, and is apparently heavier than common starch.—(*Thomson's Chemistry*; *Ure's Dictionary.*)

Starch was charged, down to 1834, with an excise duty of 3½*d.* per lb.; but the injurious influence of the duty, the nett produce of which did not exceed 85,000*l.*, having been forcibly pointed out by the Commissioners of Revenue Inquiry, it was repealed in the course of the above year. In 1833, duty was paid on 8,070,026 lbs. starch. The manufacture has since, however, been greatly extended.

STATIONERY, a term which is not very well defined; but which is now commonly understood to designate the pens, ink, paper, wax, wafers, and other materials necessary to the writing of letters, inc., pen-knives, erasers, &c. Formerly the term had a wider signification, stationer and bookseller being held to be synonymous. (Johnson, *voce* Stationer.) And hence it is that the Stationers' Company formerly comprised, and continues to comprise, all the more eminent booksellers and publishers of the metropolis. The name has no doubt been derived from the *stationes* (stations) that were assigned in the forum at Rome to the vendors of books, which were classed among the *mercium vilissimarum!* (Ducange, vi. 715., voce *Stationarii.*)

Besides the vast quantities of stationery consumed at home, the value of the exports amounted, in 1857, to 742,372*l.*, whereof the exports to Australia made 215,993*l.*, those to the East Indies, 160,837*l.*, to the United States, 69,162*l.*, to North America, 65,523*l.*, &c.

The stationery for the British government is supplied by a peculiar department called the "Stationery Office," which has, also, the charge of the public printing.

STEAM VESSELS (REGULATION OF).

Subjoined is an abstract of the Act 14 & 15 Vict. cap. 79. (7th Aug. 1851), for the regulation of steam navigation, and the boats and lights to be carried by sea-going vessels.

Clause 1. repeals the 9 & 10 Vict. c. 100., and 11 & 12 Vic. c. 81., except as respects penalties, and the certificates of the sufficiency of steam vessels issued by the Board of Trade.

Naval Department of the Board of Trade to assist in the Execution of this Act. — The persons from time to time appointed to assist the Board of Trade in the execution of the Mercantile Marine Act of 1850, and who are herein-after referred to as the Naval Department of the Board of Trade, shall assist the board in the execution of this Act. — § 2.

Steam Vessels to be surveyed, &c. — The owner of every steam vessel constructed or intended to carry passengers (except vessels which fall within the definition of foreign-going ships in the Mercantile Marine Act, 1850, and are employed in the conveyance of the public mails or dispatches), shall cause such steam vessel to be surveyed twice at least in every year, at the times herein-after directed, by a shipwright surveyor and by an engineer surveyor appointed for the purposes of this Act by the Board of Trade, such shipwright surveyor in the case of an iron steam vessel being a person properly qualified to survey iron steam vessels, and shall obtain a declaration of the sufficiency and good condition of the hull of such steamer, and of the boats and other equipments thereof, required by this Act, and also, if the board so require, a statement of the number of passengers (whether deck passengers or other passengers) which such vessel is constructed to carry, under the hand of such shipwright surveyor, and a declaration of the sufficiency and good condition of the machinery of such steamer under the hand of such engineer surveyor, and in such declarations it shall be distinguished whether such vessel is in construction and equipments adapted for sea service as well as for river or lake service, or for river or lake service only; and when any such vessel is adapted for lake and river service only, such declaration shall state the local limits within which such vessel is in the judgment of the surveyor adapted for plying; and in the case of sea-going vessels the declaration of one of the surveyors shall contain a statement that he is satisfied that the compasses have been properly examined and adjusted; and such owner shall transmit such declarations to the lords of the said committee within 14 days after the dates thereof respectively. — § 3.

Times appointed for the Surveys. — In all cases where the same may be possible, such surveys shall be made in the months of April and of October, and such declarations shall be transmitted on or before the 30th of April and the 31st of October respectively, or if the last preceding survey of any such steam vessel were not made in either of those months, then such survey shall be made and such declaration transmitted in the course of the 30 days next before the expiration of 6 months next after the date of the certificate granted as herein-after mentioned upon the last preceding survey; but if the owner of any such steam vessel as aforesaid be unable to have the same surveyed in the month of April or of October, as the case may be, or in the course of such 30 days as aforesaid, either by reason of such vessel being absent from the U. K. during the whole of those periods respectively, or by reason of such vessel or the machinery thereof being under construction or repair, or of such vessel being laid up in dock, or for any other reason satisfactory to the Board of Trade, then the owner of such steam vessel shall have the same surveyed as aforesaid as soon thereafter as possible, and shall transmit such declarations to the said board within 14 days after the date thereof, together with a statement of the reasons which have prevented the survey of such vessel at the time before prescribed; and the owner of every such steam vessel in respect of which such declarations shall not have been transmitted at the times and in the manner herein directed shall, except in any case in which the survey of such vessel shall have been prevented as herein provided, forfeit and pay the sum of 10*s.* for every day that the sending of such declaration is delayed, and such sum shall be paid upon the issue of the certificate herein-after mentioned, together with the fee herein-after mentioned, unless the Board of Trade think fit in any case to remit such forfeiture or any part thereof. — § 4.

Board of Trade to grant Certificates, and transmit Lists, to be put up at Custom Houses. — Upon the receipt of such declarations the Board of Trade shall register the same, and, if they are satisfied that the provisions of this Act have been complied with, shall cause to be transmitted to the master or owner of the steam vessel to which such declarations refer a certificate, signed by one of the secretaries to the said board, or by some one or more of the members of the Naval Department of the Board of Trade, or the secretary to such department, that the provisions of the law with respect to the transmission of declarations in respect of such vessel have been complied with; and such certificate shall be called a "Sea-going Certificate," where, according to the declaration of the surveyor, such vessel is adapted for sea-service as well as river or lake service; and such certificate shall be called a "River Certificate" where, according to such declaration, such vessel is adapted for river or lake service only, and shall set out the local limits within which such vessel is to ply; and where any such vessel is constructed to carry passengers, and the B. of T. think fit so to do, in order to prevent the over-crowding of such vessel with passengers, they shall insert in such certificate the number of passengers, whether deck passengers or other passengers, which such vessel is constructed to carry; and the B. of T. shall from time to time transmit lists of the vessels in respect of which such certificates have been issued to the officers of customs in all ports in the U. K., who shall cause such lists to be put up in a conspicuous place in the custom house at each port. — § 5.

Board of Trade may cancel Certificates, and require fresh Declarations. — The B. of T. may revoke and cancel such certificates in any case where they have reason to believe that the declarations of the sufficiency and good condition of the hull and machinery of any vessel, or either of them, have been fraudulently or erroneously made, or that such certificate has otherwise been issued upon false or erroneous information, or where they have reason to believe that since the making of such declarations the hull or machinery of such vessel has sustained any injury, or is otherwise insufficient; and in every such case the B. of T. may, if they think fit, require the owner to have the hull or machinery of such vessel again surveyed, and to transmit a further declaration or declarations of the sufficiency and good condition thereof before re-issuing any certificate, or granting a fresh one in lieu thereof; and the B. of T. may at any time revoke any certificate, for the purpose of inserting in any certificate to be issued in lieu thereof the number of passengers which the vessel to which such certificate relates is constructed to carry. — § 6.

How long Certificates to continue in force. — No certificate bearing date on any day between the 1st April and the 15th May in any year shall be held to be in force, for the purposes of this Act, after 15th November following, and no certificate bearing date on any day between the 1st October and the 15th November following shall be held to be in force for the purposes of this Act after the 15th May following, and no certificate bearing date on any day not falling within the periods before defined shall be held to be in force after the expiration of 6 months from the date thereof, and no certificate shall be in force after notice to the owner or master of the vessel to which the same relates by the B. of T. that they have revoked the same: provided always, that if any steam vessel shall have been absent from the U. K. for

the whole of April or October in any year, or the whole of the 30 days next before the expiration of 6 months from the date of the certificate last granted in respect of such vessel, the certificate previously granted to such vessel (if not expressly cancelled or revoked) shall continue in force till the return of such vessel to the U. K., and for 21 days afterwards. — § 7.

Fees to be paid for Certificates.— The owner of every steam vessel requiring a certificate under this Act shall pay for every certificate granted by the B. of T. such sum as they shall appoint, not exceeding the sums following: — that is to say,—

Where the tonnage of such vessel does not exceed 100 tons, a sum not exceeding 2*l.*
Where such tonnage exceeds 100 tons and does not exceed 300 tons, a sum not exceeding 3*l.*
Where such tonnage exceeds 300 tons, a sum not exceeding 4*l.*

And such fees, as well as such forfeitures as herein-before mentioned, shall be paid to the B. of T., or as they may direct, and shall be applied towards defraying the expenses incurred in execution of this Act; and the B. of T. may regulate the manner in which such fees and forfeitures are to be received, and in which they are to be kept, and in which they are to be accounted for. — § 8.

Forgery of Declaration or Certificate to be a Misdemeanor. — Every person who knowingly and wilfully makes or assists in making a false or fraudulent declaration or certificate with respect to any vessel requiring a certificate under this Act, or who knowingly and wilfully forges, counterfeits, or fraudulently alters, or assists in forging, counterfeiting, or fraudulently altering, any declaration or certificate required by this Act, or any words or figures in any such declaration or certificate, or the signature thereto, shall be deemed guilty of a misdemeanor, or shall be liable, on summary conviction, to a penalty not exceeding 50*l.*, or to imprisonment, with or without hard labour, not exceeding 1 month. — § 9.

Copy of Certificate to be placed in conspicuous Part of Vessel. — The owner or master of every steam vessel shall forthwith on receipt of any such certificate as aforesaid by him or his agent from the B. of T. cause the same or a true copy thereof, in distinct and legible characters, to be put up in some conspicuous part of the vessel, so as to be visible to all persons on board the same, and shall cause it to be continued so put up so long as such certificate remains in force and such vessel is in use, and in default such owner, or if he can prove the default to have been caused by the master, such master shall for every offence be liable to a forfeiture or penalty not exceeding 10*l.* — § 10.

Vessel not to proceed on her Voyage without Certificate. — It shall not be lawful for any steam vessel (other than a mail packet as aforesaid) to proceed to sea or upon any voyage or excursion with any passengers on board the owner of which has not transmitted to the B. of T. the declarations herein required, and the owner or master of which has not received from them a certificate that the provisions of the law in that respect have been complied with as herein provided for, such certificate being a certificate applicable to the voyage or excursion on which such vessel is proceeding; and no officer of H. M. customs shall clear out any steam vessel (other than mail packet aforesaid) for sea or for any voyage or excursion, with passengers on board, or grant to the owner or master thereof any transire or other customs document necessary for the conduct thereof, unless upon the production of such certificate as aforesaid (being a certificate then in force); and if the owner or master of any steam vessel (other than mail packet as aforesaid) proceed to sea or on any voyage or excursion, with any passengers on board, without having such certificate as aforesaid, or a true copy thereof in distinct and legible characters on board, and put up in some conspicuous part of the vessel (such certificate being a certificate then in force), the owner thereof shall for such offence be liable to a penalty not exceeding 100*l.*, and the master of such vessel shall also be liable to a further penalty not exceeding 20*l.* — § 11.

Penalty on Owners, &c. for carrying more Passengers than specified in Certificate. — If in any such certificate the number of passengers which the vessel to which such certificate relates is constructed to carry is stated, it shall not be lawful to carry on board thereof any greater number of passengers, whether deck passengers or other passengers, than the numbers thereof respectively stated in such certificate; and if the owner or master or other person in charge of any such vessel receive on board thereof, or if such vessel shall at any time have on board, any greater number of passengers, whether deck passengers or other passengers, than the numbers thereof respectively specified in such certificate, the owner or the master or other person having charge thereof shall forfeit a sum not exceeding 20*l.*, and shall also forfeit 5*s.* for every passenger over and above the number so specified in the certificate as aforesaid. — § 12.

Penalty on Persons forcing their Way on board when Vessels are full. — If any person, after having been refused admission into any steam vessel by the owner or person in charge thereof, or by any person in the employ of the owner thereof, on account of such steam vessel being full, and after having had the full amount of his fare (if he has paid the same) returned or tendered to him, shall nevertheless persist in attempting to enter the same, or if any person, having got on board any steam vessel, be requested, on the like account, by the owner or person in charge thereof, or by any person in the employ of the owner, to leave such steam vessel before the same has quitted the place at which such person got on board, and shall refuse so to do after having had the full amount of his fare (if he has paid the same) returned or tendered to him, then and in either of such cases such person shall for such offence forfeit and pay to the owner of such vessel any sum not exceeding 40*s.* — § 13.

Penalty on Persons refusing to pay their Fares or to quit the Vessel. — If any person travel or attempt to travel in any steam vessel that has been duly surveyed in conformity with the provisions of this Act without having previously paid his fare, and with intent to avoid payment thereof, or if any person having paid his fare for a certain distance knowingly and wilfully proceed in any such vessel beyond such distance without previously paying the additional fare for the additional distance, and with intent to avoid payment thereof, or if any person knowingly and wilfully refuse or neglect, on arriving at the point to which he has paid his fare, to quit such vessel, every such person shall for every such offence forfeit and pay to the owner of such vessel a sum not exceeding 5*s.*, in addition to the fare payable by him. — § 14.

Penalty on refusing to give Name and Address. — Every person who, having committed any of the offences mentioned in the last two preceding sections or either of them, refuses, on application of the master of the vessel or other person in the employ of the owner thereof, to give his name and address, or who on such application gives a false name or address, shall forfeit and pay to the owner of such vessel a sum not exceeding 20*l.* — § 15.

Power for Board of Trade to appoint and remove Shipwright Surveyors, &c. — The B. of T. may from time to time appoint such number of fit and proper persons to be shipwright surveyors and engineer surveyors for the purposes of this Act, at such ports or places as they think proper, and may from time to time remove such surveyors; and may from time to time fix, alter, or vary the rates of remuneration to be received by such surveyors. — § 16.

Surveyors to make Returns of the Build, &c. of Vessels. — The said surveyors shall make such returns from time to time to the B. of T. with respect to the build, dimensions, draft, burden, rate of sailing, room for fuel, and the nature and particulars of machinery of the vessels surveyed by them, as shall be required by the said board; and every owner, master, and engineer of any such vessel shall, on demand, give to such surveyors all such information and assistance within his power as may be required by them for the purpose of such returns; and every such owner, master, and engineer who, on being applied to for that purpose, wilfully refuses or neglects to give such information or assistance, shall be liable to a penalty not exceeding 5*l.* — § 17.

Surveyors to act under Direction of the Board of Trade. — The said surveyors shall execute their duties

under the direction of the B. of T.; and in the execution of such duties it shall be lawful for them to go on board any steam vessel at all reasonable times, and to inspect the same or any part thereof, or any of the machinery, boats, equipments, or articles on board thereof to which the provisions of this Act or any of the regulations to be made by virtue thereof apply, not unnecessarily detaining or delaying the vessel from proceeding on any voyage, and, if in consequence of any accident to any such vessel or for any other reason they consider it necessary so to do, to require the vessel to be taken into dock for the purpose of surveying the hull thereof; and any person who hinders any such surveyor from going on board any such steam vessel, or otherwise impedes him in the execution of his duty under this Act, shall be liable to a penalty not exceeding 5*l.* — § 18.

Penalty on Surveyors demanding or receiving Fees unlawfully. — Every such surveyor who demands or receives, directly or indirectly, from the owner or master of any vessel surveyed by him under the provisions of this Act, any fee or remuneration whatsoever for or in respect of such survey, otherwise than as the agent, and by the direction of the B. of T., shall be liable to a penalty not exceeding 50*l.* at the suit of any person whomsoever. — § 19.

Iron Steamers to be divided by Water-tight Partitions. — The owner of every steam vessel built of iron, of 100 tons burthen or upwards, the building of which shall have been commenced since the 28th of August, 1846, and the owner of every steam vessel built of iron of less burthen than 100 tons, the building of which shall have commenced after the passing of this Act, except vessels used solely as steam tugs, shall cause the same to be divided by transverse water-tight partitions, so that the fore part of the vessel shall be separated from the engine room by one of such partitions, and so that the after part of such vessel shall be separated from the engine room by another of such partitions; and it shall not be lawful for the officers of H. M. customs, or for any other person, to grant a certificate of British registry to, or to clear out or grant a transire to, or allow to proceed to sea, any iron steamer of 100 tons burthen or upwards, built since the said 28th of August, 1846, or to any iron steamer of less burthen than 100 tons built after the passing of this Act, except as aforesaid, unless the same be divided as aforesaid; and if any steamer required to be so divided proceeds to sea without being so divided, the owner shall be liable to a penalty not exceeding 100*l.* — § 20.

Steam Vessels to carry Safety Valves out of Control of Engineer. — After the 31st March, 1852, it shall not be lawful for any steam boat, of which surveys are required by the provisions of this Act, to go to sea, or to steam upon the rivers of the U. K., without having a safety valve upon each boiler, free from the care of the engineer, and out of his control and interference; and such safety valve shall be deemed to be a necessary part of the machinery, upon the sufficiency of which the engineer surveyor is to report as herein provided. — § 21.

Sea-going Vessels to be provided with Boats. — No decked vessel, except vessels used solely as steam tugs, shall proceed to sea from any port or place in the U. K. unless it be provided, according to its tonnage, with boats duly supplied with all requisites for their use, and not being fewer in number nor less in their cubic contents than the boats the number and cubic contents of which are specified in the following table; provided that the said limits of dimension be not considered applicable to vessels engaged in the whale fishery:

Registered Tonnage.		Column 1. To be carried by Sailing Vessels and Steam Vessels.								Column 2. To be carried by Sailing Vessels, and by Steam Vessels, unless they carry the Boats in No. 3. as the case may be.

Note. — In the case of steam vessels, two paddle-box boats may be substituted for any two of the boats in Column 3.

And no such vessel carrying more than ten passengers shall proceed to sea unless, in addition to the boats herein-before required, it also be provided with a life boat furnished with all requisites for use, or unless one of its boats herein-before required be rendered buoyant after the manner of life boats; and no such vessel shall proceed to sea with passengers as aforesaid unless it also be provided with two life buoys, to be kept ready for immediate use: provided, that the enactments with respect to boats and life buoys herein contained shall not apply in any case in which a certificate has been duly obtained under sect. 9. of 12 & 13 Vict. c. 33. — § 22.

No Steamer to proceed to Sea without being provided with a Hose and Signals. — No steam vessel, except vessels used solely as steam tugs, shall proceed to sea unless it be provided with a hose adapted for the purpose of extinguishing fire in any part of the vessel, and capable of being connected with the engines of the vessel, nor, if carrying passengers, without being provided with the following means of making signals of distress, that is to say, 12 blue lights, or 12 port-fires, and 1 cannon, with ammunition for at least 12 charges, or, in the discretion of the master or owner of such vessel, with such other means of making signals as shall have been previously approved by the B. of T. — § 23.

Penalties on Masters, &c. neglecting to provide Boats, &c. — If any such steam or other vessel as aforesaid proceed to sea without being provided with such boats and other equipments as are required for such vessel, or if any of such boats or other equipments be lost or rendered useless in the course of the voyage through the wilful fault or negligence of the owner or master, or if in case of any of such boats or life buoys being accidentally lost or injured in the course of the voyage the master or other person having charge of the vessel wilfully neglect to replace or repair the same on the first convenient opportunity, then and in every case where the owner shall appear to be in fault he shall be liable to a penalty not exceeding 100*l.*, and in every case where the master or other person having charge of the vessel shall appear to be in fault he shall be liable to a penalty not exceeding 50*l.* — § 24.

Officers of Customs not to clear out Vessels not complying with the above Provisions. — It shall not be lawful for any officer of customs to clear out, or to grant a transire to, or allow to proceed to sea, any

steam or other vessel, unless the same is provided with such boats and other equipments as are required for such vessel; and in any case in which any vessel is delayed by reason of non-compliance with any of the provisions herein-before contained the tide-waiter left on board shall be maintained at the expense of the master or owner of such vessel until such provisions are complied with.—§ 25.

Admiralty to make Regulations as to Lights.—The Admiralty shall from time to time make regulations requiring the exhibition of such lights, by such classes of vessels, whether steam or sailing vessels, within such places and under such circumstances as they think fit, and may from time to time revoke, alter, or vary the same, and they shall cause such regulations to be published in the London Gazette, and to be otherwise publicly made known, and such regulations shall come into operation on a day to be named in such Gazette, and they shall cause such regulations to be printed, and shall furnish a copy thereof to any owner or master of a vessel who applies for the same, and production of the Gazette containing such regulations shall be sufficient evidence of the purport and due making thereof; and all owners and masters or persons having charge of vessels shall be bound to take notice of the same, and shall, so long as the same continue in force, exhibit such lights, and no others, at such times, within such places, in such manner, and under such circumstances as are enjoined by such regulations; and in case of default the master or other person having charge of any vessel, or the owner of such vessel, if it appear that he was in fault, shall for each and every occasion upon which such regulations are infringed forfeit and pay a sum not exceeding 20*l.*: provided always that all regulations made by the Admiralty, under the authority of the said recited Acts or either of them, and in force at the passing of this Act, together with the penalties applicable thereto, shall continue and be in force as if the same had been made under this Act, until the same be revoked.—§ 26.

Rules to be observed by Vessels passing each other.—Whenever any vessel proceeding in one direction meets a vessel proceeding in another direction, and the master or other person having charge of either such vessel perceives that if both vessels continue their respective courses they will pass so near as to involve any risk of a collision, he shall put the helm of his vessel to port, so as to pass on the port side of the other vessel, due regard being had to the tide and to the position of each vessel with respect to the dangers of the channel, and, as regards sailing vessels, to the keeping of each vessel under command; and the master of any steam vessel navigating any river or narrow channel shall keep as far as is practicable to that side of the fairway or mid-channel thereof which lies on the starboard side of such vessel; and if the master or other person having charge of any steam vessel neglect to observe these regulations or either of them, he shall for every such offence be liable to a penalty not exceeding 50*l.*—§ 27.

Owners not entitled to Compensation in certain Cases of Collision.—If in any case of a collision between 2 or more vessels it appear that such collision was occasioned by the non-observance either of the foregoing rules with respect to the passing of steamers or of rules to be made by the Admiralty with respect to the exhibition of lights, the owner of the vessel by which any such rule has been infringed shall not be entitled to recover any recompence whatsoever for any damage sustained by such vessel in such collision, unless it appears to the court before which the case is tried that the circumstances of the case were such as to justify a departure from the rule; and in case any damage to person or property be sustained in consequence of the non-observance of any of the said rules, the same shall in all courts of justice be deemed, in the absence of proof to the contrary, to have been occasioned by the wilful default of the master or other person having the charge of such vessel, and such master or other person shall, unless it appears to the court before which the case is tried that the circumstances of the case were such as to justify a departure from the rule, be subject in all proceedings, whether civil or criminal, to the legal consequences of such default.—§ 28.

Accidents to be reported to Board of Trade.—Whenever any steam vessel (other than a ship of war) has sustained or caused any accident occasioning loss of life or any serious injury to any person, or has received any material damage affecting her seaworthiness or efficiency either in her hull or in any part of her machinery, the owner, master, or other person having the charge of such vessel shall, within 24 hours after the happening of such accident or damage, or as soon thereafter as possible, transmit through the post office to the B. of T. by letter signed by such master or other person, a report of such accident or damage, and the probable occasion thereof, stating the name of the vessel, the port to which she belongs, and the place where she is; and if such master or other person neglect so to do he shall for such offence be liable to a penalty not exceeding 50*l.*—§ 29.

Notice to be given of apprehended Loss of Steam Vessels.—If the owner of any steam vessel have reason, owing to the non-appearance of such vessel, or to any other circumstance, to apprehend that such vessel has been wholly lost, he shall as soon as conveniently may be send notice thereof in like manner to the B. of T., and if he neglect so to do within a reasonable time he shall for such offence be liable to a penalty not exceeding 50*l.*—§ 30.

Board of Trade may send Inspectors on board Vessels whenever necessary.—The B. of T. may from time to time, whenever it seems expedient to them so to do, appoint any of the surveyors to be appointed by them as aforesaid, or any other fit person, as an inspector, to go on board any ship or vessel, to report to them whether the provisions of this Act, or the regulations made under or by virtue of this Act, have been complied with, and also whether the hull and machinery of such vessel, if the same be a steam vessel, are sufficient and in good condition, or to report to them upon the nature and causes of any accident or damage which such vessel has sustained or caused, or is said to have sustained or caused.—§ 31.

Powers of Inspectors.—It shall be lawful for any such inspector, and also for any person being a member of the naval department of the B. of T., to go on board any steam vessel at all reasonable times, and to inspect the same or any part thereof, or any of the machinery, boats, equipments, or articles on board thereof to which the provisions of this Act or any of the regulations to be made by virtue thereof apply, not unnecessarily detaining or delaying the vessel from proceeding on any voyage; and in all cases of accident or damage such inspector or other person may make such inquiries, and require answers or returns thereto, as to the nature, circumstances, and causes of such accident or damage, as he thinks fit, and may, by summons under his hand, require the attendance of all persons whom he thinks fit to call before him upon any question or matter connected therewith or relating thereto, and may administer oaths, and examine such persons upon oath, and may require and enforce the production upon oath of all log books, accounts, agreements, or other papers or writings in anywise relating to any such matter as aforesaid, or in lieu of requiring and administering an oath may require any person to make and subscribe a declaration of the truth of the matters respecting which he has been examined or interrogated: provided that no person shall be required, in obedience to any summons from such inspector or other person, to travel more than 10 miles from his actual abode at the time of receiving such summons, unless such reasonable allowance for expenses in respect of his attendance to give evidence and of his journeys to and from the place where he may be required to attend for that purpose be made and tendered to him as would be allowed to any witness attending on subpœna to give evidence before any of H. M. courts at Westminster; and in case of any dispute as to the amount of such expenses the same shall be referred by such inspector, or other person, to one of the masters of H. M. court of Queen's Bench, and such master shall, on a request made to him for that purpose under the hand of such inspector or other person, ascertain and certify the proper amount of such expenses.—§ 32.

Penalty for obstructing Inspectors.—If any person wilfully impede such inspector or other person in the execution of any part of his duty, whether on board any ship or vessel or elsewhere, every person so

offending, and all persons aiding and assisting therein, may be seized and detained by such inspector or other person, or by any persons called by him to his assistance, until such offender can be conveniently taken before some justice of the peace or other officer having proper jurisdiction; and every such offender, and also every person who refuses to attend as a witness before any such inspector or other person, when required so to do, in the manner hereby directed, or who refuses or neglects to make any answer, or to give any return, or to produce any document in his possession, or to make or subscribe any declarations which such inspector or other person is hereby empowered to require as aforesaid, shall for each offence be liable to a penalty not exceeding 5*l.* — § 33.

The rest of the clauses relate to the legal proceedings which may be carried on under the Act.

STEEL (Fr. *Acier*; Ger. *Stahl*; It. *Acciajo*; Lat. *Chalybs*; Rus. *Stal*; Span. *Acero*; Sw. *Stål*), is iron combined with a small portion of carbon; and has been, for that reason, called carburetted iron. The proportion of carbon has not been ascertained with much precision. It is supposed to amount, at an average, to $\frac{1}{140}$th part. Steel is so hard as to be unmalleable while cold; or at least it acquires that property by being immersed, while ignited, in a cold liquid: for this immersion, though it has no effect upon iron, adds greatly to the hardness of steel. It is brittle, resists the file, cut-glass, affords sparks with flint, and retains the magnetic virtue for any length of time. It loses this hardness by being ignited, and cooled very slowly. It is malleable when red hot, but scarcely so when raised to a white heat. It may be hammered out into much thinner plates than iron. It is more sonorous; and its specific gravity when hammered is greater than that of iron—varying from 7·78 to 7·84. Steel is usually divided into 3 sorts, according to the method in which it is prepared; as *natural steel*, *steel of cementation*, and *cast steel*. The latter is the most valuable of all, as its texture is the most compact, and it admits of the finest polish. It is used for razors, surgeons' instruments, and similar purposes. Steel is chiefly employed in the manufacture of swords, knives, and cutting instruments of all sorts used in the arts; for which it is peculiarly adapted by its hardness, and the fineness of the edge which may be given to it.—(*Thomson's Chemistry*; and see IRON.)

STETTIN, a city of Prussia, on the left bank of the Oder, about 36 miles from its mouth, in lat. 53° 23′ 20″ N., long. 14° 33′ E.. It is well built, strongly fortified, and had, in 1855, a population of 50,058.

Stettin is the seat of an extensive and growing commerce; and is now, indeed, the principal port of importation in Prussia. She owes this distinction mainly to her situation. The Oder, which flows through the centre of the Prussian dominions, is navigable as far as Ratibor, near the extreme southern boundary of Prussian Silesia; and is united by means of canals with the Vistula, the Elbe, the Spree, &c. Stettin is, consequently, the principal emporium of some very extensive and flourishing countries; being not only the port of Frankfort-on-the-Oder, Breslaw, &c., but also of Berlin. She is, also, the centre of an extensive system of railways, communicating with Berlin and the W. parts of Germany on the one hand, and on the other with Posen, Bromberg, and Dantzic. Hence, at the proper seasons, her wharfs are crowded with lighters that bring down the produce of the different countries traversed by the river, and bring back colonial products, and other articles of foreign growth and manufacture. Vessels of considerable burden, or those drawing above 7 or 8 feet water, load and unload, by means of lighters, at the mouth of the river, at Swinemunde, the outport of Stettin, on the east coast of the isle of Usedom, in lat. 53° 55′ N., long. 14° 15′ 15″ E. Formerly there were not more than 7 feet water over the bar adjacent to Swinemunde; but the harbour of the latter has recently been so much improved, by the construction of piers and breakwaters, dredging, &c., that it is now the best on the Prussian coast, and admits vessels drawing from 18 to 19 feet water. A lighthouse has been erected at the extremity of the eastern pier. Stettin is a free port; that is, a port into and from which all sorts of goods may be imported and re-exported free of duty. Goods brought through the Sound, imported at Stettin, and entered for home consumption in the Prussian states, used to be charged with 2½ per cent. less duty than if they had been imported through any other channel. This was intended to reimburse the merchant for the Sound duties, and to encourage importation by this direct route in preference to that carried on through Hamburg and Embden; but as the Sound duties have been abolished, it is probable that goods imported at Stettin will no longer enjoy this preference. There is a great wool fair in the month of June each year.

Monies, Weights, and Measures, same as at Dantzic, which see. The Bank of Berlin has a branch at Stettin, and there is also an insurance office.

Imports and Exports.—The principal articles of import at Stettin are sugar, coffee, dye-woods, wine, iron, and hardware, oil, tallow, cotton and cotton goods, herrings, spirits, linseed, coal, salt, &c. The principal exports are corn, especially wheat; spirits, rapeseed, spelter, timber, &c.; bones, manganese, fruits, &c.

Harbour Dues paid by all privileged Vessels.

1. Harbour dues at Swinemunde on vessels arriving and departing seawards.

	Per last of 4,000 lb.	
	Rd.	*S. G.*
1. With cargo, entering the harbour	12	8
— leaving	12	8
2. With ballast or without, entering the harbour	6	4
— — leaving	6	4
2. Navigation dues of all vessels.		
a, with cargoes	1	4
b, — ballast	0	8

Vessels under 15 lasts pay only half dues.

3. Ships which remain in the roads of Swinemunde pay the following expenses:—

a, when they leave the roads, without having discharged or laden any part of the cargo, or without altering the papers, they pay no harbour dues.

b, when they are changing papers, 6 *rd.* 4 *s. g.* per last, once.

c, when they discharge or load, either cargo or ballast, they have to pay either 12 *rd.* 8 *s. g.* or 6 *rd.* 4 *s. g.* per last, once.

d, when they discharge and load a cargo the whole harbour dues.

e, when the 10th part of the cargo of a vessel is laden and not surpassed, they pay for such part only the dues as stated 1., with 12 *rd.* 8 *s. g.* once.

Pilotage.

From Stettin to Swinemunde } up to 10 lasts, 2 r. dollars.
Swinemunde to Stettin }
from 11-20 — 3 —
— 21-30 — 3½ —
— 31-40 — 4 —
— 41- up to 150 lasts

and upwards, for each 10 lasts, ½ dollar more.

Ships of more than 150 lasts burden, to pay the same dues as those of 141 to 150 lasts.

Stettin is one of the principal shipping ports in the Prussian dominions. For an account of the shipping belonging to it and the other Prussian ports on the 1st January, 1858, see Dantzic.

Port Regulations.—All vessels are prohibited entering Swinemunde, unless forced by stress of weather, without previously heaving to for, and receiving a pilot on board. But when compelled to enter without a pilot, the master is to observe the signals made from the beacon erected on the eastern and western moles as follows :—

Notice.

1. When pilots cannot put to sea, and captains of ships are nevertheless resolved to enter the harbour, a red flag will be hoisted on the direction beacon of the eastern mole.

2. The captains will then steer until they find themselves, S.E. by S. on the compass, from the lighthouse placed on the utmost point of the east mole, taking care to keep the outermost great white buoy, situate on the end of the western ground in a depth of 16 feet, on the starboard, and the next black buoy, in an oblique line towards the lighthouse, on the larboard.

3. In that situation of the vessel the two new beacons cover themselves in the direction of S.S.E., and this course, keeping the two beacons completely covered, the captains sail into the port up to the second landing berth of the eastern mole, four cables' length beyond the lighthouse, keeping off the mole half a cable's length.

4. At that place, the captains taking care to remain a little South, are expected by the pilots to go on board of their vessels.

5. On entering the port all the white buoys are to remain on the starboard side of the vessel (see 2).

6. For facilitating the finding and keeping the directions given in this instruction in case the buoys should have been removed by sea, or taken up on account of the advanced season, signals will be given with a red flag from the direction beacon on the eastern mole.

7. The captains must follow the signals in so far as to steer to that part where the flag is hoisted perpendicularly.

8. Should there be no pilot at sea, and no flag hoisted on the beckoning beacon, the captains must not attempt to enter the port at all, but either anchor in the roads or remain at sea.

Trade.—The abolition of the Sound dues, and the improved communications by means of railways with the interior, have led to a great increase in the trade of Stettin. This is evident from the following account of the Imports and Exports of the town by sea :—

Years.	Imports.	Exports.	Total.
1855	£2,604,954	£1,041,969	£3,646,902
1856	3,602,567	1,709,693	5,312,260
1857	4,208,636	2,722,451	6,931,088

This is a very extraordinary increase. In the import trade it has principally taken place in the articles of raw cotton, iron, and coals, from England ; palm and cocoa-nut oil, coffee, herrings, &c. The great articles of export from Stettin are corn, timber, and spirits ; and in 1857 the exports of corn were of unparalleled magnitude.

Account of the Quantities of the different Varieties of Corn exported from Stettin in 1857, specifying the Countries to which they were sent, and the Quantities sent to each in Imperial Quarters.

Countries to which Exported.	Wheat.	Rye.	Barley.	Oats.	Total.	Per-centage of the total Amount.
Great Britain	305,138	28,872	359,899	3,046	696,955	77·75
Sweden and Norway	5,490	65,814	17,550	89	88,943	9·93
German States	—	40,721	—	518	41,239	4·6
Holland	8,254	19,585	5,384	—	33,223	3·7
Denmark	2,467	17,321	2,109	408	22,305	2·49
France	6,312	4,339	972	—	11,623	1·3
Spain	1,611	—	—	—	1,611	·18
Russia	—	—	456	—	456	·05
Total	329,272	176,652	386,350	4,061	896,535	100·

In addition to corn, timber, and spirits, the principal articles of export are spelter, oil cake, bones, clover and other seeds, wool, glass, &c.

Direct Trade of the U. Kingdom with Prussia.—Account of the Quantities, and of the Computed Values of the Principal Articles imported from Prussia into the U. Kingdom in each of the 4 Years ending with 1857.

We also send to Prussia large quantities of foreign and colonial produce, the value of the exports thereof in 1857 having amounted to 896,424*l.* Sometimes, however, they are much greater. But it can hardly be necessary to add that a large (though not so large now as formerly) portion of our trade with Prussia is indirect, being carried on through the Hanse Towns, Holland, &c.

STOCKHOLM, the capital city of Sweden, situated at the junction of the lake Maelar with an inlet of the Baltic, in lat. 59° 20′ 31″ N., lon. 17° 54′ E.; a well-built handsome city. Population in 1855, 97,952.

The entrance to the harbour is intricate and dangerous, and should not be attempted without a pilot; but the harbour itself is capacious and excellent, the largest vessels lying in safety close to the quays. Stockholm possesses from a third to a half of the foreign trade of Sweden; but this is confined within comparatively narrow limits. The government was long accustomed to endeavour to promote industry by excluding foreign products; latterly, however, this system has been very considerably relaxed, with great advantage to the trade of the country, and the well-being of the people. Notwithstanding the general inferiority of the soil, and the backwardness of the climate, agriculture has, within the last 20 years, made a more rapid progress in Sweden than in, perhaps, any other country of Europe; and instead of importing, as was formerly the case, she now exports large quantities of oats and other grain. (See *post* for her exports of corn to England.) Iron, timber, and deals form, however, the principal articles of export. Swedish iron is of very superior quality; and is rather extensively used in Great Britain; the imports of it amounting, of late years, to about 40,000 tons, exclusive of 800 tons of steel. In addition to the above leading articles, Stockholm exports pitch, tar, copper, &c. The timber is inferior to that from the southern ports of the Baltic. The imports principally consist of colonial products; cotton stuffs and yarn, iron, hardware, machinery, and coal, mostly from England; with woollens, wine, silks, salt, hides, guano, fish, brandy, wool, fruit, &c.

Pilotage.—Vessels bound for Stockholm take a pilot at the small island of Oja. Lands-hort light-house is erected on the southern extremity of this island, in lat. 58° 44′ 30″ N., lon. 17° 52′ 15″ E. It is painted white, and is furnished with a fixed light, elevated 158 feet above the level of the sea, which may be seen, under favourable circumstances, 5 leagues off. The signal for a pilot is a flag at the fore-top-mast-head, or firing a gun.

Shipping and Character of Sailors.—In 1856, there belonged to Sweden 2,374 vessels of the aggregate burden of 126,236 lasts. "I would," says the British consul at Stockholm, "beg to remark, that in consequence of the superior education of the masters and mates of Swedish mercantile vessels, the subordination and steadiness of their crews, combined with great care in loading and unloading their cargoes, they and the Norwegians have become favourite carriers with merchants of all nations. This preference is not to be attributed to a lower rate of freight, though they offer that advantage also, but to the confidence reposed in the zeal and intelligence of the masters and crews." This is the true cause of the great increase, of late years, in the number of Swedish ships bringing cargoes from foreign countries to England.

Money.—Accounts are kept here, in Gottenburg, and generally throughout Sweden, in paper money, consisting of rix-dollars *banco;* 1 rixdollar being equal to 48 skillings, and 1 skilling to 12 rundstycks. The exchange with London is at about 12 rixdollars banco per £, so that the rixdollar is worth about 1*s.* 8*d.* sterling. Rixdollars banco may be exchanged for specie rixdollars at the rate of ⅔ the former for one of the latter. But there are very few coins, except of copper, in circulation; the currency consisting almost wholly of notes, varying from 5 skillings to 500 rixdollars banco.

Weights and Measures.—The victual or commercial weights are punds, lippunds, and skippunds; 20 punds being equal to 1 lispund, and 20 lispunds=1 skippund; 100 lbs. Swedish commercial weight=93⅔ lbs. avoirdupois=42½ kilog.=87⅔ lbs. of Hamburg.

The iron weights are 3-5ths of the victual or commercial weights; 20 marks=1 mark pund; 20 mark punds=1 skippund; and 7½ skippunds=1 ton English. Hence, 100 punds Swedish iron weight=75 lbs. avoirdupois, and 100 lbs. avoirdupois=133⅓ lbs. Swedish iron weight.

In corn measure:—

4 Quarts	-	=	1 Spann.
2 Spann	-	=	1 Tun or barrel.
1 Tun	-	=	4 1-6th Winch. bush.
A last *of* rye from Riga	-	=	18 Tuns.
Ditto	Liebau	=	19½ —
Ditto	Stettin	=	22½ —
Ditto	Stralsund=		24 —

The tun of 32 kappor contains 4 1-5th Winchester bushels.

In liquid measure:—

2	Stup -	=	1 Kanna.
15	Kanner -	=	1 Anker.
2	Ankers -	=	1 Eimer.
2	Eimers -	=	1 Ahm.
1½	Ahm -	=	1 Oxhoft.
2	Oxhoft -	=	1 Pipe.

The pipe=124¼ English wine gallons; and, consequently, the ahm=41 5-12ths ditto, and 700 kanner=1 5-6th ditto.

The Swedish foot=11·684 English inches; the ell or alna =2 feet; the fathom=3 ells; the rod=8 ells.

In estimating by lasts*—

1	Last of pitch, ashes, &c. -	=	12 barrels.
1	ditto tar, oil, &c. -	=	43 ditto.
1	Last of hemp, flax, tallow, &c. -	=	6 skippunds.
1	Ton of Liverpool common salt	=	7 tuns Swed.

We also export to Sweden considerable quantities of colonial and foreign produce, the value of the exports thereof having amounted in 1856 to 300,795*l.*, and in 1857 to 196,341*l.*

The smelting furnaces and iron works are licensed to produce certain quantities, some being as low as 50 tons, and others as high as 400 or 500 tons; and some fine bar iron works have licences for 1,000 tons each. These licences are granted by the College of Mines, which has a control over all iron works and mining operations. The iron masters make annual returns of their manufactures, which must not exceed the privileged or licensed quantity, on pain of the overplus being confiscated. The college has established courts of mines in every district, with supervising officers of various ranks. All iron sent to a port of shipment must be landed at the public weigh-house, the superintendent of which is a delegate of the college, so that it is impossible for an iron-master to send more iron to market than his licence authorises. It is true that sales are made to inland consumers at the forges, of which no returns are made out, and in so far the licences are exceeded; but it is not supposed that the quantity so disposed of exceeds a few thousand tons a year. Every furnace and forge pays a certain annual duty to the crown. Its amount is fixed by the college when the licence is granted; and care is taken not to grant the licence to any one unless he have the command of forests equal to the required supply of charcoal without encroaching on the supply of this material required for the existing forges in the neighbourhood. As the supply of pig-iron is limited to the quantity licensed to be made, the college, in granting new licences to bar-iron works, always takes into consideration how far this may be done without creating a scarcity of pig-iron. Hence, the erection of new forges depends — 1st, on having a supply of charcoal, without encroaching on the forests which supply your neighbours; and 2d, on the quantity of pig iron which the college knows to be disposable. The courts of the mines decide all disputes that arise

among the iron-masters regarding the exceeding of their licences, encroachments, &c.; an appeal to the college lying from their decision, and ultimately to the king in council, or to the supreme court of the kingdom.

It is needless to dwell on the impolicy of such regulations. No doubt it is quite right for government to interfere to prevent the waste and destruction of the forests; but, having done this, it should abstain from all other interference, and leave every one at liberty to produce as much iron as he may think proper. Mines of any importance are usually held by a society of shareholders. Some of them are only worked occasionally; and, as the labour is performed by peasants, who live ostensibly by industry, it is impossible to form any correct estimate of the numbers engaged in mining industry.

STOCKINGS, as every one knows, are coverings for the legs. They are formed of only one thread entwined, so as to form a species of tissue, extremely elastic, and readily adapting itself to the figure of the part it is employed to cover. This tissue cannot be called cloth, for it has neither warp nor woof, but it approaches closely to it; and for the purposes to which it is applied, it is very superior.

1. *Historical Sketch of the Stocking Manufacture.*—It is well known that the Romans and other ancient nations had no particular clothing for the legs. During the middle ages, however, hose or *leggings*, made of cloth, began to be used; and at a later period, the art of knitting stockings was discovered. Unluckily, nothing certain is known as to the individual by whom, the place where, or the time when, this important invention was made. Howell, in his *History of the World* (vol. iii. p. 222.), says that Henry VIII. wore none but cloth hose, except there came from Spain by great chance a pair of silk stockings; that Sir Thomas Gresham, the famous merchant, presented Edward VI. with a pair of long silk stockings from Spain, and that the present was much taken notice of; and he adds, that Queen Elizabeth was presented, in the third year of her reign, with a pair of black knit silk stockings, and that from that time she ceased to wear cloth hose. It would appear from this circumstantial account, that the art of knitting stockings, or at least that the first specimens of knit stockings, had been introduced into England from Spain about the middle of the 16th century; and such seems to have been the general opinion, till an allusion to the practice of knitting, in the pretended poems of Rowley, forged by Chatterton, made the subject be more carefully investigated. The result of this investigation showed clearly that the practice of knitting was well known in England, and had been referred to in acts of parliament, a good many years previously to the period mentioned by Howell. But it had then, most probably, been applied only to the manufacture of woollen stockings; and the general use of cloth hose shows that even these had not been numerous. There is no evidence to show whether the art is native to England, or has been imported.—(See *Beckmann's Inventions*, vol. iv. art. *Knitting, Nets, and Stockings.*)

It is singular that the stocking frame, which, even in its rudest form, is a very complex and ingenious machine, that could not be discovered accidentally, but must have been the result of deep combination and profound sagacity, should have been discovered so early as 1589; before, in fact, the business of knitting was generally introduced. The inventor of this admirable machine was Mr. William Lee, of Woodborough, in Nottinghamshire. He attempted to set up an establishment at Calverton, near Nottingham, for the manufacture of stockings, but met with no success. In this situation he applied to the queen for assistance; but instead of meeting with that remuneration to which his genius and inventions so well entitled him, he was discouraged and discountenanced! It need not, therefore, excite surprise that Lee accepted the invitation of Henry IV. of France, who, having heard of the invention, promised him a magnificent reward if he would carry it to France. Henry kept his word, and Lee introduced the stocking frame at Rouen with distinguished success; but after the assassination of the king, the concern got into difficulties, and Lee died in poverty at Paris. A knowledge of the machine was brought back from France to England by some of the workmen who had emigrated with Lee, and who established themselves in Nottinghamshire, which still continues to be the principal seat of the manufacture.—(See *Beckmann's Inventions*, vol. iv. pp. 313—324.; and *Letters on the Utility and Policy of Machines*, Lond. 1780.)

During the first century after the invention of the stocking frame, few improvements were made upon it, and 2 men were usually employed to work 1 frame. But in the course of last century the machine was very greatly improved. The late ingenious Mr. Jedediah Strutt, of Derby, was the first individual who succeeded in adapting it to the manufacture of *ribbed* stockings.

2. *Statistical View of the Stocking Trade.*—It is not possible, perhaps, to obtain any very satisfactory information in regard to the extent or value of the stocking trade. It embraces not only stockings, properly so called, but a great many other articles, including woollen and cotton drawers, gloves, mitts, night caps, socks, knitted shawls, &c. And even as respects stockings, the varieties are so very numerous and differ so widely, comprising all sorts, from those of the finest to those of the coarsest silk, cotton, and wool, that nothing better than a rough estimate can be formed of their value.

In 1832, Mr. Felkin, of Nottingham, who made many elaborate inquiries into the subject, estimated the number of frames at work at 33,000, and the total value of the hosiery produced at 1,991,000*l.* This estimate (see last edition of this work) was probably underrated at the time; and is now, there can be no doubt, greatly below the mark. From the best information we can obtain, we incline to think that the entire value of the hosiery produced in Great Britain, whether by frames or otherwise, may (1859) amount to somewhere about 5,100,000*l.* a year. The average consumption per individual of hosiery in the same division of the empire may, it is believed, be taken at about 4*s.* a year; and, if we take the population at 22 millions, this will give 4,400,000*l.* for their consumption; and adding to this 300,000*l.* for the value of the exports to foreign countries (266,279*l.* in 1857), a sum of 400,000*l.* will remain to defray the cost of those sent to Ireland. We are pretty well satisfied that this estimate is not far from the mark. And moderate as it may seem to be when compared with others that have been put

forward, it sets the great importance of the manufacture in a very striking point of view.

Of 1,015,960 doz. pairs stockings of the value of 266,269*l.* exported in 1857, no fewer than 729,737 doz. pairs, worth 163,133*l.*, were shipped for the U. States. Of the residue, which were sent to a great many places, Cuba and Australia took the largest numbers.

STORAX. See BALSAM.

STORES, MILITARY AND NAVAL, include arms, ammunition, &c. It is enacted, that no arms, ammunition, or utensils of war, be imported by way of merchandise, except by licence, for furnishing his Majesty's public stores only.—(6 *Geo.* 4. c. 107.)

STORES, in commercial navigation, the supplies of different articles provided for the subsistence and accommodation of the ship's crew and passengers.

It is laid down, in general, that the surplus stores of every ship arriving from parts beyond seas are to be subject to the same duties and regulations as those which affect similar commodities when imported as merchandise; but if it shall appear to the collector and comptroller that the quantity of such stores is not excessive, nor unsuitable, under all the circumstances of the voyage, they may be entered for the private use of the master, purser, or owner of such ship, on payment of the proper duties, or be warehoused for the future use of such ship, although the same could not be legally imported by way of merchandise.—(3 & 4 *Will.* 4. c. 52. § 35.)

A List, by which to calculate the Amount of Stores, of the estimated Average Number of Days' Duration of a Voyage from the U. Kingdom to the different Ports enumerated, and back.

For such places as are not included in the List, the same allowance should be granted as is given to the place nearest thereunto.

No stores shall be shipped for the use of any ship bound to parts beyond the seas, nor shall any goods be deemed to be such stores, except such as shall be borne upon the victualling bill. —(3 & 4 *Will.* 4. c. 52. sect. 16.)

Goods delivered into the charge of the searchers to be shipped as stores, may be so shipped without entry or payment of any duty, for any ship of the burden of 70 tons at least bound upon a voyage to foreign parts, the probable duration of which outand home will not be less than 40 days: provided such stores be duly borne upon the ship's victualling bill, and be shipped in such quantities, and subject to such directions and regulations, as the commissioners of customs shall direct and appoint. —(3 & 4 *Will.* 4. c. 57. sect. 16.)

Rum of the British plantations may be delivered to the searcher, to be shipped as stores for any ship, without entry or payment of any duty; and any surplus stores of any ship may be delivered to the searcher, to be re-shipped as stores for the same ship, or for the same master in another ship, without entry or payment of any duty, —such rum and such surplus stores being duly borne upon the victualling bills of such ships respectively; and if the ship, for the future use of which any surplus stores have been warehoused, shall have been broken up or sold, such stores may be so delivered for the use of any other ship belonging to the same owners, or may be entered for payment of duty, and delivered for the private use of such owners or any of them, or of the master or purser of the ship. — Sect. 17.

The searchers in London, on clearance of vessels coastwise to take in cargoes for foreign parts, are to apprise the collectors and comptrollers at the outports where the vessels may be bound, of the quantity and description of the goods which may have been shipped as stores on board such vessels, and that bond has been given by the masters of the vessels that no part of such stores shall be consumed by the crews, or any package opened or altered, until the vessels have actually been cleared on their foreign voyages; and the collectors and comptrollers at the out-ports are in like manner to cause a similar communication to be made to the ports where the outward cargoes are to be taken on board, and the officers at such ports are to take care to ascertain that the several goods so shipped are actually on board the vessels on their arrival, and have neither been consumed or run on shore during the coasting voyage; and if so, to report the same to the Board. — (*Min. by Com. of Customs*, 19th of Feb. 1833.)

List of Foreign Goods allowed to be shipped as Stores, from the bonded Warehouses free of Duty. — (Customs Minute, 29th of Nov. 1832.)

Tea, ½ of an oz.; coffee or cocoa, 1 oz. per day for each person on board, with the option to ship the entire quantity required for the voyage of either species of these articles, *half* an oz. of tea being considered equal *to one oz.* of coffee or cocoa; the tea to be shipped in the original packages in which it was imported.

Wine, 1 quart per day for the master, each mate, and cabin passenger.

Wine bottled in the bonded warehouses for exportation may be shipped as stores, in packages containing not less than 3 doz. reputed quart, or 6 doz. reputed pint bottles.

Spirits, viz. brandy, geneva, rum (British plantation), ½ pint per day for each person on board.

British plantation rum to be in the proportion of ⅓ of the whole quantity of spirits shipped. Each description of spirits intended as stores to be shipped in *one* cask capable of containing the entire quantity of brandy, or of geneva or rum, allowed for the voyage, or in casks containing not less than 40 gallons of brandy or geneva, or 20 gallons of British plantation rum, as the case may be: provided that if spirits shall have been imported in bottles, or bottled in the bonded warehouses for exportation, the same may be shipped as stores, in packages containing not less than 3 doz. reputed quart, or 6 doz. reputed pint bottles.

Raw Sugar and Molasses (together or separate), 2 oz. per day for each person on board.

Dried Fruits, 2 lbs. per week for each person on board.

Rice, 2 lbs. per week for each person on board.

Foreign Segars, ½ oz. per day for the master, each mate, and each cabin passenger.

The entire quantity of foreign segars allowed as stores for each voyage to be shipped in *one* package.

A List of British manufactured Goods to be allowed to be shipped as Stores on the usual Bounty or Drawback.

British refined Sugar, 3 oz. per day for the master, each mate, and each cabin passenger.

British manufactured Tobacco, ½ oz. per day per man.

British exciseable Goods, viz. beer, ale, and porter (together or separate), 1 quart per day for the master, each mate, and each passenger.

Vinegar, ½ pint per week for each person on board.

Soap, ½ oz. per day for each person on board. The same indulgence, in respect of the shipment of stores, which has been granted to merchant vessels under the 2 & 3 Will. 4. c. 84., and by subsequent orders, is granted to transports under the following conditions, viz.: — On a certificate being produced for each vessel, from the office of a comptroller for victualling and transport service, setting forth the destination of the vessel, and the number of the crew and passengers on board, who are not to be messed by the victualling shipped by the public; and as respects soldiers embarked as guards in ships chartered for the transportation of convicts, on a certificate being produced from the proper department, specifying the number of soldiers to be embarked in each case; but no indulgence can be granted in regard to the article of soap. — (*Treas. Order*, 6th of March, 1833; see also *Ellis's British Tariff.*)

STRANDING, in navigation, the running of a ship on shore, or on the beach.

It is the invariable practice to subjoin the following *memorandum* to policies of insurance executed by private individuals in this country: — "*N. B.* — Corn, fish, salt, fruit, flour, and seed are warranted free from average, unless general, *or the ship be stranded*; sugar, tobacco, hemp, flax, hides, and skins are warranted free from average under *5l.* per cent.; and all other goods, also the ship and freight, are warranted free of average under *3l.* per cent., unless general, *or the ship be stranded.*"

It is, therefore, of the greatest importance accurately to define what shall be deemed a stranding. But this is no easy matter; and much diversity of opinion has been entertained with respect to it. It would, however, appear that merely striking against a rock, bank, or shore, is not a stranding; and that, to constitute it, the ship must be upon the rock, &c. for some time (how long?). — Mr. Justice Park has the following observations on this subject: — "It is not every touching or striking upon a fixed body in the sea or river that will constitute a stranding. Thus Lord Ellenborough held, that in order to establish a stranding, the ship must be *stationary*; for that merely striking on a rock, and *remaining there a short time* (as in the case then at the bar, about a minute and a half), and then passing on, though the vessel may have received some injury, is not a stranding. Lord Ellenborough's language is important. — *Ex vi termini* stranding means lying on the shore, or something analogous to that. To use a vulgar phrase, which has been applied to this subject, if it be *touch and go* with the ship, there is no stranding. It cannot be enough that the ship lie for a few moments on her beam ends. Every striking must necessarily produce a retardation of the ship's motion. If by the force of the elements she is run aground, and becomes stationary, it is immaterial whether this be on piles, on the muddy bank of a river, or on rocks on the sea shore; but a mere *striking* will not do, *wherever* that may happen. I cannot look to the consequences, without considering the *causa causans*. There has been a curiosity in the cases about stranding not creditable to the law. A little common sense may dispose of them more satisfactorily."

This is the clearest and most satisfactory statement we have met with on this subject; still, however, it is very vague. Lord Ellenborough and Mr Justice Park hold, that to constitute a stranding, the ship must be *stationary*; but they also hold, that if she merely remain upon a rock, &c. for a *short time*, she is not to be considered as having been stationary. Hence every thing turns upon what shall be considered as a short time. And we cannot help thinking that it would be better, in order to put to rest all doubts upon the subject, to decide either that every striking against a rock, the

shore, &c., by which damage is done to the ship, should be considered a stranding; or that no striking against a rock, &c. should be considered as such, provided the ship be got off within a *specified time.* Perhaps a *tide* would be the most proper period that could be fixed.

The insurance companies exclude the words, "*or the ship be stranded,*" from the memorandum. — (See INSURANCE, MARINE.)

STURGEON FISHERY. The sturgeon is a large, valuable, and well-known fish, of which there are several species, viz. the sturgeon, properly so called, or *Accipenser sturo;* the beluga, or *Accipenser huso;* the sevruga, or *Accipenser stellatus,* &c. The sturgeon annually ascends our rivers, but in no great number, and is taken by accident in the salmon nets. It is plentiful in the North American rivers, and on the southern shores of the Baltic; and is met with in the Mediterranean, &c. But it is found in the greatest abundance on the northern shores of the Caspian, and in the rivers Wolga and Ural; and there its fishery employs a great number of hands, and is an important object of national industry. Owing to the length and strictness of the Lents in the Greek Church, the consumption of fish in Russia is immense; and from its central position, and the facilities afforded for their conveyance by the Wolga, the products of the Caspian fishery, and those of its tributary streams, are easily distributed over a vast extent of country. Besides the pickled carcases of the fish, caviar is prepared from the roes; and isinglass, of the best quality, from the sounds. The caviar made by the Ural Cossacks is reckoned superior to any other; and both it and isinglass are exported in considerable quantities. The belugas are sometimes of a very large size, weighing from 1,000 to 1,500 lbs., and yield a good deal of oil. The seal fishery is also pretty extensively prosecuted in the Caspian. The reader will find a detailed account of the mode in which the fishery is carried on in this sea, and in the rivers Wolga and Ural, in *Tooke's Russia,* vol. iii. pp. 49—72. We subjoin the following official statement of the produce of the Russian fisheries of the Caspian and its tributary streams in 1828 and 1829:—

Year.	Number of Persons employed.		Number of Fish taken.					Products of Sturgeon.		
	In Fishing.	In hunting Seals.	Sturgeon.	Sevruga.	Beluga.	Sasans. (Carp).	Seals.	Caviar.	Fish Cartilage.	Isinglass.
								Pouds. lbs.	*Pouds. lbs.*	*Pouds. lbs.*
1828	8,887	254	45,035	653,164	23,069	8,353	98,584	34,860 1	1,407 38	1,225 27
1829	8,760	257	68,325	697,716	20,391	5,940	69,872	28,420 7	1,173 26½	1,092 22

M. Tegoborski (*Forces Productives de la Russie,* i. 284.) estimates the total value of the produce of the fisheries now referred to at 5,000,000 silver roubles a year. In 1852, 13,338 pouds pressed, and 11,238 do. soft caviar were exported from Taganrog.

SUGAR (Fr. *Sucre;* Ger. *Zucher;* It. *Zucchero;* Russ. *Sachar;* Sp. *Azùcar;* Arab. *Sukhir;* Malay, *Soola;* Sans. *Sarkarā*), a sweet granulated substance, too well known to require any particular description. It is every where in extensive use; and in this country ranks rather among the indispensable necessaries of life, than among luxuries. In point of commercial importance, it is second to very few articles. It is chiefly prepared from the expressed juice of the *arundo saccharifera,* or sugar cane; but it is also procured from an immense variety of other plants, as maple, beet-root, birch, parsnep, &c.

I. *Species of Sugar.* — The sugar met with in commerce is usually of 4 sorts; — brown, or muscovado sugar; clayed sugar; refined, or loaf sugar; and sugar candy. The difference between one sort of sugar and another depends altogether on the different modes in which they are prepared.

1. *Brown, or Muscovado Sugar.* — The plants or canes being crushed in a mill, the juice, having passed through a strainer, is collected in the clarifier, where it is first exposed to the action of a gentle fire, after being "tempered" (mixed with alkali), for the purpose of facilitating the separation of the liquor from its impurities. It is then conveyed into the large evaporating copper, and successively into two others, each of smaller size; the superintending boiler freeing it, during the process, from the scum and feculent matters which rise to the surface. The syrup then reaches the last copper vessel, called the "striking tache," where it is boiled till sufficiently concentrated to be capable of granulating in the cooler, whence it is transferred with the least possible delay, to prevent charring. Here it soon ceases to be a liquid; and when fully crystallised, is put into hogsheads (called "potting"), placed on their ends in the curing-house, with several apertures in their bottoms, through which the molasses drain into a cistern below. In this state they remain till properly cured, when the casks are filled up, and prepared for shipment.

2. *Clayed Sugar* is prepared by taking the juice, as in the case of muscovado sugar when boiled to a proper consistency, and pouring it into conical pots with the apex downwards. These pots have a hole at the lower extremity, through which the molasses or syrup is allowed to drain. After this drain has continued for some time, a stratum

of moistened clay is spread over the surface of the pots; the moisture of which, percolating through the mass, is found to contribute powerfully to its purification.

3. *Refined Sugar* may be prepared from muscovado or clayed sugar, by redissolving the sugar in water, and, after boiling it with some purifying substances, pouring it, as before, into conical pots, which are again covered with moistened clay. A repetition of this process produces *double refined* sugar. But a variety of improved processes are now resorted to.

4. *Sugar Candy.*—Solutions of brown or clayed sugar, boiled till they become thick, and then removed into a hot room, formed upon sticks or strings put into the vessels for that purpose, into crystals, or candy.

II. *Historical Notice of Sugar.*—The history of sugar is involved in a good deal of obscurity. It was very imperfectly known by the Greeks and Romans. Theophrastus, who lived about 320 years before the Christian era, the first writer whose works have come down to us by whom it is mentioned, calls it a sort of "honey extracted from canes or reeds." Strabo states, on the authority of Nearchus, Alexander's admiral, that "reeds in India yield honey without bees." And Seneca, who was put to death A. C. 65, alludes to sugar in a way which shows how little was then known respecting it (Epist. 84.):—*Aiunt*, says he, *inveniri apud Indos mel in arundinum foliis, quod aut ros illius cœli, aut ipsius arundinis humor dulcis et pinguior gignat.*

Of the ancients, Dioscorides and Pliny have given the most precise description of sugar. The former says, it is "a sort of concreted honey, found upon canes, in India and Arabia Felix; it is in consistence like salt, and is, like it, brittle between the teeth." And Pliny describes it as "honey collected from canes, like a gum, white and brittle between the teeth; the largest is of the size of a hazel nut: it is used in medicine only."—(*Saccharum et Arabia fert, sed laudatius India; est autem mel in arundinibus collectum, gummium modo candidum, dentibus fragile, amplissimum nucis avellanæ magnitudine, ad medicinæ tantum usum.*—Lib. xii. c. 8.)

It is evident, from these statements, that the knowledge of the Greeks and Romans with respect to the mode of obtaining sugar was singularly imperfect. They appear to have thought that it was found adhering to the cane, or that it issued from it in the state of juice, and then concreted like gum. Indeed, Lucan expressly alludes to Indians near the Ganges,—

Quique bibunt tenerâ dulces ab arundine succos.—(Lib. iii. l. 237.)

But these statements are evidently without foundation. Sugar cannot be obtained from the cane without the aid of art. It is never found native. Instead of flowing from the plant, it must be forcibly expressed, and then subjected to a variety of processes. It is not, however, quite so clear as has been generally supposed that the Romans were wholly unacquainted with the mode of procuring sugar. The remarkable line of Statius—

Et quas percoquit Ebusia cannas.—(Sylv. lib. i. v. 15.)

has been conjectured, apparently on pretty good grounds, to refer to the boiling of the juice of the cane. But the passage has been differently read, and is too enigmatical to be much depended on.

Dr. Moseley conjectures, apparently with much probability, that the sugar described by Pliny and Dioscorides, as being made use of at Rome, was sugar candy obtained from China. This, indeed, is the only sort of sugar to which their description will at all apply. And it would seem that the mode of preparing sugar candy has been understood and practised in China from a very remote antiquity; and that large quantities of it have been in all ages exported to India, whence, it is most probable, small quantities found their way to Rome.—(*Treatise on Sugar*, 2d. edit. pp. 66—71. This, as well as Dr. Moseley's *Treatise on Coffee*, is a very learned and able work.)

Europe seems to be indebted to the Saracens, not only for the first considerable supplies of sugar, but for the earliest example of its manufacture. Having, in the course of the 9th century, conquered Rhodes, Cyprus, Sicily, and Crete, they introduced into them the sugar cane, with the cultivation and preparation of which they were familiar. It is mentioned by the Venetian historians, that their countrymen imported, in the 12th century, sugar from Sicily at a cheaper rate than they could import it from Egypt.—(*Essai de l'Histoire du Commerce de Venise*, p. 100.) The Crusades tended to spread a taste for sugar throughout the Western world; but there can be no doubt that it was cultivated as now stated, in modern Europe, antecedently to the æra of the Crusades; and that it was also previously imported by the Venetians, Amalphitans, and others, who carried on a commercial intercourse, from a very remote epoch, with Alexandria and other cities in the Levant. It was certainly imported into Venice in 996.—(See the *Essai, &c.* p. 70.)

The art of refining sugar, and making what is called loaf-sugar, is said, by Dr.

Moseley, to be a modern European invention, the discovery of a Venetian about the end of the 15th or the beginning of the 16th century.—(*Moseley*, p. 66.) But this is doubtful, for Le Grand D'Aussy has shown that white or, as he calls it, refined sugar, (*sucre blanc ou raffiné*) had been introduced into and used in France for more than a century and a half previously to the date assigned for the discovery of the process of refining in Venice.*—(*Vie Privée des François*, ii. 198. ed. 1815.) This sugar was imported from Egypt principally by Italians; and the probability is, that the latter were the first Europeans who practised the art, which, however, would appear to have originated in the East.

The cane had, as already seen, been introduced into Sicily, and its culture practised, previously to the middle of the 12th century. It also was carried to Spain and cultivated by the Saracens soon after they obtained a footing in that country. The first plantations were at Valencia; but they were afterwards extended to Granada and Murcia. Mr. Thomas Willoughby, who travelled over great part of Spain in 1664, has given an interesting account of the state of the Spanish sugar plantations, and of the mode of manufacturing the sugar.

Plants of the sugar cane were carried by the Spaniards and Portuguese to the Canary Islands, and Madeira, in the early part of the 15th century; and it has been asserted by many, that these islands furnished the first plants of the sugar cane that ever grew in America.

But though it is sufficiently established that the Spaniards early conveyed plants of the sugar cane to the New World, there can be no doubt, notwithstanding Humboldt seems to incline to the opposite opinion (*Essai Politique sur la Nouvelle Espagne*, liv. iv. c. 10), that this was a work of supererogation, and that the cane was indigenous both to the American continent and islands. It was not for the plant itself, which flourished spontaneously in many parts when it was discovered by Columbus, but for the art of making sugar from it, that the New World is indebted to the Spaniards and Portuguese: and these to the nations of the East.—(See *Lafitau, Mœurs des Sauvages*, tome ii. p. 150; *Edwards's West Indies*, vol. ii. p. 238.)

Barbadoes is the oldest settlement of the English in the West Indies. We took possession of it in 1627; and so early as 1646 began to export sugar thence to England. The trade of Barbadoes attained its maximum in 1676, furnishing, it is said, employment, at that period, for 400 sail of vessels, averaging 150 tons burden; but this statement is most probably exaggerated.

Jamaica was discovered by Columbus, in his second voyage, and was first occupied by the Spaniards. It was wrested from them by an expedition sent against it by Cromwell in 1656; and has since continued in our possession, forming by far the most valuable of our West Indian colonies. At the time when it was conquered, there were only 3 small sugar plantations upon it. But, in consequence of the influx of English settlers from Barbadoes and the mother country, fresh plantations were speedily formed, and continued rapidly to increase.

The sugar cane is said to have been first cultivated in St. Domingo, or Hayti, in 1506. It succeeded better there than in any other of the West Indian Islands. Peter Martyr in a work published in 1530, states that, in 1518, there were 20 sugar-works in St. Domingo established by the Spaniards. "It is marvellous," says he, "to consider how all things increase and prosper in the island. There are now 28 sugar presses, wherewith great plenty of sugar is made. The canes or reeds wherein the sugar groweth are bigger and higher than in any other place; and are as big as a man's wrist, and higher than the stature of a man by the half. This is more wonderful, that whereas in Valencia, in Spain, where a great quantity of sugar is made yearly, whensoever they apply themselves to the great increase thereof, yet doth every root bring forth not past 5 or 6, or at most 7 of these reeds; whereas at St. Domingo, 1 root beareth 20, and oftentimes 30."—(Eng. Trans. p. 172.)

Sugar from St. Domingo formed, for a lengthened period, the principal part of the European supplies. Previously to its devastation in 1790, no fewer than 65,000 tons of sugar were exported from the French portion of the island.

III. *Sources whence the Supply of Sugar is derived.*— The West Indies, inc. Cuba, Louisiana, Java, Brazil, Bengal, Mauritius, the Isle de Réunion, and the Philippines, are the principal sources whence the foreign supplies required for the European, American, and Australian markets are derived. But of late years the supplies of tropical sugar brought to Europe have been materially increased by the beet-root sugar raised in France, Belgium, Germany, &c.

The following estimate, of which we have borrowed the principal portion from a valuable article on Sugar in *Hunt's Commercial Magazine*, gives what is, we believe, a pretty accurate account of its production during each of the 9 years ending with 1857: —

	1849.	1850.	1851.	1852.	1853.	1854.	1855.	1856.	1857.

* But white sugar is not necessarily, as Le Grand D'Aussy seems to suppose, refined; it may be merely clayed, like Havannah sugar, which is as white as refined sugar.

The produce of sugar in the U. States in 1857 is set down in the above table at rather less than 37,000 tons. But this was an extraordinarily small crop, occasioned by the early frost of that year (see N. ORLEANS): and the produce of the U. States may be safely estimated as amounting, at an average, to at least from 160,000 to 180,000 tons a-year or upwards.

On the whole we incline to think that we shall be sufficiently near the mark if we estimate the produce of sugar in 1858 at about 1,250,000 tons cane, and 230,000 tons beet-root, making a total produce of 1,480,000, or perhaps 1,500,000 tons.

Loaf or lump sugar is unknown in the East, sugar candy being the only species of refined sugar that is made use of in India, China, &c. The manufacture of sugar candy is carried on in Hindostan, but the process is extremely rude and imperfect. In China, however, it is manufactured in a very superior manner, and large quantities are exported. When of the best description, it is in large white crystals, and is a very beautiful article. Two sorts of sugar candy are met with at Canton, viz. Chinchew and Canton; the former being the produce of the province of Fokien, and the latter, as its name implies, of that of Canton. The Chinchew is by far the best, and is about 50 per cent. dearer than the other. Chinese sugar candy is extensively consumed by Europeans at the different settlements throughout the East. With the exception of 1852, when 2,085 tons raw sugar were imported from China, very little has latterly been brought to our markets from that empire. It seems, indeed, to be pretty well understood that the sugar of China is unable to withstand the competition of that of Java, Brazil, and Cuba.

Consumption of Tropical Sugar.—It is exceedingly difficult, or rather we should say quite impossible, to get any correct information with respect to the consumption of sugar in most countries. In as far, however, as regards this country, the subjoined tables furnish ample information. It appears from them that at an average of the 3 years ending with 1844, the consumption of sugar in the U. Kingdom amounted to about 200,000 tons a-year, exclusive of about 10,000 tons of bastard or inferior sugar, obtained from boiling molasses. In the course of the ensuing year, Sir Robert Peel reduced the duties on British colonial muscovado sugars from *25s.* 2⅔*d.* to *14s.* a cwt., a considerable reduction being made, at the same time, in the duty on foreign sugar the produce of free labour. In consequence of this reduction the entries of sugar for home consumption increased from 206,472 tons in 1844 to 242,830 tons in 1845, exclusive in both years of molasses equivalent to about 15,000 tons. In 1846 farther changes were made in the duties by the admission of foreign slave grown sugar at a reasonable rate; and in 1854 the entries for consumption amounted to 416,619 tons. But they declined during the next 3 years. The entries in 1858, however, rose, inc. refined, to about 437,000 tons, to which from 25,000 to 30,000 tons may be added for molasses. (See *post.*)

The statements given by Schnitzler (*Statistique de la France*, i. 296.) show that at an average of 1840 and 1841 the consumption of colonial and foreign sugars amounted in France to 73,139,000 kilog., or 71,425 tons a year; and adding to this quantity the produce of the beet-root plantations for these years, amounting to about 30,000,000 kilog., the whole consumption would be about 103,000,000 kilog., exclusive of the quantity surreptitiously introduced. But the home supply of sugar has greatly increased in the interval: and it further appears from the official accounts published by the French customs, that, in 1857, no fewer than 136,240,817 kilog., or 134,000 tons, of foreign and colonial sugar were entered for consumption. And it may be proper to observe that this quantity, though greatly in excess of the imports previously to 1854, does not differ materially from the imports of 1855 and 1856. We hardly think, however, that we should be justified in estimating the imports of foreign and colonial sugar into France at above 110,000 tons in ordinary years, making, with beet-root, the consumption about 200,000 tons.

The Low Countries, Germany, and Austria are supplied through Holland, the Hanse Towns, the ports on the south shore of the Baltic, and Trieste. Most part of the produce of the Dutch colonies is imported into Holland, and considerable quantities are also imported from other countries; so that, on the whole, the imports into the Dutch ports may be fairly estimated at from 100,000 to 110,000 tons a year. The imports into Hamburg and Bremen amount, at an average, to about 35,000 or 40,000 tons a year; and those into Antwerp to above 15,000 tons. There is also a considerable importation of sugar into Stettin and other Baltic ports belonging to Germany and Prussia. The imports into the Austrian dominions through Trieste, Venice, and other channels, may be taken at about 30,000 tons.

The consumption of sugar in Spain has been estimated by Montveran (*Statistique des Colonies*, p. 92.) at 41,050 tons. But, despite the considerable consumption of cocoa in Spain, and the moderation of the duties on sugar, we have little or no doubt that this estimate is considerably beyond the mark. Probably, were the consumption stated at 36,000 tons, it would be quite as much as it amounts to. On the like grounds we may, perhaps, estimate the consumption of Portugal at about 10,000 tons.

Duty is paid in Russia on about 25,000 tons of raw sugar, exclusive of what is clandestinely imported, and exclusive, also, of the clandestine imports of refined sugar. This, with beet-root sugar, may raise the total supply to 60,000 tons.

The following Table shows the Imports of Foreign Sugar, of all Sorts, into Russia, with its estimated Value, according to the Official Returns published by the Imperial Government.

Years.	By Sea.	By Land.	Total.	Value.	Duty.
1852	*Tons* 31,232	*Tons* 27	*Tons* 31,259	*Roub.* 7,027,834	*Roub.* 7,241,891
1853	21,173	Nil.	21,173	4,936,560	4,871,206
1854	15,611	2,607	18,218	5,918,226	3,960,610
1855	1,233	14,950	16,183	5,208,436	2,290,936
1856	8,697	12,769	21,466	7,111,092	3,472,615
1857	24,797	1,604	26,401	8,901,014	4,931,814

To the above has to be added about 24,000,000 lbs. beet-root sugar imported from Poland in 1857, and 42,000,000 lbs. raised in the empire; making in all about 36,000 tons. (*Consular Report on Poland in* 1857.) The growth of beet-root sugar in Poland is said to have been 1849–50, 3,628,170 lbs. Eng.; 1855–56, 11,031,000 lbs.; and 1856–57, 15,377,000 lbs. of superior quality, exc. in 1856–57, of 13,636,000 lbs. inferior do.

During the year ending the 30th June, 1858, the U. States imported (principally from Cuba and Porto Rico) 517,228,624 lbs., of which 74,470,454 lbs. were re-exported, leaving 442,758,170 lbs., or nearly 200,000 tons, for the consumption of the Union. But in addition to their imports of foreign sugar the U. States draw a principal portion

of their supply from the plantations in Louisiana, the produce of which has increased very rapidly of late years. In 1854 it amounted to 224,000 tons. But, as already stated, the produce fluctuates very greatly in different years, and may, perhaps, be estimated at about 175,000 tons at an average. The exports of this sugar are not very considerable: the whole shipments of native raw and refined sugar from the Union during the year ended the 30th of June, 1858, having amounted to 46,367,786 lbs., or about 20,000 tons. (*Papers published by order of Congress.*) The States derive a further supply of 15,000 or 18,000 tons sugar from the maple.

On the whole, therefore, we shall not perhaps be far wrong in estimating the consumption of colonial, tropical, and beet-root sugar as follows, viz.:—

	Tons.	Tons.
The U. Kingdom, inclusive of distilleries, &c.		430,000
France, inc. beet-root		200,000
Colonial sugars for the Netherlands, Belgium, Germany, Prussia, Austria, Hungary, and Austrian Italy, per Dutch ports, deducting re-exports to Russia and other countries	60,000	
per Hanse Towns	35,000	
— Antwerp	15,000	
— Rostock, Stettin, Königsberg, and other ports on the Baltic, including the imports from Holland and the Hanse Towns	8,000	
Trieste, Venice, Fiume, &c.	30,000	
Beet-root, do.	117,000	
		265,000
Spain		35,000
Portugal		10,000
Russia, inc. beet-root		60,000
Denmark and Sweden		13,000
Italy, Sicily, Malta, Turkey, Greece, and the Levant generally		52,000
U. States		360,000
Canada, Australia, Cape of Good Hope, &c.		45,000
		1,470,000

Now, supposing these statements to be reasonably correct, it would appear that the aggregate supply of sugar so far exceeds the demand, that it may be fairly presumed, that the giving of full permission to employ sugar in our distilleries and breweries will have no lasting influence over its price.* It is, no doubt, true that the demand for sugar is rapidly increasing in this and most other countries; but, as the power to increase its supply (so long, at least, as Cuba, Brazil, and Louisiana are supplied with slave labour) is all but illimitable, no permanent rise of prices need at present be anticipated.

Taking the price of sugar at the rate of 1*l.* 4*s.* a cwt. or 24*l.* a ton, the prime cost of the article (1,470,000 tons) to the people of Europe and the U. States will be 35,280,000*l.* sterling; to which adding 50 per cent. for duty, its total cost will be 52,920,000*l.*! This is sufficient to prove the paramount importance of the trade in this article. Exclusive, however, of sugar, the other products of the cane, as rum, molasses, treacle, &c. are of very great value. The revenue derived by the British treasury for rum only, amounted, in 1858, to 1,396,093*l.* nett., but it has sometimes been greater.

Progressive Consumption of Sugar in Great Britain.—We are not aware that there are any authentic accounts with respect to the precise period when sugar first began to be used in England. It was, however, imported in small quantities by the Venetians and Genoese in the 14th and 15th centuries†; but honey was then, and for long after, the principal ingredient employed in sweetening liquors and dishes. Even in the early part of the 17th century, the quantity of sugar imported was very inconsiderable; and it was made use of only in the houses of the rich and great. It was not till the latter part of the century, when coffee and tea began to be introduced, that sugar came into general demand. In 1700, the quantity consumed in Great Britain was about 10,000 tons, or 22,400,000 lbs.; whereas, in 1854, the consumption amounted (bastards excluded) to above 416,000 tons, or more than 930,000,000 lbs.; so that sugar forms not only one of the principal articles of importation and sources of revenue, but an important necessary of life.

Great, however, as the increase in the use of sugar has certainly been, it may, we think, be fairly presumed that the demand for it is still a good deal below its natural limit; and now that the duties are reasonable, and the trade placed on a proper footing, we confidently anticipate that the consumption of sugar, and, also, the revenue derived from it, will yet be considerably increased.

During the first half of last century, the consumption of sugar increased five-fold. It amounted, as already stated—

* The quantities taken for this purpose have hitherto been inconsiderable, viz., in 1856, 134,623 cwt.; 1857, 5,225 do.; and in 1858, 17,553 do.

† In Marin's *Storia del Commercio de Veneziani* (vol. v. p. 306.), there is an account of a shipment made at Venice for England in 1319, of 100,000 lbs. sugar, and 10,000 lbs. sugar candy. The sugar is said to have been brought from the Levant.

In 1700,	to 10,000 tons	- or 22,000,000 lbs.	In 1754,	to 53,270 tons	or 119,320,000 lbs.
1710,	- 14,000	- 31,369,000	1770—75,	- 72,500 (average)	- 162,509,000
1734,	- 42,000	- 94,080,000	1786—90,	- 81,000 —	- 181,500,000

In the reign of Queen Anne, the duty on sugar amounted to 3*s.* 5*d.* per cwt. Small additions were made to it in the reign of George II.; but in 1780 it was only 6*s.* 8*d.* In 1781 a considerable addition was made to the previous duty; and in 1787 it was as high as 12*s.* 4*d.* In 1791 it was raised to 15*s.*; and while its extensive and increasing consumption pointed it out as an article well fitted to augment the public revenue, the pressure on the public finances, caused by the French war, occasioned its being loaded with duties, which, though they yielded a large return, would, there is good reason to think, have been more productive had they been lower. In 1797, the duty was raised to 17*s.* 6*d.*; 2 years after, it was raised to 20*s.*; and, by successive augmentations in 1803, 1804, and 1806, it was raised to 30*s.*; but in the last mentioned year it was enacted, that, in the event of the market price of sugar in bond, or exclusive of the duty, being for the 4 months previous to the 5th of January, the 5th of May, or the 5th of September, below 49*s.* a cwt., the Lords of the Treasury might remit 1*s.* a cwt. of the duty; that if the prices were below 48*s.*, they might remit 2*s.*; and if below 47*s.*, they might remit 3*s.*, which was the greatest reduction that could be made. In 1826, the duty on West India sugar was declared to be constant at 27*s.*, without regard to price; the duty on sugar from the Mauritius being then also reduced to 27*s.* In 1830, the duty was reduced to 24*s.* on West India and Mauritius sugar, and to 32*s.* on East India sugar; and in 1836, the duty on the latter was reduced to the same level as that on the former.

Account of the Quantity of Sugar retained for Home Consumption in GREAT BRITAIN, the Nett Revenue derived from it, and the rates of Duty with which it was charged, in each Year from 1789 to 1814, both inclusive.

of the duty, have been deducted.

* To White-Clayed.

We had occasion, in a former edition of this work, to remark on the impolicy and injustice of charging sugar from our possessions in the East Indies with a higher rate of duty than was laid on sugar from the West Indies. But, as already seen, this distinction was suppressed in 1836, and the sugar of our various colonial possessions and dependencies is now admitted for consumption on the same terms.

Previously to 1845 the duty on sugar from a British possession was decidedly too high, being no less than 25*s.* 2*d.* (24*s.* + 5 per cent.) per cwt. But whether this were so or not, there cannot, we apprehend, be so much as the shadow of a doubt that the duty on foreign sugars was then more than twice as great as it should have been. This duty, which amounted for a lengthened period to 63*s.* a cwt., was, in fact, intended to be prohibitory; and so long as our foreign dependencies furnished so much sugar as not only to supply the markets of the U. Kingdom, but to furnish, besides, a considerable excess for exportation to others, there was little to object to in the magnitude of the duty. Latterly, however, it became most oppressive in its operation. In consequence, as already seen, of the measures connected with the emancipation of the slaves, the imports of sugar from the West Indies declined from 4,103,746 cwts. in 1831, to 2,857,703 cwts. in 1845. Owing to the immigration of hill-coolies, and other circumstances, the emancipation of the slaves in the Mauritius had comparatively little effect; and since 1845 there has been a very great increase in the exports of sugar from that island. (See Port Louis.) But despite this circumstance, and the increase in the imports of sugar from India since 1840, the decrease in the imports from the West Indies was not, for a considerable time, fully compensated. On the one hand, therefore, we had a rapidly increasing population, and on the other we had that population confined by an oppressive duty to a market for sugar, the supply of which had been diminished! The consequences were such as every man of sense might have anticipated from the outset. The business of refining for the foreign market, and our export trade in sugar, were all but annihilated, while the average gazette price of muscovado sugar admissible to the English markets amounted during the 3 years ending with 1844 to about double the price of foreign sugar in bond, of equal or superior quality! We beg, in illustration of what is now stated, to subjoin an

Account of the Quantities of Sugar retained for Consumption, of the Nett Produce of the Duties thereon, and of the Prices of British Sugar (ex Duty), and Brazil Sugar in Bond, in 1842, 1843, and 1844, with the Average of these 3 Years.

Years.	Quantities.	Nett Revenue from Duties on Sugar.	Average Prices of British Muscovado Sugar.	Average Prices of Brazil Sugar (Brown and Yellow).
	Cwts.	£	*s.* *d.*	*s.* *d.*
1842 - -	3,868,437	4,874,812	56 1½	18 3
1843 - -	4,028,307	5,076,526	53 9½	17 2
1844 - -	4,129,994	5,203,222	53 3	17 0
Total -	12,026,738	15,154,560	163 11½	£2 12 5
Average of 3 years -	4,008,912⅔	5,051,453½	54 7¾	17 5⅔

Now, it appears from this statement, that while the price of British sugar (exclusive of duty) amounted during the 3 years ending with 1844 to 34*s.* 7¾*d.* per cwt., the price of Brazil (and Cuba) sugar was only 17*s.* 5⅔*d.* per do.! And hence it follows, that, had the then prohibitory duty of 63*s.* on foreign sugar been reduced to the same rate (25*s.* 2*d.*, or 24*s.* + 5 per cent.) as the then duty on British sugars, the people of the U. Kingdom might have bought the same quantity of sugar for 17*s.* 5⅔*d.* that cost them 34*s.* 7*d.*, that is, they might have got about 2 lbs. of sugar for the same sacrifice it cost them to get 1 lb. The aggregate loss to the public from this preposterous arrangement of the sugar duties, during the period in question, was quite enormous. It appears from the above account that the average consumption of sugar, during each of the three years ending with 1844, amounted to 4,008,912⅔ cwts., which at 34*s.* 7¾*d.* cost 6,944,605*l.* 14*s.* 5*d.* But had we been allowed to go into the foreign market for sugar, we might have got the same quantity for 3,502,230*l.* 13*s.*, being a saving in 1 year of no less than 3,442,375*l.* 1*s.* 5*d.*, and on 3 years, of 10,327,125*l.* 4*s.* 3*d.* But it may, perhaps, be said, that had our ports been open to the free importation of Brazilian and other foreign sugars, the price of the latter would have been raised: and so probably it would; though, considering the vast extent and productiveness of the field from which sugar may be brought, we doubt whether this effect would be very sensible. But, supposing that the opening of our ports had raised the price of foreign sugar from 17*s.* 5⅔*d.* to 22*s.* a cwt., still the saving would have amounted to 2,534,801*l.* 15*s.* 9*d.* a year!

Under these circumstances there could no longer be a doubt that the reduction of the old prohibitory duty of 66*s.* a cwt. on foreign sugar was imperatively required; this was partially effected in 1844, when the duty on foreign sugar, if produced by free

labour, was reduced to 35*s.* 8½*d.* a cwt.; and when, in 1845, the duty on British colonial sugars was reduced to 14*s.* a cwt., that on foreign free labour sugar was farther reduced to 23*s.* 4*d.* a cwt.

But though these reductions of duty effected a great improvement in the old system, they were inadequate to place it on a satisfactory footing. The reduction of the duty on foreign sugar applied to that only which was produced by free labour, the sugar produced by the labour of slaves (unless we happened to be bound by treaty to admit it at the low duty) continuing subject to the old prohibitory duty of 66*s.* per cwt. Nothing, however, could be more inexpedient than this distinction, on which we took the liberty to animadvert as follows in a former edition of this work:—

"We take, without any scruple, the cotton, tobacco, rice, and other products of slave-holding countries; and such being the case, it is not very easy to see on what principle we refuse to take their sugar. There is no reason to think that we are at all likely to hasten, by this refusal, the emancipation of their slaves (even if that were certainly desirable), or to improve their condition: our policy in this respect is injurious to ourselves, without being of the smallest advantage to any one else.

"But the truth is, if we look a little narrowly into the circumstances, we shall find that we do the very thing we pretend not to do. We annually export large quantities of British produce to Cuba and Brazil; but the sugar of those countries, the principal article they have to send us, being excluded from our markets, we cannot bring it direct to this country, but we carry it to Hamburg and other continental emporiums, and there exchange it for wool, flax, and other articles we are allowed to import; so that, in effect, we transmute the slave-grown sugar into other things, and consume it under its new form. We do not employ it to sweeten tea and coffee; but we clothe ourselves with wool and flax, manure our lands with bones, and manufacture our paper of rags, which are all bought by it! But suppose we were a little more Quixotic, and that after getting the sugar we threw it into the sea, the result, as respects Cuba and Brazil, would be the same. We give, by buying their sugar, all the encouragement in our power to the slavery that exists in them; what we shall do with the sugar is our own affair; and whether we use it, sell it to others, or destroy it, is, as far as slavery is concerned, quite immaterial. But it is by no means immaterial as respects our trade with slave-holding countries; inasmuch as the preference we give to the sugars of others tempts them to lay discriminating duties on our products, and to discourage and embarrass our trade. And even were it otherwise desirable, it may be doubted whether it be in our power to exclude slave-grown sugar. Certificates of origin will, we apprehend, be rather a slender security for this result. But supposing them to be effectual, the consequence will be that a greater quantity of Java and Manilla sugar being consumed in England, less of it will remain to be sent to the Continent, where, by means of our policy, a corresponding market will be opened for slave-grown sugar!

"But admitting that something might be found to say in favour of the policy of wholly excluding slave-grown sugar, we, in effect, abandon it, by admitting the slave-grown sugar of the U. States and other countries with which we have treaties of reciprocity; so that, after all, our policy, in this respect, is prohibitive only of the sugars of Cuba, Porto-Rico, and Brazil! If the Americans chose to send us the whole sugar grown in Louisiana, every ounce of which is the produce of slave labour, importing in its stead sugar from the Havannah and Bahia, it would be freely admitted to our markets. Hence it is that, while we exclude the slave-grown sugar of those friendly countries of whose trade we might, if we chose, have a virtual monopoly, we admit the slave-grown sugar of our rivals, of the only people whose commercial marine can come into competition with our own! And to show that this contradiction is not imaginary, we may mention that, during the present year (1845) about 300 tons of the sugar of Louisiana* and Venezuela have been admitted to consumption under the new act! Is it, we beg to ask, possible to speak too harshly of such a policy? to imagine anything more perverse, contradictory, and absurd?

"It were really, therefore, to be wished that we should cease to rave, as we have done for the last 20 years, about slavery; and that we should allow our merchants to buy sugar, as we allow them to buy cotton and other things, without inquiring how, or by whom, it is produced. We may be assured that we should give as little encouragement to slavery by so doing as we give by our present system, while we should, at the same time, give greater facilities to our trade, and full scope to the late, and in other respects, wise and liberal measures."

We are glad to have to state that the principle contended for in the above paragraphs has since been fully admitted by the legislature; the act of 1846, 9 & 10 Vict. c. 63., having equalised the duty on all descriptions of foreign sugars.

* The quality of the latter is not, as now prepared, well suited to our markets.

It will farther be observed that under the system adopted in 1845, a discriminating duty of 9*s.* 4*d.* per cwt. was imposed on foreign muscovado sugar admitted to consumption over and above the duty (14*s.* per cwt.) imposed on British sugar. Inasmuch, however, as the latter was inadequate to the supply of the U. Kingdom, the effect of this regulation was to add 9*s.* 4*d.* per cwt. to the price of all the sugar, British as well as foreign, entered for consumption. And it was hardly to be supposed, after the striking recognition of the principles of free trade given by the legislature in passing the act for the abolition of the corn laws, that the protective system would be permitted to continue for the sake of the sugar colonies. The abolition of the former was, in truth, all but equivalent to the abolition of the latter. And the 9 & 10 Vict. c. 63. referred to above, which put an end to the distinction between free and slave-grown sugar, provided also for the equalisation of the duties on British and foreign sugars, which, had it been maintained, would have been finally effected on the 5th of July, 1851.

This last act, however, was afterwards superseded by the 11 & 12 Vict. c. 97., which, exclusive of some changes in the duties, deferred their complete equalisation till 1854.

Comparative Efficiency of Free and Slave Labour in the Production of Sugar. — But though it was not to be expected that a discriminating duty in favour of the sugar of our colonies would be tolerated, it is by no means clear that its abolition has not been an injustice to the latter. The equalisation of the duties would have been in all respects unobjectionable, were the circumstances under which the planters in our colonies are placed identical with or similar to those under which their competitors are placed in Cuba, Brazil, and Java. Such, however, is not the case. The instruments of production possessed by the latter are totally different from those possessed by the former. In Brazil and Cuba the planters are furnished with slave labour, and in Java the population, though not enslaved, is subjected to compulsory service. Unless, therefore, it can be shown that free labour is as efficient in the production of sugar in the West Indies and Demerara as slave or compulsory labour, it will necessarily follow that the equalisation of the duties on British and foreign sugars was an injustice to our colonists.

It has been alleged over and over again in vindication of this equalisation, that free labour is at once cheaper and more efficient than slave labour; and without inquiring into the truth of this allegation, we shall admit the greater cheapness of free labour in countries where freemen and slaves are equally suited to the employments carried on in them, and where these employments would be spontaneously followed by the slaves were they emancipated. But the conditions under which the production of sugar is carried on in the intertropical regions of the New World are entirely different from those now stated. Whites are not capable of field labour in such climates; and the raising of sugar is not an employment that would be voluntarily undertaken by free blacks. The latter have few wants. They reckon as useless incumbrances many articles indispensable in cold or temperate climates. Hence the *curis acuens mortalia corda*, so powerful in Europe, has but little influence in Jamaica and Trinidad. Men are not instinctively laborious or enterprising. Industry is with them merely a means to an end, a sacrifice they make to obtain supplies of the necessaries and conveniences of human life. Whenever the sacrifice required to procure food, clothes, and other necessary accommodations is considerable, the population is generally industrious; and a taste for labour being widely diffused, those who are not obliged to apply themselves to the production of necessaries, engage in the production of superfluities. But wherever the principal wants of man may be supplied with but little exertion, indolence becomes the distinguishing characteristic of the population; and, instead of employing their spare time in the production of articles of ostentation and luxury, they usually waste it in idleness and apathy. Now this is the precise state of the blacks in the W. Indies. Their necessities and desires are of a very limited description; and are generally indeed fully satisfied by the produce of a small patch of land, requiring but little labour in its cultivation: and such being the case it would be contradictory to suppose that they should voluntarily employ themselves in the hard labour necessary to produce sugar. Consistently with what is now stated, we find that Hayti, or St. Domingo, though the most fruitful of the West Indian islands, and though, when a colony of France, it furnished immense supplies of sugar, does not export, now that it is occupied by free blacks, a single ton! This, also, is the case in Mexico: and what reasonable ground have we for supposing that the result would be different in Jamaica, Cuba, or Brazil, were the blacks free and able (which is not the case in our islands) easily to obtain patches of land? The possession of the latter is requisite to enable them to exist without engaging in laborious service; and in the event of their not being able to obtain land, they may be forced to employ themselves in the culture of sugar; though, as it is against their inclination, they will withdraw from their work on the first opportunity, and will, while employed, indulge as much as possible in idleness.

Hence it would seem that, whether slave and compulsory labour be cheaper or

dearer than free labour, it is indispensable to the production of sugar. We do not presume in making this statement to give any opinion in regard to the policy or impolicy of the suppression of slavery in our colonies. The freedom of the blacks may be a more than sufficient compensation for the cessation of supplies of sugar from them. But, whether it be so or not, we regard it as the merest illusion to suppose that the severe drudgery of sugar planting will ever be efficiently carried on in the W. Indies by really free labourers.

The mere exclusion of slave-grown sugar would not, however, as many seem to suppose, have in any degree obviated the hardships to which our planters have been exposed. It would merely have forced a larger quantity of the sugars of Java and China upon our markets, and opened a larger field for the consumption of slave-grown sugar on the Continent. Justice to our colonists required that either a discriminating duty should have been imposed in their favour on all foreign sugars, or that they should have been compensated in some other way. But as the former method of dealing fairly by them would have been repugnant to the national feeling and highly objectionable, at the same time that it is more than doubtful whether it would have done real service to the planters, some less offensive and more efficient alternative should have been resorted to. We subjoin

An Account of the Quantities of the different Descriptions of Unrefined Sugar entered for Consumption in the United Kingdom during each of the 26 Years ending with 1857; with an Account of the Amount of Duty received on the same, the average Price of Muscovado Sugar in Bond, &c.

Sugar Duties. — The 11 & 12 Vict. c. 97. regulated and materially reduced the duties on colonial and foreign sugars. But the war with Russia occasioned their subsequent increase. And though they have been again reduced, it is very doubtful whether that reduction will be permanent. The probability, indeed, seems to be quite the other way. And it must be admitted that when fairly imposed, and not carried to an extravagant height, these duties afford one of the least exceptionable means by which a large revenue may be most conveniently raised. The sugar duties at present are as follows, viz.

Duties on Sugar imposed by the Act 20 & 21 Vict. c. 61.

Sugar, viz.:		£	s.	d.	
Candy, brown or white refined sugar, or sugar rendered by any process equal in quality thereto -	cwt.	0	18	4	Till 31 March, 1860.
White clayed sugar, or sugar rendered by any process equal in quality to white clayed, not being refined, or equal in quality to refined - - - - - -	,,	0	16	0	
Yellow Muscovado and brown clayed sugar, or sugar rendered by any process equal in quality to yellow Muscovado or brown clayed, and not equal to white clayed - - - -	,,	0	13	10	
Brown Muscovado or any other sugar, not being equal in quality to yellow Muscovado or brown clayed sugar - - - - - - - - - -	,,	0	12	8	
Cane juice - - - - - - - - - -	,,	0	10	4	
Molasses - - - - - - - - - -	,,	0	5	0	

The quantity of sugar consumed in Great Britain, previously to the change in 1845, allowing for the quantity sent to Ireland, was more than double what it was in 1790. But had the duty continued at 12*s.* 4*d.*, its amount in that year, there cannot, we think, be much doubt, provided foreign sugars had also been admitted under a reasonable duty, that the consumption would have been trebled or more. During the intervening period the population had been little less than doubled; and the proportion which the middle classes bear to the whole population had been decidedly augmented. The consump-

tion of coffee—an article in the preparation of which a great deal of sugar is used in this country by all who can afford it—is about 35 times as great now as in 1790; that is, it has increased from under 1,000,000 lbs. to about 35,000,000 lbs.! The consumption of tea has more than doubled; and there has been a great increase in the use of home-made wines, preserved and baked fruits, &c. Instead, therefore, of having done little more than increase proportionally to the increase of population, it may be fairly presumed that the consumption of sugar would, had there not been some powerful counter-vailing cause in operation, have increased in a far greater degree. Instead of amounting, in 1844, to little more than 4,000,000 cwt., the consumption of Great Britain should have amounted to about 6,000,000 cwt.

Taking the aggregate consumption of sugar in Great Britain previously to 1845 at 400,000,000 lbs., and the population at 20,000,000, the average consumption of each individual would have been about 20 lbs., ex molasses. This, though a far greater average than that of France, or any of the continental states, was but small compared with what it was supposed it would amount to when supplied under a more liberal system. In workhouses, the customary annual allowance for each individual is, we believe, 34 lbs.; and, in private families, the smallest separate allowance for domestics is 1 lb. a week, or 52 lbs. a year. These facts strongly corroborate what we formerly stated as to the extent to which the consumption of sugar would probably be increased under the new system; and others may be referred to, that are little less conclusive. Mr. Huskisson observed, in his place in the House of Commons, on Mr. Grant's motion for a reduction of the sugar duties, 25th of May, 1829, that "in consequence of the present enormous duty on sugar, the poor working man with a large family," to whom pence were a serious consideration, was denied the use of that commodity; and he believed *he did not go too far when he stated that* TWO-THIRDS *of the poorer consumers of coffee drank that beverage without sugar.* If, then, the price of sugar were reduced, it would become an article of his consumption, like many other articles—woollens, for example, which are now used for their cheapness — which he was formerly unable to purchase."—(*Speeches*, vol. iii. p. 455.) Mr. Huskisson's conclusions are now in the way of being fully realised. But for the late check given to consumption by the increase of the duty occasioned by the war with Russia, it is not easy to anticipate what might have been its amount in 1860. In 1844, for example, the consumption of the U. K. amounted to 206,472 tons; in 1847 it had increased to 290,282 tons; in 1850 to 310,390; and in 1854, when the duties were equalised, it amounted to 401,437 tons raw, and 15,182 do. refined. And this, it will be observed, is exclusive of about 42,000 tons molasses entered for consumption. And we may add, in illustration of the way in which this extraordinary increase has been effected, that while, in London and other parts of the country, the sales of sugar by the grocers who supply the higher classes have been but little extended, the sales by those who principally deal with the lower classes have augmented from 50 to 100, and, in some cases, to 150 and 200 per cent.! This is the best possible proof of the salutary as well as of the powerful influence of the reduction of the duties. But it is only what might have been anticipated; inasmuch as the consumption of the more opulent classes was but little affected by the previous high duty.

In Ireland, especially, the most beneficial effects have resulted from the reduction of the duties on sugar. The direct importations of sugar into Ireland did not, previously to the late changes, exceed 18,500 tons; and, adding to these 6,500 tons for the second-hand importations (including bastards) from Great Britain, which, we believe, was quite as much or more than they amounted to, the entire consumption of that country would be 25,000 tons, or 57,000,000 lbs., which, taking the then population at 8,000,000, gave 7·125 lbs. to each individual; or nearly 1-3d part of the average consumption of each individual in Great Britain. So singular a result must, no doubt, be principally ascribed to the poverty of the Irish; but there can be no doubt that it was partly, also, owing to over-taxation. And the reduction of the duty, though it occasioned an immediate loss of revenue in Ireland, was sure in the end to be productive of its increase, besides being attended with other and still more beneficial consequences. Next to the suppression of agitation, and assassination, the "one thing needful" in Ireland is to inspire the population with a taste for the conveniences and enjoyments of civilised life; and the first step towards supplying this desideratum is, if possible, to make articles of convenience and luxury attainable by the mass of the people. If this be done, whether by a reduction of duties or otherwise, we may expect that the desire inherent in all individuals of improving their condition will impel them to exert themselves to obtain them. A taste for such articles will be gradually diffused among all ranks; and ultimately, it may be presumed, it will be thought discreditable to be without them. It is probable, owing to the late extraordinary decrease of the population in Ireland, that the deliveries of sugar may not be greater now than formerly. But if it be maintained at near its old level, it will show a great increase in the consumption per individual.

The Board of Inland Revenue has latterly made some elaborate inquiries with respect to the comparative consumption of sugar and tea by the higher, the middle, and the lower classes. But it would be wrong to lay much stress on the conclusions resulting from such investigations. At the best they should be regarded only as very rude approximations. Even as such, however, they are deserving of attention. We subjoin the result of the Board's inquiries in as far as they relate to sugar.

Proportional Consumption of Sugar in Great Britain by the Higher, the Middle, and the Poorer or Working Classes.

	England.	Scotland.	Great Britain.
The upper classes consume	23 per cent.	22 per cent.	22½ per cent.
The middle classes	37 „	40 „	38 „
The poorer or working classes	40 „	38 „	39½ „
Total	100 per cent.	100 per cent.	100 per cent.

Mr. Ogilvie, a very intelligent Customs officer, has made the following observations in regard to the consumption of sugar.

"In England, sugar is generally used by the working classes in the raw or unrefined state, though the preference for refined sugar is gradually and extensively increasing. In London and other large towns, when refined sugar can be purchased for 6*d.* per lb., it is universally preferred; but when the price rises above that, the poor are obliged to fall back upon the raw.

"In Scotland, raw sugar is but little used, except by the very poorest; inferior qualities of refined, known as 'crushed lump' and 'bastards,' being generally used by the middling and lower classes, the use of loaf sugar being confined to the wealthier classes.

"In the north of Ireland, particularly in the manufacturing districts around Belfast and Londonderry, the produce of Liverpool and Greenock refineries meets with a large sale. In Limerick it is stated that two-thirds of the consumption consist of refined loaf and crushed; but in the other parts of Ireland, raw sugar is the chief article of consumption among the working classes, loaf sugar being consumed only by the rich, and by the better classes of mechanics and farmers in their whiskey punch. Among all classes, sugar is more an article of consumption than tea, because the poor use it with coffee and cocoa as well as with tea, and among the rich it enters largely into many culinary preparations."—(*Parl. Paper*, No. 184, Sess. 1857.)

U. States.—Next to, or even, perhaps, before Great Britain, the U. States are now, as previously seen, by far the largest consumers of sugar; and Louisiana has become a principal producing country. It appears from the best attainable information that the consumption of foreign and native sugar, allowing for stocks on hand, &c., in the Union in the under-mentioned years was nearly as follows, viz.:—

Consumption of Foreign and Domestic Cane Sugar, in the U. States, in the following Years, ending 31st of December (in Tons):—

Years.	Foreign.	Domestic.	Total.	Years.	Foreign.	Domestic.	Total.
1850	143,045	126,421	269,466	1855	192,604	185,148	377,752
1851	181,047	107,438	288,485	1856	255,292	123,468	378,760
1852	196,558	118,659	315,217	1857	241,765	39,000	280,765
1853	200,610	172,379	372,989	1858	244,758	143,654	388,492
1854	150,854	234,444	385,298				

But this, it will be observed, is exclusive of molasses and maple sugar. And allowing 36,000 tons for these, and taking the population of the Union at 30,000,000, the total average consumption in 1858 has been estimated at nearly 32 lbs. for each individual!

The crops of sugar in Louisiana are very fluctuating, being very apt to be injured by frost. The crop of 1853-54 was the largest ever known; and has been estimated at 225,000 or 227,000 tons. Probably, however, the average produce may not, as previously stated, exceed from 170,000 to 180,000 tons. The refining business has made a rapid progress in the U. States; so much so, that the produce of refined sugar is now estimated at about 170,000 tons.

Sugar Trade of the U. States in 1858.

Total Imports	tons	255,100
Add stock in ports, 1st January, 1858		15,529
Supply for year		270,629
Deduct exports and shipments inland to Canada	12,525	
Stock in ports, 1st January, 1859	13,346	25,871
Total consumption of Foreign sugar in U. States		244,758
Add crop of 1857-58 of Louisiana, Texas, Florida, &c., the bulk of which was distributed in 1858, and assuming the stock 1st January each year to be equal		143,734
Would make the total consumption of cane sugar in U. States in 1858		388,492

It may, perhaps, be proper to state that these estimates, like others of the same kind, though nearly, are not to be considered as being entirely accurate; and the best of them always differ more or less from each other. In the statements now laid before the reader the years terminate on the 31st December; whereas, in the official returns, they terminate on the 30th June. And it appears from the latter that the imports of raw sugar in the year ending the 30th June, 1858, amounted to 517,228,624 lbs., being rather above 230,000 tons, while the exports during the same year were 71,674,178 lbs., or very near 32,000 tons, leaving 198,000 tons for consumption. But it does not, therefore, follow that it was consumed. To decide this point we must know the stocks on hand at the beginning and end of the year, and these it is either impossible or very difficult to learn exactly.

Use of Sugar in Distilleries and Breweries.—In the last edition of this work we expressed ourselves on this subject as follows: "The use of sugar in these establishments, though not absolutely prohibited, is at present placed under restrictions which are equivalent to a prohibition. There can, however, be no doubt that these restrictions should be abolished, and free leave given to the growers and importers of sugar and molasses, and, indeed, of everything else, to convert them to any purpose to which they may be applicable. This has hitherto been objected to, except in periods of scarcity, partly from a wish to promote the interests of the barley growers and maltsters in this country, and partly from the alleged risk of smuggling and loss to the revenue. But now that the policy, or rather impolicy, of protection has been renounced by the legislature, and that foreign barley may be imported and employed in any way, under a nearly nominal duty, there is plainly no ground or pretence on which the agriculturists can object to the use of sugar; and as respects the risk of fraud and loss to the revenue, we do not think it amounts to much. In cases where sugar only is to be used in distilleries and breweries, the risk of fraud could hardly amount to anything; and in the cases in which it is partly used along with malt or raw grain, or both, it would be easy, seeing that the capacity of sugar to produce spirits and beer, as compared with malt and grain, is well known, to take such precautions as would prevent any amount of fraud worth talking about. But, however it may be carried into effect, it would seem to be indispensable that the distilleries and breweries, as well as every other legitimate channel of consumption carried on in the kingdom, should be open to all who raise or import sugar, or anything else, on their paying the customary rates of duty. This is the only way in which the interests of the consumers, which are identical with those of the public, can be effectually secured; and it is obvious that, to carry out the great principle of the freedom of industry, it is not merely necessary to permit the free importation of colonial and other products, but to allow them, after being imported, to be employed in any way their owners may think fit. Under this system justice will be done to all parties, and the public be supplied with the best and the cheapest articles." And we are glad to have to state that this principle has since been fully carried into effect by the acts 10 Vict. c. 5., and 11 & 12 Vict. c. 100., to which we beg to refer.

Adulteration.—Sugar is an article which is especially liable to adulteration; and its high price during many years, coupled with the high duty, gave a powerful stimulus to this nefarious practice. Perhaps, we might not be far from the mark, were we to estimate the quantity of foreign matters intentionally mixed up with sugar, and sold as such in this country, previously to the late reduction of duties, at 10,000 or 12,000 tons a-year! Sago and potato flour are the articles which have been most extensively used for this purpose. When mixed with sugar they give it a whiter and finer appearance; and, unless the dose be overdone, increase its price about 4*s.* a cwt. It is extremely difficult to deal with an abuse of this sort. No doubt the fall in the price of sugar following the placing of the trade on a proper footing, and the reduction of the duty, have lessened the temptation to adulterate. But they have not wholly removed it, the materials employed to adulterate being decidedly cheaper than sugar, however supplied. In this, as in most cases of the sort, the best security against adulteration is to deal only with grocers of the highest character.

Refining of Sugar for Home Consumption.—Of late years the refining of British colonial sugar for exportation has wholly ceased. Indeed the tide has now turned the other way. In 1857, 14,896 tons foreign refined sugar, principally from Holland and Belgium, were taken for consumption. But despite this circumstance, the refining of sugar for home use is extensively carried on, and has increased considerably since the reduction of the duties. At present (1859) there are upwards of 50 refining establishments in G. Britain, with a capital probably exceeding 1,500,000*l.* It is supposed that these establishments will use in the course of the current year from 230,000 to 250,000 tons raw sugar, which will produce, exclusive of molasses and bastards, from about 180,000 to 200,000 tons refined sugar. A large proportion of this produce consists of what is called "crushed lumps," a variety of refined sugar which is rapidly superseding the finer descriptions of E. Indian sugar and even of W. Indian muscovadoes. Refined sugar is now used by very many families by whom it was formerly never tasted.

According to the mean of several estimates,

100 cwts. of sugar, double-refined (or corresponding in quality to double-refined) are equal to 129 cwts. raw sugar.

100	„ of sugar single-refined	110
100	„ of bastards	85
100	„ of molasses	39

Drawback or Bounty on the Exportation of Refined British Colonial Sugar.—It may be doubted whether the business of refining sugar for exportation has ever been productive of any material national advantage to us. It was long suspected—and the fact

seems to have been sufficiently established—that the drawback formerly allowed on the exportation of refined sugar was greater than the duty charged on the raw sugar used in its manufacture; the excess being, in fact, a bounty paid to those engaged in the trade. Previously to 1826, the drawback on double-refined sugar was 46*s.* a cwt.: it was then reduced to 43*s.*; but there is reason to think that that was still considerably above the mark. The average price of sugar in bond in this country was, for several years, from 5*s.* to 6*s.* a cwt. above what sugar of the same quality brought on the Continent; a difference which, as we then exported sugar, could not have been maintained, had it not been for the bounty. The same conclusion was established by trials made at a sugar-house taken for the purpose by government; and in consequence the drawback was reduced to what was supposed to be the fair equivalent of the duties paid on the raw sugar; a measure of the expediency of which no doubt can be entertained.

The existing bounties or drawbacks on the exportation of British refined sugar are as follows, viz.: —

Drawbacks allowed by the Act 20 & 21 Vict. c. 61. on Refined Sugar, when exported to Foreign Parts, or removed to the Isle of Man for Consumption therein.

		£	s.	d.	
Sugar: refined sugar in loaf, complete or whole or lumps duly refined, having been perfectly clarified and thoroughly dried in the stove, and being of an uniform whiteness throughout, or sugar candy, or sugar refined by the centrifugal machine, or by any other process, and not in any way inferior to the export standard No. 3., approved of by the Lords of the Treasury -	cwt.		17	2	Till 31st March 1860.
Such refined sugar already described, if pounded, crushed, or broken in a warehouse approved by the Commissioners of Customs, such sugar having been there first inspected by the officers of customs in lumps or loaves, as if for immediate shipment, and then packed for exportation in the presence of such officers, and at the expense of the exporter - - - -	cwt.		17	2	
Refined sugar unstoved, pounded, crushed or broken, and not in any way inferior to the export standard sample No. 1, approved by the Lords of the Treasury, and which shall not contain more than 5 per cent. moisture, over and above what the same would contain if thoroughly dried in the stove - - - - - - - -	cwt.		16	4	
Bastard or refined sugar, unstoved, broken in pieces, or being ground, powdered, or crushed, not in any way inferior to the export standard sample No. 2, approved by the Lords of the Treasury - - - - - - - - - - -	cwt.		15	1	
Bastard or refined sugar being inferior in quality to the said export standard sample No. 2. -	cwt.		12	8	

Most foreign countries have endeavoured to bolster up the refining business, not merely by excluding foreign refined sugars from their markets, but by granting the most lavish bounties on the exportation of sugar refined at home. In France, this sort of policy, if we may so call it, was carried so far, that out of a gross revenue of about 40,000,000 francs (1,570,000*l.*) paid into the treasury on account of the sugar duties in 1832, about 19,000,000 (760,000*l.*) were returned as drawback on the export of refined sugar. As the French government could not afford to lose the sugar duties, which would very speedily have been swallowed up by the drawback, necessity compelled them to modify their system, by making the allowance to the exporter more nearly correspond with the duty. The refining of sugar has been carried on within the last few years to a very great extent in Holland. But here also the business has received an unnatural extension, by artificial encouragement.

Prussia, and most parts of Germany, to which we formerly exported large quantities of refined sugar, no longer admit it except at a high duty.

Beet-Root Sugar.—The manufacture of sugar from beet-root is carried on to a very considerable extent in several parts of the Continent, particularly in France and the N. of Germany. It began in France during the exclusion of colonial products in the reign of Napoleon, and received a severe check at the return of peace, by the admission of West Indian sugars at a reasonable duty. It is probable, indeed, that it would long since have been entirely extinguished, but for the additions made to the duties on colonial and foreign sugars in 1820 and 1822. After the last-mentioned epoch, however, the production of beet-root sugar began rapidly to increase; and such was its progress, that though, in 1828, its produce did not exceed 4,000,000 kilogs., it amounted, in 1838, to 39,199,408 kilogs.! But this extension of cultivation, instead of being of any advantage, entailed a heavy loss on the public, inasmuch as the beet-root growers sold their sugar, which paid no duty, at the same rate that the colonists sold theirs, which paid a large revenue to the treasury! It was not possible that such a system could be permanent. And the well-founded complaints of the colonists of the injustice of which they were the victims, enforced by the rapid decline of the revenue derived from sugar, which, indeed, was threatened with total extinction, occasioned the imposition, in 1838, of a duty of 16 fr. 50 cents per 100 kilogs. (about 6*s.* 9*d.* a cwt.) on beet-root sugar, which, in 1840, was increased to 27 fr. 50 cents (about 11*s.* a cwt.) But even this last increase left a differential duty (or bounty) of 20 fr. per 100 kilogs. in favour of beet-root sugar, as compared with colonial raw sugar; so that, while the beet-root cultivators affirmed they would be ruined, the colonists vehemently complained of the preference that was given to them. It was, indeed, known, from the facility with which the beet-root growers had previously contrived to evade the duty, that its increase would not be so injurious to them as was supposed; but the manufacture sustained notwithstanding a severe check, and sundry plantations were abandoned.

But farther and still more considerable changes have since been made in the conditions under which the culture of beet-root is carried on. In 1842 it was proposed, in order to get rid of the difficulties in which it had involved the country, to grub up the plantations, paying the planters 40,000,000 fr. (1,600,000*l.*) as an indemnity for their loss. And this was at the time considered by many as the best and most equitable mode of dealing with what was confessedly a very difficult matter. It was not, however, adopted; and next year it was resolved annually to raise the duty on beet-root sugar by 5 fr. per 100 kilog., till the duty on it should be equalised with that on colonial sugar. This new system came into operation on the 1st of August, 1844; and in August, 1848, the nominal equalisation of the duties was effected. It was very generally believed at the time that this measure would go far to annihilate the production of beet-root sugar; but such has not been the case. The falling off in the supplies of sugar from the French colonies which took place in the 5 or 6 years immediately posterior to 1848, when the slaves were emancipated, and the high differential duty on foreign sugars, were very favourable to the beet-root growers, and gave them, indeed, a modified monopoly of the home market. These, however, which were uncertain and evanescent advantages, disappeared with the increased production of sugar in the Isle of Réunion (Bourbon) and the diminution of the differential duties. Owing, however, to the very great improvements that had been effected in the interval in the production of beet-root sugar, it was not injuriously affected by these circumstances, and has continued not only to keep its ground in competition with colonial and foreign sugars, but to make a rapid increase. It is affected, of course, by variations in the seasons, in the price of corn, and other circumstances. But such has been its progress that in 1858 (which, however, was an unusually favourable year), the crop was estimated at 151,514,436 kilog.; or about 150,000 tons! And besides France the production of beet-root sugar is largely carried on, and is rapidly increasing in Belgium, Germany, and Russia. Hence it would appear that what was long considered as a sort of exotic industry, introduced when colonial sugar was excluded from the Continent, and depending in great measure on custom-house regulations, will most probably become a well-established, leading, industrial pursuit. This is a very unprecedented result, and one which we certainly did not anticipate. There are very few instances in the history of industry, of any important business or employment, originating under such peculiar circumstances, being able to maintain its ground after they have ceased to exist. Whether, indeed, it be really worth the sacrifices that have been incurred in its establishment, may be fairly doubted. But in this case they appear, at all events, to have been sufficient to insure their object.

But, though the beet-root sugar of France and the Continent generally were loaded with the same duty as colonial sugar, and though its culture were notwithstanding extensively prosecuted, that would give no countenance to the opinion of those who contend that free labour is universally as effective in the production of sugar as slave or compulsory labour. The question which the legislature and people of America have to consider, is not between the efficiency of free and slave labour in Europe, but between free and slave labour in the intertropical regions of the New World. Admitting that the free labourers of France and Prussia raise sugar as cheaply as the slaves of Cuba and Brazil, does that afford any solid ground for concluding that the blacks of Louisiana and Texas, were they really free, would be equally successful in their competition with them? There is plainly no analogy between the cases. And our conviction is, as previously stated, that without compulsory labour of some sort or other, not a pound of sugar will eventually be raised either in Louisiana, or in our colonies or anywhere else in America.

Sugar raised in the United Kingdom is charged with the like duty that is laid on colonial sugar.

Maple Sugar.—A species of maple (*Acer saccharinum*, Lin.) yields a considerable quantity of sugar. It grows plentifully in the U. States and in Canada; and in some districts furnishes the inhabitants with most of the sugar they make use of. Though inferior both in grain and strength to that which is produced from the cane, maple sugar granulates better than that of the beet-root, or any other vegetable, the cane excepted. It is produced from the sap, which is obtained by perforating the tree in the spring, to the depth of about 2 inches, and setting a vessel for its reception. The quantity afforded varies with the tree and the season. From 2 to 3 gallons may be about the daily average yield of a single tree, but some trees have yielded more than 20 gallons in a day, and others not more than a pint. The process of boiling the juice does not differ materially from what is followed with the cane juice in the West Indies. It is necessary that it should be boiled as soon after it is drawn from the tree as possible. If it be allowed to stand above 24 hours, it is apt to undergo the vinous and acetous fermentation, by which its saccharine quality is destroyed.—(*Bouchette's British America*, vol. i. p. 371.; *Timber Trees and Fruits, Library of Entertaining Knowledge.*)

N. B.—Whatever may be thought of the speculative parts of this article, we flatter ourselves that its practical and more important portion will be found to be as accurate as it could well be made. At all events, it has been submitted to the highest authorities on such subjects, who have gone carefully over the greater number of the statements, and satisfied themselves of their substantial accuracy.

The following very complete set of *Pro formâ* sales of sugar have been compiled by gentlemen engaged in the trade, and may be relied on.

			1,616 6 11
		Due in cash, 15th October, 1855.	£ 1,099 15 7

* This charge includes reweighing and 12 weeks' rent, but should the importer keep the sugar on hand beyond that period, he would be liable to a rent of 5*d.* per ton per week. The buyer has also the sugar delivered to him free of expense.

All sugar from our West India Colonies is sold at reweights. The purchaser is allowed 2 months to take delivery in, during which period it lies at the seller's risk unless paid for. The rent, if any, during the 2 months is paid by the seller.

The duty is payable on the weight delivered from the warehouse, adding 1½ lb. per hhd. and tierce, and ⅔ lb. per barrel for samples.

The tares allowed to the buyer and by the customs are as follows: they are calculated on the landing weights.

	To the Buyer. Cwt. qrs. lbs.	By the Customs. Cwt. qrs. lbs.
On all casks under 8 cwt.	0 0 14 lb. per cwt.	0 0 14 lb. per cwt.
— weighing 8 cwt. and under 9 cwt.	1 0 7	
— 9 — 10	1 0 14	1 0 0
— 10 — 11	1 1 0	
— 11 — 12	1 1 7	
— 12 — 13	1 1 14	
— 13 — 14	1 1 21	1 1 12
— 14 — 15	1 2 0	
— 15 — 16	1 2 7	
— 16 — 17	1 2 14	1 2 0
— 17 — 18	1 2 21	
— 18 — 19	1 3 0	1 3 0
And on each cwt. above 19 an additional	0 0 7	

A draft of 2 lbs. per hhd. and tierce, and 1 lb. per barrel is allowed to the buyer, and if he has any suspicion of there being a heavy super tare, he has the right, within 30 days from the date of sale, and before the removal of half the purchase, to require the dock company to tare a certain proportion as follows:—Of 5 casks the middle number, of 6 to 20 casks the first and last numbers, of 21 to 30 the first, middle, and last numbers, of 31 casks and upwards the last number of each ten; should the casks average 7 lbs. and upwards above the scale, he is entitled to the increased tare; but if less than 7 lbs., he gets no allowance, and has to pay the expense.

	Due in cash, 13th October, 1855. - £			1881 6 4

* This charge includes 12 weeks' rent, but should the importer keep the sugar on hand beyond that period, he would be liable to rent at the rate of 4*d.* per ton per week. The buyer has also the sugar delivered to him free of expense.

The buyer has 2 months to take delivery in, during which period the rent, if any, is paid by the seller, and the sugar lies for that time at the seller's risk unless paid for: but the sugar when sold at the bonded price for exportation is payable on delivery without discount, or at the expiration of 3 months, the purchasers having paid a deposit of 15 per cent. within 3 days of the sale. The goods are then rent free for the 3 months, and are at the seller's risk. Of course there would be no charge for duty or interest on duty. Brokerage and commission would be charged on the selling price, but other charges would remain the same.

	Due in cash, 13th October, 1855 -		£ 1,541 9 0

* This charge includes 12 weeks' rent; but should the importer keep the sugar on hand beyond that period, he would be liable to rent at the rate of 4*d.* per ton per week. The buyer also has the sugar delivered to him free of expense.

Instead of reweighing the sugar, as was formerly the case, an allowance is now generally made of 2 lbs. per chest on the sound, and 3 lbs. per chest on the damaged.

The sugar is rent free to the buyer to the prompt day, and lies at the seller's risk, unless paid for.

When Havannah sugar is sold in bond for exportation it is sold at a prompt of 1 month, allowing 2½ per cent. discount; and the same rule applies to Brazil and all foreign sugar, not East India, when sold in bond.

SULPHUR, OR BRIMSTONE (Fr. *Soufre*; Ger. *Schwefel*; It. *Zolfo*, *Solfo*; Sp. *Azufre*; Arab. *Kibreet*), a crystallised, hard, brittle substance, commonly of a greenish yellow colour, without any smell, and of a weak though perceptible taste; its specific gravity is from 1·9 to 2·1.

It burns with a pale blue flame, and emits a great quantity of pungent suffocating vapours. In some parts of Italy and Sicily it is dug up in a state of comparative purity. That which is manufactured in this country is obtained by the roasting of pyrites. It is denominated *rough* or *roll sulphur*, from its being cast in cylindrical moulds. The Italian roll sulphur does not contain more than 3 per cent. of a simple earth; and is in higher estimation than the English. When roll sulphur is purified, it receives the name of *sublimed sulphur*, and is in the form of a bright yellow powder.—(*Thomson's Chemistry, &c.*)

Sulphur is of great importance in the arts. It is used extensively in the manufacture of gunpowder, and in the formation of sulphuric acid, or oil of vitriol. It is also used extensively in medicine, and for

other purposes. The entries for home consumption amounted, at an average of the three years ending with 1842, to 333,731 cwt. a year. The duty on refined or roll brimstone was reduced in 1842 to 2*s.* a cwt.; and that on rough brimstone to 6*d.* a cwt., and they have since been wholly repealed. In 1857 the imports amounted to 48,982 tons, of which 46,773 tons were brought from the Neapolitan dominions.

Our supplies of brimstone are almost wholly derived from Sicily. The mines of sulphur in that island have been wrought for several centuries; but it is only since 1820 that any considerable quantity has been prepared for exportation. Subsequently to 1833, the trade with this country increased so much that the export of sulphur to the U. Kingdom rose from 19,122 tons in that year to 38,654 tons in 1838. We have elsewhere (see art. PALERMO) noticed the way in which this rapidly growing trade was interfered with by the Neapolitan government. Luckily, however, the monopoly in favour of the French company was abolished in 1841, and the trade, as seen above, has since reverted to its old channels.

SYDNEY, the capital of New South Wales, and of the British settlements in New Holland, or Australia, on a cove on the south side of Port Jackson, about 7 miles from its mouth, lat 33° 55′ S., lon. 150° 10′ E. Population in 1856, 53,358, and now (1859) probably 60,000.

Owing to a want of attention at first, the streets of Sydney were laid out, and the houses built, according to the views of individuals, without any fixed or regular plan. But latterly this defect has been to a considerable degree remedied in the old streets; and the new ones are systematically laid out. The town covers a great extent of land; almost every house having a considerable piece of ground attached to it. Schools for the instruction of poor children have been established, and there are, besides two establishments dignified with the pompous titles of colleges, numerous seminaries, some of them said to be very well conducted, for the education of the middle and upper classes. There are several newspapers and other periodical publications.

Sydney is admirably adapted for the capital of a great trading colony. Port Jackson is one of the finest natural basins in the world. It stretches about 15 m. into the country, and has numerous creeks and bays; the anchorage is everywhere excellent, and ships are protected from every wind. The entrance to this fine bay is between two gigantic cliffs, not quite 2 m. apart. On the most southerly, in lat. 33° 51′ 30″ S., long. 161° 15′ 30″ E., a lighthouse has been erected, the lantern of which is elevated 67 ft. above the ground, and about 345 ft. above the sea. It is navigable for ships of any burthen to the distance of 15 m. from its entrance, or 7 m. above Sydney, up what is called the Parramatta River. Ships come close up to the wharfs and stores of the town, their cargoes being hoisted from the ship's hold into the warehouses. Sydney is consequently the emporium of all the settlements in this part of Australia, and has a very extensive trade.

Down to the discovery of the gold fields in 1851, wool was by far the most important product raised in the colony. The increase of cattle and sheep, but especially the latter, in Australia, has, in truth, been altogether extraordinary. Previously to the arrival of the English settlers in N. S. Wales in 1778, neither horse nor cow, sheep nor hog, had ever set foot on the continent. The stock they brought with them was limited in the extreme, consisting only of 7 horses, 7 head of cattle, 29 sheep, 19 goats, and 74 pigs. And from this late and scanty stock, assisted by a few subsequent importations, have been derived all the vast numbers of sheep and other useful animals now to be found in the Australian continent. For a while the rate of increase was comparatively slow. But from 1810 down to 1851, when the revolution occasioned by the gold discovery affected every branch of industry, the multiplication of sheep and other stock, especially the former, has been rapid beyond all precedent. This is shown by the following

Account of the Sheep's Wool annually imported from Australia into the U. Kingdom since 1818.

	lbs.		lbs.		lbs.
1818	86,525	1835	4,210,301	1847	26,056,815

1834	3,558,091	1846	21,865,270	1858	51,104,560

Down to 1851 the colony of N. S. Wales comprised the extensive province of Port Phillip, now Victoria. But the latter was then separated from the former, and formed into an independent state, with a governor and legislature of its own. And the district called Moreton, on the north, has been separated from it in the course of the present year (1859), and formed into the independent colony of Queensland. See MELBOURNE in SUPPLEMENT. We subjoin a

Table illustrative of the Progress of the Colony from 1845 to 1856 inclusive.

Year.	Population.	Value of Exports.	Value of Imports.	Value of Imports, Produce or Manufacture of the U. K.	Land in Cultivation.	Value of Exports of Wool.	Value of Exports of Tallow.	Produce of Land Sales.	Receipts from Leases, Lic., and Quit Rents.
		£	£	£	*Acres.*	£	£	£	£
1845	181,556	1,092,389	985,561	612,912	138,237	612,705	90,479	14,104	29,414

Opium, per lb. avoirdupois	10	0

Return of the duties levied on articles exported from the colony of New South Wales, now collected under the Act of Council 20 Vict., No. 17.

	s.	d.
Gold, the oz. troy weight	2	6

Exemptions.—All goods imported for the supply of Her Majesty's service are exempted from all duties and imposts of every description whatsoever.

All wine imported into the colony of New South Wales, or taken out of bond for the use of military or naval officers serving on full pay in the said colony or the adjoining seas, is exempted from duty.

Tariff.—It is but justice to the colonial legislature to say, that it has done all that was in its power to consolidate and extend the trade of the colony. The new tariff enacted in is one of the shortest and least onerous in existence.

Harbour Dues &c.—The colonial legislature has also, by an act passed in 1852, suppressed all charges on shipping for harbour dues, light-house dues, fees on entering and clearing, water police dues, &c. Sydney is therefore really a free port.

Bonded Warehouse Charges.

And so on, 1*l*. for every additional foot.

Scale of Mercantile Charges, Agency, &c. as fixed by the Chamber of Commerce of Sydney, in 1852.

On sales of merchandise	5 per cent.
On sales of ships, houses, land, and shares in public companies	2½ —
On sales of government securities	1 —
On sales of live stock, stations, &c. For residents	2½ —
For non-residents	5 —
On sales of colonial produce, viz.:—wool, tallow, hides, sheepskins, &c.	2½ —
On sales of gold, gold dust, bullion, and specie	1 —
On all property withdrawn, shipped, or delivered to order, one half of the rates chargeable in cases of sale.	
On goods consigned for conditional delivery	2½ —
On purchase of merchandise, ships, houses, land, stock, or stations: with funds	2½ —
Ditto, ditto, without funds	5 —
On purchases of shares, government securities, &c.	2½ —
On purchases of gold, gold dust, bullion, and specie	1 —
On effecting insurance on the amount insured	½ —
On settling insurance losses, total or partial, and procuring returns of premium	2½ —
On procuring money on bottomry and respondentia	2½ —
On guaranteeing sales, bills, or bonds, by indorsement or otherwise	2½ —
On recovering debts	5 —
On the management of estates, as executors, administrators, or attorneys	5 per cent.
On procuring charter for vessels, including the collection of freight—if the ship returns	5 —
On procuring freight and passage for vessels	5 —
On collecting inward freight or charter money	5 —
On ships' disbursements from funds arising from freight collected on which a commission of 5 per cent. has already been charged	Nil.
On ships' disbursements from funds in hand not arising from freight collected	2½ —
On ditto ditto under advance	5 —
Settler's Accounts.	
On purchases or payments under advance	5 —
On ditto or ditto with funds in hand	2½ —
Any balance of account unliquidated at the end of the year to be considered as a new advance, and charged accordingly.	
Interest on current accounts to be charged the rate of discount charged by the banks on bills having six months to run.	
Re-exchange.	
On inter-colonial bills dishonoured	5 — and notarial charges.
On bills from New Zealand dishonoured	7½ — and notarial charges.
On all other foreign bills dishonoured	20 and notarial charges.

The colony is naturally better suited for pasturage than for tillage, and, in consequence, considerable quantities of corn and rice are imported from Van Diemen's Land, and other places. But we may remark, by the way, that the preference given to pasturage has been in no inconsiderable degree occasioned by the policy (if so we may designate a worthless compound of pedantry and quackery) that has been pursued in regard to the sale of waste lands in the colony. We have elsewhere shown that since the *minimum* price charged for these waste lands, 4 or 5 acres of which are required to depasture a single sheep, has been fixed at no less than 20*s*. an acre (!) the purchase of land for agricultural purposes comparatively ceased; and it was taken in large tracts for grazing by lessees, or squatters. In consequence the progress of cultivation, and the settlement of the colony, have been seriously interrupted by this system; while, instead of concentrating the population, as we were told it would do, it led to its all but indefinite dispersion. But a *felo-de-se* policy of this sort cannot be long maintained. And when it has been abandoned, a fresh stimulus will be given to agriculture and emigration, and the prosperity of this and the other Australian colonies will be materially increased.

Considering the character of a large proportion of the population, one need not be surprised at the circumstance of drunkenness being a prevalent vice, and consequently, that spirits and wines are very largely imported. The other great articles of importation are manufactured goods and apparel of all sorts, hardware, earthenware, saddlery, books and stationery, carriages, &c., from England; tea from China; and sugar from the Mauritius and Calcutta.

The value of the imports into Sydney exceeded for a lengthened period the value of the exports; the excess of the former being, in fact, the amount of the remittances from this country on account of the convict establishment. But since the latter was suppressed, the value of the exports has been equal to that of the imports, and now greatly exceeds them. Occasionally there has been a great deal of overtrading at Sydney; and the revulsions consequent thereon have been quite as ruinous there as in England and elsewhere. There are 4 banks in the town, and a savings' bank.

Population, &c.—The British settlements in New South Wales were originally intended to serve as penal establishments, to which convicts might be transported, and employed in public and private works; and were, till very lately, used for this purpose. The first vessel with convicts arrived at Botany Bay in January, 1788; but it having been found to be quite unsuitable as a site for a colony, the establishment was removed to Port Jackson. Convicts of all sorts continued to be sent to the latter till 1839; but from that period down to 1843 none were sent, except those who had been confined in Pentonville and other penitentiaries. In the last-mentioned year the system entirely ceased; and from that period no convicts have been sent to Sydney. During the period that transportation continued in force, 54,583 convicts, of whom 47,092 were males and 7,491 females, were carried to Sydney. In 1846 the convicts of all classes in New South Wales amounted to 10,555, of whom 6,500 were liberated in 1848; and the residue had been reduced to 1708 in December, 1851. Convictism (to borrow a colonial phrase) has, therefore, terminated in New South Wales; but the taint it has imparted to the population will not be easily effaced.

The total population of the colony of New South Wales, ex Victoria, amounted, in 1857, to 305,484, of whom 171,673 were males. The progress of the colony has been much more rapid than might have been anticipated, considering the character and habits of the convicts annually landed upon its shores, the difficulties which the great distance from England interpose in the way of an emigration of the voluntary settlers, and inferiority of the soil. Owing to the circumstance of the great majority of the convicts and other emigrants being males, a great disproportion has always existed between the sexes in the colony, which has materially retarded its progress, and been, in other respects, productive of pernicious results. Government, however, availing itself of the assistance of benevolent individuals at home, and in the colony, has within these few years materially lessened the disproportion referred to, by sending out considerable numbers of young unmarried females free

of expense. Much, it was obvious, of the influence of this measure, was to depend on the discrimination with which the female emigrants were selected; and various precautions were taken, by the organisation of committees, and otherwise, to exclude from amongst them those whose character was in any degree suspicious. It was not, however, to be expected, that these precautions should be completely successful; and very conflicting accounts have been received as to the conduct of the females on their landing, and the influence of their immigration on the colony. But though the results of the scheme may, in some respects, have fallen short of the anticipations of its more sanguine promoters, there can be no manner of doubt that it has been, on the whole, decidedly advantageous; and that it has tended both to increase the population, and to improve the morals of the colony.

Emigration to New South Wales, independently of the allurements of the gold fields, holds out several advantages to the industrious emigrant, which, however, are partially countervailed by some disadvantages. There has been at all times a pretty brisk demand for labour; wages, though not extravagant, have been high; provisions, except in years of drought, have been moderately cheap; and the climate is mild, moderately healthy, and suitable for European constitutions. The drawbacks are, — the immense distance from Europe, and the consequent cost of the voyage; the general inferiority and exorbitant price of land, which, however, will no doubt be shortly obviated; the frequent recurrence of droughts; and, perhaps, also, the taint of convictism, in a large portion of the population. The greater mildness and salubrity of the climate appears to be the principal recommendation in favour of emigrating to Australia rather than to Canada or the United States. Whether, however, this be a sufficient counterpoise to the disadvantages attending it, is a point which we do not presume to decide, but which deserves the serious consideration of intending emigrants. It seems to be the unanimous opinion of every one acquainted with the colony, and entitled to be heard upon such a subject, that "*in every case, emigrants of every sort will find it for their interest to come out married.*"

The stimulus given to immigration by the discovery of gold has been less felt here than in Victoria: but it has, notwithstanding, been very powerful. It is impossible, however, to form any conjecture in regard to its continuance, as that must in great measure depend on the future productiveness of the gold fields. But whether it continue about stationary, diminish or increase, still it is plain that the demand of those engaged in the search for gold, for provisions and other articles of accommodation cannot fail in the end to give a corresponding impulse to every branch of industry, and to re-establish that general equality, taking all things into account, which usually subsists between wages and profits in different departments. How prosperous soever the "diggings" may be, the labourers drawn to them in the first instance from agriculture and other pursuits will be sure to be restored to the latter, or replaced by others.

Monies, Weights, and Measures.—Accounts are kept in sterling money; but Spanish dollars are most abundant. They pass current at 5*s.* each. The weights and measures are the same as those of England.

SYRA, the ancient Syros, one of the islands of the Greek Archipelago, whose salubrity and fertility have been celebrated by Homer (*Pope's Odyssey*, book xv. v. 438. &c.), in the group called the Northern Cyclades, 15 m. W. from the greater Delos, its port, on the east side of the island, being in lat. 37° 26′ 30″ N., long. 24° 57′ E. It is from 9 to 10 miles in length, by about 5 in breadth. Though rugged, it is carefully cultivated, and produces garden stuffs, wine, olives, figs, cotton, &c., with a little barley. The population in 1830, was set down by Mr. Urquhart at 4,500; but we have been assured that it is at present (1858) little, if at all, short of 25,000.

It is indebted for this extraordinary increase of population to the convenience and excellence of its port and its central situation, which have made it a considerable commercial *entrepôt*. Though small, its harbour is accessible to line-of-battle ships. The holding ground is good, and it has in its centre about 10 fathoms water. Merchantmen of from 400 to 500 tons burden moor within about 100 yards of the wharfs. Winds from the S.E. round to E.N.E. throw in a heavy swell; but the port is well protected from winds from all other points. A lighthouse, with a revolving light, has been erected on Gaidoro island, about 1½ m. S.E. from the port. Most part of the trade that formerly centred at Scio is now carried on here; and the island has not only received numerous immigrants from Scio, but also from many other parts of Greece. Great Britain and most European powers have consuls in Syra: and it also is the principal seat of the Protestant missionaries to the Levant. The town is on the N. side of the harbour. — The oldest portion occupies the summit of a conical shaped hill, probably the site of the acropolis of the ancient city. (See the sketch in *Tournefort, Voyage du Levant*, i. 321.) But the new streets and houses, of which there are many, come down to the water's edge. It has an appearance of great bustle and animation. Its copious spring of pure fresh water has been eulogised by Clarke (*Travels*, vi. 153.). In 1856 no fewer than 766 ships of the burden of 121,342 tons were registered at Syra, being more than three times the amount of shipping that belonged to any other Greek port. Pherycides, one of the most celebrated of the ancient Greek philosophers, the disciple of Pittacus, and the master of Pythagoras, was a native of this island.

Port Regulations, Quarantine, &c. — Trading vessels from Turkey and Egypt with foul bills of health perform 17 days quarantine; men of war and steamers 14 days. With clean bills of health, the former 12 days, and the latter 10 days.

Vessels arriving from any port in Europe with clean bills of health, are immediately admitted to free pratique; but should any error occur in the bill of health as to the number of persons on board, the vessel is subject to a quarantine of 7 days, with an additional number of days should the vessel be without a bill of health: in such cases, also, the master is liable in damages to the merchants who may have goods on board.

Dues under Quarantine.—Trading vessels pay one lepta, or cent each day per ton, for every day they are under quarantine, besides 1½ drachma per day for the guardian placed on board of the vessel by the Health Office.

Men-of-war and steamers are exempted from tonnage dues, and only pay the guardian.

Trading vessels, and men-of-war, and steamers wind-bound under quarantine, only pay for a guard-boat, at the rate of 5 drachmas a day, during the time they remain in port.

Harbour Dues. — Vessels discharging and shipping goods pay 12 leptas per ton, with the addition of 2 leptas per ton to the Health Office.

Vessels only landing, or only loading goods, pay 8 leptas per ton with the 2 leptas per ton to the Health Office.

Vessels wind-bound pay only the light house dues, but should they remain in port over 7 days, they pay 4 leptas a ton, with the additional 2 leptas to the Health Office.

All these dues are paid on the register tonnage.

The charge of clearance is from 1 to 5 drachmas on the vessel, according to its size.

The lighthouse dues are likewise levied on the size of the vessel, from 1 drachma to 10 drachmas.

The lowest rate for vessels of from 20 to 50 tons register,

and so on upwards to the highest rate, for vessels of from 300 tons upwards.

Pilotage.—There are no fixed dues for pilotage; but when a vessel makes a signal for a pilot, the harbour master sends his boat to pilot the vessel in, for which service a fee of 5 Spanish dollars is paid.

Weights and Measures same as at Constantinople.—(*Private information.*)

A few miles to the east of Syra lies Delos. This island, regarded in antiquity with peculiar veneration from its being the birthplace of Apollo and Diana, is no less celebrated in the commercial than in the religious history of ancient Greece. Its sacred character, by insuring its immunity from hostile attacks, and its central situation, made it a favourite mart for the products of the states of Greece, Asia Minor, Phœnicia, Egypt, &c. Religion, pleasure, and trade had all their votaries at its festivals; which were famous throughout the ancient world for the splendour of the rites and processions, and the magnitude of the business transacted. It were too much to expect that Syra should ever attain to equal importance, even as an *entrepôt*. But as she enjoys most of those advantages of position that contributed to render Delos one of the principal emporiums of antiquity, it may be hoped, now that there is a reasonable prospect of good order and freedom being again established in Greece, that she may also acquire some portion of her celebrity. It may be worth while mentioning, as strikingly evincing the mutability of human affairs, that at present both the great and the little Delos are uninhabited. And Tournefort states, that the inhabitants of Mycone were, in the early part of last century, in the habit of holding the greater Delos, for the purposes of pasturage, paying to the Grand Seignior a rent of 20 crowns a year for that famous island!—(*Tournefort, Voyage du Levant*, 4to. ed. tome i. pp. 290–325. There is a good account of the religious rites celebrated at Delos, though but a very indifferent one of its commerce, in the *Travels of Anacharsis.*)

T.

TACAMAHAC, a resin obtained from the *Fagara octandra;* and likewise, it is supposed, from the *Populus balsamifera.* It is imported from America in large oblong masses wrapt in flag leaves. It is of a light brown colour, very brittle, and easily melted when heated. When pure, it has an aromatic smell, between that of lavender and musk; and dissolves completely in alcohol, water having no action upon it.—(*Thomson's Chemistry.*)

TAGANROG, a city of European Russia, on the north coast of the sea of Azof, near the mouth of the River Don, lat. 47° 12′ 48″ N., lon. 38° 39′ E. Population 18,000. It has a naval hospital, a lazaretto, &c.; and there are annual fairs in May, August, and November. Taganrog is a place of considerable commercial importance. It was intended by its illustrious founder, Peter the Great, to replace Azof, the ancient emporium of the Don, the port of which had become all but inaccessible; and its whole consequence is derived from this circumstance, or from its being the *entrepôt* of the commerce of the countries traversed by that great river. The largest portion by far of the trade is carried on with Constantinople, Smyrna, and other Turkish ports: but a good deal is also carried on with the Italian and other foreign ports; and there is an extensive coasting trade with Odessa and other Russian ports. In 1857 the exports to foreign countries comprised, among other articles, 1,070,523 chetwerts wheat, 201,563 poods tallow, 207,182 poods wool, 68,096 poods caviar, 288,976 chet. linseed, &c.

Seeing that Taganrog was built to obviate the difficulties that had to be encountered by vessels entering the Don, through the shallowness of the water, it might have been supposed that care would be taken to place it in a position in which it should be, in as far as possible, free from this defect. This important consideration seems, however, to have been to a great degree overlooked. The gulph of the Don is seldom navigable by vessels drawing more than from 10 to 11 ft. water, and even these cannot approach within less than about 700 yards of the town. They are principally loaded by carts, drawn each by a single horse, the expenses being so very considerable that it costs from 120 to 150 copecks to ship a chetwert of wheat. Without, however, altering the position of the town, these defects might be obviated with but little difficulty, by constructing a wooden pier by which vessels in the roads might be sheltered, and from which they might be laden.

Sea of Azof.—Any one who takes up a map of Russia in Europe will at once perceive the vast importance of this sea (the *Palus Mœotis* of the ancients) as an outlet for the products of the most fertile provinces of the empire. At its N.E. extremity it receives the Don (an. *Tanais*), which with its navigable tributaries the Donetz, Medveditza, &c., flows through an immense extent of fruitful territory. Peter the Great was fully sensible of the paramount importance of this channel of communication; and he not only, as stated above, founded Taganrog on the æstuary of the Don, but joined the latter to the Wolga by means of a canal, uniting in this way the Caspian with the sea of Azof. It is singular, however, that the Russian government, which has, in other respects, so sedulously followed up the plans of the great father of his

country, would seem of late years rather to have discouraged the trade of the sea of Azof. As evidence of this, we may mention that no efforts have been made to deepen the channel over the bar at the mouth of the Don, to remove the other obstructions to the easy navigation of the river, or to improve any of the ports on the sea; and farther, all vessels entering the sea are obliged to perform a lengthened quarantine at Kertsch on the W. side of the Straits of Yenikalé. We believe, indeed, that this measure was chiefly dictated by a wish to make Kertsch a depôt for the produce of the various ports on the sea of Azof, which it was supposed would be conveyed to it in lighters. But the experience of the last twelve years has shown that this expectation is not destined to be realised; the charges attending the bringing of produce to the Straits of Yenikalé by means of lighters, and its transhipment, being so very heavy that more than 4-5ths of the shipping that arrive at Kertsch proceed, after performing quarantine there, to load at Taganrog, Mariapol, and other ports on the sea.

It is not surely too much to expect that the Russian government will see the advantage of making an end of these preposterous arrangements, the only effect of which is to obstruct one of the principal channels for the commerce of the empire; and to hinder its subjects from availing themselves of those gigantic means of production which a less illiberal policy would enable them fully to command. It is plain that ships may load and unload at Taganrog with as little danger to the health of the contiguous provinces as at Kertsch; and such being the case, why should they not be permitted to sail direct for the former?

The sea of Azof is usually shut by frost for about 3 months in winter, and it is besides shallow, and in parts incumbered with sand banks. But it may, notwithstanding, be navigated by vessels of considerable burden with but little risk or difficulty. Its greatest depth in the middle is about 7 fathoms: but it shoals gradually to the sides, and at Taganrog there is only from 10 to 11 feet water. Its depth is, however, materially affected by the direction and strength of winds. The only entrance to this sea is by the Straits of Yenikalé, the *Bosphorus Cimmerius* of the ancients, a narrow and difficult passage, having in some places not more than 13 feet water. Owing to the great quantity of fresh water poured into the sea of Azof, and its limited magnitude, its water is brackish merely. (*Norie's Sailing Directions for the Mediterranean and Black Seas; Annuaire du Commerce Maritime* for 1833, p. 161, &c.)

It is impossible to form any estimate of the future magnitude of the trade of this sea, were it placed under a more liberal policy, and reasonable facilities afforded for its extension. No doubt, however, it would be very great; it being the natural seat of the commerce of some of the most extensive and fertile countries of Eastern Europe. The subjoined returns show that even now it is of the first importance; and with a little encouragement, or with the mere absence of obstruction, it would no doubt rapidly increase. It may, indeed, be fully concluded that sooner or later Taganrog is destined to become one of the first corn-shipping ports in the world, if not the very first.

Statement showing the Quantities of the Principal Articles exported from the Sea of Azof during the Year 1857, with their Values in Roubles, and their total Value in Pounds Sterling.

In 1858, 1,610,000 chet. wheat, 344,000 chet. linseed, 408,000 poods tallow, &c., were exported from the sea of Azof. By far the largest portion of the wheat and tallow are shipped for England.— (For an account of the imports from S. Russia, see article PETERSBURG.) In 1858 the ports on the sea of Azof were visited by 144 British ships, of the aggregate burden of 42,026 tons.

Were the navigation of the Don improved, and facilities given to foreigners entering the sea, the exports might be largely increased, even with recent prices, which have been nearly the same as those of Odessa (which see). The harvests in the S. of Russia fluctuate very greatly, see ODESSA.

The imports into the sea of Azof are but inconsiderable, principally consisting of tobacco, Greek wines, oils, dry salteries, and such like articles.

The emperor Alexander, whose reign will always form a memorable and brilliant æra in the history of Russia, expired at Taganrog on the 19th of November, 1825. —(For further particulars see *Schniztler, La Russie*, p. 717.; *Hagemeister on the Trade of the Black Sea*, p. 31, &c.; *Russian Official Accounts; and Reports*, by Mr. Yeames, the intelligent British consul at Odessa.)

Monies, Weights, and Measures, same as those of PETERSBURG; which see.

Caspian Sea, Magnitude, Ports of, &c.— The Caspian Sea, or rather Lake (the *Mare Hyrcanum* of the ancients), extends lengthwise from N. to S. about 740 miles, varying in breadth from 112 to 275 miles. In some parts, particularly on the southern shores, it is so very deep that a line of 450 fathoms will not reach the bottom; whereas in the northern parts, and opposite to the mouths of the Wolga, it is comparatively shallow; and owing to the frequent occurrence of shoals, it is not safely navigated by vessels drawing more than 10 or 12 feet water. Its level had been variously estimated by Olivier and Lowitz at from 64 to 53 feet below that of the Black Sea; but the observations of M. Humboldt made the difference of level between them no less than 300 feet! This, however, was supposed to involve some mistake; and its level has since been ascertained by an expedition fitted out by the Russian government to be 116 feet below the level of the Black Sea. The water of the Caspian is not salt, but brackish merely; it has no tides, but gales of wind raise a very heavy sea. It is extremely prolific of fish and seals. The value of the sturgeon caught in the Russian fisheries amounts to a very large sum. —(See STURGEON FISHERY.) They proceed in shoals up the rivers, where they are captured without the least apparent diminution of their numbers. The salmon is remarkably fine; and herrings are in such abundance, that, after a storm, the shores of the Persian provinces of Ghilan and Mazunderan are nearly covered with them. —(*Kinneir's Memoir of the Persian Empire*, p. 6.; *Memoir on the Caspian Sea, in Malte Brun's Geography.; Humboldt, Fragmens de Géologie, &c.*)

Astrakhan is situated on an island of the Wolga, more than 50 miles from the mouth of that river; and owing to the extensive command of internal navigation it possesses, it is a place of very considerable commercial importance. Baku, acquired by the Russians in 1801, is, however, the best port on the western side of the Caspian. It is situated on the southern shore of a peninsula that projects far into the sea, in lat. 40° 22′ N., lon. 51° 10′ E. The harbour is spacious and convenient; and its central and advanced position gives it superior advantages as a trading station. Prodigious quantities of naphtha are procured in the vicinity of Baku. It is drawn from wells, some of which yield from 1,000 to 1,500 lbs. a day. It is used as a substitute for lamp oil; and when ignited, emits a clear light, with much smoke and a disagreeable smell. Large quantities are exported in skins to the Persian and Tartar ports on the south and east shores of the sea.

Vessels.—The largest class of vessels by which the Caspian Sea is navigated are called by the Russians *schuyts*, and belong wholly to Astrakhan and Baku; their burden varies from 90 to 150, and, in some instances, 200 tons. They are not built on any scientific principle, and are constructed of the worst materials, that is, of the timber of the barks that bring grain down the Wolga to Astrakhan. There are supposed to be, in all, about 100 sail of these vessels. There is a second class of vessels employed in the trade of the Caspian, called *razchives*. They carry from 70 to 140 tons, and sail better than the schuyts. Their number is estimated at about 50. Exclusive of the above, there are great numbers of small craft employed in the coasting trade, in the rivers, in the fisheries, and in acting as lighters to the schuyts. Steam boats are extensively employed on the Wolga; and they are now also found in most parts of the Caspian. The masters and crews of the vessels employed on this sea are, for the most part, as ignorant as can well be imagined. They are generally quite incapable of making an observation, or of keeping a reckoning; so that accidents frequently occur, that might be avoided by the most ordinary acquaintance with the principles of navigation. —(These statements are made, partly upon official, and partly upon private authority: the latter may, however, be safely relied on.)

The trade of this great sea is entirely in the hands of the Russians; by whom it is carried on from the ports of Astrakhan and Baku, with the Persian ports of Astrabad, Balfroosh, &c. on the south; and with the Tartar ports of Mangishlak, Balkan, &c. on the east. It is very insignificant, compared with what it ought to be; the value of the Russian produce exported by it in 1857 being only 633,557 silver roubles; and that of the imports 3,192,912 do. On the whole, however, a gradual improvement is taking place; and whatever objections may, on other grounds, be made to the encroachments of Russia in this quarter, there can be no manner of doubt, that, by introducing comparative security and good order into the countries under her authority, she has materially improved their condition, and accelerated their progress to a more advanced state.

TALC, a species of fossil nearly allied to mica. It is soft, smooth, greasy to the feel, and may be split into fine plates or leaves, which are flexible, but not elastic. It has a greenish, whitish, or silver-like lustre. The leaves are transparent, and are used in many parts of India and China, as they were used in ancient Rome—(*Plin. Hist. Nat.* lib. xxxvi. c. 22.)—in windows instead of glass. In Bengal, a seer of talc costs about 2 rupees, and will sometimes yield a dozen panes 12 inches by 9, or 10 by 10, according to the form of the mass, transparent enough to allow ordinary subjects to be seen at 20 or 30 yards' distance. It should be chosen of a beautiful pearl colour; but it has, in general, either a yellowish or faint blue tinge. Its pure translucent flakes are frequently used by the Indians for ornamenting the baubles employed in their ceremonies. Talc is employed in the composition of *rouge végétal*. The Romans prepared with it a beautiful blue, by combining it with the colouring fluid of particular kinds of testaceous animals. Talc is met with in Aberdeenshire, Perthshire, and Banffshire in Scotland; and in various parts of the Continent, where rocks of serpentine and porphyry occur. The talc brought from the Tyrolese mountains is called in commerce Venetian talc. Several varieties are found in India and Ceylon.—(*Thomson's Chemistry; Rees's Cyclopædia; Milburn's Orient. Com.*; *Ainslie's Mat. Indica.*)

TALLOW (Fr. *Suif*; Ger. *Talg*; It. *Sevo, Sego*; Rus. *Salo, toplenoe*; Sp. *Sebo*), animal fat melted and separated from the fibrous matter mixed with it. Its quality depends partly on the animal from which it has been prepared; but more, perhaps, on the care taken in its purification. It is firm, brittle, and has a peculiar heavy odour. When pure, it is white, tasteless, and nearly insipid; but the tallow of commerce has usually a yellowish tinge; and is divided, according to the degree of its purity and consistence, into candle and soap tallow.

Tallow is an article of great importance. It is manufactured into candles and soap; and is extensively used in the dressing of leather, and in various processes of the arts. Besides our extensive supplies of native tallow, we annually import a very large quantity, principally from Russia, the River Plate, and the Australian colonies. The exports of tallow from Russia amount, at an average, to about 3,810,000 poods, or 137,160,000 lbs. a year.—(*Tegoborski, Forces Productives de la Russie*, i. 233.) Of this immense supply by far the largest portion is brought to England; the remainder being exported to Prussia, France, the Hanse Towns, Turkey, &c.

We borrow from the work of Mr. Borrisow, on the commerce of Petersburg, the following details with respect to the tallow trade of that city:—

Tallow is divided into different sorts; namely, white and yellow *candle tallow*, and common and Siberian *soap tallow*; although it is allowed that the same sort often differs in quality.

Tallow is brought to Petersburg from the interior; and the best soap tallow from Siberia, by various rivers, to the lake Ladoga; and thence, by the canal of Schlusselburg, to the Neva.

An *ambare*, or warehouse, is appropriated to the reception of tallow, where, on its arrival, it is selected and assorted (*bracked*). The casks are then marked with three circular stamps, which state the quality of the tallow, the period of selecting, and the name of the selector (*bracker*).

The casks in which white tallow is brought have a singular appearance: their form being conical, and their diameter at one end about 2½ feet, and at the other only 1½ foot; the casks of yellow tallow are of the common shape. There are also others, denominated ¼ casks.

To calculate the tare, the tallow is removed from a certain number of casks, which are weighed, and an average tare is thence deduced for the whole lot. A cask weighs 8½, 9, 10, or 11 per cent., but the average is generally about 10 per cent. of the entire weight of tallow and cask.

Account of the Quantities and Values of the Tallow imported into the U. Kingdom in 1857, specifying the Countries whence it was brought, and the Quantities and Values furnished by each.

Account of the Quantities of Tallow imported into the U. Kingdom in each of the 7 Years ending with 1858.

	1852.	1853.	1854.	1855.	1856.	1857.	1858.
Tallow - - cwts.	1,049,703	1,175,754	749,721	952,322	1,122,736	1,210,347	1,235,789

Yellow candle tallow, when good, should be clean, dry, hard when broken, and of a fine yellow colour throughout. The white candle tallow, when good, is white, brittle, hard, dry, and clean. The best white tallow is brought from Woronesch. As for soap tallow, the more greasy and yellow it is, the better the quality. That from Siberia is the purest, and commonly fetches a higher price than the other sorts. The exports of tallow from Petersburg in 1858 amounted to 2,886,157 poods.

Formerly the oil and tallow warehouses were the same; and this occasioned great difficulties in shipping, because all vessels or lighters taking in tallow or oil were obliged to haul down to the *ambare* and wait in rotation for their cargoes. The consequence was, that when much business was doing, a vessel was often detained for several weeks at the *ambare* before she could get her cargo on board. Now the tallow and oil warehouses are separated, and every article has its own place. When a shipment of tallow is made, the agent is furnished by the selector (*bracker*) with a sample from each cask.

Captains, in order to obtain more freight, usually load some casks of tallow upon deck; but it is more for the interest of the owner to avoid this, if possible, because the tallow loses, through the heat of the sun, considerably both in weight and quality.

One hundred and twenty poods of tallow, at gross weight, make a Petersburg last, and 63 poods an English ton.

M. Tegoborski estimated the average annual exports of tallow from Russia at 3,810,000 poods, of the value of 13,871,000 roubles, that is, taking the rouble at 3*s.* 2*d.*, 2,196,241*l.* sterling.—(*Forces Productives de la Russie*, i. 242.)

Tallow from foreign countries is charged with a duty of 1*s.* 6*d.* per cwt., while that from a British possession is charged with a duty of only 1*d.* per cwt. In a financial point of view these duties are of little importance, but they are imposed on an illiberal principle, are justly offensive to other countries, and provoke them to retaliate.

The price of tallow fluctuated very much during the war. This was occasioned, principally, by the obstacles that were at different periods thrown in the way of supplies from Russia. The price of tallow is also affected by the state of the seasons. Some very extensive speculations have at various periods been attempted in tallow; but seldom, it is believed, with much advantage to the parties. Yellow candle tallow was worth, in the London market, in April, 1859, from 55*s.* 3*d.* to 55*s.* 9*d.* per cwt.

TALLY TRADE, the name given to a system of dealing carried on in London and other large towns, by which shopkeepers furnish certain articles on credit to their customers, the latter agreeing to pay the stipulated price by certain weekly or monthly instalments.

In the metropolis there are about 60 or 70 tally-shops of note; and from 500 to 600 on a smaller scale. They are also spread over the country to a considerable extent, particularly in the manufacturing districts. The customers of the tally-shops are mostly women; consisting, principally, of the wives of labourers, mechanics, porters, &c., servant girls, and females of loose character. Few only of the more respectable classes have been infatuated enough to resort to them. Drapery goods, wearing apparel, coals, household furniture, hardware, &c. are furnished; and even funerals are performed; but few or no articles of food, except tea, are sold upon the tally plan.

We believe that this is the very worst mode in which credit is afforded. The facility which it gives of obtaining an article when wanted, and the notion so apt to be entertained that the weekly or monthly instalments may be paid without difficulty, make those who resort to the tally-shops overlook the exorbitant price, and usual bad quality, of the articles they obtain from them; and generates habits of improvidence that seldom fail to involve the parties in irretrievable ruin. It is not going too far to say that nine tenths of the articles supplied by tally-shops might be dispensed with. As already observed, women are the principal customers; and it is not easy to exaggerate the mischief that has been entailed on the families of many industrious labourers by their wives having got entangled with tally-shops. They buy goods without the knowledge of their husbands; and these are not unfrequently pawned, and the proceeds spent in gin. So destructive, indeed, is the operation of the system, that the establishment of a tally-shop in any district is almost certain to occasion an increase in the paupers belonging to it. Even the unmarried females who do not pay are demoralised and ruined by the system; because, if a woman who buys 3 gowns pays for the 2 first, and runs away from the payment of the last, she gains nothing *in point of saving*, while she becomes indifferent to an act of dishonesty. As tally debts can only be collected whilst a supply of goods is kept up, as soon as that supply is stopped, the debtor either flies to another district, or awaits a summons. Where the wife has contracted the debt, she usually appears before the commissioners, who in general order the debt to be paid by weekly or monthly instalments. But it often occurs, from the wife not being able to keep up such payments, that execution issues, and the poor husband is frequently arrested and lodged in prison for a debt, of the existence of which he was entirely ignorant. In this way, numbers of the working classes are completely ruined; they lose their employment, and themselves and families are reduced to beggary. The intelligent keeper of Whitecross-street prison (Mr. Barrett) stated, that from 150 to 200 persons are annually imprisoned there for tally-shop debts, in sums of from 10*s.* to 5*l.*, and that in one year 30 prisoners were at the suit of one tally-shop alone! Such imprisonments, however, are now much decreased, in consequence, as is believed, of the Court of Requests discouraging the tally system, by ordering claims of *this* kind to be paid by *extremely small* instalments, and these at *very distant* intervals; and also in consequence of no composition being allowed by the charities for the relief of poor prisoners with reference to such debts.

It is estimated that in London alone about 850,000*l.*, or nearly 1,000,000*l.* sterling, is annually returned in this trade. From his large profits (generally from 25 to 40

per cent.), it is obvious that in a few transactions the tally-shop keeper becomes independent of the existing debt; and with capital and good management, it is said that some have realised considerable sums of money in this business.

According to the custom of the trade, Mondays, Tuesdays, Wednesdays, and Thursdays are the days set apart for collecting money from the customers. The tally-man sends round his collector through the different "walks," and the amount of a collection which keeps the collector engaged from morning till night, even in a good tally concern, seldom exceeds 4*l.* a day. The payments are invariably made in *shillings* and *sixpences*—but the people seldom or never pay at the tally-shops; they rarely call there unless something else is wanted. The tally-shop keeper trusts one party on the recommendation of another; but guarantees are never required—certainly no *written* guarantees; and a verbal guarantee is, according to Lord Tenterden's act, not binding. It is part of the collector's business, besides getting money, to beat up for fresh customers in his walk.

The greater number of the small tally concerns are kept by Scotchmen; it is a curious fact, that when a "Tally-walk" is to be sold, which is often the case, a Scotchman's walk will bring 15 per cent. more than an Englishman's! It is believed to contain a better description of customers.

From the causes above mentioned, assisted, perhaps, by the salutary influence of Savings Banks, this obnoxious trade is understood to be rather on the wane. It will never, however, be completely rooted out, except by adopting the plan we have previously suggested—(see CREDIT)—for placing all small debts beyond the pale of the law; and the fact, that the adoption of this plan would have so beneficial a result, is an additional and powerful recommendation in its favour. In cases where failures take place, the creditors of a tally-shop keeper are in general *terrified* into the acceptance of a small composition. The very sight of the tally Ledgers, from 10 to 20 in number, containing debts from 5*s.* to 5*l.*, dotted over the pages like a small pattern on a piece of printed cotton, and spread over every district in and round London, determines the creditors to accept of any offer, however small, rather than encounter the collection of such disreputable assets. In an affair of this kind, concluded a few years since, where the business was under the management of a respectable accountant in the city, the whole debts due to the concern, good, bad, and doubtful, amounted to 8,700*l.*, while the number of debtors was 7,600! giving an average of 22*s.* 10*d.* each.

N.B.—This article has been compiled wholly from *private*, but *authentic, information.*

TAMARINDS (Ger. *Tamarinden;* Fr. *Tamarins;* It. and Sp. *Tamarindo;* Arab. *Umblie;* Hind. *Tintiri*), the fruit of the *Tamarindus Indica*, a tree which grows in the East and West Indies, in Arabia, and Egypt. In the West Indies the pods or fruit, being gathered when ripe, and freed from the shelly fragments, are placed in layers in a cask, and boiling syrup poured over them, till the cask be filled; the syrup pervades every part quite down to the bottom; and when cool, the cask is headed for sale. The East India tamarinds are darker coloured and drier, and are said to be preserved without sugar. When good, tamarinds are free from any degree of mustiness; the seeds are hard, flat, and clean; the strings tough and entire; and a clean knife thrust into them does not receive any coating of copper. They should be preserved in closely covered jars.—(*Thomson's Dispensatory.*) The duty on tamarinds after being greatly reduced in 1842 was wholly repealed in 1853. The imports and exports of tamarinds in 1857 amounted respectively to 1,544,193 lbs., and 1,517,713 do.

TAPIOCA, a species of starch or white coarse powder derived from the roots of the bitter cassava (*Jatropa manihot*), an American plant, raised all over South America, but principally in Brazil, where it is called *mandioc* or *manioc*. The roots of the plant, being peeled, are subjected to pressure in a kind of bag made of rushes; the juice which is forced out by this process being a deadly poison, and employed as such by the Indians to poison their arrows! But the residuum, or farinaceous matter remaining after the expulsion of the juice, is perfectly wholesome, and makes excellent bread. Tapioca, as stated above, is prepared from this residuum; and being nutritious, and easy of digestion, is extensively used in the making of puddings. When dressed, it is not easily distinguished from sago. The imports amounted in 1857 to 9,528 cwt., whereof 5,512 were from Brazil. Duty 4½*d.* per cwt.

TAR (Fr. *Goudron;* Ger. *Theer;* It. *Catrame;* Pol. *Smola gesta;* Rus. *Degot, Smola shithaja;* Sw. *Tjara*), a thick, black, unctuous substance, chiefly obtained from the pine, and other turpentine trees, by burning them in a close smothering heat.

The tar of the north of Europe is very superior to that of the United States, and is an article of great commercial importance. The process followed in making it has been described as follows by Dr. Clarke:—"The inlets of the gulph (Bothnia) everywhere appeared of the grandest character; surrounded by noble forests, whose tall trees,

flourishing luxuriantly, covered the soil quite down to the water's edge. From the most southern parts of Westro-Bothnia, to the northern extremity of the gulph, the inhabitants are occupied in the manufacture of tar; proofs of which are visible in the whole extent of the coast. The process by which the tar is obtained is very simple: and as we often witnessed it, we shall now describe it, from a tar-work we halted to inspect upon the spot. The situation most favourable to the process is in a forest near to a marsh or bog; because the roots of the fir, from which tar is principally extracted, are always most productive in such places. A conical cavity is then made in the ground (generally in the side of a bank or sloping hill); and the roots of the fir, together with logs and billets of the same, being neatly trussed in a stack of the same conical shape, are let into this cavity. The whole is then covered with turf, to prevent the volatile parts from being dissipated, which by means of a heavy wooden mallet, and a wooden stamper, worked separately by two men, is beaten down and rendered as firm as possible above the wood. The stack of billets is then kindled, and a slow combustion of the fir takes place, without flame, as in making charcoal. During this combustion the tar exudes; and a cast iron pan being at the bottom of the funnel, with a spout which projects through the side of the bank, barrels are placed beneath this spout to collect the fluid as it comes away. As fast as the barrels are filled, they are bunged and ready for immediate exportation. From this description it will be evident that the mode of obtaining tar is by a kind of distillation *per descensum*; the turpentine, melted by fire, mixing with the sap and juices of the fir, while the wood itself, becoming charred, is converted into charcoal. The most curious part of the story is, that this simple method of extracting tar is precisely that which is described by Theophrastus and Dioscorides; and there is not the smallest difference between a tar-work in the forests of Westro-Bothnia and those of ancient Greece. The Greeks made stacks of pine; and having covered them with turf, they were suffered to burn in the same smothered manner; while the tar, melting, fell to the bottom of the stack, and ran out by a small channel cut for the purpose."

Tar was charged, previously to 1844, on being admitted to consumption, with a duty of 15*s.* a barrel. But this duty being repealed in the course of that year, it has since been admitted duty free. It is principally brought from Russia, the U. States, and Sweden. Thus of 18,239 lasts imported in 1857, 14,128 were supplied by the first, 2,369 by the U. S., and 887 by Sweden. N. B. The last contains 12 barrels, and each barrel 31½ gallons.

TARE, an abatement or deduction made from the weight of a parcel of goods, on account of the weight of the chest, cask, bag, &c. in which they are contained. Tare is distinguished into *real tare, customary tare,* and *average tare.* The first is the actual weight of the package; the second, its supposed weight, according to the practice among merchants; and the third is the medium tare, deduced from weighing a few packages, and taking it as a standard for the whole. In Amsterdam, and some other commercial cities, tares are generally fixed by custom: but in this country, the prevailing practice, as to all goods that can be unpacked without injury, both at the Custom-house and among merchants, is to ascertain the real tare. Sometimes, however, the buyer and seller make a particular agreement about it. We have, for the most part, specified the different tares allowed upon particular commodities, in the descriptions given of them in this work. (For the tares at Amsterdam, Bordeaux, &c., see these articles; see also ALLOWANCES.)

TARE, VETCH, or FITCH, a plant (*Vicia sativa* Lin.) that has been cultivated in this country from time immemorial; principally for its stem and leaves, which are used in the feeding of sheep, horses, and cattle; but partly, also, for its seed. Horses are said to thrive better upon tares than upon clover and rye grass; and cows that are fed upon them to give most milk. The seed is principally used in the feeding of pigeons and other poultry. The imports in 1857 amounted to 25,589 qrs. from Denmark, Prussia, the Hanse Towns, and France.

TARIFF, a table, alphabetically arranged, specifying the various duties, drawbacks bounties, &c. charged and allowed on the importation and exportation of articles of foreign and domestic produce.

The first two columns of the subjoined Table contain an account of the duties existing on the 1st November, 1859, on the various articles charged with duties on being imported for consumption into the U. Kingdom, distinguishing between the duties when the articles come from foreign countries and from colonial possessions.

Those who compare the following tariff, with the tariffs in the copies of this work issued previously to 1842, will be forcibly struck with the vast difference between them. Notwithstanding the improvements effected by Mr. Huskisson, the tariff continued down to the epoch now referred to, on a most objectionable footing. Hundreds of articles were loaded with duties, which, while they brought little revenue into the public treasury, opposed formidable obstacles to the extension of commerce; a host of other articles, including live cattle and fresh provisions, were wholly prohibited; high duties were laid on various articles of consumption, and on others that were necessary

to the prosecution of some of our principal manufactures; and some most important articles, including corn, sugar, and timber, were burdened with duties, imposed not so much for the sake of revenue as of protection. But the change in these respects since 1842 has been greater than any one, however sanguine, could have anticipated. It was then that Sir Robert Peel began that course of commercial reform that will, for ever, distinguish his administration; and such were the energy, skill, and success with which that great minister prosecuted his plans, that in the brief space of 4 years, he obviated, with but little sacrifice of revenue, almost all the defects alluded to above, and effected a vast and most salutary change in our commercial policy.

Sir Robert Peel's commercial reforms were principally embodied in the acts 5 & 6 Vict. c. 47., 8 Vict. c. 12., 9 & 10 Vict. c. 22., and 9 & 10 Vict. c. 23. The *first* of these acts permitted cattle, sheep, hogs, beef, salmon, and other articles that had previously been prohibited, to be imported under reasonable duties: the *second*, or the 8 Vict. c. 12., repealed the duties on about 420 different articles; and though many of these were of comparatively trifling importance, the list comprised others of a very different class, such, for example, as ashes, barilla, bark, flax and tow, cotton wool, hemp, hides, indigo, madder; palm, olive, and train oil; sago, saltpetre, raw silk, all sorts of skins and furs, straw for platting, all sorts of fancy woods, with a host of others: the *third* of the above mentioned statutes, or the 9 & 10 Vict. c. 22., is the famous act for the modification and repeal of the corn laws: and the *fourth* and last, the 9 & 10 Vict. c. 23., is the tariff act of 1846, which entirely repealed the duties on cattle, sheep, hogs, beef, bacon, and other leading products; at the same time that it reduced the duties on silks, butter, cheese, and nearly 100 other articles!

Sir Robert Peel also reduced the duty on muscovado sugar from a British possession, from 25*s.* 2*d.* to 14*s.* a cwt., at the same time that he made a very great reduction in the duty on certain descriptions of foreign sugar. And Lord John Russell subsequently followed up the policy of his predecessor in this respect, by making an end of the distinction between free and slave grown sugars; and providing for the gradual equalisation of the duties on sugars, without regard to their origin.

Independent of the powerful influence which the repeal and reduction of the duties on so many important articles has had on the well-being and industry of the people, it must always be borne in mind that owing to the reciprocity which is of the essence of all commercial transactions, it is impossible to increase the importation of foreign articles, without at the same time proportionally increasing the exportation of the native products with which the former must be paid. It is, therefore, no easy matter to estimate the future influence of such extensive changes on the trade and prosperity of the U. Kingdom. It has already been, and there can be no doubt that it will continue to be, very great. And beside contributing to improve our manufactures, it can hardly fail to deepen and enlarge the existing channels of commercial intercourse, and gradually to open others with which we may now, perhaps, be wholly unacquainted.

Sir Robert Peel left but little for others to do in the way of commercial reform; and that little has since been in great measure accomplished. The duty on tea was the only very objectionable one in the amended tariff bequeathed to the country by Sir Robert Peel; and he had merely deferred to a more convenient opportunity his determination to place it on a more reasonable and equitable footing. He did not, unhappily, live to effect this object; but it has since been effected by others. The reduction of the tea duties formed a striking feature in the budget proposed by Mr. Disraeli; and after the rejection of the latter, the project was introduced into the budget of Mr. Gladstone, and was passed into a law. But, among its other bad consequences, the war with Russia has unfortunately interfered to prevent this reduction being carried out; and has made the retention and, in some instances, even the increase of customs duties, not of the most unobjectionable description, a matter not of choice but of necessity. But for this contest tobacco would now have been the only decidedly over-taxed article in our tariff; though except in the check it would give to smuggling and adulteration, the reduction of the duty on it is of secondary importance.

We have excluded from the following table numerous articles which are at this moment (1st January, 1856) duty free; and we have annexed to the table of existing duties two additional columns; the first exhibiting the amount of the customs duties in 1819, as fixed by the act 59 Geo. 3. c. 52.; and the second, their amount in 1787, as fixed by Mr. Pitt's Consolidation Act, the 27 Geo. 3. c. 13. The reader has, therefore, before him, and may compare the present customs duties with the duties on the same articles as they existed after the termination of the last war, and of the American war.* No table of this sort is to be met with in any other publication, unless it be

* It must, however, be carefully borne in mind that this table does not fully represent the customs duties as they existed in 1787 and 1819. It exhibits those duties only which were charged at the epochs in question on the articles now (1st Jan. 1856) subject to customs duties; whereas the tariff embraced in 1787 and 1819 more than 500 articles not included in the present tariff.

purloined from this. It was furnished for a former edition of this work by Mr. J. D. Hume, late of the Board of Trade.

The duties in the following table were imposed by the 18 & 19 Vict. c. 97. The table of duties is preceded by the following clauses:—

Instead of all other Duties and Drawbacks of Customs, there shall be paid, &c.—From and after the passing of this Act, there shall be raised, levied, collected, and paid upon goods imported into Great Britain or Ireland, the several duties of customs, and there shall be allowed upon goods exported the several drawbacks respectively inserted and set forth in the annexed Table A.; and there shall be raised, levied, collected, and paid, the several duties of customs, upon the importation of goods into the Isle of Man, set forth in figures in Table B. annexed to this Act; and all the goods described as free in Table A. shall be exempt from duty on importation into Great Britain or Ireland, and those described as free in Table B. shall be exempt from duty on importation into the Isle of Man.—§ 1.

Section 2. gives power to the Treasury to remit and reimpose the duties of 15 per cent., levied on unenumerated articles imported into the Isle of Man.

Drawbacks upon Sugar.—The drawbacks upon sugar allowed under Table A. shall also be allowed and paid on the like kinds of sugar, upon the same being deposited in any approved warehouse, upon such terms and conditions, and subject to such regulations as the Commissioners of Customs may direct, for delivery therefrom as ships stores only, or for the purpose of sweetening British spirits in bond.—§ 3.

Section 4. directs that the Commissioners of Customs shall provide standard samples of white clayed sugar, and brown clayed sugar.

Metage Dues on Fruit.—The metage dues now payable upon fruit imported into the port of London shall not be increased in consequence of the duties upon such fruit being levied by the bushel.

Entries of Arms, &c.—On the entry of arms and ammunition of war, whether for home use, exportation, or transit, the number and quantity of articles of each description, as denominated in the annexed table A, shall be stated in the import, export, or transit entry, as the case may be.—§ 6.

Clause 7. enacts that manufactures of Gibraltar, Malta, and Heligoland, from foreign materials shall be deemed foreign.

Acts repealed.—The following Acts, viz. "The Customs Tariff Act, 1853," the Acts of the 17th and 18th years of Her present Majesty, caps. 28 and 29, and the 1st and 5th sect. of cap. 122, and the Acts of the 13th of H. Majesty, caps. 9 and 21, are hereby repealed, except as to anything done before the commencement of this Act, and except so far as relates to any arrears of duty, or to any drawback which shall have become due or payable, and except so far as may be necessary for the purpose of supporting or continuing any proceeding heretofore taken, or to be taken after the commencement of this Act, and except as to the recovery or application of any penalty for any offence which shall have been committed or any forfeiture which shall have been incurred before the commencement of this Act; and the duties imposed by the several Acts in force at the time of the passing of the Act of the 17th and 18th of H. present Majesty, cap. 122, are hereby declared not to have been affected or repealed by that Act, except as to the articles enumerated therein; and the duties collected since the passing of that Act according to the tables contained in the said several Acts and in that Act are hereby declared to have been legally charged and collected; and all orders made by H. M. in council, all bonds taken or licences granted, and all things done under the authority or in pursuance of any of the Acts or parts of Acts hereby repealed, shall nevertheless be valid and effectual.—§ 8.

When Contracts have been entered into, Amount of increased or decreased Duty to be added or deducted.—In the event of any increase or decrease by law in the duties of customs chargeable upon any goods or commodities after the making of any contract or agreement for the sale or delivery of such goods duty-paid, it shall be lawful for the seller, in case such increase shall accrue before the clearance and delivery from the warehouse of such goods at such increased duty, and after payment thereof, to add so much money to the contract price as will be equivalent to such increase of duty, and he shall be entitled to be paid and to sue for and recover the same; and it shall be lawful for the purchaser under any such contract or agreement, in case such decrease shall take effect before the clearance and delivery from the warehouse at such decreased duty, to deduct so much money from the contract price as will be equivalent to such decrease of duty, and he shall not be liable to pay or be sued for or in respect of such deduction.—§ 9.

The rules and regulations to be followed in regard to the importation and exportation of goods are embodied in the Customs Consolidation Act of 1853, the 16 & 17 Vict. c. 107.; and will be found in this work under the head IMPORTATION AND EXPORTATION. But it may be useful to subjoin the following clause in regard to the importation of duty free goods, viz.:—

Particulars of Entry.—The importer of any goods not subject to duties of customs, or his agent, shall deliver to the collector or comptroller a bill of entry of such goods in the same manner and form and containing the same particulars as are required on the entry of dutiable goods, so far as the same is applicable, which entry, so far as regards the goods, shall be a transcript of the report, and shall therein describe such goods according to the terms upon which such goods are free of duty, and the value of such goods as shall have been previously chargeable with duty at value; and such bill of entry, when signed by the collector or comptroller, shall be transmitted to the proper officer, and be his warrant for the delivery of the goods mentioned therein; and the importer, owner, or consignee of such goods, or his agent, shall, within 14 days after the entry and landing thereof, deliver to the collector, comptroller, or other proper officer of customs a full and true account of the goods so landed; provided, that at Liverpool, and with the sanction of the Commissioners of Customs at any other port where the docks, quays, and wharfs shall in like manner be wholly or principally under the control and management of one and the same corporate body, the owner, master, or consignee of the importing ship, or his agent, shall sign and leave with the collector of the customs, within 14 days next after the final discharge of such goods, a full and accurate list thereof, stating the quantities and distinguishing the weight and contents by measurement of such goods, if any, comprised therein, as shall be chargeable by weight or by measurement for the freight payable thereon, and the names of the consignees (according to the bills of lading), or the names of the persons actually paying freight for the same; and on failure to leave such list, such owner, master, consignee, or agent shall forfeit the sum of 20*l.*—§ 60.

Table (A.) exhibiting the Duties payable on 1st of November, 1859, on Goods, Wares, and Merchandise imported into the U. K., from Foreign Parts, and from British Possessions; and those payable on the same Articles in 1819 and 1787, when imported from Foreign Parts.

(The full duties on wine are drawn back upon re-exportation or shipment as stores.)				
lees of wine subject to the same duty as wine, but no drawback is allowed on lees exported.				

Wood.	Foreign Countries. £ s. d.	British Possessions. £ s. d.
Upon timber and wood the following duties with 5 per cent. on all wood and timber the produce a British possession, viz.: —		
Timber and wood, not being deals, battens, boards, staves, handspikes, oars, lathwood, or other timber or wood sawn, split, or otherwise dressed, except hewn, and not being timber or wood otherwise charged with duty, the load of 50 cubic feet	0 7 6	*0 1 0 per load.†
deals, battens, boards, or other timber or wood sawn or split, and not otherwise charged with duty, the load of 30 cubic feet	0 10 0	*0 2 0 per load.†

Or, in lieu of ascertaining the cubical contents in pile, the importer may have the option, at the time of passing the first entry, in respect of planks, deals, deal ends, battens, and batten ends, not the produce of the British possessions, of entering the same by tale upon a computation of their cubic content, calculated according to the under-mentioned scale, specifying in such entry the number and dimensions of the several pieces included therein; and the duties imposed thereon by this act shall be ascertained, computed, and charged upon the planks, deals, deal ends, battens, and batten ends included in such entry on the cubical contents thereof, computed in conformity with the said scale.

† The wood articles from British possessions marked * are subject to an additional duty of 5 per cent.

	£	s.	d.
Goods, wares, and merchandise, not the growth, produce, or manufacture of Great Britain or Ireland but brought from thence, and having there been entered for consumption, and the import duties having been there paid thereon		Free.	
Goods, wares, or merchandise imported or brought from any place from whence such goods may be lawfully imported into the Isle of Man, and not hereinbefore charged with duty, or declared to be free of duty, for every 100*l.* of the value thereof	15	0	0

Inland or Excise Duties in the U. Kingdom, on the 1st of November, 1859.

Articles.	Duties.		
	£	s.	d.
Hops, per lb.	0	0	2*
Malt from barley, per bushel	0	2	8½
from bear or bigg, per bushel	0	1	1
Paper and pasteboard, per lb.	0	0	1½*
Plate (gold) per oz. troy	0	17	0
(silver) per oz. troy	0	1	6
Spirits, per gallon	0	8	0
Sugar, from beet-root, &c., per cwt.	0	12	8

N.B.—5 per cent. to be added to the duties on the articles marked thus *

The excise or inland duties are repaid, or, as it is termed, drawn back, on the goods being exported; and countervailing duties are imposed in the case of articles exempted from duty in Ireland and charged with it in Great Britain, being imported from the former into the latter. The drawback on the malt used in brewing is computed at the rate of 5*s.* the barrel of 36 Imperial gallons.

Duties repealed. We subjoin a list of the articles the duties on which were repealed in 1845, 1846, and 1853 by the acts 8 Vic. c. 12., 9 & 10 Vic. c. 23., and 16 & 17 Vic. c. 106.

Agates, or cornelians, not set.
Albumen.
Alganobilla seed.
Alkali.
Alkanet root.
Almonds, bitter.
Aloes.
Alum,
  rough.
Amber, rough,
  manufactured, except beads.
Ambergris.
Amboyna wood.
Anchovies.
Angelica.
Animals, living; viz.:
  asses.
  goats.
  kids.
  oxen and bulls.
  cows.
  calves.
  horses, mares, geldings, colts, foals.
  mules.
  sheep.
  lambs.
  swine and hogs.
  pigs, sucking.
Annatto.
  roll.
Antimony, ore of.
  crude.
  regulus of.
Aquafortis.
Argol.
Aristolochia.
Arsenic.
Ashes, pearl and pot.
  soap, weed, and wood.
  unenumerated.
Asphaltum or Bitumen Judaicum.

Bacon.
Balsam, Canada.
  capivi.
  Peru.
  Riga.
  Tolu.
  balm of Gilead, and unenumerated balsam.
Bandstring twist.
Barilla.
Bark, extract of, or of other vegetable substances, to be used for tanning or other manufacturing purposes.
  for tanners' or dyers' use.
  cascarilla.
  Peruvian.
  of other sorts.
Bar wood.
Barytes, sulphate of, ground.
Basket rods, peeled and unpeeled.
Bast ropes, twines, and strands.
Beads and bugles of glass.
Beef, fresh or slightly salted.
  salted.
Beef wood.
Berries, bay.
  juniper.
  yellow.
  unenumerated.
Birds, singing.
Blacking.
Blackwood.
Bladders.
Bones (except whale fins), whether burnt or not, or as animal charcoal.
Books of editions, printed prior to 1801, bound or unbound.
Borax, refined.
Borax or tincal, unrefined.
Boracic acid.
Bottles of earth and stone, empty.
Box wood.
Bran.
Brass, powder of.
  old, fit only to be remanufactured.
  wire.
Brazil wood.
Brazilletto wood.
Bricks or clinkers.
Brimstone, refined in rolls.
  in flour.
  not refined.
Bristles, rough, or in any way sorted.
Bronze, works of art.
  powder.
Brushes, paint.
Bulrushes.
Bullion and foreign coin of gold or silver.
Buttons.

Cables, not iron.
Cameos, not set.
Camomile flowers.
Camphor, refined and unrefined.
Canewood.
Candlewick.
Canella alba.
Canes, bamboo.
  reed.
  rattans, not ground.
  or sticks, unenumerated.
Cantharides.
Caoutchouc.
Cardamoms.
Carmine.
Carriages of all sorts.
Casks, empty.
Cassia buds.
  fistula.
Castor.
Casts of busts, statues, or figures.
Catlings.
Caviare.
Cedar wood.
Chalk, manufactured or unmanufactured.
Chip, or willow, for platting.
Cherry wood.
Chesnuts.
China root.
Cider.
Cinnabaris nativa.
Citrate of lime.
Citric acid.
Citron preserved with salt.
Civet.
Coals, culm, and cinders.
Cobalt.
  ore of.
  oxide of.
Cochineal.
  dust.
  granilla.
Cochinella wood.
Coco nuts.
Coir rope, twine, and strands.
Colocynth.
Columbo root.
Copper, ore of.
  regulus.
  old.
  unwrought.
  part wrought.
  plates and coin.
  wire.
Copperas, blue.
  green.
  white.
Coral, whole, polished.
  unpolished.
  in fragments.
Cordage, tarred or untarred.
Cork.
Corks, fishermen's.
Cotton manufactures, not being articles wholly or in part made up, not otherwise charged with duty.
Cotton yarn.
Cranberries.
Crayons.
Cream of tartar.
Crystal, rough or cut, except beads.
Cubebs.
Cucumbers preserved in salt.
Cutch.

Diamonds.
Divi divi.
Down.
Drugs, unenumerated.

Ebony.
Elderflower water.
Enamel.
Extract.
  chesnut bark.
  quercitron bark.
  logwood.
  saffiower.
  bark, &c. for tanning.

Feathers for beds, in beds or otherwise.
  ostrich, undressed.
  paddy bird, undressed.
  unenumerated and undressed.
Fish.
Flax and tow, or codilla of.
  dressed and undressed.

Flock for paper stainers.
Flocks.
Flower roots.
Frames for pictures, prints, or mirrors.
Furniture woods, except ash, beech, birch, elm, oak, wainscot.
Fustic.

Gallic powder.
Galls.
Gamboge.
Garancine.
Garnets, cut or uncut, not set.
Gauze of threads.
Gelatine.
Gentian.
Ginseng.
Glass, plate.
painted.
white flint-glass bottles, not cut, engraved, or ornamented.
wine glasses, tumblers, and all other white flint-glass.
goods not cut, engraved, or otherwise ornamented.
bottles of glass covered with wicker (not being cut glass.)
or of green or common glass.
articles of green or common glass.
manufactures, not otherwise enumerated, and old broken glass, fit only to be re-manufactured.
Glue.
clippings, or waste of any kind, fit only for glue.
Gold leaves, and ore of.
Goods unenumerated, not being either in part or wholly manufactured, not enumerated or prohibited.
Grease.
Greaves for dogs, and tallow greaves.
Guano.
Gum, animi.
Arabic.
assafœtida.
ammoniacum.
copal.
euphorbium.
guaiacum.
kino.
lac dye.
mastic.
seed lac.
stick lac.
Senegal.
shellac.
tragacanth.
unenumerated.
Gunpowder.
Gun-stocks in the rough, of wood.
Gutta percha.
Gypsum.

Hair, camel hair or wool.
cow, ox, bull, or elk.
horse.
human.
Hair, unenumerated.
manufactures of hair or goats' wool, or of hair or goats wool, and any other material not particularly enumerated.
Hams of all kinds.
Harp strings or lute strings silvered.
Hay.
Heath, for brushes.
Hellebore.
Hemp, dressed.
rough or undressed, or any other vegetable substance of the nature and quality of undressed hemp, and applicable to the same purposes.
tow and codilla of hemp.
jute.
Hides, or pieces thereof, tawed, curried, varnished, japanned, enamelled.
Muscovy or Russia hides, or pieces thereof, tanned, coloured, shaved, or otherwise dressed, and hides or pieces thereof in any way dressed, not otherwise enumerated.
not tanned, tawed, curried, or in any way dressed, dry and wet.
Losh hides.
or pieces of hides, raw or undressed, and unenumerated.
tails, buffalo, bull, cow, or ox.
tanned, not otherwise dressed.
Hones.
Honey.
Hoofs of cattle.
Hoops of wood.
Horns—horn tips, and pieces of horns.

Ice.
Indigo.
Ink for printers.
Indian.
Inkle, wrought.
unwrought.
Iron, bloom.
cast.
chromate of.
in bars, unwrought.
wire.
hoops.
old broken, and old cast iron.
ore.
pig.
slit or hammered into rods.
rough castings.
Isinglass.

Jalap.
Jet.
Jewels—emeralds and *all* other precious stones, unset.
Juice of lemons, limes, or oranges.

Kingwood.

Lac; viz. sticklac.
Lamp black.
Lapis calaminaris.
Lard.
Latten.
shaven and wire.
Lavender flowers.
Lead ore.
red.
white.
black.
pig and sheet.
chromate of.
Leaves of roses.
Leeches.
Lignum vitæ.
Linen; viz.:—
cambrics and lawns, plain.
bordered handkerchiefs.
damasks.
damask diaper.
sails of all sorts.
plain linens and diaper, whether chequered or striped with dye yarn or not, and manufactures of linen, or of linen mixed with cotton or with wool, not particularly enumerated, or otherwise charged with duty, not being articles wholly or in part made up.
Litharge.
Live creatures illustrative of natural history.
Logwood.
Losh Hides.

Madder.
Madder root.
Magna græcia ware.
Mahogany.
Manganese, ore of.
Manna.
Manures, unenumerated.
Manuscripts.
Maps and charts, or parts thereof, plain or coloured.
Maple wood.
Mats and matting.
Mattresses.
Mead or metheglin.
Meat, salted or fresh, not otherwise described, or preserved in any other way than salted.
Medals of any sort.
Mercury, prepared.
Metal—bell metal, and leaf, not gold.
Minerals and fossils, unenumerated.
Models of cork or wood.
Moss, lichen islandicus.
other than rock or Iceland moss.
rock, for dyers' use.
Mother-o'pearl shells.
Musk.
Myrrh.

Naphtha.
New Zealand wood.
Nicaragua wood.
Nickel, arseniate of, in lumps or powder, being in an unrefined state.
metallic, and oxide of, refined.
ore of.
Nitre—cubic nitre.
Nuts; viz.
kernels of walnuts, and of peach stones, and of nuts or kernels thereof, unenumerated, commonly used for expressing oil therefrom.
Coco nuts.
Nuts, Pistachio.
Nuts and kernels, unenumerated.

Oakum.
Ochre.
Oil, animal.
castor.
cocoa nut.
olive.
lard.
palm.
paran.
Oil, rock.
resin.
train, blubber, spermaceti oil, or head matter.
hempseed.
linseed.
rapeseed.
walnut.
or spirit of turpentine.
seed, unenumerated.
Oil seed cake.
Olibanum.
Olive wood.
Olives.
Orange peel and lemon peel.
Orange flower water.
Orchal.
Ore, unenumerated.
Orpiment.
Orris root.
Orsedew.

Painters' colours, unenumerated, manufactured or unmanufactured.
Palmetto thatch.
Palmetto thatch manufactures.
Parchment.
Partridge wood.
Pearls.
Pencils of all kinds.
Pens.
Perry.
Phosphorus.
Pink root.
Pickles and vegetables preserved in salt.
Pictures.
Pitch.
Burgundy.
Plantains.
Plants, shrubs, and trees alive.
Plaster of Paris.
Plate, battered.
Platina, and ore of platina.
Pollard.
Pomegranates or peel of.
Pork, fresh.
salted, not hams.
Potatoes.
Pots, melting, for goldsmiths'.
stone.
Poultry and game alive or dead, including rabbits.
Prussiate of potash.
Purple wood.

Quicksilver.
Quills, goose.
swan.

Radix contrayervæ.
enulæ campanæ.
eringii.
ipecacuanhæ.
rhatanieæ.
senekæ.
serpentariæ or snake root.
Rags, old ropes or junk, or old fishing-nets, fit only for making paper or pasteboard.
pulp of.
woollen.
Rape of grapes.
Red wood or guinea wood.
Rhubarb.
Rice dust, for feeding cattle.
Rose water.
Rosewood.
Rosin.

Saccharum saturni.
Safflower.
Saffron.
Sal ammoniac.
limonum.
prunella.
Salep or salop.
Salt.
Saltpetre.
Sanguis draconis.
Santa Maria wood.
Sapan wood.
Sarsaparilla.
Sassafras.
Satin wood.
Saunders' red.
white or yellow
Sausages or puddings.
Scammony.
Seeds; viz.
acorn.
aniseed.
beans, kidney or French.
burnet.
canary.
carrot.
clover.
colchicum.
cole.
coriander.
croton.
cummin.
dari.
fenugreek.

Seeds, flax.
forest.
garden, unenumerated.
grass seeds of all sorts.
hemp.
leek.
lentiles.
lettuce.
linseed and flaxseed.
lucerne.
lupin.
maw.
millet.
mustard.
onion.
parsley.
poppy.
quince.
rape.
sesamum.
shrub or tree.
tares.
trefoil.
unenumerated, commonly used for expressing oil therefrom.
worm.
not particularly enumerated or described, or otherwise charged with duty.
Senna.
Ships, British, broken up or to be broken up, with tackle, apparel, and furniture (except sails).
Shumuch.
Silk, raw.
knubs or husks, and waste silk.
thrown, not dyed, and dyed, viz.
singles or tram, organzine or crape.
Silkworm gut.
Skins and furs; viz.
pelts and tails.
marten, undressed.
seal, in the hair, not tanned, tawed, or dressed.
squirrel or calabar, undressed.
badger, undressed.
bear, undressed.
beaver, undressed.
cat, undressed.
chincilla, undressed.
coney, undressed.
deer, undressed.
dog in the hair, not tanned, tawed, or dressed.
dog fish, undressed.
elk, undressed.
ermine, dressed or undressed.
fisher, undressed.
fitch, undressed.
fox, undressed.
fox tails, undressed.
goat raw, or undressed.
goose, undressed.
hare, undressed.
husse, undressed.
kangaroo, undressed.
kid, in the hair, undressed.
kolinski, undressed.
leopard, undressed.
lion, undressed.
lynx, undressed.
marten tails, undressed.
minx, undressed.
mole, undressed.
musquash, undressed.
nutria, undressed.
otter, undressed.
ounce, undressed.
panther, undressed.
pelts, undressed.
racoon, undressed.
sable, undressed.
sable tails or tips, undressed.
Skins and furs, viz.
squirrel or calabar, tails of, undressed.
swan, undressed.
tiger, undressed.
weasel, undressed.
wolf, undressed or tawed.
wolverings, undressed.
deer, Indian, half dressed, tanned tawed, or in any way dressed.
ermine, dressed.
kid, dressed and dyed or coloured.
lamb, tanned or tawed.
lamb, dyed or coloured, dressed in oil.
minx, dressed.
pelts, tanned, tawed, or in any way dressed.
goat, tanned, tawed, or in any way dressed.
lamb, undressed, in the wool.
sheep, undressed, in the wool, tanned or tawed, dressed in oil.
squirrel or calabar undressed, tawed.
wolf, tawed.
kid, dressed, and dyed or coloured.
and furs, or pieces thereof, unenumerated, tanned, tawed, curried, or dressed.
and furs, or pieces thereof, raw or undressed, unenumerated.
Smalts.
Specimens of minerals, fossils, illustrative of natural history.
Speckled wood.
Spectacles.
Spelter or zinc, rolled, but not otherwise manufactured.
crude, in cakes.
oxide and white of.
rods for bolts.
Spermaceti.
Sponge.
Squills, dried or not dried.
Stavesacre.
Staves, not exceeding 72 inches in length, nor 7 inches in breadth, nor 3¼ inches in thickness.
Steel, unwrought.
scrap.
Straw or grass for platting.
Sulphur impressions.
Sweet wood.
Stone and marble in blocks, shaped or rough scalped.

Talc.
Tallow, vegetable.
Tamarinds.
Tar.
Barbadoes.
Tarras.
Tartaric acid.
Teasles.
Teeth, elephants'.
sea-cow, sea-horse, or sea-morse.
Telescopes.
Terra Japonica.
Sienna.
verde.
umbra.
Thread, not otherwise enumerated or described.
Tiles.
Tin ore, and regulus of, or in blocks, ingots, bars, or slabs.
Tobacco pipes of clay
Tongues.
Tornsal.
Tortoise-shell or turtle shell unmanufactured.
Truffles.
Tulip-wood.
Turmeric.
Turpentine of Venice, Scio, or Cyprus.
Turpentine.
Twine.

Ultra marine.

Valonia.
Vanellocs.
Varnish, not otherwise described.
Vases, ancient, not of stone or wood.
Vegetables, all, not otherwise enumerated or described.
preserved in salt.
Vellum.
Vermilion.
Verdigris.
Verjuice.

Wafers.
Walnut wood.
Water, mineral.
Wax, bleached.
unbleached.
myrtle.
sealing.
vegetable.
Weld.
Whale fins.
Whipcord.
Wire, gilt or plated.
silver.
Wool.
Wood for ship-building, viz.; stringy bark, red and blue gum, green hart, mora, and locust woods, and wood formerly admitted at the same duty as teak.
treenails of stringy bark, red and blue gum, and locust woods, and all treenails of and from British possessions.
shovel hilts.
Wood.
birch and fir, hewn, not exceeding 3 feet long, nor exceeding 8 inches square, imported for the sole purpose of making herring barrels for the use of fisheries.
waste wood.
hoops.
firewood of and from British possessions.
teak.
Wool, beaver.
cut and combed.
goats' wool or hair.
sheep's or lambs' wool.
coney.
hares'.
cotton and waste of cotton wool.
Woollens; viz. manufactures of wool, (not being goats' wool), or of wool mixed with cotton, not particularly enumerated, not otherwise charged with duty.

Yarn.
cable yarn.
camel or mohair.
raw linen.
Yarn of silk and worsted spun together and not dyed.
worsted yarn, raw not dyed, or only partially dyed, and not being fit or proper for embroidering or other purposes.
Yeast, dried.

Zaffre.
Zebra wood.

The 8 Vict. c. 12. s. 4. directs, in the view of preserving exact accounts of the value of goods entered inwards, upon which the duties have been repealed; "That upon the entry inwards of any such goods, the value thereof shall be stated in the entry, and shall be affirmed by the declaration of the importer or his known agent, written upon the entry and attested by his signature, and if such declaration be false, the person signing the same shall forfeit a sum not exceeding 20*l.*; and it shall be lawful for the landing waiter or other officer appointed to examine such goods to call for the invoice, bills of parcels, and such other documents relating thereto as he may think necessary for ascertaining the true value of the same."

TARTAR. See ARGAL.

TATTA, a town in the territory of Sinde, situated about 60 miles in a direct line from the sea, at a short distance from the western bank of the river Indus, in lat. 24° 44′ N., lon. 68° 17′ E. Population uncertain, probably about 8,000. The streets are narrow and dirty; but the houses, though built of mud, chopped straw, and timber, are superior to the low huts seen in the adjoining towns and villages.

Trade. — Being situated a little above the part where the Indus divides into the two great branches by which its waters are poured into the Indian Ocean, it might be supposed that Tatta would be a place of great trade. But, owing to the unwholesomeness of the climate, the barbarism of the tribes on its banks, and other causes, its commerce has never corresponded with what might have been anticipated, looking at its position on the map. It had probably attained the acmé of its prosperity in the beginning of the 16th century. In 1555, the Portuguese, by way, as they stated, of avenging the

treachery of the king of Sinde, inhumanly massacred 8,000 of the inhabitants, and burned the town. — (*Conquêtes des Portugais*, tome iv. p. 183.) It is probable that Tatta never fully recovered from this dreadful blow; but Mr. Hamilton mentions, that in the 17th century it was extensive and populous, possessing much commerce, with manufactures of silk, wool, and cabinet ware. The decayed state in which we now find it, has been a consequence of the misgovernment and rapacity of its present rulers, the Ameers of Sinde, under whose sway it fell more than 50 years ago.

In 1635, the English established a factory at Tatta, in the view of facilitating the disposal of woollens and other goods in the countries traversed by the Indus; and the building occupied by the factory, though far from magnificent, was recently, if it be not still, the best, not in Tatta only, but in the whole country of Sinde.

The chief exports are rice, shawls from Cashmere, opium from Malwah, hides, ghee, cotton, goats' wool, carpets, drugs, &c. Putchock, an article largely consumed in China, is a peculiar export of Sinde. The imports comprise a variety of articles, but the quantities are trifling: they consist principally of spices, dye stuffs, hardware, tin, iron, &c., broad cloths, English cottons, silks, &c. But at present the trade is quite inconsiderable; and no one could believe, *à priori*, that the natural emporium of so great a river as the Indus, traversing many extensive countries, would cut so insignificant a figure in the trading world.

Navigation and Trade of the Indus. — The navigation of this magnificent river by the fleet of Alexander the Great, has conferred on it a classical celebrity not to be matched by any other river of the East. Its magnitude, too, is worthy of its fame. It may be navigated by flat-bottomed boats as far as Attock, and its tributary stream the Ravee is navigable to Lahor, both places being above 1,000 miles from the sea. But, unfortunately, its navigation is extremely difficult, and it may be doubted whether it will ever realise any considerable portion of the advantages which have of late years been anticipated from its being opened. The mouths of the river are ill-defined, shallow, and infested with moveable sand-banks, while the violence of the *bore*, or tide * makes their entrance at all times a matter of difficulty for vessels of a small draught of water suitable to their navigation, and during the period of the western monsoon they are all but impracticable. This, no doubt, is the reason that for centuries past the navigation from and to the sea through the delta of the Indus has been almost wholly abandoned; and that all products brought down the river and destined for exportation by sea are conveyed from Tatta overland to Curachee, a sea-port a little to the north of the most northerly mouth of the river, about 60 miles in a direct line from Tatta; and that all those coming from parts beyond sea and destined for countries on the Indus are conveyed from Curachee to Tatta by the same route.

Even after it has been entered, the navigation of the river is peculiarly difficult, partly from the strength of the current during the period of the inundation, and partly from shallows, and the sudden and constant shifting of the channel; what was a navigable passage one day is not unfrequently quite unnavigable a day or two after. The *doondees*, or native craft, by which the river is navigated, though of very small burden, frequently get aground.

If the Indus should ever become a considerable commercial highway, it will, most probably, be brought about by the intervention of suitable steamers; and it seems to be the opinion of the best judges, that, provided the steamers employed be flat-bottomed, and do not draw more than 28 or 30 inches water, they might, with proper precautions, be navigated from the sea for nearly 1,000 miles inland. But, exclusive of the physical obstacles to the navigation of the river, the backward state of the country, through which it flows, and the poverty and barbarism of the inhabitants, are formidable obstacles to its becoming of much importance as a commercial highway. The inhabitants along its banks have little taste for foreign commodities; and even if they had, they have few products suitable for export to exchange for them. No doubt, should regular government, industry, and civilisation be introduced into the Punjab, Caubul, and the contiguous countries, the case might be very different, and the trade of the Indus might become of very considerable importance. But this, if it be ever effected, must require a lengthened period to bring it about; so that those who look for any material addition being speedily made to our trade, or to that of India, by the opening of the Indus, will, there is too much reason to think, be entirely disappointed. (See, for farther particulars, the art. *Indus* in the *Geographical Dictionary*, and the authorities there referred to; see also Captain Postan's work on Sinde; and especially the memoir in the appendix (p. 361.) of Captain Carless, *On the Navigation of the Indus.*)

A very well-informed party, Dr. Buist, editor of the *Bombay Times*, has, in his work

* Whatever other changes may have taken place in the river, the tides at its mouth would seem to have been nearly the same in antiquity as at present. Their violence created the greatest alarm in the fleet of Alexander; and occasioned, indeed, the loss of several vessels! — (*Arrian*, lib. vi. cap. 19.)

on the late expedition into Affghanistan, made the following observations on the trade of the Indus: —

"The glowing descriptions of Burnes appear to have given a very exaggerated idea of the value of the internal traffic of the countries beyond the Indus. It was forgotten that where there was no industry, no manufactures or mineral wealth, no sea-coast or rivers to permit exportation, there could be little or nothing to give in exchange for imports; and that the wants of a population purely nomade must at all times be simple and singularly few. The whole of our commerce with Persia has never exceeded two millions sterling a year, rarely above one; the total of our trade with Affghanistan certainly never exceeded a million annually, and has very rarely amounted to much more than the half of one. Besides this, the Indus in reality was never closed save by its own dangerous entrances and shallow depth of water. Lord Ellenborough has opened the Indus as far as Mithen Kote; and the Sutlej, in continuation of this, to the Markunda, where it ceases to be navigable for the smallest craft. Yet the gross value of the British goods consumed by the countries adjoining does not at present amount to a quarter of a million sterling, and will not in all likelihood be doubled for 10 years to come; the expense of maintaining troops betwixt Kurrachee and Bukkur, both stations included, exceeding 600,000*l.* a year; with a less force it would be unwise to think of keeping these stations at all. The great line of traffic was not along but across the Indus, by the Delhi frontier, or parallel to it at a distance of 100 miles, by Sonmeanee and Kelat. The countries beyond the Indus, besides, have always been open to the free admission of every variety of foreign imports on paying a moderate fixed duty. The chief obstruction in reaching these is irremediable by treaty; and arises from the attacks of the plundering tribes in the passes, which cannot be restrained save by the payment of a black mail or subsidy."

The delta of the Indus has little in common with the delta of the Nile, except its shape. Not a fourth part of it is cultivated, and its few inhabitants principally lead a pastoral life. It is overgrown with tamarisks and other wild shrubs; and though intersected by the numerous mouths of the river, its surface is dry and arid, and it is in a great degree destitute of fresh water.

Money, Weights, and Measures.—Accounts are kept in rupees, carivals, and pice: 12 pice = 1 carival; 50 carivals = 1 rupee. Cowries are current in Sinde, 48 cowries = 1 pice.

Small Weights.—24 Moons = 1 Ruttee.
6 Ruttees = 1 Massa.
12 Massas = 1 Tolah.

Gross Weights. — 4 Pice = 1 Anna.
16 Annas = 1 Pucca seer.
40 Seers = 1 Maund, or 74 lbs. 5 oz. 7 dwts. avoirdupois.

Long Measure. — 1 Garee = 2 inches.
16 Garees = 1 Guz; but 1 guz cloth = 34 inches at Tatta.

Grain Measure.—4 Puttees = 1 Twier.
4 Twiers = 1 Cossa.
60 Cossas = 1 Carval of wheat; or 22 Pucca maunds, or 21 Bombay parahs.

Diamonds and pearls are sold by hubbas and ruttees.—8 hubba = 1 ruttee, about 2 grs. Troy.—(*Milburn's Orient. Commerce.*)

TEA (in one Chinese dialect *Cha*, in another *Te*; Du. *Te*; Fr. *Thé*; It. *Te*; Rus. *Tchai*; Hind. *Cha*; Malay, *Teh*), the leaves of the tree or shrub (*Thea viridis* Lin.).

I. Description of the Tea Plant. — Tea Trade of China.

II. Rise and Progress of the British Tea Trade. — Consumption of Tea.

III. East India Company's Monopoly — Influence of, on the Price of Tea — Conditions under which it was held — Abolition of.

IV. Duties on Tea. — Consumption of, in the U. Kingdom, the Continent, the United States, etc.

I. Description of the Tea Plant. — Tea Trade of China.

Description of the Plant. — Places where it is cultivated. — The tea plant ordinarily grows to the height of from 3 to 6 feet, and has a general resemblance to the myrtle, as the latter is seen in congenial situations in the southern countries of Europe. It is a polyandrous plant, of the natural order *Columniferæ*, and has a white blossom, with yellow style and anthers, not unlike those of a small dog-rose. The stem is bushy, with numerous branches, and very leafy. The leaves are alternate, on short, thick, channelled footstalks, evergreen, of a longish elliptic form, with a blunt, notched point, and serrated except at the base. These leaves are the valuable part of the plant. The *Camellias*, particularly the *Camellia Sasanqua*, of the same natural family as the tea tree, and very closely resembling it, are the only plants liable to be confounded with it by a careful observer. The leaves of the particular camellia just named are, indeed, often used in some parts of China, as a substitute for those of the tea tree.

The effects of tea on the human frame are those of a very mild narcotic; and, like those of many other narcotics taken in small quantities — even of opium itself — they are exhilarating. The green varieties of the plant possess this quality in a higher degree than the black; and a stronger infusion of the former will, in most constitutions, produce considerable excitement and wakefulness. Of all narcotics, however, tea is the least pernicious: if, indeed, it be so in any degree, which we very much doubt.

The tea shrub may be described as a very hardy evergreen, growing readily in the open air, from the equator to the 45th degree of latitude. For the last 60 years it has been reared in this country, without difficulty, in greenhouses; and thriving plants of it

are to be seen in the gardens of Java, Singapore, Malacca, and Penang; all within 6 degrees of the equator. The climate most congenial to it, however, seems to be that between the 25th and 23d degrees of latitude, judging from the success of its cultivation in China. For the general purposes of commerce, the growth of good tea is confined to China; and is there restricted to 5 provinces, or rather parts of provinces, viz. Fokien and Canton, but more particularly the first, for black tea; and Kiang-nan, Kiang-si, and Che-kiang, but chiefly the first of these, for green. The tea districts all lie between the latitudes just mentioned, and the 115th and 122d degrees of East longitude. However, almost every province of China produces more or less tea, but generally of an inferior quality, and for local consumption only; or when of a superior quality, like some of the fine wines of France, losing its flavour when exported. The plant is also extensively cultivated in Japan, Tonquin, and Cochin-China; and in some of the mountainous parts of Ava; the people of which country use it largely as a kind of *pickle preserved in oil!*

Botanically considered, the tea tree is a single species; the green and black, with all the diversities of each, being mere varieties, like the varieties of the grape, produced by difference of climate, soil, locality, age of the crop when taken, and modes of preparation for the market. Considered as an object of agricultural produce, the tea plant bears a close resemblance to the vine. In the husbandry of China, it may be said to take the same place which the vine occupies in the southern countries of Europe. Like the latter, its growth is chiefly confined to hilly tracts, not suited to the growth of corn. The soils capable of producing the finest kinds are within given districts, limited, and partial. Skill and care, both in husbandry and preparation, are quite as necessary to the production of good tea, as to that of good wine.

The best wine is produced only in particular latitudes, as is the best tea; although, perhaps, the latter is not restricted to an equal degree. Only the most civilised nations of Europe have as yet succeeded in producing good wines; which is also the case in the East with tea; for the agricultural and manufacturing skill and industry of the Chinese are there unquestionably pre-eminent. These circumstances deserve to be attended to, in estimating the difficulties which must be encountered in any attempt to propagate the tea plant in colonial or other possessions. These difficulties are obviously very great; and, perhaps, all but insuperable. Most of the attempts hitherto made to raise it in foreign countries were not, indeed, of a sort from which much was to be expected. Within the last few years, however, considerable efforts have been made by the Dutch government of Java, to produce tea on the hills of that island; and having the assistance of Chinese cultivators from Fokien, who form a considerable part of the emigrants to Java, a degree of success has attended them, beyond what might have been expected in so warm a climate. The Brazilians have made similar efforts; having also, with the assistance of Chinese labourers, attempted to propagate the tea shrub near Rio de Janeiro; and a small quantity of tolerably good tea has been produced. But owing to the high price of labour in America, and the quantity required in the cultivation and manipulation of tea, there is no probability, even were the soil suitable to the plant, that its culture can be profitably carried on in that country.

It may, perhaps, succeed in Assam, where its culture is now being attempted; for labour is there comparatively cheap, and the hilly and table lands are said to bear a close resemblance to those of the tea districts of China; but we are not sanguine in our expectations as to the result.

Species of Tea. — Manner in which they are manufactured. — The *black* teas usually exported by Europeans from Canton are as follows, beginning with the lowest qualities: — Bohea, Congou, Souchong, and Pekoe. The *green* teas are Twankay, Hyson skin, young Hyson, Hyson, Imperial, and Gunpowder. All the black teas exported (with the exception of a part of the bohea, grown in Woping, a district of Canton) are grown in Fokien — a hilly, maritime, populous, and industrious province, bordering to the north-east on Canton. Owing to the peculiar nature of the Chinese laws as to inheritance, and probably, also, in some degree, to the despotic genius of the government, landed property is much subdivided throughout the empire; so that tea is generally grown in gardens or plantations of no great extent. The plant comes to maturity and yields a crop in from 2 to 3 years. The leaves are picked by the cultivator's family, and immediately conveyed to market; where a class of persons, who make it their particular business, purchase and collect them in quantities, and manufacture them in part; that is, expose them to be dried under a shed. A second class of persons, commonly known in the Canton market as "the tea merchants," repair to the districts where the tea is produced, and purchase it in its half-prepared state from the first class, and complete the manufacture by garbling the different qualities; in which operation, women and children are chiefly employed. A final drying is then given, and the tea packed in chests, and divided, according to quality, into parcels of from 100 to 600 chests each. These

parcels are stamped with the name of the district, grower, or manufacturer, exactly as is practised with the wines of Bordeaux and Burgundy, the indigo of Bengal, and many other commodities; and, from this circumstance, get the name of *chops*, the Chinese term for a seal or signet. Some of the leaf-buds of the finest black tea plants are picked early in the spring, before they expand. These constitute pekoe, or black tea of the highest quality; sometimes called "white-blossom" tea, from there being intermixed with it, to give it a higher perfume, a few blossoms of a species of olive (*Olea fragrans*), a native of China. A second crop is taken from the same plants in the beginning of May, a third about the middle of June, and a fourth in August; which last, consisting of large and old leaves, is of very inferior flavour and value. The younger the leaf, the more high flavoured, and consequently the more valuable, is the tea. With some of the congous and souchongs are occasionally mixed a little pekoe, to enhance their flavour; and hence the distinction, among the London tea dealers, of these sorts of tea, into the ordinary kinds and those of "Pekoe flavour." Bohea, or the lowest black tea, is partly composed of the lower grades; that is, of the fourth crop of the teas of Fokien, left unsold in the market of Canton after the season of exportation has passed; and partly of the teas of the district of Woping in Canton. The green teas are grown and selected in the same manner as the black, to which the description now given more particularly refers; and the different qualities arise from the same causes. The gunpowder here stands in the place of the pekoe; being composed of the unopened buds of the spring crop. Imperial, hyson, and young hyson, consist of the second and third crops. The light and inferior leaves, separated from the hyson by a winnowing machine, constitute hyson skin, an article in considerable demand amongst the Americans. The process of drying the green teas differs from that of the black; the first being dried in iron pots or vases over a fire, the operator continually stirring the leaves with his naked hand. The operation is one of considerable nicety, particularly with the finer teas; and is performed by persons who make it their exclusive business.

Tea Trade in China. — The tea merchants commonly receive advances from the principal merchants and other capitalists of Canton; but, with this exception, are altogether independent of them; nor have the latter any exclusive privilege or claim of pre-emption. They are very numerous; those connected with the green tea districts alone being about 400 in number. The black tea merchants are less numerous but more wealthy. The greater part of the tea is brought to Canton by land carriage or inland navigation, but chiefly by the first: it is conveyed by porters; the roads of China, in the southern provinces, not generally admitting of wheel carriages, and beasts of burden being very rare. A small quantity of black tea is brought by sea, but probably smuggled; for this cheaper mode of transportation is discouraged by government, which it deprives of the transit duties levied on inland carriage. The length of land carriage from the principal districts where the green teas are grown to Canton is probably not less than 700 miles; nor that of the black tea, over a mountainous country, less than 200 miles. The tea merchants begin to arrive in Canton about the middle of October, and the busy season continues until the beginning of March; being briskest in November, December, and January. Tea, for the most part, could, previously to the late changes, only be bought from the Hong or licensed merchants; but some of these, the least prosperous in their circumstances, were supported by wealthy *outside* merchants, as they are called; and thus the trade was considerably extended. The prices in the Canton market vary from year to year with the crop, the stock on hand, and the external demand, as in any other article, and in any other market. After the season is over, or when the westerly monsoon sets in, during the month of March, and impedes the regular intercourse of foreigners with China, there is a fall in the price of tea, not only arising from this circumstance, but from a certain depreciation in quality, from the age of the tea; which, like most other vegetable productions, is injured by keeping, particularly in a hot and damp climate.

Foreign Trade in Tea — There seems to be little mystery in the selection and purchase of teas; for the business is both safely and effectively accomplished, not only by the supercargoes of the American ships, but frequently by the masters; and it was ascertained by the sales at the East India House, that there was no difference between the qualities of the teas purchased by the commanders and officers of the Company's ships, without any assistance from the officers of the factory, and those purchased for the Company by the latter. An unusual degree of good faith, indeed, appears to be observed, on the part of the Chinese merchants, with respect to this commodity; for it was proved before the select committee of the House of Commons, in 1830, that it was the regular practice of the Hong merchants to receive back, and return good tea for, any chest or parcel upon which any fraud might have been practised, which sometimes happens in the conveyance of the teas from Canton on board ship. Such restitution has occasionally been made even at the distance of 1 or 2 years. The Company enjoyed no advantage over other purchasers in the Canton market, except that which the largest

purchaser has in every market, viz. a selection of the teas, on the payment of the same prices as others; and this advantage they enjoyed only as respects the black teas; the Americans being the largest purchasers of green teas.

We subjoin a Table for calculating the cost of tea: —

Comparison of the Cost of Tea per Picul (133⅓ lbs. Avoirdupois), with the Rate per Pound and Ton, of 9 Cwt. or 1,008 Pounds per Ton.

II. Rise and Progress of the British Tea Trade. — Consumption of Tea.

The late rise and present magnitude of the British tea trade are among the most extraordinary phenomena in the history of commerce. Tea was wholly unknown to the Greeks and Romans, and even to our ancestors previously to the end of the 16th or the beginning of the 17th century. It seems to have been originally imported in small quantities by the Dutch; but was hardly known in this country till after 1650. In 1660, however, it began to be used in coffee houses; for, in an act passed in that year, a duty of 8*d.* is laid on every gallon of "coffee, chocolate, sherbet, and tea," made and sold. But it is abundantly evident that it was then only beginning to be introduced. The following entry appears in the Diary of Mr. Pepys, secretary to the Admiralty: — "September 25. 1661. I sent for a cup of tea (a China drink), of which I had never drunk before." In 1664, the East India Company bought 2 lbs. 2 oz. of tea as a present for his Majesty. In 1667, they issued the first order to import tea, directed to their agent at Bantam, to the effect that he should send home 100 lbs. of the best tea he could get! — (See the reference in *Milburn's Orient. Com.* ii. 530.; *Macpherson's Hist. of Com. with India*, pp. 130—132.) Since then, the consumption seems to have gone on regularly though slowly increasing. In 1689, instead of charging a duty on the decoction made from the leaves, an excise duty of 5*s.* per lb. was laid on the tea itself. The importation of tea from 1710 downwards is exhibited in the following Tables.

The reductions made in the duties on tea in 1745 and 1784, strikingly evince the superior productiveness of low duties on articles in general demand, and are, in that respect, especially worth attention. Previously to 1745, tea was charged with an excise duty of no less than 4*s.* per lb., and with a customs duty of 14 per cent. *ad valorem*: and it appears that at an average of the 5 years ending Midsummer, 1745, the teas entered for consumption amounted to 768,520 lbs. a-year, yielding an average excise and customs revenue of 175,222*l.* a-year. But though the taste for tea was then comparatively little diffused, it was well known that its clandestine importation was extensively carried on, and that its real was much greater than its apparent consumption. To check this illegitimate traffic, which enriched the smuggler at the expense of the revenue and of the fair trader, a bill was carried through parliament in 1745, in pursuance of the recommendation of a Committee of the House of Commons, by which the excise duty on tea was reduced from 4*s.* to 1*s.* per lb. and 25 per cent. *ad valorem*: and as the price of the teas sold at the Company's sales was then about 4*s.* per lb., the 25 per cent. was, in fact, equivalent to 1*s.* per lb. making the new excise duty 2*s.* per lb., being a reduction of 50 per cent. This measure, which had in a great degree the merit of originality, was eminently successful. In the year immediately after the

reduction of the duty, the entries of tea for consumption amounted to about 1,800,000 lbs., being nearly three times as much as they had amounted to in the last year of the high duties; and the increase in the second and third years of the new system was also most striking. But to set the operation of this well-considered measure in the clearest point of view, we subjoin

An Account of the Quantities of Tea entered for Consumption, and of the Produce of the Excise and Customs Duties thereon during each of the Five Years preceding, and subsequent to Midsummer, 1745, when the Excise Duty on Tea was reduced from 4*s.* to 2*s.* per lb. (M'Culloch on Taxation, p. 332.)

Years.	Quantities.	Duties.	Years.	Quantities.	Duties.
	Lbs.	£ *s.*		*Lbs.*	£
1741	880,700	200,799 0	1746	1,800,000	230,400
1742	836,200	190,655 10	1747	2,000,000	256,000
1743	797,200	181,761 10	1748*	2,600,000	358,800
1744	708,500	161,538 0	1749	2,700,000	372,600
1745	620,000	141,360 0	1750†	2,700,000	372,600
Totals.	3,842,600	876,112 0	Totals.	11,800,000	1,590,400
Average of 5 years.	768,520	175,222 8	Average of 5 years.	2,360,000	318,080

But notwithstanding this unanswerable demonstration of the superior productiveness of low duties, they were again increased in 1759; and fluctuated, between that epoch and 1784, from about 65 to 120 per cent. *ad valorem*. The effects which followed this inordinate extension of the duties are equally instructive with those which followed their reduction. The revenue was not increased in anything like a corresponding proportion; and as the use of tea had become comparatively general, smuggling was carried to an infinitely greater extent than at any former period. In the *nine* years preceding 1780, above 118 millions lbs. of tea were exported from China to Europe in ships belonging to the continent, and about 50 millions lbs. in ships belonging to England. But from the best information attainable, it appears that the real consumption was almost exactly the reverse of the quantities imported; and that while the consumption of the British dominions amounted to above 13 millions lbs. a-year, the consumption of the continent did not exceed 5½ millions. If this statement be nearly correct, it follows that an annual supply of about *eight* millions lbs. must have been clandestinely imported into this country, in defiance of the revenue laws. But this was not the worst effect of the high duties; for many of the retail dealers who purchased tea at the East India Company's sales, being in a great measure beaten out of the market, were, that they might put themselves in a condition to stand the competition of the smugglers, tempted to adulterate their teas by mixing them with sloe and ash leaves.‡ At length, in 1784, ministers, having in vain tried every other resource for the suppression of smuggling, resolved to follow the precedent of 1745, and reduced the duty on tea from 119 to 12½ per cent. This measure was as successful as the former: smuggling and the practice of adulteration were immediately put an end to. The following statement shows that the *quantity* of tea sold by the East India Company was about *trebled* in the course of the *two* years immediately following the reduction.

	Lbs.
In 1781 the quantity of tea sold at the East India Company's sales amounted to	5,023,419
1782	6,283,664
1783	5,857,883
1784 (duties reduced)	10,148,257
1785	16,307,433
1786	15,093,952
1787	16,692,426§

While the quantity of tea sold at the Company's sales was thus rapidly augmented, in consequence of the reduction of the duty, the quantity of tea imported into the continent from China, which had, in 1784, amounted to 19,027,300 lbs. declined with still greater rapidity, and, in 1791, was reduced to only 2,291,500 lbs.‖

The duties on tea, at an average of the 5 or 6 years preceding 1784, produced about 700,000*l.* a-year. And, on their being reduced to 12½ per cent, an additional duty, estimated to produce 600,000*l.*, was laid on windows, as a *commutation* tax, to compensate for the deficiency which it was supposed would take place in the revenue derived from tea. But, instead of the duties falling off in the proportion of 119 to 12½, or from 700,000*l.* to 73,000*l.*, they only fell off, in consequence of the increased consumption, in the proportion of about *two* to *one*, or from 700,000*l.* to 340,000*l.* The Commutation Act has been always regarded as one of the most successful financial measures of Mr. Pitt's administration. The plan was generally understood at the time to have been suggested by Mr. Richardson, accountant-general of the East India Company; but the popularity of the measure was so great as to induce several other individuals to claim this honour, and even to occasion some hot disputes on the subject

* In 1748, 5 per cent was added to the customs duty on dry goods; but its influence on tea was nex, to imperceptible.

† In 1752 the entries increased to 3,000,000 lbs.

‡ Macpherson's "Commerce with India," p. 208. Milburn's "Oriental Commerce," vol. ii. p. 540

§ Macpherson's "Commerce with India," p. 416. ‖ Ibid, p. 210

in the House of Commons. In point of fact, however, the merit of originally suggesting the plan neither belonged to Mr. Richardson, nor to any of those who then claimed it; and such of our readers as will take the trouble to look into a pamphlet ascribed to Sir Matthew Deaker ("Serious Considerations on the present High Duties"), published in 1743, will find that the measure adopted in 1784 had been strenuously recommended 40 years before.

But the principle of the Commutation Act, and the striking advantage that had resulted from the reduction of the duty, were soon lost sight of. In 1795 the duty was increased to 25 per cent; and, after successive augmentations in 1797, 1798, 1800, and 1803, it was raised, in 1806, to 96 per cent., *ad valorem*, at which it continued till 1819, when it was raised to 100 per cent. on all teas that brought above 2*s.* per lb. at the Company's sales.

The following statements show the progress of the consumption of tea in this country from a very remote epoch down to the present time: —

Account of the Quantity of Tea retained for Home Consumption in Great Britain from 1789 to 1833, and of the Quantity that paid Duty for Home Consumption in Ireland from 1789 to 1827; specifying the Nett Produce of the Duties in each Country, and the Rates of Duty.

N. B.— We have made up this account from the accounts given in *Milburn's Oriental Commerce* (vol. ii. p. 534), and Postlethwayt's Dictionary, Art. *Tea*.

The following table, compiled by the Inspector-General of Imports and Exports, sets the most material circumstances connected with the tea trade in a very clear and striking point of view. The Inspector-General has added to his table two more columns, one showing the annual population of the U. Kingdom, and the other the annual average consumption of tea by each individual of that population. But we have omitted these, inasmuch as the average in question was wholly fallacious. The consumption of tea per individual in Great Britain was formerly a good deal more than double its consumption per individual in Ireland. And though the proportional consumption in the latter has increased since the occurrence of the potatoe rot in 1846, it is still much below the consumption either in England or Scotland. This, indeed, is very clearly exhibited in the table showing the comparative consumption of tea at different epochs in each of the three kingdoms, which has, also, been supplied by the Inspector-General.

An Account showing the Quantity of Tea annually consumed in the U. K., with the average Rate and aggregate Amount of Duty collected thereon; and the average Price, exclusive and inclusive of the Duty, from

III. East India Company's Monopoly — Influence of, on the Price of Tea — Conditions under which it was held — Abolition of.

From its origin down to 1834, the trade in tea was monopolised by the East India Company. Considerable quantities of tea were, indeed, at different times, smuggled into the country; but no British subject, not authorised by the Company, was ever allowed openly to import tea. Being thus the *only sellers*, they had it in their power, by limiting the quantity brought to market, to raise its price above its natural elevation, and to realise immense profits at the expense of the public. They might, no doubt, have declined availing themselves of this power; but no such forbearance could be rationally expected from the Company, or from any other body of men. All individuals and associations exert themselves to obtain the highest price for whatever they have to sell: and it is found that those who are protected from the competition of others, or who have obtained a monopoly of any market, invariably raise the price of their commodities to a very high pitch. The East India Company did this, probably, to a less extent than most other bodies that have enjoyed such exclusive privileges. Still, however, it is an undoubted fact, that the teas sold by them during the last years of the monopoly cost the people of Britain upwards of 1,500,000*l.* a year more than they would have cost had they been sold at the price at which teas of equal quality were sold, under a system of free competition, in New York, Hamburg, Amsterdam, &c.! — (For proofs of this statement, see 1st edition of this *Dictionary*, p. 1031.)

The legislature endeavoured, at different periods, to prevent the Company from abusing their monopoly, by enacting regulations as to the sale of tea; and though no longer of any practical importance, it may be worth while briefly to notice some of the more important, and the means by which they were defeated. In 1745, for example, when the great deduction was made from the amount of the tea duties, it was enacted, by a statute passed in that year (18 Geo. 2. c. 26.), in order to prevent the Company from depriving the public of the benefit of this reduction, that in case the tea imported by the East India Company shall not always be sufficient to answer the consumption thereof in Great Britain, and to *keep the price of tea in this country upon an equality with the price thereof in the neighbouring Continent of Europe*, it shall be lawful for the said Company, and their successors, to import into Great Britain such quantities of tea as they shall think necessary from any part of Europe: and by another section of the same statute, it is enacted, that if the East India Company shall, at any time, neglect to keep the British market supplied with a *sufficient quantity of tea at reasonable prices*, it shall be lawful for the Lords of the Treasury to *grant licences to any other person or persons*, body politic or corporate, to import tea into Great Britain from any part of Europe.

Had this statute been enforced, it would certainly have restrained the demands of the Company within reasonable limits; but it was very soon forgotten, and the Company continued, as before, to sell their teas at an enormous advance as compared with their prices in Hamburg and Amsterdam.

The same well-founded jealousy, which dictated the act of 1745, was again displayed in the proceedings at the reduction of the duties in 1784. It was then enacted (24 Geo. 3. c. 38.), that the East India Company should make 4 sales of tea every year, as near as conveniently may be at equal distances of time from each other, and should put up at such sales such quantities of tea as may be judged sufficient to supply the demand; and at each sale the tea to be put up shall be sold without reserve to the highest bidders, provided an advance of 1*d.* per pound be bid upon the price at which the same is put up. By another clause it was enacted, that it should not be lawful for the East India Company "to put up their teas for sale at any price which shall, upon the whole of the teas so put up at any sale, exceed the prime cost thereof, with the freight and charges of importation, together with lawful interest from the time of arrival of such teas in Great Britain, and the common premium of insurance as a compensation for the sea risk incurred thereon." The company were further ordered to keep a stock, equal to at least 1 year's consumption, according to the sales of the preceding year, always beforehand. And they were bound to lay before the Lords of the Treasury copies of the accounts and estimates upon which their orders for importation, prices for sale, and quantities put up to sale, should be grounded.

The object of these conditions is obvious. They were intended to secure a plentiful supply of tea to the public, and to prevent its being sold at an oppressive increase of price. But monopoly and low prices are altogether incompatible. The conditions now referred to were, as to all practicable purposes at least, quite inoperative.

1. In the first place, the Company made various additions to the prime cost, and consequently to the putting-up price of their tea, which they ought not to have made, but which the Lords of the Treasury, had they been so disposed, could hardly disallow. They always, for example, charged the cost of the factory in Canton to the price of tea. This establishment consisted of about 20 persons, and cost at an average about 100,000*l.*

a year! We do not presume to say that it was altogether useless. Undoubtedly, however, it might have been conducted at half the expense. It is a fact, that the whole American business at Canton has been transacted by the captains of the ships; and every one knows that they have had fewer disturbances with the natives than the English.

2. In the second place, it was established by the evidence taken before the select committee of 1830, that the Company had for many years thrown the whole losses arising from their outward investment upon tea, by estimating the value of the tael, or Chinese money in which the accounts are kept, at the price which it cost for the purpose of being vested in tea. This was a complete evasion of the provisions of the statute; but it was one which it was very difficult, if not impossible, to defeat.

3. In the third place, the obligation imposed on the Company, of keeping a year's supply of tea in their warehouses, contributed both to raise its price, and deteriorate its quality. From a return made to an order of the select committee of the House of Commons in 1830 (*First Report*, App. p. 23.), it appears that the shortest time any tea sold by the Company had been in store was 14 months; and that, at an average, all the teas sold during the 3 years ending with 1829 had been 17 months in store. But, according to the evidence of the most respectable American witnesses, the black and coarser kinds of tea are depreciated at least 5 per cent. by being kept a twelvemonth, and are, indeed, hardly saleable after the arrival of fresh teas from China. Adding, therefore, warehouse rent, interest of capital, and insurance for 17 months, to the deterioration in point of quality, we may estimate the loss to the public, by this well-meant but most injudicious interference of the legislature, at 15 per cent. upon the price of all the teas sold.

4. In the fourth place, it is obvious, even supposing the prime cost of the Company's teas had not been improperly enhanced, that the regulation obliging them to be sold at an advance of 1*d.* per lb. if offered, on the putting-up price, could not be otherwise than nugatory. Had the trade been open, private merchants would have undersold each other, until the price of tea, like that of sugar or coffee, had been reduced to the very lowest point that would yield the sellers the customary rate of profit. But the Company was in an entirely different situation. Being the *only sellers*, they invariably *understocked* the market. Instead of bringing forward such quantities of tea as might have occasioned its sale at a small advance upon the upset price, they adjusted the supply so that the price was raised to a much higher elevation. Now, it will be observed, that all this system of management put into the Company's coffers consisted of *extra profit*; for the putting-up price embraced every item that could fairly enter into the cost of the tea, including both *interest* on capital and insurance, and including also, as we have seen, several items that had but little to do with it. To show the extent to which this source of profit was cultivated, we may mention, that at the June sale in 1830, the Company put up congou at 1*s.* 8*d.* and 2*s.* 1*d.* per lb.; the lowest sort, or that put up at 1*s.* 8*d.*, being sold partly at 2*s.* 1½*d.*, being an advance of *twenty-two and half* per cent., and partly at 2*s.* 5*d.*, being an advance of FORTY-FIVE per cent.; while the highest sort, or that put up at 2*s.* 1*d.*, was sold partly at 2*s.* 2*d.*, being an advance of *four* per cent., and partly at 3*s.* 7*d.*, being an advance of no less than SEVENTY-TWO per cent. above the upset price; that is, above a price calculated to yield *ordinary profits*. Mr. Mills, an intelligent tea merchant, in a paper laid before the committee of the House of Lords on East India affairs, showed, that the advance on teas sold at the Company's June sale in 1830, above the putting-up price, amounted to 122,177*l.* 18*s.* 1*d.*; and as there are 4 such sales in the year, the total advance must have been about 500,000*l.*; and this was considerably under what it had been a few years previously.

These statements show generally how the Company defeated the provisions of the act of 1784, and, indeed, turned them to its own advantage. But, as already observed, nothing else could be expected. It is nugatory to attempt to combine monopoly with low prices and good qualities. They never have existed, and it is not possible they ever should exist, together. Monopoly is the parent of dearness and scarcity; freedom, of cheapness and plenty.

Great, however, as was the sacrifice entailed on the people of Britain by the Company's monopoly, it is doubtful whether it yielded any considerable amount of revenue to the Company. Every one, indeed, must be satisfied, on general grounds, that it was impossible for the Company to make anything like the same profits by the privileges conceded to them, that would have been made by private individuals enjoying similar advantages. "The spirit of monopolists," to borrow the just and expressive language of Gibbon, "is narrow, lazy, and oppressive. Their work is more costly and less productive than that of independent artists; and the new improvements so eagerly grasped by the competition of freedom, are admitted with slow and sullen reluctance, in those proud corporations above the fear of a rival, and below the confession of an error." We have no doubt that the directors of the East India Company were disposed to extend

its commerce, and to manage it according to the most approved principles, but they were wholly without the means of giving effect to their wishes. They had to operate through servants; and is it to be imagined that the *employés* of such bodies will ever display that watchful attention to their interests, or conduct the business intrusted to their care with the unsparing economy practised by private merchants trading on their own account, superintending their own concerns, and responsible in their own private fortunes for every error they may commit? The affairs of the Company, notwithstanding the efforts of the directors to introduce activity and economy, have always been managed according to a system of routine. Their captains and mercantile agents were, we doubt not, "all honourable men;" but it were an insult to common sense to suppose that they may be compared for a moment with individuals trading on their own account, in the great requisites of zeal, conduct, and skill.

Several gentlemen of great knowledge and experience, who carefully inquired into the state of the Company's affairs in 1830, expressed their decided conviction that they made nothing by the tea trade!—the increased price at which they sold the article not being more than sufficient to balance the immense expenses incident to the monopoly! Perhaps this statement may be somewhat exaggerated, though we incline to think it is not far from the mark. Taking, however, the accounts laid by the Company before the late committee on Indian affairs, as they stand, it would appear that the profits realised by them during the 3 years ending with 1827-28 amounted to 2,542,569*l.*, being at the rate of 847,523*l.* a year.—(*Appen. to Second Report of Select Committee of* 1830, p. 95.) But we have already seen that the excess of price received by the Company for their teas, over the price of similar teas sold at New York and Hamburg, has been above 1,500,000*l.* a year; so that, according to the Company's own showing, their monopoly occasioned an *absolute loss* of 652,477*l.*, exclusive of its mischievous influence in lessening the consumption of tea, and in confining our trade with China to less than a third of what it will probably amount to under a system giving free scope to the energies of individual enterprise.

The renewal of a monopoly productive of such results was, therefore, wholly out of the question. There was hardly, indeed, in 1833, an individual in the empire out of the pale of the Company who was not anxious for the opening of the trade to China; and the act 3 & 4 Will. 4. c. 85.—(see *antè*, p. 552.)—abolishing the Company's monopoly, and making it lawful for all individuals to import tea, was passed with almost no opposition.

IV. Duties on Tea.—Consumption of Tea in the United Kingdom, the Continent, the United States, etc.

Down to the 22d of April, 1834, the duty on tea was an *ad valorem* one of 96 per cent. on all teas sold under 2*s.* a pound, and of 100 per cent. on all that were sold at or above 2*s.* charged on the prices which they brought at the Company's sales. This was, certainly, a high duty; though, as a large amount of revenue must be raised, we do not know, had the trade been free, that it could have been fairly objected to on that ground. But under the monopoly system, the duty was, in fact, about 200 per cent. *ad valorem!* For, the price of the tea sold by the Company being forced up to nearly double what it would have been under a free system, it followed, inasmuch as the duty varied directly as the price, that it also was doubled when the latter was doubled. The price of congou in Hamburg, for example, varied, during the latter years of the monopoly, from 1*s.* 2*d.* to 1*s.* 4*d.* per lb.; and had the Company supplied our markets with congou at the same rate, it would have cost us, duty included, nearly 2*s.* 4*d.* and 2*s.* 8*d.* per lb. But instead of this, the congou sold by the Company was, at an average, a good deal above 2*s.* per lb.; and, the duty being as much, it invariably cost from 4*s.* to 5*s.* per lb. Hence, though the duty was only 100 per cent. on the Company's price, it was really above 200 per cent. on the price of tea in an open market! The mischief of the monopoly was thus greatly aggravated; inasmuch as every addition made by it to the cost of the article, made an equal addition to the duty on it.

The *ad valorem* duties ceased on the 22d of April, 1834; and, under the act 3 & 4 Will. 4. c. 101. all tea imported into the U. Kingdom for home consumption was charged with a customs duty as follows:—

Bohea	1*s.* 6*d.* per lb.
Congou, twankay, hyson skin, orange pekoe, and campoi	2*s.* 2*d.*
Souchong, flowery pekoe, hyson, young hyson, gunpowder, imperial, and other teas not enumerated	3*s.* 0*d.*

If we compare these duties with the wholesale prices of tea, they will be seen to have been exceedingly heavy, particularly on bohea and congou. Bohea may be sold, exclusive of duty, at or under 10*d.* or 1*s.* per lb.; so that the fixed duty was equivalent to an *ad valorem* duty of 150 per cent. or upwards! But to impose such a duty on an article fitted to enter largely into the consumption of the lower classes, seems to be in the last degree oppres-

sive. It must have gone far to neutralise the beneficial effects that would otherwise have resulted from the abolition of the monopoly; and by confining the consumption of the article within comparatively narrow bounds, have rendered the duty less productive than it would have been had it been lower. In consequence, however, of the complaints of the importers of tea that the discriminating duties were not, and could not be, fairly assessed, and that teas were sometimes charged at 2*s.* 2*d.* or 3*s.* per lb. that should only have paid 1*s.* 6*d.*, the duty was repealed in about two years, by the act 5 & 6 Will. 4. c. 32., which enacted that an equal duty of 2*s.* 1*d.* per lb. (increased in 1840 to 2*s.* 2¼*d.*) should be charged, after the 1st of July, 1836, on all teas entered for consumption in the U. Kingdom.

Considering the very great differences in the qualities and the prices of the different varieties of tea, it would have been extremely desirable, had it been practicable, that the duty on them should have been assessed on an *ad valorem* principle. But after the Company's sales had ceased, and the trade had been fully opened, this was no longer possible; and it was found in the case of tea, as of wine, sugar, and similar articles, that it was better to adopt an unfair principle which could be fairly carried out, than to adopt a principle which, though fair in the abstract, was sure in its practical operation to lead to every species of abuse.

We remarked on this subject in our Treatise on Taxation, as follows: —

"But while we admit that the necessity of the case, or the impossibility of fairly assessing discriminating duties on the different varieties of tea, fully justified their repeal, and the imposition of a single duty in their stead, we contend that nothing can justify the magnitude of this single duty, which is, beyond all question, the most objectionable in our tariff.

"It has, we are aware, been alleged that the duty of 2*s.* 2¼*d.* per lb. is not really so bad as it looks; that it is a mistake to suppose that the lower classes use inferior teas, and that the reduction of the duty on them would not materially increase their consumption! But those who make such statements either know nothing of the facts of the case, or reckon on the ignorance of those to whom they address themselves. It appears from the official returns, that in 1816-17 and 1817-18 the price of bohea sold at the Company's sales was about 2*s.* 6*d.*; so that it must have cost the buyer, duty included, about 5*s.* per lb.; and in these years the consumption amounted, at an average, to 1,784,000 lbs. a year. But in 1830-31 and 1831-32, when the price of bohea to the buyer was reduced to 3*s.* 4*d.* per lb. (1*s.* 8*d.* price and 1*s.* 8*d.* duty), the consumption rose to 6,285,000 lbs.; showing, beyond all dispute, that a fall of 1*s.* 8*d.* in the price of bohea had more than trebled its consumption! And though St. Augustine has said that *nullum mendacium tam impudens est ut teste careat*, we hardly think that any one will venture to affirm in the teeth of an experiment like this, that bohea would not be used, if it could be procured by the poorer classes; or that the demand for it would not be very greatly extended by a reduction of 1*s.* 2*d.* or 1*s.* 3*d.* per lb. in its price.

"Taking the average price of bohea in bond in London at 8*d.*, 10*d.*, or 1*s.* per lb., a duty of the same amount would, of course, be equal to an *ad valorem* duty of 100 per cent., which is certainly high for a duty on a necessary consumed by the poor. But even with a duty of 1*s.* per lb. bohea might be retailed at 2*s.* or 2*s.* 2*d.* per lb.; and at this price there can be no manner of doubt that the consumption would amount to 10 or 12,000,000 of pounds. The reduction of the duty on congou to 1*s.* per lb. would, also, be of the greatest importance to the lower and middle classes; and the powerful stimulus it would give to consumption, and consequently, also, to the demand for sugar, which is indispensable to the use of tea, makes it all but certain, that in no very lengthened period the revenue would lose little by the change.

"We admit, however, that a reduction of the duty to 1*s.* per lb. would occasion at the outset a very considerable loss of revenue, amounting to, perhaps, from 1,000,000*l.* to 1,500,000*l.* a year. But this loss might be advantageously compensated by adding ½ per cent. to the house-tax, and extending it to all houses under 10*l.* a year. A measure of this sort, besides being just and proper in itself, would be in accordance with the precedent set by Mr. Pitt in 1784. And while it would be advantageous to the trade of the country, the occupiers of houses would gain more by the fall in the price of teas than they would lose by the imposition and increase of the house-tax. A duty of 4 per cent. on a house of 10*l.* a year would only amount to 8*s.* And supposing the duty on black teas to be reduced to 1*s.* per lb., a fall of 1*s.* 2¼*d.* per lb. would be effected in the price; so that, supposing the consumption of tea by families occupying 10*l.* houses to amount, at an average, to only 10 lbs. a year, they would save 3*s.* 10½*d.* a year, or nearly half their house-tax, by the commutation.

"Taking the price of bohea and low congou in bond in London at 1*s.* per lb. (and it is usually less), the duty of 2*s.* 2¼*d.*, with which they are at present charged, is equivalent to an *ad valorem* one of considerably more than *two hundred* per cent.; whereas, taking the price of the hyson and other superior teas consumed by the rich at from 3*s.* to 4*s.* per lb., the duty on them does not exceed from about 50 to 67 per cent. *ad valorem*, that is, it does not amount to more than from ⅓ to ¼ part of the duty laid on the teas consumed by the poor! Surely, however, this is neither an age nor a country in which an anomaly of this sort can be safely maintained. The public necessities require that the tea, sugar, and other necessaries of the poor should be taxed; but the obvious principles of justice, also, require that the duties on them should be, if not lower, at all events no higher than those laid on the necessaries or luxuries of the rich. The existing tea duties contradict this plain principle, and are at once unjust and exorbitant. The duty on bohea and the lower congous should not, in fact, exceed 6*d.* or 8*d.* per lb., and means may be found, in the commutation we have ventured to suggest, of reducing it to that amount.

"It has been supposed that such an effectual reduction of the duties on tea would greatly increase our trade with China. But others doubt whether such would be the case, so far, at least, as regards our exports, and we are inclined to agree with them. The demand of the Chinese for opium far exceeds their demand for any other foreign product; and it is at present, and has long been, the most advantageous article of export to China. The presumption, consequently, is, that were increased quantities of tea sent from China, it would lead rather to an increase of the imports of opium than of the cottons or hardware of England; or it might, perhaps, check or lessen the heavy drain for bullion that is now operating on China. But though it might not increase our exports to China, it would not fail to make a corresponding addition to those to India, which furnishes the opium sent to China. Every increase of imports is sure to occasion, directly or indirectly, an equal increase of exports. But whatever may be its immediate or remote influence on the trade with the East, a reduction of the duty on tea is required by other and more pressing considerations, by a regard to the well-being of our own people, and to those principles of equal and impartial justice with which the duty we have suggested is in perfect harmony, and to which the present duty on tea is in direct contradiction." — (*Treatise on Taxation*, 2d. ed. p. 348.)

The plan we ventured to suggest for a commutation of the duty was not adopted,

but we are glad to have to say that its effectual reduction was determined on. All parties appear to have become satisfied that the former duty could no longer be maintained Its reduction formed a prominent feature in the Budget proposed by Mr. Disraeli; and after the rejection of the latter, it formed an equally prominent feature in the Budget introduced by Mr. Gladstone, and was afterwards passed into a law; the duty being regulated as follows, viz.—

To 5th April, 1854.	From 5th April, 1854, to 5th April, 1855.	From 5th April, 1855, to 5th April, 1856.	From and after 5th April, 1856.
1s. 10d. per lb.	1s. 6d. per lb.	1s. 3d. per lb.	1s. 0d. per lb.

But, among its other mischievous effects, the war with Russia made it necessary, not merely to suspend this arrangement, but to raise the duties to 1s. 9d. per lb., at which rate they continued till the 6th April, 1857, when they were reduced to 1s. 5d. per lb.

We beg to subjoin an estimate, which we have submitted to the highest mercantile authorities, showing in detail the different items which enter into the price of tea, and its cost to the public.

Estimate of the Cost to the Public of the Tea retained for Home Consumption in the U. Kingdom, supposing it to amount to 70,000,000 lbs.

	£
Cost of tea free on board in China, all charges inclusive, 70,000,000 lbs. at 1s. per lb.	3,500,000
Freight at 4l. per ton, measuring 50 cubic feet, and averaging about 1000 lbs. of tea to the ton	280,000
Landing charges and dock rates	125 000
Marine insurance and incidental charges, 3 per cent.	105,000
Interest for 6 months on the price of tea in China	87,000
Cost of tea in England	4,097,000
Duty	4,958,000
Outlay, and profits of wholesale and retail dealers, &c.	1,800,000
	£10,855,000

Making the average cost to the consumer very near 3s. 2d. per lb.

We believe that this estimate comes as near the mark as it is possible to do in such inquiries. It sets the oppressiveness of the late duty in a striking point of view. It may be supposed, perhaps, that we have overrated the profits of the dealers; but we do not admit that such is the case. There are above 140,000 retail dealers in tea, and taking their profits at 10l. each at an average, they would exceed 1,400,000l. It should, also, be borne in mind that the profits made by the retail of tea are to be regarded as including the greater part of those made by the retail of sugar, which is sold almost at its cost price. Indeed, very many grocers will not supply customers with sugar unless they also supply them with tea.

The following statements in regard to the deliveries, &c., and prices of tea, are derived from the valuable circular of Messrs. Thompson, of 38. Mincing Lane.

Imports and Deliveries of Tea in the U. Kingdom in 1857 and 1858, with the Stocks on the 31st December in each Year.

Capacity of China to furnish additional Supplies of Tea.—It has been sometimes contended, that were the duties on tea materially reduced, the increased demand of this country could not be supplied, and that the reduction of the duty would not really benefit the British consumer, but the Chinese. Our readers will hardly expect that we should enter at any length into the refutation of so absurd a notion. At the commencement of last century, the entire annual consumption of tea in this country, the Continent, and America, did not certainly amount to 500,000 lbs.; whereas the consumption of Great Britain, the Continent, the U. States, and Australia, amounts at present (1859) to about 130,000,000 or 140,000,000 lbs.; and yet every one acquainted with the history of the trade is aware that, though the consumption has increased more than *two hundred and sixty times*, the prices in all open markets have, with few exceptions, been regularly declining. We may, therefore, rest quite easy upon this point. The production of tea is rapidly extending in China; and its vast extent, its capacities for raising unlimited quantities of tea, and the extent to which it is there used, negative the idea that any conceivable increase of the consumption of this country should have any perceptible or permanent influence on its cost price. But it is, at the same time, very possible that the occurrence of rebellion or extensive commotions in the country may for a while interrupt the usual supply, and occasion a temporary rise of price.

The Quantities of Tea exported by Sea from China in ordinary Years may (1859) be estimated as follows, viz.:—

The United Kingdom	lbs. 80,080,000	India	lbs. 1,000,000
The United States	56,000,000	Other places	5,000,000
Australia	10,000,000		
Holland	4,000,000	Total	136,000,000

The exports of tea to Russia by land amount to 14,000,000 or 15,000,000 lbs. a-year.

Retail Dealers in Tea.—Retailers in tea are obliged to take out a licence, which costs 11*s.* 6½*d.* a-year. In 1858 their numbers were, in Great Britain, 123,328, and in Ireland 10,444.

ADULTERATION OF TEA.—It might have been fairly enough anticipated, from the high price of, and the high duty on tea, and the facility with which it may be mixed up with foreign substances, that it would not escape adulteration: and the records of the courts of justice show that such is the case; several dealers having been convicted of this pernicious practice. The adulteration is usually effected either by the intermixture of sloe or ash leaves with fresh teas; or by mixing the latter with tea that has been already used. The penalties on such offences are stated below; but the best, or rather the only, security on which any reliance can be placed, is to be found in the character and respectability of the parties dealing in tea. Even were he influenced by nothing else, it would be extreme folly in any person carrying on an extensive business to engage in such dishonest practices; for they can hardly fail of being detected; and the ruin of his business, that would follow such exposure, would far more than balance whatever gains he could hope to make by his fraudulent schemes.

Penalties on Adulteration.—If any dealer in or seller of tea dye or fabricate any sloe or other leaves in imitation of tea, or mix or colour leaves of tea with terra Japonica or other ingredient, or vend or expose to sale, or have in possession the same, he shall forfeit for every pound of such adulteration, 10*l.*—(4 *Geo.* 2. *c.* 14. *s.* 11.)

Every person, whether a dealer in or seller of tea, or not, who shall dye or fabricate any sloe leaves, liquorice leaves, or

the leaves of tea that have been used, or the leaves of the ash, elder, or other tree, shrub, or plant, in imitation of tea, or who shall mix or colour such leaves with terra Japonica, copperas, sugar, molasses, clay, logwood, or other ingredient, or who shall sell or expose to sale, or have in custody, any such adulterations in imitation of tea, shall for every pound forfeit, on conviction, by the oath of 1 witness, before 1 justice, 5*l.*; or on non-payment, be committed to the house of correction for not more than 12 nor less than 6 months.—(17 *Geo. 3. c.* 29. *s.* 1.)

Any person having in possession any quantity exceeding 6 pounds of sloe, ash, or elder leaves, or the leaves of any other trees, plant, or shrub, green or manufactured, and shall not prove to the satisfaction of the justice hearing the matter that the same were gathered with the consent of the owner of the trees, &c., and that they were gathered for some other purpose than that of being fabricated in imitation of tea, shall forfeit 5*l.* for every pound in his possession, or, on non-payment, be committed to prison.—Sect. 2.

If an officer of excise, or other person, make oath that he suspects herbs dyed, or otherwise prepared in imitation of tea, are hid or lodged in any place, a justice may issue a warrant for seizing the same by day or night, (in the night in presence of a constable,) together with all wagons, tubs, and packages in which they may be contained; the herbs may be directed to be burnt, and the wagons, &c. sold, and after deducting expenses, the proceeds to be shared, ½ to informer, and ½ to poor of the parish. Obstructing such seizure subjects the offender to a penalty of 50*l.*, or not less than 6 nor more than 12 months imprisonment.—Sect. 3.

Herbs not to be burnt, if owner can prove, within 24 hours, that they were gathered with consent of proprietor of trees, plants, or shrubs, and that they were not intended to be fabricated in imitation of tea.—Sect. 4.

Occupier of premises where herbs are found, liable to the penalties, unless he can prove they were lodged without his consent.—Sect. 5.

Consumption of Tea on the Continent and in the U. States.—Of the Continental states, Russia and Holland are the only ones in which the consumption of tea is considerable. In 1848, the imports of tea into Russia amounted to 253,429 poods, or 9,123,444 lbs., in chests, and 116,249 poods in bricks. The former consists almost entirely of the finest varieties of black tea. The consumption of tea in Holland amounts to about 3,000,000 lbs. a year; the duty on which varies from 1⅛*d.* to 4½*d.* per lb. The consumption of France does not exceed 350,000 lbs. The importations into Hamburg vary between 1,500,000 and 2,000,000 lbs., the greater part of which is forwarded to the interior of Germany.

The consumption of the U. States amounts to from 30,000,000 to 32,000,000 lbs. a year. Duties on tea used to form one of the largest items of American revenue, having in some years produced 650,000*l.* Their magnitude, however, was justly complained of; and it is probably owing to this circumstance that, while the consumption of tea was for several years pretty stationary in the U. States, that of coffee increased with even greater rapidity than in England. The secretary of the treasury of the U. States, in his Report for 1827, observed,—"The use of tea has become so general throughout the U. States, as to rank almost as a necessary of life. When to this we add that there is no rival production at home to be fostered by lessening the amount of its importation, the duty upon it may safely be regarded as too high. Upon some of the varieties of the article it considerably exceeds 100 per cent., and is believed to be generally above the level which a true policy points out. A moderate reduction of the duty will lead to an increased consumption of the article, to an extent that, in all probability, would, in the end, rather benefit than injure the revenue. Its tendency would be to enlarge our trade and exports to China; a trade of progressive value, as our cottons and other articles of home production (aside from specie) are more and more entering into it. It would cause more of the trade in teas to centre in our ports; the present rate of duty driving our tea ships, not unfrequently, to seek their markets in Europe, not in the form of re-exportation, but in the direct voyage from China. It would also serve to diminish the risk of the U. States losing any portion of a trade so valuable, through the policy and regulations of other nations." These judicious suggestions could not fail to command attention; and the flourishing state of the revenue in subsequent years having admitted of a very great reduction of duties, those on tea were wholly repealed. As was to be expected, the consumption has since rapidly increased.

TEAK WOOD, OR INDIAN OAK, the produce of the *Tectona grandis*, a large forest tree, that grows in dry and elevated districts in the south of India, the Burman empire, Pegu, Ava, Siam, Java, &c.

Teak timber is by far the best in the East; it works easily, and, though porous, is strong and durable; it is easily seasoned, and shrinks very little; it is of an oily nature, and, therefore, does not injure iron. Mr. Crawfurd says, that in comparing teak and oak together, the useful qualities of the former will be found to preponderate. "It is equally strong, and somewhat more buoyant. Its durability is more uniform and decided; and to insure that durability it demands less care and preparation; for it may be put in use almost green from the forest, without danger of dry or wet rot. It is fit to endure all climates and alternations of climate."—(See *Tredgold's Principles of Carpentry*, p. 206.; *Crawfurd's East. Archip.*, vol. i. p. 451.; *Rees's Cyclopædia, &c.*)

The teak of Malabar, produced on the high table land of the south of India, is deemed the best of any. It is the closest in its fibre, and contains the largest quantity of oil, being at once the heaviest and the most durable. This species of teak is used for the keel, timbers, and such parts of a ship as are under water: owing to its great weight, it is less suitable for the upper works, and is not at all fit for spars. The teak of Java ranks next to that of Malabar, and is especially suitable for planking. The Rangoon or Burman teak, and that of Siam, is not so close grained or durable as the others. It is, however, the most buoyant, and is, therefore, best fitted for masts and spars. Malabar teak is extensively used in the building-yards of Bombay. Ships built wholly of it are almost indestructible by ordinary wear and tear; and instances are not rare of their having lasted from 80 to 100 years; they are said to sail indifferently; but this is probably owing as much to some defect in their construction, as to the weight of the timber. Calcutta ships are never wholly built of teak; the timbers and framework are always of native wood, and the planking and deck only of teak. The teak of Burma, being conveyed with comparatively little difficulty to the ports of Rangoon and Maulmain, is the cheapest and most abundant of any, and it is mainly owing to the facility with which supplies of it are obtained that ship-building is now carried on so very extensively at Maulmain. It is largely exported to Calcutta and Madras.—(See RANGOON.)—(*Private information.*)

A species of timber called African teak is pretty largely imported into England, from the west coast of Africa. But, in point of fact, it is not teak, and it is destitute of several of its most valuable properties. It is, however, for some purposes, a useful species of timber.

TEASEL, OR FULLERS' THISTLE (Ger. *Weberdistel, Kratzdistel*; Fr. *Chardon à carder*; It. *Cardo da cardare*; Sp. *Cardeucha, Cardo peinador*).

This plant, which is cultivated in the north and west of England, is an article of considerable importance to clothiers, who employ the crooked awns of the heads for raising the nap on woollen cloths; for this purpose they are fixed round the periphery of a large broad wheel, against which the cloth is held while the machine is turned. In choosing teasles, the preference should be given to those with the largest bur, and most pointed, which are generally called *male teasels*. They are mostly used in preparing and dressing stockings and coverlets; the smaller kind, commonly called the fullers' or drapers', and sometimes the *female teasels*, are used in the preparation of the finer stuffs, as cloths, rateens, &c.

THREAD (Ger. *Zwirn*; Du. *Garen*; Fr. *Fil*; It. *Refe*; Sp. *Hilo, Torzal*; Rus. *Nitki*), a small line made up of a number of fibres of some vegetable or animal substance, such as flax, cotton, or silk; whence its names of linen, cotton, or silk thread.

TILES (Ger. *Dachziegel*; Fr. *Tuiles*; It. *Tegole, Embrici*; Sp. *Tejas*; Rus. *Tscherepiza*), a sort of thin bricks, dried in kilns, and used in covering and paving different kinds of buildings. The best brick earth only should be made into tiles.—(See BRICKS AND TILES.)

TIMBER (Ger. *Bauholz, Zimmer*; Du. *Timmerhout*; Fr. *Bois de charpente, Bois à bâtir*; It. *Legname da fabbricare*; Sp. *Madera de construccion*; Rus. *Ströewoi Gess*;

Pol. *Cembrowina*), the term used to express every large tree squared, or capable of being squared, and fit for being employed in house or ship building. In the language of the customs, when a tree is sawn into thin pieces, not above 7 inches broad, it is called batten; when above that breadth, such thin pieces are called deal. Wood is the general term, comprehending under it timber, dye woods, fire wood, &c.

Timber is generally sold by the load.

The following are the contents of the loads of different species of timber, hewn and unhewn:—

A load of timber unhewn	-	40 cubic feet.	
squared timber	-	50	—
1 inch plank	-	600	square feet.
1½ inch plank	-	400	—
2 inch plank	-	300	—
A load of 2½ inch plank	-	240	square feet.
3 inch plank	-	200	—
3½ inch plank	-	170	—
4 inch plank	-	150	—

36⅔	Russian stand. deals	12	feet long,	1½	inch thick,	11	inch broad,	make 1 load timber.
58⅔	Christiana ditto	11	—	1½	—	9	—	1 —
53⅓	Bram ditto	10	—	1½	—	9	—	1 —
3	Riga logs	-	-	-	-	-	-	1

The price of timber has, owing to the reduction of freight and duties, and the greater facility of importation, fallen very materially since the peace of 1815. We subjoin an account of the wholesale prices of the principal species of timber in Liverpool on the 1st of February, 1859: the duties are given in the Tariff.

TIMBER TRADE. Having, in separate articles, described those species of timber most in demand in this country, we mean to confine ourselves in this article to a few remarks on the policy of the regulations under which the trade in timber is conducted.

1. *Importance of a cheap Supply of Timber.* — It is surely unnecessary to enter into any lengthened statements on this head. If there be one article more than another with which it is of primary importance that a great commercial and manufacturing nation like England should be abundantly supplied on the lowest terms, that article is timber. Owing to the deficiency of our home supplies, most part of the timber, with the exception of oak, required for building ships and houses; and most part, also, of that employed in the construction of machinery; is imported from abroad. Any individual acquainted with the purposes to which timber is applied, but ignorant of our peculiar policy with respect to it, would never, certainly, imagine that such an article could have been made the subject of oppressive duties, and of still more oppressive preferences. Timber is not to be looked at in the same light as most other commodities. It is against all principle to impose heavy duties on materials intended to be subsequently manufactured; but timber is the raw material of the most important of all manufactures — that of the instruments of production. Suppose it were proposed to lay a heavy duty on ships, waggons, looms, or workshops when completed; would not such a proposal be universally scouted? And yet this is what was really done. The finished articles were not, indeed, directly taxed; but the principal material of which they were made, and without which they could not be constructed, was burdened with an exorbitant duty! To dwell on the impolicy of such a tax would be worse than useless. Of all things essential to the prosperity of manufacturing industry, improved and cheap machinery is the most indispensable.

Most individuals amongst us are ready enough to ridicule the contradictory conduct of the French government, who, at the very moment that they are endeavouring to bolster up a manufacturing interest, lay enormous duties on foreign iron, and thus double or treble the price of some of the most important manufacturing implements. Timber is, however, of quite as much importance in this respect as iron; and our conduct in having burdened it with exorbitant duties partook as largely of the *felo-de-se* character as that of our neighbours! Indeed, as will be immediately seen, it was perhaps less defensible. Some plausible, and probably conclusive, reasonings may be urged in defence of moderate duties on iron and timber, when they are imposed for the sake of revenue: but this apology for financial rapacity cannot be set up in defence of the iron duties of France or the late timber duties of England. The former, however, were the least objectionable; they were imposed, and are still kept up, to encourage the production of iron in France: whereas the duties on timber in England were imposed for the sake, principally, of promoting the lumber trade of Canada, and of forcing the employment of a few thousand additional tons of shipping! We did not sacrifice the goose for the sake of the golden eggs, but for the sake of the offal she had picked up.

2. *Origin and Operation of the discriminating Duty in favour of American Timber.* — The practice of encouraging the importation of the timber of Canada and our other possessions in North America in preference to that of foreign countries, is but of recent growth. It took its rise during the administration of Mr. Vansittart, and bears in every part the impress of his favourite policy. The events that took place in 1808 having seriously affected our previous relations with the Baltic powers, a deficiency in the accustomed supply of timber began to be apprehended; and the ship owners and Canada merchants naturally enough availed themselves of this circumstance, to excite the fears of the ministry, and to induce them to change the fair and liberal system on which the trade in timber had been conducted down to that time, by granting extraordinary encouragement to its importation from Canada. Even as a temporary expedient, applicable to a peculiar emergency, the policy of giving any such encouragement is extremely doubtful. Supposing timber not to have been any longer obtainable from the north of Europe, its price would have risen, and it would, of course, have been imported from Canada, the U. States, or wherever it could be had, without any interference on the part of government. But, in 1809, a large addition was made to the duties previously charged on timber from the north of Europe, at the same time that those previously charged on timber from Canada and our other possessions in America were almost entirely repealed; and in the very next year (1810), the duties thus imposed on Baltic timber were *doubled!* Nor did the increase of duties on such timber stop even here. In 1813, after Napoleon's disastrous campaign in Russia, and when the free navigation of the Baltic had been restored, 25 per cent. was added to the duties on European timber! The expediency of increasing the revenue was, no doubt, pleaded in justification of this measure; but we believe it was really intended to augment the preference in favour of Canada timber; for how could it be supposed that an increase of the duties on an article imported from a particular quarter of the world, that was already taxed up to the very highest point, could add any thing considerable to the revenue, when a convertible article might be imported from another quarter duty free? The various duties laid on European timber amounted, when consolidated by the act 59 Geo. 3. c. 52., to 3*l.* 5*s.* per load.

Admitting, for the moment, that the peculiar and unprecedented aspect of things in 1808 and 1809 warranted the giving of some preference to the importation of timber from Canada, such preference should plainly have ceased in 1813. So long as the communication with the bridge is interrupted, we may be forced to use a boat to cross the river; but when the communication is again opened, and when there is not the remotest chance of its future interruption, it would be a singular absurdity to refuse to resume the use of the bridge, and to continue the costly and inconvenient practice of being ferried over! This, however, is exactly what we did in the case of the Canada trade. Because a fortuitous combination of circumstances obliged us, upon one occasion, to import inferior timber at a comparatively high price, we resolved to continue the practice! The history of commerce affords few such displays of gratuitous folly.

The absurdity of this conduct will appear still more striking, if we reflect for a moment on the peculiar situation of the countries in the north of Europe. The nations round the Baltic have made little progress in manufacturing industry. They abound in valuable raw products; but they are wholly destitute of the finer species of manufactured commodities, and of colonies. Nor have they any real inducement to attempt supplying themselves directly with the former, or to establish the latter. Their iron and copper mines, their vast forests, and their immense tracts of fertile and hitherto unoccupied land, afford far more ready and advantageous investments for their deficient capital, than could be found in manufactures or foreign trade. Russia and Prussia were,

indeed, tempted, by our corn and timber laws, to exclude some species of manufactured goods; but it is not possible that they should succeed in materially limiting our exports to them, provided we do not second their efforts by refusing to admit their products.

Of all the countries in the world, there is obviously none which has so many facilities for carrying on an advantageous trade with the North as Great Britain. We have a surplus of all those products of which Russia, Prussia, Sweden, Denmark, and Norway stand most in need; and, on the other hand, they have a surplus of many of those of which we are comparatively destitute. The immense traffic we carry on with the Baltic does not, therefore, depend, in any considerable degree, on artificial or accidental circumstances. It does not rest on the wretched foundation of Custom-house regulations or discriminating duties, but on the gratification of mutual wants and desires. It has been justly remarked by the Marquis Garnier, the excellent translator of the "Wealth of Nations," that no inconsiderable portion of the increased power and wealth of England may be traced to the growing opulence of Russia. But the Russian empire is yet only in the infancy of civilisation; she must continue for a very long period to advance in the career of improvement; and it will be our own fault if we do not reap still greater advantages from her progress.

Such is the nature of that commerce against which the discriminating duties on timber from the north of Europe aimed a severe blow! In 1809, when this system began, 428,000 tons of British shipping entered inwards from the Baltic. In 1814, the year after the 25 per cent. of additional duty had been imposed on Baltic timber, and when all the ports of that sea were open to our ships, only 242,000 tons of British shipping entered inwards, being little more than the half of what it amounted to when the system began. And notwithstanding the vast increase, in the interval, of population and wealth in the countries round the Baltic, our trade with the different ports on that sea had not recovered, in 1843, from the blows inflicted on it in 1809 and 1813! It is seen, from the statements previously laid before the reader (see art. Elsineur), that in 1842 only 295,435 tons of British shipping left the Baltic for the U. Kingdom.

The following extract from the evidence of Mr. Edward Patzcker, a merchant of Memel, given before the committee of the House of Commons on the foreign trade of the country, in 1821, shows the effect that the increased duties on timber had on the commerce with Prussia:—

"Has there been a great alteration in the timber trade between Memel and this country of late years?"—"Since the war, a great alteration; before the war we used to have 950 to 1,000 English ships in a year, and since the war we have had from 200 to 300 only."

"When you talk of 900 ships, do you mean 900 ships trading between Great Britain and Memel?"—"Yes."

"Do you mean that number of cargoes were loaded in the year for England?"—"Yes."

"How many cargoes were loaded for Great Britain during the last year (1820)?"—"About 270 or 280 cargoes; there have not been more."

"To what cause do you attribute that diminution in the trade?"—"*To the high duties in England*; for formerly the duties were only 16*s.* and some pence; now they are 3*l.* 5*s.* in a British, and 3*l.* 8*s.* in a foreign ship."

"Has that diminished trade in timber produced a great alteration in the circumstances of the people of Prussia?"—"Yes: for it is the only trade which we can carry on; wheat and all the rest of our articles cannot be brought here; *timber* is the only one that can be brought, and the trade from Poland has very much ceased in consequence of the diminished demand for it; the people cannot sell their goods, and we cannot take such quantities of timber as we used to do; and, therefore, they cannot take English goods from us."

"If such an alteration was to take place in the duties on timber in this country, as to give the Prussians a larger share of the trade than they at present enjoy, do you think that would produce increased friendly feelings on the part of the people of your country to the people of this country?"—"It would. *They would certainly take far more goods from hence*, as they could get better rid of them. The Poles, also, would take more of them.—(*Report*, 9th of March, 1821, p. 107.)

The effect that the increased duties had on the trade with Norway and Sweden, aggravated as they in some degree were by the method of charging the duty on deals, was still more striking and extraordinary. These countries had few products, except timber and iron, to exchange for our commodities; and as neither of these could be advantageously imported into England under the new system, the trade with them almost entirely ceased; and they were reluctantly compelled to resort to the markets of France and Holland for the articles they had formerly imported from us. In proof of this, we may mention, that the exports to Sweden, which amounted in 1814 to 511,818*l.*, declined in 1819 to 46,656*l.*, and even in 1842 were only 199,313*l.*; while the exports to Norway, which had, in 1815, amounted to 199,902*l.*, fell in 1819 to 64,741*l.*, and in 1842 had only increased to 134,704*l.*

This extraordinary falling off in so very important a branch of our commerce having been established beyond all question by evidence taken before the committees of Lords and Commons on the foreign trade of the country in 1820, an approach to a better system was made in 1821, when the duty on timber from the north of Europe was reduced from 3*l.* 5*s.* to 2*l.* 15*s.* per load, at the same time that a duty of 10*s.* per load was laid on timber from British America. This, however, was a comparatively inefficient measure. It was stated, to be sure, at the time, that the

2*l.* 5*s.* per load of excess of duty that was thus continued on Baltic timber over that laid on timber imported from Canada, was not more than enough to balance the higher prime cost, the greater freight, and other charges consequent upon the importation of the latter; and that it would, therefore, be in future indifferent to a merchant whether he imported timber from Memel or Miramichi! In point of fact, however, the discriminating duty continued in favour of Canada timber was far too high to allow of this equalisation being effected. So much so was this the case, that there were instances of ships loading with timber in the north of Europe, carrying that timber to Canada, and then bringing it to England as Canada timber; the difference of duty having been about sufficient to indemnify the enormous expense of this round-about voyage! We do not mean to say that this was a common practice; but what are we to think of a commercial regulation that admitted of such an adventure being undertaken with any prospect of success? Admitting, however, that the duty had been adjusted so as to have had the anticipated effect, could any thing be more preposterous and absurd than to impose it on such a principle? There are mines of coal in New Holland; but what should we think, were an attempt made to impose such duties on coals from Newcastle as should render it indifferent to a London dealer whether he imported a cargo of coal from the Tyne or Botany Bay? Now, the case of the timber duties was, in point of principle, precisely the same. We may obtain timber from countries so near at hand that our ships may make 3, 4, 5, and even 6 voyages a year to them*; and we refused to admit it unless loaded with a duty that raised its price to a level with what was brought from the other side of the Atlantic — a voyage which our ships cannot, at most, perform above twice a year!

3. *Comparative Quality of Baltic and Canada Timber.* — Had the timber of Canada been decidedly superior to that of the north of Europe, something might have been found to say in favour of the discriminating duty; for it might have been contended, with some show of reason, that it was of the utmost consequence, considering the application of timber to ship and house building, and other important purposes, to prevent the importation of an inferior species, even though it might be cheaper. But the system we adopted was of a totally different character. We did not attempt to shut out an article which, though cheap, was inferior; but committed the twofold absurdity of shutting out one that was at once *cheap and superior!*

The committee of the House of Lords observe, in their *First Report on the Foreign Trade of the Country*, that "the North American timber is more soft, less durable, and every description of it more liable, though in different degrees, to the dry rot, than timber of the north of Europe. The red pine, however, which bears a small proportion to the other descriptions of timber, and the greater part of which, though imported from Canada, *is the produce of the U. States*, is distinguished from the white pine by its greater durability. On the whole, it is stated by one of the commissioners of his Majesty's navy, most distinguished for practical knowledge, experience, and skill, that the timber of Canada, both oak and fir, *does not possess, for the purpose of ship building, more than half the durability of wood of the same description, the produce of the north of Europe.* The result of its application to other purposes of building is described by timber merchants and carpenters to be nearly similar."—(p. 4.)

We subjoin the following extracts from the evidence of Sir Robert Seppings, the commissioner alluded to by the committee, whose great intelligence and experience render his opinion of the highest authority: —

"Can you state to the committee the result of any observations that you or others in his Majesty's service have made, on the durability of timber, the produce of the North American colonies, or timber imported from the north of Europe, applied to the same purposes?"—"About the year 1796, there were a certain number of frigates built of the fir of the Baltic, and *their average durability was about* EIGHT *years*. About the year 1812, there were a considerable number of frigates built, also of fir of the growth of North America, and their *average durability was not* HALF *that time.*"

"You have stated that Canada timber is peculiarly subject to the dry rot, and the dry rot is known to have prevailed lately to a great degree in the navy; has that prevailed principally since the application of Canada timber to the uses of the navy?"—"I believe *the navy has suffered very considerably from the introduction of Canada timber*, or timber of the growth of North America; and in consequence, from experience, we have *entirely discontinued the use of it*, except for deals and masts." — (p. 56.)

Mr. Copland, an extensive builder and timber merchant, being asked by the committee what was his opinion with respect to the comparative qualities of American and Baltic timber, answered, —"The timber of the Baltic in general, speaking of Norway, Russian, Prussian, and Swedish timber, is of a very superior quality to that imported from America; the bulk of the latter *is very inferior in quality, much softer in its nature, not so durable, and very liable to dry rot*; indeed, it is not allowed by any professional man under government to be used, nor is it ever used in the best buildings in London; it is only speculators that are induced to use it, from the price of it being much lower (in

* According to the evidence of Mr. J. D. Powles, secretary to the London Dock Company, ships can make *six* voyages from Norway, 3 or 4 from Prussia, and 2 from Russia, in a season. —(*Commons' Report*, p. 89.)

consequence of its exemption from duty) than the Baltic timber; if you were to lay two planks of American timber upon each other, in the course of a twelvemonth they would have the dry rot, almost invariably, to a certain extent." — (p. 56.) And many passages to the same effect might be produced, from the evidence of persons of great experience in building.

But though such was the opinion of the best informed parties at the time, and though its correctness is in some respects not to be doubted, still there can be no question that the inferiority of British N. American timber was set in too strong a light in the evidence referred to, and that it is, in fact, better fitted for several important purposes than Baltic timber. Not only is the red American pine of a very superior quality; but the pine and spruce planks of N. Brunswick and Nova Scotia, especially the latter, are universally preferred for the purposes to which they are applied to all other varieties of timber; and their importation, as is seen from the previous statements (p. 1305), has increased, notwithstanding the reduction of the discriminating duty, beyond all precedent. These circumstances were not, however, known to the parties who introduced the discriminating system, which was at the time, and for long after, most injurious to the best interests of the U. Kingdom.

4. *Apologies for the discriminating Duty.* — If any thing ought, more than another, to make legislators pause before enacting a restrictive regulation, it is the difficulty of receding from it. After it has been enforced for a while, a variety of interests usually grow up under its protection, which may be materially injured by its repeal. All, however, that the persons so interested can justly claim, is, that sufficient time, and every possible facility, should be afforded them to prepare for a change of system. Because the interests of a comparatively small portion of the community may be injuriously affected by the abolition of a regulation ascertained to be inimical to the public, is it, therefore, to be contended that we should, at all hazards, continue to enforce the regulation we have so unwisely enacted? To maintain the affirmative, would be to give perpetuity to the worst errors and absurdities; and would be an effectual bar to every sort of improvement. No change, even from a bad to a good system, should be rashly set about: but when once the expediency of an alteration has been clearly established, it ought to be resolutely carried into effect.

It has been objected to the abolition of the discriminating duties on timber, that it would be injurious to Canada and the shipping interest. We believe, however, that the injury would not be nearly so great as has been represented; that it would, in fact, be quite inconsiderable. So far from the *lumber trade* — or the trade of felling wood, squaring it, and floating it down the rivers to the shipping ports — being advantageous to a colony, it is distinctly and completely the reverse. The habits which it generates are quite subversive of that sober, steady spirit of industry, so essential to a settler in a rude country: to such a degree, indeed, is this the case, that lumberers have been described as the pests of a colony, "made and kept vicious by the very trade by which they live." — But, abstracting altogether from the circumstances now alluded to, it has been shown, over and over again, that the abolition of the lumber trade would materially benefit the real interests of the colonies. It is ludicrous, indeed, seeing that not one tree in a hundred is fit for the purposes of being squared for timber, to suppose that the discontinuance of the trade could be any serious loss. But the fact is, that when trees are cut down by lumberers, for export as timber, instead of being burnt down, so great a growth of brushwood takes place, that it actually costs more to clear the ground where the lumberers have been, than where they have not been. Mr. Richards, who was sent out by government to report on the influence of the lumber trade, represented it as most unfavourable; and observed that, "when time or chance shall induce or compel the inhabitants to desist from this employment, agriculture will begin to raise its head." The statements of Captain Moorsom, in his *Letters from Nova Scotia*, are exactly similar. He considers the depression of the timber market, although a severe loss to many individuals, a "decided gain to the colony," from the check it has given to the "lumbering mania." — (p. 53.)

The statements that have been made as to the amount of capital expended on saw mills, and other fixed works for carrying on the lumber trade, have been singularly exaggerated. Mr. P. Thomson (afterwards Lord Sydenham), who had the best means of acquiring accurate information on this point, made the following statement with respect to it in his speech on the 18th of March, 1831: — "From the means I have had of calculating the amount of capital embarked in these saw mills, I believe it is about 300,000*l.*: I am sure I may say that if 500,000*l.* were taken as the amount, it would be a great deal above rather than under the real value; but after all, this description of property is not to be sacrificed by the arrangements proposed, even if they were carried to the fullest extent. I am ready at once to admit that the consequence of the proposed alteration may be, that it will diminish the exports of timber from Canada to England, and affect the productiveness of the capital vested in the mills to which I

have referred; but the committee ought not to lose sight of the fact, that though in this one branch of industry there will be a great falling off, yet the same amount of labour might be applied to much greater advantage on land in the colonies; and the mills, which will be rendered useless for their original purposes, may be converted into useful auxiliaries to the agricultural and other pursuits of the colonists; so that the enormous losses that have been placed in so frightful a point of view, will, as I have shown, be absolutely next to nothing."

The fact is, that in so far as the interests of the colonies are concerned, it is plain they will not really lose by the repeal of the differential duties on foreign timber. For the quality of their timber being now well ascertained, and the prejudice with which it had formerly to contend having subsided, it is found that it is in great part quite able successfully to maintain its ground, under a free system, with the timber of the Baltic or of anywhere else.

Had the imports of timber from British N. America fallen off to the extent that was once anticipated from the reduction or repeal of the discriminating duty, it would, no doubt, have affected the shipping interest. But it could not, under any circumstances, have done this to any very great extent. And it is material, too, to observe, that whatever temporary inconvenience the shipping interest might sustain from the change, its future consequences would be singularly advantageous to it. The high price of timber employed in the building of ships was then, as it still continues to be, though in a much less degree, the heaviest drawback on the British ship-owners; but an equalisation of the duties would reduce this price; and would, consequently, be in so far advantageous to our ship-owners.

Changes proposed in the Timber Duties in 1831, 1835, 1842, *&c.* — Considering the vicious principle on which the duties on timber have been imposed, and their pernicious influence, the tenacity with which they were long supported, and the little opposition made to them, may well excite surprise. In 1831, Lord Althorp moved that the duties on foreign timber should be reduced 6*s.* a load on the 1st of January, 1832; 6*s.* more on the 1st of January, 1833; and 3*s.* on the 1st of January, 1834; making the whole reduction 15*s.* a load, and leaving a protection in favour of Canada timber of 30*s.* a load. The only real objection to this proposal is, that it did not go far enough, that it "scotched the snake without killing it." But, moderate as it was, it was rejected by a large majority, and the project fell to the ground.

In 1835 a committee of the House of Commons, appointed to inquire into the operation of the duties on timber, agreed to the following resolutions: —

1. That it is the opinion of this committee, that the present mode of taking the duties on deals is susceptible of improvement, and that this committee would recommend that a mode be adopted which shall approach more nearly to a payment according to the contents of the deals.
2. That it is the opinion of this committee, that the difference of duty of 45*s.*, now imposed by law upon timber the produce of Europe, as compared with timber the produce of our North American colonies, is too great, and may be reduced.
3. That it is the opinion of this committee, that, having a due regard to the interests which have been created in the British North American colonies by the system hitherto pursued, and to the representations of the shipping interest, a reduction of the protective duty, not exceeding 15*s.* per load, appears to them to be a fair arrangement.
4. That it is the opinion of this committee, that such reduction be made, so far as may be consistent with the interest of the revenue, without any augmentation on the duty on colonial timber.
5. That it is the opinion of this committee, that, in any alteration made, such alteration should not affect the shipments made in the year 1836.
6. That it is the opinion of this committee, that there should be a uniform mode of taking the duty on deals throughout the U. Kingdom.

But no step was taken to give effect to these resolutions. No private member, unless supported by government, could have expected to succeed in an attempt to accomplish any material modification of the timber duties; and government, influenced, perhaps, by a dread of the difficulties in the way of such an attempt, and not, perhaps, having any strong feeling on the subject, did nothing; so that the trade continued on its old footing down to 1842!

The differential duty of 45*s.* a load in favour of Canada timber was, however, reduced, by the Tariff Act of the above year, from the 10th of October, 1843, to 24*s.* a load on timber properly so called, and to 30*s.* on deals. But, though this was a signal improvement on the previous system, it left much to be desired. It was brought about by reducing the previous duties on foreign timber from 55*s.* to 25*s.* and 32*s.* the load, and the previous duty on British colonial timber from 10*s.* to 1*s.* and 2*s.* per load. While, however, every one must admit that the reduction of the duty on foreign timber was most proper, it is not easy to see why any reduction should have been made in the duty on Canadian timber. Had it been allowed to remain as it was, or at 10*s.* a load, the discriminating duty in favour of colonial timber would have amounted to 15*s.* and 22*s.* a load, which certainly was a great deal too much, at the same time that there would have been comparatively little loss of revenue. The precedent thus set was, however, farther followed up, in 1847, when the discriminating duty was reduced to 14*s.*

And it has since been farther followed up by the act of 1851, the 14 & 15 Vict. c. 62., which imposes a duty of 7*s.* 6*d.* per load on squared timber, and of 10*s.* per do. on deals and battens, brought from foreign countries. If the duty is to be maintained, this is as low as it should be, or, perhaps, lower. But there can be no reason why it should not, and there are many why it should be extended to colonial timber. Probably, indeed, it may be supposed that it had better be repealed. But we beg to dissent from this opinion; though it might be as well, perhaps, to allow ships to be built in bond. But except on them the duty, supposing it were extended to colonial timber, is too limited to have any sensible, or, at all events, any prejudicial effect.

TIN (Ger. *Blech, Weissblech*; Fr. *Fer blanc*; It. *Latta, Banda stagnata*; Sp. *Hoja de lata*; Rus. *Blächa, Shest*; Arab. *Resas*; Sans. *Trapu* and *Ranga*), a metal which has a fine white colour like silver; and when fresh, its brilliancy is very great. It has a slightly disagreeable taste, and emits a peculiar smell when rubbed. Its hardness is between that of gold and lead. Its specific gravity is 7·29. It is very malleable; *tin-foil*, or tin leaf, is about $\frac{1}{1000}$th part of an inch thick; and it might be beat out into leaves as thin again, if such were required for the purposes of art. In ductility and tenacity it is very inferior. A tin wire 0·078 inch in diameter is capable of supporting a weight of 34·7 pounds only without breaking. Tin is very flexible, and produces a crackling noise when bent. It may be readily alloyed with copper, zinc, &c., forming very valuable compounds. — (*Thomson's Chemistry.*)

The ores of this metal are found in comparatively few places; the principal, and perhaps the only, ones are Cornwall, Galicia, Erzgebirge in Saxony, Bohemia, the Malay countries, China, and Banca in Asia. They are peculiar to primitive rocks, generally in granite, either in veins or beds, and are often associated with copper and iron pyrites.

Tin is much used as a covering to several other metals: iron is tinned, to prevent its rapid oxidation when exposed to air and moisture; and the same process is applied to copper, to avoid the injurious effects to which those who are in the habit of employing cooking utensils made of this metal are always liable. The solutions of tin in the nitric, muriatic, nitro-sulphuric, and tartaric acids, are much used in dyeing, as giving a degree of permanency and brilliance to several colours, to be obtained by the use of no other mordants with which we are at present acquainted: tin forms the basis of pewter, in the composition of which it is alloyed with lead; when rolled into thin sheets, it is called tin-foil, and is applied, with the addition of mercury, to cover the surface of glass, thus forming looking-glasses, mirrors, &c.; and in combination with sulphur, it constitutes what is called mosaic gold. — (*Joyce's Chem. Min.*)

Tin Plates, known in Scotland by the name of *white iron*, are applicable to a great variety of purposes. They are formed of thin plates of iron dipped into molten tin. The tin not only covers the surface of the iron, but penetrates it completely, and gives the whole a white colour. It is usual to add about 1-10th of copper to the tin, to prevent it from forming too thick a coat upon the iron. — (*Thomson's Chemistry.*)

The demand for tin plates, which has always been considerable, has latterly increased with extraordinary rapidity. The declared value of the exports, in 1857, amounted to 1,500,116*l.*, of which no less than 951,080*l.* went to the U. States. In 1858 the value of the exports amounted to 1,389,858*l.* During 1857, 10,848 tons tin were used in the U. K. in the manufacture of tin plates and otherwise.

Historical Notices of the British Tin Trade. — The tin mines of Cornwall have been worked from a very remote æra. The voyages of the Phœnicians to the Cassiterides, or tin islands, are mentioned by Herodotus (lib. iii. c. 115.), Diodorus Siculus (lib. iv. p. 301. ed. 1604), and Strabo (*Geog.* lib. iii.). Some difference of opinion has, indeed, been entertained as to the particular islands to which the Phœnicians applied the term Cassiterides; but Borlase (*Account of the Scilly Islands*, p. 72.), Larcher (*Herodote*, tome iii. p. 384, ed. 1802), and the ablest critics, agree that they are the Scilly Islands, and the western extremity of Cornwall. After the destruction of Carthage, the British tin trade, which was always reckoned of peculiar importance, was carried on by the merchants of Marseilles, and subsequently by the Romans. Besides Britain, Spain furnished the ancients with considerable quantities of tin. We have no very precise information as to the purposes to which they applied this metal. It has been supposed that the Phœnicians, so famous for their purple dyes, were acquainted with the use of the solution of tin in nitro-muriatic acid in fixing that colour. The best of the ancient mirrors, or *specula*, were also made of a mixture of copper and tin; and tin was used in the coating of copper vessels. — (*Watson's Chemical Essays*, vol. iv.)

In modern times, the tin mines of Cornwall and Devon have been wrought with various degrees of energy and success. Queen Elizabeth brought over some German miners, by whom some of the processes were improved. During the civil wars, the mines were much neglected. At the commencement of last century, however, the business of mining was carried on with renewed vigour; and from 1720 to 1740 the annual produce was about 2,100 tons. The produce went on gradually increasing, till it amounted, in the 10 years from 1790 to 1800, to 3,254 tons a year. During the next 15 years the produce fell off; and for the 5 years ending with 1815 it was always considerably under 3,000 tons a year. But in the last-mentioned year, a considerable increase took place; and since 1816, the produce has been, with the exception of 1820, always above 3,000

tons a year. And latterly it has so increased, that the present (1859) produce of the mines may be taken at about 9,700 tons a year.

The price of British tin, at an average, from 1811 to 1815, inclusive, was about 7*l.* a cwt. Its fall from 1815 to 1820, and its comparative low price thereafter, were owing to a variety of causes: partly to improvements in the art of working the mines, partly to the increased supply of metal obtained from them, and partly and principally to the competition of the tin of Banca and of the Malay countries. Previously to 1814, we had in some measure a monopoly of the market of the world. But since then the Banca mines have been wrought with unusual spirit; and their produce has been so much increased, as not only fully to supply the market of China, to which we formerly exported from 600 to 1,000 tons, but to meet us in every European market. Malay tin is now very extensively imported, for warehousing, into England, at the same time that large quantities are carried direct to Holland, where there are refining houses. But, notwithstanding these circumstances, both our exports of tin and its price have increased considerably of late years.

Duty on British Tin. — All tin produced in Cornwall was subject, from a very remote period down to 1837, to a coinage duty of 4*l.* a ton, payable to the Duke of Cornwall: the tin raised in Devonshire was subject to a similar duty of 1*l.* 13*s.* 4*d.* a ton. This duty produced from 16,000*l.* to 20,000*l.* a year; and was felt to be a serious grievance, not only from its amount, but from the vexatious regulations under which it was collected. Luckily, however, the duty on tin, and all regulations with respect to its coinage, were abolished by 1 & 2 Vict. c. 120. Compensation was made to the duchy of Cornwall for the loss arising from this abolition, by settling on its possessors a perpetual annuity equal to the nett average amount of the duties during the 10 years ending with 1837.

TIN, ORIENTAL (Malay, *Timá*; Hind. *Kalai*; Siamese, *Dibuk*; Burmese, *Kye-p'kyu*, white copper), in commercial language usually called Banca tin. It is found in several provinces of China; but the most extensive and, probably, richest tin district in the world, exists in the Malay countries. This comprehends the whole of the peninsula, from the extreme cape to the latitude of 14° on its western side, and to 11° on its eastern, and comprehends several of the small islands lying in the route between the peninsula and Java, as far as the latitude of 3° south; so that the whole of this tin district has an extreme length of near 1,200 miles. By far the greater number of the mines within these limits are as yet unwrought and unexplored. It was only in the beginning of last century that the mines of Banca, the most productive at present worked, were accidentally discovered. The whole tin of the Malay countries is the produce of alluvial ores, or what is called, in Cornwall, "Stream-work:" and from the abundance in which the mineral has been found by the mere washing of the soil, no attempt has hitherto been made at regular mining, or obtaining the ore from its rocky matrix. Malay tin, consequently, is grain tin, or tin in a very pure state; that being the species which alluvial ore uniformly produces. The mines, or rather excavations, are perpendicular pits of from 15 to 25 feet deep; and when the soil and a superstratum of common clay are removed, the bed containing the ore, consisting of quartz and granitic gravel, is reached. The sand and gravel are separated from the ore by passing a stream of water through the whole materials. The ore so obtained is preserved in heaps, and smelted periodically with charcoal in a blast furnace. The mine or pit is kept clear of water by the Chinese wheel. No cattle are used in any part of the process; human labour being had recourse to throughout the whole of its stages. The most imperfect part of the process is the smelting. The stream ores of Cornwall, which are generally poor, afford from 65 to 75 per cent. of grain tin; whereas, owing to the imperfection of the process, from those of Banca not more than 55 or 60 are usually obtained. The difference in the produce suggested, a few years ago, the practicability of sending the ore to England for the purpose of being smelted; and the experiment was tried; but our customs regulations not allowing the produce to be bonded and re-exported without duty, rendered the scheme abortive.

With very trifling exceptions, the whole tin of the Malay islands is mined and smelted by Chinese settlers; and before their skill and enterprise were applied to its production, the metal seems to have been obtained by the inhabitants of the countries which produced it, by processes hardly more skilful than those by which the precious metals were procured by the native inhabitants of America, prior to the introduction of European skill and machinery. The following estimate has been given of the annual produce of the principal states and places producing tin: —

East coast of the Malay peninsula —	*Piculs.*	West coast of the Malay peninsula and islands —	*Piculs.*
Junk Ceylon	5,000	Sungora and Patani	5,000
Queda	2,000	Tringanu	7,000
Pera	3,000	Pahang	3,000
Salangore	3,000	Singkep	5,000
Malacca	4,000	Banca	35,000
Total	Piculs 17,000	Total	Piculs 55,000

This can be considered only as a rough estimate; but we believe it is not far wide of the truth. The most considerable port of exportation is Batavia; from which there is sent annually, either directly or through orders from the Dutch government or the authorities at Banca, 2,000 tons. From Prince of Wales Island there is also a considerable quantity exported; and a smaller one direct to China in junks, from several of the native ports on the eastern shore of the Malay peninsula. The great marts for the consumption of tin are China, Hindostan, and the continent of Europe. The quality of the different descriptions of Malay tin, although there may be some inconsiderable difference in the quality of the original ores, seems to be derived chiefly from the greater or less skill with which the process of smelting is conducted; and this, again, necessarily depends upon the extent of capital and goodness of the machinery employed. The mining operations of Banca have long been conducted upon a larger scale, and with more skill, than in any other of the Malay countries; and, consequently, the metal produced in this island is superior by from 10 to 12 per cent.: in the market of Canton it is called "old tin," in contradistinction to "new tin," the produce of the other Malay countries. Next, in point of quality, to the produce of Banca, are those of Tringanu and Singkep, which are not more than 5 per cent. inferior to it. The tin of the state of Pera, a considerable part of which is produced by the natives themselves, without Chinese assistance, is the worst, and usually about 15 per cent. below that of Banca. The native tin of China is 10 per cent. inferior to that of Banca, and is probably block tin, like the greater part of that of Cornwall; and, like it, the produce of regular mining operations, and not alluvial. The produce of the Chinese mines is said of late years to have greatly decreased; probably owing to the great increase which has recently taken place in the produce of the Malay countries, and the cheapness and abundance with which it finds its way to China. It should be added, that of late years, and chiefly owing to the very low price and abundance of German spelter (zinc) in the Indian market, this commodity has occasionally been fraudulently mixed with tin. The Chinese brokers of Canton, however, are sufficiently expert to detect the adulteration; and it is believed that this discreditable practice has lately ceased.

The price of tin, taking the market of Singapore as the standard, has fluctuated of late years from 14 to 20 Spanish dollars per picul; equal, at the exchange of 4*s.* per dollar, to 47*s.* and 67*s.* per cwt. At an average of these prices, the annual value of the whole Malay tin will be about 240,000*l.* per annum. — (*Crawfurd's History of the Indian Archipelago; Dr. Horsfield's MS. Statistical View of the Island of Banca; Singapore Chronicle; Canton Register, &c.*)

TOBACCO (Da. *Tobak*; Du. *Tabak*; Fr. *Tabac*; Ger. *Taback*; It. *Tabacco*; Pol. *Tobaka*; Rus. *Tabak*; Sp. *Tabaco*; Arab. *Bujjerbhang*; Hind. *Tumbākū*; Malay,

Tambrăcoo), the dried leaves of the *Nicotiana Tabacum*, a plant indigenous to America, but which succeeds very well, and is extensively cultivated, in most parts of the Old World. The recent leaves possess very little odour or taste; but when dried, their odour is strong, narcotic, and somewhat fœtid; their taste bitter and extremely acrid. When well cured, they are of a yellowish green colour. When distilled, they yield an essential oil, on which their virtue depends, and which is said to be a virulent poison. The leaves are used in various ways; being chewed, smoked, and ground and manufactured into snuff. It is in the last mentioned form that tobacco is principally used in Great Britain; and, though the contrary has been often asserted, its use does not seem to be productive of any perceptible bad consequence.

1. *Historical Sketch of Tobacco.* — The taste for tobacco, though apparently administering only to a frivolous gratification, has given birth to a most extensive commerce, and been a powerful spur to industry. Being a native of the New World, its introduction into Europe dates only from the early part of the 16th century. Seeds of the plant were sent, in 1560, from Portugal, to Catherine de' Medici, by Jean Nicot, the French ambassador in that country, from whom it has received its botanical name. The notion, at one time so general, that the specific appellation tobacco was derived from its having been imported from Tobago, is now universally admitted to be without foundation. Humboldt has shown, that tobacco was the term used in the Haytian language to designate the pipe, or instrument made use of by the natives in smoking the herb; and the term, having been transferred by the Spaniards from the pipe to the herb itself, has been adopted by the other nations of the ancient world. — (*Essai Politique sur la Nouvelle Espagne*, vol. iii. p. 50. 2d. edit.) Tobacco is believed to have been first introduced into England by the settlers who returned, in 1586, from the colony which it had been attempted to found in Virginia, under the auspices of Sir Walter Raleigh, in the preceding year. Harriott, who accompanied this expedition, gives, in his description of Virginia, an account of the tobacco plant, and of the manner in which it was used by the natives; adding, that the English, during the time they were in Virginia, and since their return home, were accustomed to smoke it after the fashion of the Indians, "and found many rare and wonderful experiments of the virtue thereof." — (*Hakluyt*, vol. i. p. 75.)

Raleigh, and other young men of fashion, having adopted the practice of smoking, it spread amongst the English; as it had previously spread amongst the Spaniards, Portuguese, French, and other Continental nations. But it made its greatest progress in this country after the foundation of the colony at James Town in Virginia, in 1607. The soil of the colony being found particularly well fitted for the culture of tobacco, considerable quantities were raised and sent home; and the numerous individuals interested in the colony contributed to introduce that taste for it which was diffused amongst all classes with astonishing rapidity.

James I. attempted, by repeated proclamations and publications, some of them couched in very strong terms, to restrain the use of tobacco. But his efforts had very little effect; and the settlers in Virginia continued to experience a more rapidly increasing and better demand for tobacco than for any other product of the colony.

During the earlier part of the reign of Charles I., the trade in tobacco was monopolised by the Crown. This monopoly was not, however, of long continuance, and totally ceased at the breaking out of the civil war.

Tobacco plants had been early introduced into England, and were found to answer remarkably well. Their cultivation was, indeed, prohibited by James, and afterwards by Charles, but apparently without effect. At length, however, the growing consumption of tobacco having excited the attention of the government financiers, it was seen that, by imposing a duty on its importation, a considerable revenue might be raised; but that, were it allowed to be freely cultivated at home, it would be very difficult to collect a duty upon it. In 1643, the Lords and Commons imposed a moderate duty, for the sake of revenue, on plantation tobacco; but instead of directly prohibiting the use of native tobacco, they burdened it with such a duty as, it was supposed, would occasion its culture to be abandoned. The facility, however, with which the duty was evaded, soon satisfied the republican leaders that more vigorous measures were required to stop its cultivation, and consequently to render its importation a source of revenue. Hence, in 1652, an act was passed, prohibiting the growth of tobacco in England, and appointing commissioners to see its provisions carried into effect. This act was confirmed at the Restoration, by the act Charles 2. c. 34., which ordered that all tobacco plantations should be destroyed. These measures were believed, at the time, to have been principally brought about by the solicitations of the planters; but their real intention was not so much to conciliate or benefit the latter, as to facilitate the collection of a revenue from tobacco; and, considered in this point of view, their policy seems quite unexceptionable.

This act did not, however, extend to Ireland; and of late years, the cultivation of

tobacco made considerable progress in the country. Had this been allowed to continue, there can be no question that, in a few years, the revenue from tobacco, amounting to about 4,500,000*l.* a year, would have been most materially diminished; for it would be quite visionary to suppose that any plan could have been devised for collecting a duty even of 100 per cent. upon tobacco — (see *post*) — supposing it to have been generally cultivated in Ireland. No one, therefore, can question the wisdom of the act prohibiting its growth in that country, and the rigorous enforcement of its provisions. Any advantage Ireland might have gained by its cultivation, would have been but a poor compensation for the sacrifice of revenue it must have occasioned.

In some countries, as England, tobacco is principally, perhaps, used in the form of snuff; in others it is principally chewed; but, in one form or other, it is every where made use of. So early as 1624, Pope Urban VIII. issued a bull, excommunicating those who smoked in churches! The practice of smoking was at one time exceedingly prevalent in this country; but during the reign of George III. it was well nigh superseded, at least amongst the higher and middle classes, by the practice of snuff-taking. Latterly, however, smoking has been extensively revived, though it is yet far from being so generally practised as formerly.

We quote the following statement as to the universality of the use of tobacco from a learned paper on its "Introduction and Use," in the 22d volume (p. 142.) of the *Asiatic Journal*: — "In Spain, France, and Germany, in Holland, Sweden, Denmark, and Russia, the practice of smoking tobacco prevails amongst the rich and poor, the learned and the gay. In the United States of America, smoking is often carried to an excess. It is not uncommon for boys to have a pipe or cigar in the mouth during the greatest part of the day. The death of a child is not unfrequently recorded in American newspapers, with the following remark subjoined: — 'supposed to be occasioned by excessive smoking.' If we pass to the East we shall find the practice almost universal. In Turkey, the pipe is perpetually in the mouth; and the most solemn conferences are generally concluded with a friendly pipe, employed like the *calumet of peace* amongst the Indians. In the East Indies, not merely all classes, but both sexes, inhale the fragrant steam; the only distinction among them consisting in the shape of the instrument employed, and the species of the herb smoked. In China, the habit equally prevails; and a modern traveller in that country (Barrow) states, that every Chinese female, from the age of 8 or 9 years, wears, as an appendage to her dress, a small silken purse or pocket to hold tobacco, and a pipe, with the use of which many of them are not unacquainted at this tender age. This prevalence of the practice, at an early period, amongst the Chinese, is appealed to by M. Pallas as an evidence that 'in Asia, and especially in China, the use of tobacco for smoking is more ancient than the discovery of the New World.' He adds — 'Among the Chinese, and amongst the Mongol tribes who had the most intercourse with them, the custom of smoking is so general, so frequent, and has become so indispensable a luxury; the tobacco purse affixed to their belt so necessary an article of dress; the form of the pipes, from which the Dutch seem to have taken the model of theirs, so original; and, lastly, the preparation of the yellow leaves, which are merely rubbed to pieces and then put into the pipe, so peculiar; that they could not possibly derive all this from America by way of Europe; especially as India, where the practice of smoking is not so general, intervenes between Persia and China.'"

This, however, is a very doubtful proposition. It seems sufficiently established that the tobacco plant was first brought from Brazil to India about the year 1617; and it is most probable that it was thence carried to Siam, China, and other Eastern countries. The names given to it in all the languages of the East are obviously of European, or rather American, origin; a fact which seems completely to negative the idea of its being indigenous to the East.

Sources of Supply. Importation into Great Britain. — Tobacco is now very extensively cultivated in France and other European countries, in the Levant, and in India; but the tobacco of the U. States is still very generally admitted to be decidedly superior to most others. It is much higher flavoured than the tobacco of Europe; a superiority attributable in some degree, perhaps, to a different mode of treatment; but far more, it is believed, to differences of soil and climate.

Previously to the American war, our supplies of tobacco were almost entirely derived from Virginia and Maryland; and they are still principally imported from these states: of 35,166,358 lbs. of unmanufactured tobacco imported in 1850, no fewer than 30,173,444 lbs. came from the U. States. Mr. Jefferson, in his *Notes on Virginia*, has given a very unfavourable view of the effects of the tobacco culture. It was, indeed, well known to be a crop that speedily exhausted all but the very best lands; and in addition to this, Mr. J. says that "it is a culture productive of infinite wretchedness. Those employed in it are in a continued state of exertion, beyond the powers of nature to support. Little food of any kind is raised by them; so that the men and

animals on these farms are badly fed, and the earth is rapidly impoverished."—(English ed. p. 278.)

Tobacco is extensively cultivated in Mexico, but only for home consumption. It might probably, however, were it not for the restrictions under which it is placed, form a considerable article of export from that country. Under the Spanish government, the tobacco monopoly was one of the principal sources of revenue; yielding from 4,000,000 to 4,500,000 dollars, exclusive of the expenses of administration, amounting to about 800,000 dollars. No tobacco was allowed to be cultivated, except in a few specified places. Commissioners, or *guardas de tabaco*, were appointed, whose duty it was to take care that all tobacco plantations without the privileged districts should be destroyed. The government fixed the price at which the cultivators of tobacco were obliged to sell it to its agents. The sale of the manufactured tobacco was farmed out; and *cigars* were not allowed to be sold, except at the royal *estancos*. No one was allowed to use cigars of his own manufacture. This oppressive monopoly was established in 1764. It has been continued, from the difficulty of supplying the revenue which it produces, by the revolutionary governments.—(*Humboldt, Nouvelle Espagne*, iii. 49.; *Poinsett's Notes on Mexico*, note 116. Lond. ed.) In France, Spain, Austria, and some other countries, the trade in tobacco is monopolised by their respective governments, and yields a large revenue.

Cuba is celebrated for its tobacco, particularly its cigars. These consist of the leaves, formed into small rolls, for the purpose of smoking. Formerly their importation into this country was prohibited; but they may now be imported on paying the exorbitant duty of 9*s.* per lb. Havannah cigars are usually reckoned the best. Previously to 1820, the cultivation and sale of tobacco were subjected to the same sort of monopoly in Cuba as in Mexico; but, at the period referred to, the trade was thrown open. In consequence of the freedom thus given to the business, the production and exportation of tobacco are both rapidly increasing, though hardly, perhaps, so much as might have been expected; the culture of sugar and coffee being for a while reckoned more profitable; that, however, is no longer the case. In 1849, the tobacco and cigars exported from Cuba amounted to 6,275,000 lbs.

Consumption of Duty-paid Tobacco in the U. Kingdom. — It appears from the following account, which is not elsewhere to be met with, that the consumption of duty-paid tobacco in Great Britain has increased from about 8,000,000 lbs. in 1789, to 23,944,968 lbs. in 1852; the duty having fluctuated during the same period from 1*s.* 3*d.* to 4*s.* and 3*s.* 1¾*d.* (3*s.* + 5 per cent.) per lb. There are, however, good grounds for thinking that the consumption would have been much greater, perhaps doubled or thereby, had the duty continued at 1*s.* 3*d.* per lb. The subjoined table shows that during the 3 years ending with 1797, when the duty in Ireland was 8*d.* per lb., the annual average consumption of duty-paid tobacco, in that part of the U. K., was 7,455,221 lbs. And the population having increased in the interval from about 4 to 6½ millions, the fair presumption is, had the duty continued the same, that the consumption of tobacco would have increased in the same proportion, or have risen from 7,455,000 lbs. a-year to above 11,000,000 lbs. But, instead of this, the average annual consumption during the 3 years ending with 1852 has only been 4,511,606 lbs., or a little more than a third part of what it might, under the supposed circumstances, have been reasonably expected to be. But the inference thence arising as to the influence of the duty is not, after all, quite so conclusive as it would appear to be from this statement. For it is next to certain that at the first mentioned period duty-paid tobacco would be extensively smuggled from Ireland into England, where the duty was 11*d.* per lb. heavier; and since the equalisation of the duty between the two countries it is probable that some considerable portion of the tobacco used in Ireland, and carried thither by the cross-channel trade, has already paid duty in this country. Apart, however, from all considerations of this sort, there can be no manner of doubt that the consumption both in Britain and Ireland would be very largely increased by reducing the duty to 1*s.* 6*d.* or 1*s.* per lb.

Smuggling. — The price of tobacco in bond varies from 3*d.* and 4*d.* to 6*d.*, 8*d.*, and 10*d* per lb.; so that the duty of 3*s.* amounts to 1,200 per cent. on the inferior, and to 360 per cent. on the superior qualities. But, though quite excessive, this is one of those articles on which a high duty is least objectionable. It is true that the more the wants and desires of man are multiplied the more industrious he becomes; but tobacco is at once a filthy and an offensive luxury, and, with the exception of ardent spirits, there is hardly any article on which the money of the poor had not better be expended. The only good objection to the duty is the stimulus which it gives to smuggling and adulteration. In every other respect it is unexceptionable. The establishment of the coast-guard has, however, materially obstructed the clandestine importation of tobacco, though it is still said that it is introduced in considerable quantities. But no effectual check has been or can be given to adulteration so long as the present duty is maintained. At the same time it would be quite useless to at-

tempt to deal with an evil of this sort except by very decisive measures. Nothing less, we apprehend, than a reduction of the duty from 3*s.* to 1*s.* 6*d.*, or rather 1*s.* per lb., would be of any material service in checking illegal practices. And as a reduction to this extent would certainly be attended with great loss of revenue, the question of the tobacco duties may be properly enough deferred to a more convenient opportunity. When, however, the duties on tea, sugar, and other necessaries have been farther reduced or repealed, and we have a considerable surplus revenue, we may proceed to put the tobacco duty on a different footing. We subjoin an

Account of the Quantities of unmanufactured Tobacco retained for Home Consumption, the Rates of Duty thereon, and the Total Nett Produce of the Duties in Great Britain and Ireland, from 1789 to 1858, both inclusive.

Regulations as to Importation.—These are embodied in the Customs Consolidation Act, the 16 & 17 Vict. c. 107. § 44. as follows, viz. —

Not to be imported.—Tobacco stalks stripped from the leaf, whether manufactured or not, and tobacco stalk flour.

Not to be imported except under the following Conditions.—Tobacco and snuff from the East Indies, and tobacco from the Turkish dominions, including Egypt, unless direct from any of those places in packages containing not less than 100 lbs. nett weight each.

Negrohead tobacco, and also snuff being the produce of the U. States of America, unless in hhds., casks, chests, or cases containing not less than 200 lbs. nett weight each, or unless direct from the U. States in packages containing not less than 150 lbs. nett weight each.

Tobacco from Malta, and tobacco the produce of Porto Rico, Mexico, South America, St. Domingo, Cuba, the British possessions in America and the West coast of Africa, unless in hhds., casks, chests, or cases containing not less than 200 lbs. nett weight each, or unless direct from those places or from the U. States of America in packages containing not less than 80 lbs. nett weight each.

Tobacco and snuff, the produce of the Philippine Islands, unless in hhds., casks, chests, or cases containing not less than 200 lbs. nett weight each, or unless such tobacco or snuff be from Manilla direct, in bales or packages containing not less than 200 lbs. nett weight each.

Tobacco and snuff, of or from any country or place not before enumerated, unless in hhds., casks, chests, or cases containing not less than 200 lbs. nett weight each.

Cigars, unless in packages containing not less than 100 lbs. nett weight each.

Cigarillos or cigarettos, unless in packages containing not less than 75 lbs. nett weight each.

Tobacco, not being cigars, cigarillos, or cigarettos, and snuff, separated or divided in any manner within any package in which the same may by the foregoing table be imported, except tobacco from the dominions of the Turkish empire, or from Egypt in outer packages containing not less than 100 lbs. nett weight each.

Tobacco, snuff, cigars, cigarillos, or cigarettos of any kind, or from any country or place whatever, whether hereinbefore enumerated as especially restricted or not, unless in ships of not less than 120 tons burden, and into such ports only as are or may be approved of by the Commissioners of Customs.

The ports which are at present (1858) authorised to import tobacco and snuff are London, Liverpool, Bristol, Lancaster, Cowes, Falmouth, Fleetwood, Hartlepool, Whitehaven, Hull, Glasgow, Port Glasgow, Greenock, Aberdeen, Leith, Newcastle, Plymouth, Southampton, Preston, Swansea, Belfast, Cork, Drogheda, Dublin, Galway, Limerick, Londonderry, Newry, Sligo, Waterford, and Wexford. A rent of *four* shillings is charged upon every hogshead, cask, chest, or case of tobacco, warehoused in every warehouse provided by the Crown; 2*s.* being paid immediately upon depositing the tobacco in the warehouse, and 2*s.* more before the tobacco is taken out for home consumption, or exportation: it may remain for *five* years in the warehouse without any additional charge for rent. No abatement is made from the tobacco duties on account of damage. The duty is to be charged on the quantity found on delivery. The allowance of duty free tobacco for each sailor on board her Majesty's navy, and for each soldier on foreign service, is fixed at 2 lbs. per lunar month.

TON. An English weight containing 20 cwt.

TONNAGE, in commercial navigation, the number of tons burden that a ship will carry.

The mode in which the tonnage of British ships was formerly ascertained may be seen in the Registry Act, 3 & 4 Will. 4. *c.* 55. §§ 16 and 17. This mode, however, led to very inaccurate conclusions; and as most shipping charges depend on the tonnage, it occasioned the building of ships of an improper form for the purposes of navigation, in order that, by measuring less than their real burden, they might evade part of the duties. It was, therefore, long felt to be desirable that some change should be made in the plan of measuring ships; but the practical obstacles in the way of the change were greater than might have been supposed. The accurate estimation of the tonnage of a ship is a difficult problem; and it is indispensable that any system to be adopted in practice be not very complex; for if so, it will either be wholly inapplicable, or it will be sure to be incorrectly applied. In this case, as in most others, *summa virtus est perspicuitas*. At best, therefore, only an approximative measurement can be obtained. A committee of scientific and practical gentlemen having been appointed in 1834 to consider the subject, a bill was introduced into parliament, at their recommendation, embodying a plan for the more correct measurement of ships, and was subsequently passed into a law, the 5 & 6 Will. 4. *c.* 56. The rules it laid down were not so simple or easily applied as those that were previously used; but they gave the tonnage of all ships, however built, with tolerable accuracy, and consequently took away the temptation, that till then existed, to build ships of such a form that they might measure less than their true burden. But these rules have been again considerably modified. Those which at present (1859) exist are embodied in the Mercantile Shipping Act of 1854, the 17 & 18 Vict. *c.* 104, and are subjoined. And whatever may be their merit in other respects, they do not certainly seem to have much of that perspicuity and simplicity which appear to be essential to such rules.

Tonnage Deck; Feet; Decimals.—Throughout the following rules the tonnage deck shall be taken to be the upper deck in ships which have less than three decks, and to be the second deck from below in all other ships; and in carrying such rules into effect all measurements shall be taken in feet and fractions of feet, and all fractions of feet shall be expressed in decimals.—§ 20.

For Ships to be registered of which the Hold is clear.—The tonnage of every ship to be registered, with the exceptions mentioned in the next section, shall previously to her being registered be ascertained by the following rule 1; and the tonnage of every ship to which such rule can be applied, whether she is about to be registered or not, shall be ascertained by the same rule.

(1.) Measure the length of the ship in a straight line along the upper side of the tonnage deck from the inside of the inner plank (average thickness) at the side of the stem to the inside of the midship stern timber or plank there, as the case may be (average thickness), deducting from this length what is due to the rake of the bow in the thickness of the deck, and what is due to the rake of the stern timber in the thickness of the deck, and also what is due to the rake of the stern timber in ⅓rd of the round of the beam; divide the length so taken into the number of equal parts required by the following table, according to the class in such table to which the ship belongs:

TABLE.—Class 1. Ships of which the tonnage deck is according to the above measurement 50 feet long or under, into 4 equal parts:

Class 2. Ships of which the tonnage deck is according to the above measurement above 50 feet long and not exceeding 120, into 6 equal parts:

Class 3. Ships of which the tonnage deck is according to the above measurement above 120 feet long and not exceeding 180 into 8 equal parts:

Class 4. Ships of which the tonnage deck is according to the above measurement above 180 feet long and not exceeding 225, into 10 equal parts:

Class 5. Ships of which the tonnage deck is according to the above measurement above 225 feet long, into 12 equal parts.

(2.) Then, the hold being first sufficiently cleared to admit of the required depths and breadths being properly taken, find the transverse area of such ship at each point of division of the length as follows:—Measure the depth at each point of division, from a point at a distance of ⅛ of the round of the beam below such deck, or, in case of a break, below a line stretched in continuation thereof, to the upper side of the floor timber at the inside of the limber strake, after deducting the average thickness of the ceiling which is between the bilge planks and limber strake: then, if the depth at the midship division of the length do not exceed 16 feet, divide each depth

into four equal parts; then measure the inside horizontal breadth at each of the three points of division, and also at the upper and lower points of the depth, extending each measurement to the average thickness of that part of the ceiling which is between the points of measurement; number these breadths from above (*i. e.* numbering the upper breadth one and so on down to the lowest breadth); multiply the second and fourth by 4, and the third by 2; add these products together, and to the sum add the first breadth and the fifth; multiply the quantity thus obtained by ⅓rd of the common interval between the breadths, and the product shall be deemed the transverse area; but if the midship depth exceed 16 feet, divide each depth into 6 equal parts instead of 4, and measure as before directed the horizontal breadths at the 5 points of division, and also at the upper and lower points of the depth; number them from above as before; multiply the second, fourth, and sixth by 4, and the third and fifth by 2; add these products together, and to the sum add the first breadth and the seventh; multiply the quantity thus obtained by ⅓rd of the common interval between the breadths, and the product shall be deemed the transverse area.

(3.) Having thus ascertained the transverse area at each point of division of the length of the ship as required by the above table, proceed to ascertain the register tonnage of the ship in the following manner:—number the areas successively 1, 2, 3, &c., No. 1, being at the extreme limit of the length at the bow, and the last No. at the extreme limit of the length at the stern; then, whether the length be divided according to the table into 4 or 12 parts as in Classes 1 and 5, or any intermediate number as in Classes 2, 3, and 4, multiply the second and every even numbered area by 4, and the third and every odd numbered area (except the first and last) by 2; add these products together, and to the sum add the first and last if they yield anything; multiply the quantity thus obtained by ⅓d of the common interval between the areas, and the product will be the cubical contents of the space under the tonnage deck; divide this product by 100, and the quotient being the tonnage under the tonnage deck shall be deemed to be the register tonnage of the ship, subject to the additions and deductions herein-after mentioned.

(4.) If there be a break, a poop, or any other permanent closed-in space on the upper deck, available for cargo or stores, or for the berthing or accommodation of passengers or crew, the tonnage of such space shall be ascertained as follows:—measure the internal mean length of such space in feet, and divide it into two equal parts; measure at the middle of its height three inside breadths, namely, one at each end and the other at the middle of the length; then to the sum of the ascertained breadths add 4 times the middle breadth, and multiply the whole sum by ⅓rd of the common interval between the breadths; the product will give the mean horizontal area of such space; then measure the mean height, and multiply by it the mean horizontal area; divide the product by 100, and the quotient shall be deemed to be the tonnage of such space, and shall be added to the tonnage under the tonnage deck, ascertained as aforesaid, subject to the following provisoes; 1st, that nothing shall be added for a closed-in space solely appropriated to the berthing of the crew, unless such space exceeds 1-20th of the remaining tonnage of the ship, and in case of such excess the excess only shall be added; and 2dly, that nothing shall be added in respect of any building erected for the shelter of deck passengers, and approved by the B. of Trade.

(5.) If the ship has a third deck, commonly called a spar deck, the tonnage of the space between it and the tonnage deck shall be ascertained as follows:—measure in feet the inside length of the space at the middle of its height from the plank at the side of the stem to the lining on the timbers at the stern, and divide the length into the same number of equal parts into which the length of the tonnage deck is divided as above directed; measure (also at the middle of its height) the inside breadth of the space at each of the points of division, also the breadth of the stem and the breadth at the stern; number them successively 1, 2, 3, &c., commencing at the stem; multiply the second and all the other even numbered breadths by 4, and the third and all other odd numbered breadths (except the first and last) by 2; to the sum of these products add the first and last breadths; multiply the whole sum by ⅓d of the common interval between the breadths, and the result will give in superficial feet the mean horizontal area of such space; measure the mean height of such space, and multiply by it the mean horizontal area; and the product will be the cubical contents of the space; divide this product by 100, and the quotient shall be deemed to be the tonnage of such space, and shall be added to the other tonnage of the ship ascertained as aforesaid; and if the ship has more than three decks, the tonnage of each space between decks above, the tonnage deck shall be severally ascertained in manner above described, and shall be added to the tonnage of the ship ascertained as aforesaid. — § 21.

Rule for Ships not requiring Registry with Cargo on board.—Ships which, requiring to be measured for any purpose other than registry, have cargo on board, and ships which, requiring to be measured for the purpose of registry, cannot be measured by the rule above given, shall be measured by the following rule II.;

(1). Measure the length on the upper deck from the outside of the outer plank at the stem to the afside of the stern post, deducting therefrom the distance between the afside of the stern post and the rabbet of the stern post at the point where the counter plank crosses it; measure also the greatest breadth of the ship to the outside of the outer planking or wales, and then, having first marked on the outside of the ship on both sides thereof the height of the upper deck at the ship's sides, girt the ship at the greatest breadth in a direction perpendicular to the keel from the height so marked on the outside of the ship on the one side to the height so marked on the other side by passing a chain under the keel; to half the girth thus taken add half the main breadth; square the sum; multiply the result by the length of the ship taken as aforesaid; then multiply this product by the factor ·0018 (18-10,000ths) in the case of ships built of wood, and by ·0021 (21-10,000ths) in the case of ships built of iron, and the product shall be deemed the register tonnage of the ship subject to the additions and deductions herein-after mentioned.

(2.) If there be a break, a poop, or other closed in space on the upper deck, the tonnage of such space shall be ascertained by multiplying together the mean length, breadth, and depth of such space, and dividing the product by 100, and the quotient so obtained shall be deemed to be the tonnage of such space, and shall, subject to the deductions for a closed-in space appropriated to the crew as mentioned in Rule 1., be added to the tonnage of the ship ascertained as aforesaid. —§ 22.

Allowance for Engine Room in Steamers.—In every ship propelled by steam or other power requiring engine room, an allowance shall be made for the space occupied by the propelling power, and the amount so allowed shall be deducted from the gross tonnage of the ship ascertained as aforesaid, and the remainder shall be deemed to be the register tonnage of such ship; and such deduction shall be estimated as follows, viz.:

(*a*). As regards ships propelled by paddle wheels in which the tonnage of the space solely occupied by and necessary for the proper working of the boilers and machinery is above 20 per cent. and under 30 per cent. of the gross tonnage of the ship, such deduction shall be 37-100ths of such gross tonnage; and in ships propelled by screws in which the tonnage of such space is above 13 per cent. and under 20 per cent. of such gross tonnage, such deduction shall be 32-100ths of such gross tonnage:

(*b*). As regards all other ships, the deduction shall, if the commissioners of customs and the owner both agree thereto, be estimated in the same manner; but either they or he may in their or his discretion require the space to be measured and the deduction estimated accordingly; and whenever such measurement is so required the deduction shall consist of the tonnage of the space actually occupied by or required to be inclosed for the proper working of the boilers and machinery, with the addition in the case of ships propelled by paddle wheels of one half, and in the case of ships propelled by screws of three-fourths of the tonnage of such space; and the measurement and use of such space shall be governed by the following rules; viz.

(1.) Measure the mean depth of the space from its crown to the ceiling at the limber strake, measure also three, or, if necessary, more than three breadths of the space at the middle of its depth, taking one of such measurements at each end, and another at the middle of the length; take the mean of such breadths; measure also the mean length of the space between the foremost and aftermost bulkheads or limits of its length, excluding such parts, if any, as are not actually occupied by or required for the proper working of the machinery; multiply together these three dimensions of length, breadth, and depth, and the product will be the cubical contents of the space below the crown; then find the cubical contents of the space or spaces, if any, above the crown aforesaid, which are framed in for the machinery or for the admission of light and air, by multiplying together the length, depth, and breadth thereof; add such contents to the cubical contents of the space below the crown; divide the sum by 100; and the result shall be deemed to be the tonnage of the said space:

(2.) If in any ship in which the space aforesaid is to be measured the engines and boilers are fitted in separate compartments, the contents of each shall be measured severally in like manner, according to the above rules, and the sum of their several results shall be deemed to be the tonnage of the said space:

(3.) In the case of screw steamers in which the space aforesaid is to be measured, the contents of the shaft trunk shall be added to and deemed to form part of such space, and shall be ascertained by multiplying together the main length, breadth, and depth of the trunk, and dividing the product by 100.

(4.) If in any ship in which the space aforesaid is to be measured any alteration to be made in the length or capacity of such space, or if any cabins be fitted in such space, such ship shall be deemed to be a ship not registered until re-measurement:

(5.) If in any ship in which the space aforesaid is to be measured any goods or stores are stowed or carried in such space, the master and owner shall each be liable to a penalty not exceeding 100*l.* — § 25.

Open Ships, how measured.—In ascertaining the tonnage of open ships, the upper edge of the upper strake is to form the boundary line of measurement, and the depths shall be taken from an athwartship line, extending from upper edge to upper edge of the said strake at each division of the length. —§ 24.

Tonnage and Number of Certificate to be carved on Main Beam.—In every registered British ship the number denoting the register tonnage, ascertained as herein-before directed, and the number of her certificate of registry, shall be deeply carved or otherwise permanently marked on her main beam, and shall be so continued; and if it at any time cease to be so continued such ship shall no longer be recognised as a British ship.—§ 25.

Tonnage when once ascertained to be ever after deemed the Tonnage.—Whenever the tonnage of any ship has been ascertained and registered in accordance with the provisions of this act, the same shall thenceforth be deemed to be the tonnage of such ship, and be repeated in every subsequent registry thereof, unless any alteration is made in the form or capacity of such ship, or unless it is discovered that the tonnage of such ship has been erroneously computed; and in either of such cases such ship shall be remeasured, and her tonnage determined and registered according to the rules herein contained.—§ 26.

Remeasurement of Ships already registered.—The rules for the measurement of tonnage herein contained shall not make

it necessary to alter the present registered tonnage of any British ship registered before this act came into operation; but if the owner of any such ship desires to have the same remeasured according to such rules, he may apply to the C. of Customs for the purpose, and such commissioners shall thereupon, and after payment of such reasonable charge for the expenses of remeasurement, not exceeding the sum of 7*s.* 6*d.* for each transverse section, as they may authorise, direct such remeasurement to be made, and such ship shall thereupon be remeasured according to such rules as aforesaid, or according to such of them as may be applicable; and the number denoting the register tonnage shall be altered accordingly.—§ 27.

Power to remeasure Engine Rooms improperly extended.—If it appears to the C. of Customs that in any steam ship measured before this act came into operation store rooms or coal bunkers have been introduced into or thrown across the engine room, so that the deduction from the tonnage on account of the engine room is larger than it ought to be, the said commissioners may, if they think fit, direct such engine room to be measured according to the rules in force before this act comes into operation, excluding the space occupied by such store rooms or coal bunkers, or may, if the owners so desire, cause the ship to be remeasured according to the rules hereinbefore contained, and subject to the conditions contained in the last preceding section; and after remeasurement the said commissioners shall cause the ship to be registered anew, or the registry thereof to be altered, as the case may require. § 28.

Officers may be appointed and Regulations made for Measurement of Ships.—The C. of Customs may, with the sanction of the Treasury, appoint such persons to superintend the survey and admeasurement of ships as they think fit; and may, with the approval of the B. of Trade, make such regulations for that purpose as may be necessary; and also, with the like approval, make such modifications and alterations as from time to time become necessary, in the tonnage rules hereby prescribed, in order to the more accurate and uniform application thereof, and the effectual carrying out of the principle of admeasurement therein adopted.—§ 29.

TOOLS AND MACHINES. Under this designation are comprised all sorts of instruments employed to assist in the performance of any undertaking, from the rudest and simplest to the most improved and complex. But we only mention them here for the purpose of making one or two remarks on the restrictions to which the trade in them has been subjected.

Importation and Exportation of Tools and Machines.—Tools and machines being instruments of production, it is obviously of the utmost importance that they should be as much improved as possible; and hence the expediency of allowing their free importation. Their exclusion, or the exclusion of the articles of which they are made, would obviously lay every branch of industry carried on in a nation less advanced than others in their manufacture, under the most serious disadvantages. And supposing the implements it employed to be superior to those of other countries when the exclusion took place, the absence of foreign competition, and of the emulation which it inspires, would most probably, in a very short time, occasion the loss of this superiority. The injury arising from the prohibition of most other articles is comparatively limited, affecting only the producers and consumers of those that are prohibited. But a prohibition of machines strikes at the root of every species of industry: it is not injurious to one, or a few branches, but to all.

The question whether the exportation of machinery ought to be free, is not so easy of solution. It is the duty of a nation to avail itself of every fair means for its own aggrandisement; and supposing the machinery belonging to any particular people were decidedly superior to that employed by their neighbours, and that they had it in their power to preserve this advantage, their generosity would certainly outrun their sense, were they to communicate their improved machinery to others. We do not, however, believe that it is possible, whatever measures may be adopted in that view, for one country to monopolise, for any considerable period, any material improvement in machinery or the arts: and on this ground we think that the former restraints on the exportation of machinery were wisely abolished. Drawings and models of all sorts of machines used in Manchester, Glasgow, and Birmingham, were always to be found in most parts of the Continent; and at Rouen, Paris, &c., numbers of the best English workmen were employed in the manufacture of prohibited machines. And it did certainly appear not a little preposterous to prevent the exportation of a machine, at the same time that we allowed (it could not, indeed, be prevented) the free egress of the workmen by whom it was made! The effect of this policy was not to secure a monopoly of improved machines for the manufacturers of England, but to occasion the emigration of English artizans to the Continent, and the establishment there of machine manufactories under their superintendence. The prejudice that arose from this state of things to the interests of England, is too obvious to require being pointed out. It is plain, therefore, that sound policy dictated that the exportation of all sorts of machinery should be allowed on payment of a moderate duty. And we are glad to have to announce that this policy was adopted in the act 6 & 7 Victoria, c. 84, which repealed the restraints previously imposed on the exportation of machinery. A policy of this sort affords a much more efficient encouragement to our manufactures than they hitherto enjoyed; for, while it lessens the temptation to our artizans to emigrate, it helps to make England the grand seat of the tool as well as of the cotton manufacture. The total declared value of the machinery and mill-work exported in 1853 amounted to 1,985,536*l.*

TOPAZ (Ger. *Topas*; Fr. *Topase*; It. *Topazio*; Sp. *Topacio*; Rus. *Topas*). The name topaz has been restricted by M. Haüy to the stones called by mineralogists Occidental ruby, topaz, and sapphire; which, agreeing in their crystallisation and most of their properties, were arranged under one species by M. Romé de Lisle.

The word topaz, derived from an island in the Red Sea, where the ancients used to find topazes, was applied by them to a mineral very different from ours. One variety of our topaz they denominated Chrysolite. Colour, wine yellow. From pale wine yellow it passes into yellowish white, greenish white, mountain green, sky blue: from deep wine yellow into flesh red and crimson red. Specific gravity from 3·464 to 3·641. — (*Thomson's Chemistry.*)

"*Yellow Topaz.*—In speaking of the topaz, a gem of a beautiful yellow colour is always understood: it is wine yellow of different degrees of intensity; and the fuller and deeper the tinge, the more the stone is esteemed. In hardness it yields to the spinelle.

"There are few gems more universal favourites than the yellow topaz, when perfect: the rich warm tone of its colour, the vivacity of its lustre (which it retains even by the side of the diamond), and its large size, compared with many others, are characters which deservedly entitle it to distinction; it bears accordingly a high price when of good quality.

"It is chiefly employed for necklaces, ear-drops, bracelets, &c. in suit. No little skill and taste are required in cutting and duly proportioning this gem; the table should be perfectly symmetrical, and not too large; the bizel of sufficient depth, and the collet side should be formed in delicate steps. It works easily on the mill, and the lapidaries are in general tolerably well acquainted with it; yet it is uncommon to meet with one well cut.

"The yellow topaz varies in price according to its beauty and perfection. A superlatively fine stone, perfect in colour and workmanship, sufficiently large for an armlet, or any other ornament, weighing nearly 80 carats, was sold for 100*l.*

"Topazes have become more common since our intercourse with Brazil; consequently they are less in demand, and lower in price. A fine stone of 60 carats may be purchased at from 20*l.* to 35*l.*; and smaller, calculated for ring stones, at from 2*l.* to 5*l.*; but it is not usual to sell them by weight.

"*Pink Topaz.*—This is made from the yellow, which, when of intense colour, is put into the bowl of a tobacco pipe or small crucible, covered with ashes or sand; on the application of a low degree of heat, it changes its colour from a yellow to a beautiful pink. This is performed with little hazard; and if the colour produced happens to be fine, the price is much augmented.

"*Red Topaz.*—This beautiful gem, which very seldom occurs naturally, is of a fine crimson colour, tinged with a rich brown, it is extremely rare, and generally taken to be a variety of ruby, for which I have seen it offered for sale. Its price, from its scarcity, is quite capricious; it has an exquisite pleasing colour, very different from the glare of the artificial pink topaz.

"*Blue Topaz.*—It is also a beautiful gem, of a fine celestial blue colour. It has occurred of considerable magnitude; the finest specimen known, I brought in the rough from Brazil; when cut and polished, it weighed about 1½ oz. Smaller specimens are not uncommon, and when light-coloured, are often taken for aqua-marinas, from which they may always be distinguished by their greater weight and hardness, &c.

"*White Topaz.*—is familiarly called *Minas Nova*. It is a beautiful pellucid gem, and is used for bracelets, necklaces, &c. It possesses greater brilliancy than crystal; and, from its hardness, has been used to cover paste, &c. and to form doublets."—(*Manve on Diamonds, &c.* 2d. ed. p. 108–112.)

TORTOISESHELL (Fr. *Ecaille de Tortue;* It. *Scaglia de Tartaruga;* Ger. *Schilpad;* Malay, *Sisik kurakura*), the brown and yellow scales of the *Testudo imbricata*, or tortoise, a native of the tropical seas. It is extensively used in the manufacture of combs, snuff-boxes, &c., and in inlaying and other ornamental work.

The best tortoiseshell is that of the Indian Archipelago; and the finest of this quarter is obtained on the shores of the Spice Islands and New Guinea. When the finest West Indian tortoiseshell is worth in the London market 46*s.*, the finest East Indian is worth 60*s.* per lb. Under the latter name, however, a great deal of inferior shell is imported, brought from various parts of the East Indies. The goodness of tortoiseshell depends mainly on the thickness and size of the scales, and in a smaller degree on the clearness and brilliancy of the colours. Before the opening of the British intercourse with India, the greater part of the tortoiseshell which eventually found its way to Europe, was first carried to Canton, which then formed the principal mart for the commodity. It is still an article of trade from that city; but the imports and exports are inconsiderable, Singapore being now the chief mart for this article. Its price at the latter varies from 750 and 900 to from 1,000 to 1,600 dollars per picul, according to quality.—(*Crawfurd's Indian Archipelago; Singapore Chronicle; Canton Register.*)

The imports of tortoiseshell in 1852 amounted to 46,204, and the re-exports to 23,752 lbs. Duty repealed in 1846.

TOYS (Ger. *Spielzeug, Speilsachen;* Du. *Speelgöed;* Fr. *Jouets, Bimbelots;* It. *Trastulli;* Sp. *Dijes, Juguetes de ninnos;* Rus. *Igrushki*), include every trifling article made expressly for the amusement of children.

How frivolous soever these articles may appear in the estimation of superficial observers, their manufacture employs hundreds of hands, and gives bread to many families, in London, Birmingham, &c. The greatness of the demand for th m may be inferred, from the fact, that a manufacturer of glass beads, and articles of that description, has received a s ngle order for 500*l.* worth of dolls' eyes!—(*Fourth Report, Artisans and Machinery*, p. 314.) Considerable quantities are also imported from Holland; which supplies us with several sorts of wooden toys on more reasonable terms than we can afford to produce them. But of late years, these have been made in greater abundance in England than formerly.

In 1852, the value of the foreign toys entered for consumption amounted to 39,617*l.* In 1853 the duty of 10 per cent. *ad valorem* was repealed; for new duty see TARIFF.

TRAGACANTH, a species of gum, the produce of the *Astragalus Tragacantha*, a thorny shrub growing in Persia, Crete, and the islands of the Levant.

It exudes about the end of June from the stem and larger branches, and soon dies in the sun. It is inodorous; impressing a very slightly bitter taste as it softens in the mouth. It has a whitish colour; is semitransparent; and in very thin, wrinkled, vermiform pieces; it is brittle, but not easily pulverised, except in frosty weather, or in a warmed mortar. It should be chosen in long twisted pieces, white, very clear, and free from all other colours; the brown, and particularly the black pieces, should be wholly rejected.—(*Thomson's Chemistry; Dr. A. T. Thomson's Dispensatory; Milburn's Orient. Com.*) In 1852. 1152 cwt. tragacanth were imported, and 167 ditto re-exported. Duty repealed in 1846.

TREATIES (COMMERCIAL). By a commercial treaty is meant a treaty between two independent nations, for facilitating, and most commonly, also, regulating the commerce carried on between them.

Origin, Objects, and Policy of modern Commercial Treaties.—During the middle ages, and down, indeed, to a comparatively recent period, foreigners resident in a country, whether for commercial or other purposes, were, for the most part, subject to very harsh treatment. At one time, it was usual in England to make aliens liable for the debts and crimes of each other; and the practice, formerly so common, of laying heavier duties on the goods imported and exported by aliens than by British subjects, is not even yet, we grieve to say, altogether abandoned. In France, and some other countries, during the 14th and 15th centuries, a stranger was incapable of bequeathing property by will; and the whole of his personal as well as real estate, fell, at his death, to the king or the lord of the barony. This barbarous law was known by the name of *Droit d'Aubaine*, and was not completely abolished in France till a very late period.—(*Robertson's Charles V.* vol. i. note 29.) Previously to last century, the laws with respect to shipwreck, though infinitely more humane than they had been at a more remote period, were calculated rather to promote the interest of the sovereign of the country, or the feudal lords on whose territories shipwrecked vessels might be thrown, than those of the unfortunate owners or survivors.—(See WRECK.*) The most serious obstacles were then, also, opposed, by the prevalent insecurity, and the arbitrary nature of the tolls which the lords were in the habit of exacting, to the transit of commodities through the territories of one state to those of another.

Under such circumstances, it became of much importance for commercial states to endeavour to obtain, by means of treaties, that protection and security for the persons and properties of their subjects, when abroad, against unjust treatment and vexatious exactions, which they could not have obtained from the laws of the countries in which they might happen to reside. Thus, it was stipulated by Edward II., in 1325, that the merchants and mariners of Venice should have power to come to England for 10 years, with liberty to sell their merchandise and to return home in safety, "*without having either their persons or goods stopped on account of other people's crimes or debts.*"—(*Anderson, anno* 1325.) The commercial treaties negotiated during the 15th, 16th, and 17th centuries, are full of similar conditions; and there can be no doubt that by

* The practice of confiscating shipwrecked property continued in France till 1681, when it was abolished by an edict of Louis XIV. It was at one time common in Germany, to use the words of M. Bouchaud, "pour les prédicateurs de prier Dieu en chaire, *qu'il se fasse bien des naufrages sur leurs côtes!*"—(*Théorie des Traités de Commerce*, p. 118.) And the fact, that the celebrated jurist Thomasius wrote a dissertation in defence of such prayers, affords, if possible, a still more striking proof of the spirit of the period.

providing for the security of merchants and seamen when abroad, and suspending, with respect to them, the barbarous laws and practices then in force, they contributed materially to accelerate the progress of commerce and civilisation.

Commercial treaties were also negotiated at a very early period for the regulation of neutral commerce during war; and for defining the articles that should be deemed contraband, or which it should not be lawful for neutral ships to convey or carry to either belligerent. These are obviously points that can only be decided by express stipulations.*

Instead, however, of confining commercial treaties to their legitimate and proper purposes — the security of merchants and navigators, and the facility of commercial transactions — they very soon began to be employed as engines for promoting the commerce of one country at the expense of another. For more than 2 centuries, those engaged in framing commercial treaties have principally applied themselves to secure, either by force or address, some exclusive advantage in favour of the ships and products of their particular countries. Hence these compacts are full of regulations as to the duties to be charged on certain articles, and the privileges to be enjoyed by certain ships, according as they were either produced by or belonged to particular countries. It was in the adjustment of these duties and regulations that the skill of the negotiator was chiefly put to the test. It was expected that he should be thoroughly acquainted with the state of every branch of industry, both in his own country and in the country with which he was negotiating; and he was to endeavour so to adjust the tariff of duties, that those branches in which his own country was deficient might be benefited, and those in which the other was superior might be depressed! The idea of conducting a negotiation of this sort on a fair principle of reciprocity is of very late origin: success in circumventing, in over-reaching, or in extorting from fear or ignorance some oppressive, but at the same time worthless privilege, was long esteemed the only proof of superior talent in negotiators.

In an able tract, attributed to Mr. Eden, afterwards Lord Auckland, published in 1787 (*Historical and Political Remarks on the Tariff of the French Treaty*), there is the following outline of the qualifications necessary to the negotiator of a commercial treaty: — "Besides a general knowledge of the trade and reciprocal interests of the contracting parties, he ought to be precisely acquainted with their several kinds of industry and skill; to discover their wants, to calculate their resources, and to weigh with nicety the state of their finances, and the proportionate interest of their money: nay, further, he should be able to ascertain the comparative population and strength of each country, together with the price and quality both of first materials, and also of the labour bestowed upon them: for this purpose he should inquire into the operations of every class of merchants and manufacturers concerned in the trade; should consult their expectations on each of its several branches; and collect their hopes and fears on the effect of such a commercial revolution, on the competition of rival nations. A good treaty of commerce, independent of the art of negotiation, is pronounced, by one who well knew the extent and difficulty of the subject, to be a '*masterpiece of skill.*'" — (p. 10.)

Had Mr. Eden concluded by stating, that no individual, or number of individuals, ever possessed, or ever would possess, the various qualifications which in his estimation were required in negotiating a "good commercial treaty," he would only have affirmed what is most certainly true. We believe, however, that he had formed a totally false estimate, not only of the qualifications of a negotiator, but of the objects he ought to have in view. It was the opinion of the Abbé Mably — (*Droit Publique de l'Europe*, tome ii. p. 561.), — an opinion in which we are disposed, with very little modification, to concur, — that when a few general rules are agreed upon for the effectual security of trade and navigation, including the importation and exportation of all commodities not prohibited by law; the speedy adjustment of disputes; the regulations of pilotage, harbour and light-house duties; the protection of the property and effects of merchants in the event of a rupture, &c.; all is done that ought to be attempted in a commercial treaty. It may, indeed, be properly stipulated that the goods of the contracting powers shall be admitted into each other's ports on the same terms as "those of the most favoured nations," — that is, that no higher duties shall be charged upon them than on those of others. But here stipulation ought to cease. It is an abuse and a perversion of commercial treaties, to make them instruments for regulating duties or prescribing Custom-house regulations.

We admit, indeed, that occasions may occur, in which it may be expedient to stipulate for a reduction of duties or an abolition of prohibitions on the one side, in return for similar concessions on the other. But all arrangements of this sort should be determined by a convention limited to that particular object; and a fixed and not very distant term should be specified, when the obligation in the convention should expire, and

* There is a good collection of treaties as to this point, in the Appendix to the excellent work of Lampredi, *Del Commercio de' Popoli Neutrali*. — (See CONTRABAND.)

both parties be at liberty to continue or abandon the regulations agreed upon. Generally speaking, all treaties which determine what the duties on importation or exportation shall be, or which stipulate for preferences, are radically objectionable. Nations ought to regulate their tariffs in whatever mode they judge best for the promotion of their own interests, without being shackled by engagements with others. If foreign powers be all treated alike, none of them has just grounds of complaint; and it can rarely be for the interest of any people to show preferences to one over another. Those, for example, by whom *we* may be most advantageously supplied with foreign products, require no preferences; and if we exclude them, or give a preference to others, we incontestably injure ourselves: and yet 19 out of 20 of the regulations as to duties in commercial treaties have been founded on this preposterous principle. They have been employed to divert trade into channels, where it would not naturally flow; that is, to render it less secure and less profitable than it would otherwise have been.

A great deal of stress has usually been laid upon the advantages supposed to be derived from the privileges sometimes conceded in commercial treaties. But we believe that those who inquire into the subject will find that such concessions have, in every case, been not only injurious to the party making them, but also to the party in whose favour they have been made. The famous commercial treaty with Portugal, negotiated by Mr. Methuen in 1703, was almost universally regarded, for a very long period, as admirably calculated to promote the interests of this country; but it is now generally admitted, by every one who has reflected upon such subjects, that few transactions have taken place by which these interests have been more deeply injured. It stipulated for the free admission of British woollens into Portugal, from which they happened, at the time, to be excluded; but in return for this concession—a concession far more advantageous to the Portuguese than to us—we bound ourselves "for ever hereafter" to admit wines of the growth of Portugal into Great Britain at ⅔ds of the duty payable on the wines of France! Thus, in order to open an access for our woollens to the limited market of Portugal, we consented, in all time to come, to drink inferior wine, bought at a comparatively high price!—(See WINE.) This, however, was not all: by excluding one of the principal equivalents the French had to offer for our commodities, we necessarily lessened their ability to deal with us; at the same time that we provoked them to adopt retaliatory measures against our trade. It is owing more to the stipulations in the Methuen treaty than to any thing else, that the trade between England and France—a trade that would naturally be of vast extent and importance—has so long been confined within comparatively narrow limits.

It is visionary to imagine that any nation will ever continue to grant to another any exclusive advantage in her markets, unless she obtain what she reckons an equivalent advantage in the markets of the other. And if a commercial treaty stipulating for an exclusive privilege be really and *bonâ fide* observed by the country granting the privilege, we may be sure that the concessions made by the country in whose favour it is granted are sufficient fully to countervail it. Those who grasp at exclusive privileges in matters of this sort, or who attempt to extort valuable concessions from the weakness or ignorance of their neighbours, are uniformly defeated in their object. All really beneficial commercial transactions are bottomed on a fair principal of reciprocity; and that nation will always flourish most, and have the foundations of her prosperity best secured, who is a universal merchant, and deals with all the world on the same fair and liberal principles.

The justness of these principles, we are glad to observe, is now beginning to be very generally admitted. Stipulations as to duties and Custom-house regulations are disappearing from commercial treaties; and it is to be hoped that, at no distant period, every trace of them may have vanished.

A good work on the principles, style, and history of commercial treaties is a desideratum. The best we have seen are Mascovius *De Fœderibus Commerciorum*, 4to. Leipsic, 1735; and Bouchaud, *Théorie des Traités de Commerce*, 12mo. Paris, 1777. But these are principally works of erudition, and were written before the sound principles of commercial policy had been unfolded. There is no good collection of commercial treaties in the English language; but Mr. Hertslet's work is valuable, as containing the recent treaties in an accessible form.

We subjoin copies of the principal commercial treaties and conventions existing at this moment (January 1844) between Great Britain and other powers.

AUSTRIA.

Treaty of Commerce and Navigation between her Britannic Majesty and the Emperor of Austria, signed at Vienna, July 3. 1838.

Article 1. From the date of the ratification of this present treaty, British vessels arriving in or departing from the ports of his Majesty the Emperor of Austria, and Austrian vessels arriving in or departing from the ports of the United Kingdom of Great Britain and Ireland, and those of all the possessions of her Britannic Majesty, shall be subject to no other or higher duties or charges, of whatsoever nature they may be, than those which are actually or may hereafter be imposed on national vessels, on their entering into or departing from such ports respectively.

2. All productions of the soil, industry, and art of the states and possessions of his Majesty, the Emperor of Austria, including the said productions which may be exported through the northern outlet of the

Elbe, and the eastern outlet of the Danube, and which may be imported into the ports of the United Kingdom and the possessions of her Britannic Majesty; and also all the productions of the soil, industry and art of the United Kingdom and possessions of her Britannic Majesty, which may be imported into the ports of his Majesty the Emperor of Austria, shall enjoy reciprocally, in all respects, the same privileges and immunities, and may be imported and exported exactly in the same manner, in vessels of the one as in vessels of the other of the high contracting parties.

3. All commodities which are not the productions of the soil, industry, and art of the two respective states or their possessions, and which may be legally imported from the ports of Austria, including those of the Danube, into the ports of the United Kingdom of Great Britain and Ireland, of Malta, and Gibraltar, and other possessions of her Britannic Majesty, in Austrian vessels, shall be subject to the same duties only which would be paid on the same articles, if they were imported in British vessels.

Her Britannic Majesty extends by this treaty to Austrian navigation and trade, the full benefits of the two British acts of parliament passed on the 28th of August, 1833, regulating the trade and navigation of the United Kingdom and British possessions, as well as all other privileges of commerce and navigation now enjoyed, or to be hereafter granted, by existing laws, by orders in council, or by treaties, to the most favoured nations.

4. All Austrian vessels arriving from the ports of the Danube, as far as Galacz inclusively, shall, together with their cargoes, be admitted into the ports of the United Kingdom of Great Britain and Ireland and of all the possessions of her Britannic Majesty, exactly in the same manner as if such vessels came direct from Austrian ports, with all the privileges and immunities stipulated by the present treaty of navigation and commerce. In like manner, all British vessels, with their cargoes, shall continue to be placed upon the same footing as Austrian vessels, whenever such British vessels shall enter into or depart from the same ports.

5. In consideration of British vessels, arriving direct from other countries than those belonging to the high contracting parties, being admitted with their cargoes into Austrian ports, without paying any other duties whatever than those paid by Austrian vessels, so also the productions of the soil and industry of the parts of Asia or Africa situated within the Straits of Gibraltar, which shall have been brought into the ports of Austria, may be re-exported from thence in Austrian vessels directly into British ports, in the same manner, and with the same privileges, as to all manner of duties and immunities, as if these productions were imported from Austrian ports in British vessels.

6. All commodities and articles of commerce which, according to the stipulations of the present treaty, or by the existing laws and ordinances of the respective states, may be legally imported into or exported from the states and possessions of the two high contracting parties, whether under the British or the Austrian flag, shall in like manner be subject to the same duties, whether imported by national vessels or by those of the other state; and upon all commodities and articles of commerce which may be legally exported from ports of either state, the same premiums, drawbacks, and advantages shall be accorded, whether they are exported by the vessels of the one or by those of the other state.

7. All commodities and articles of commerce, which shall be imported, placed in depôt, or warehoused in the ports of the states and possessions of the two high contracting parties, so long as they shall remain in depôt or warehouse, and shall not be used for internal consumption, shall be subject, upon re-exportation to the same treatment and duties, whether that re-exportation shall be made in the vessels of the one or in those of the other state.

8. No priority or preference shall be given, directly or indirectly, by the government of either country, or by any company or corporation, or agent acting on its behalf or under its authority, in the purchase of any article the production of the soil, industry, or art of either of the two states and their possessions, imported into the ports of the other, on account of the nationality of the vessel in which such articles may be imported; it being the true intent and meaning of the high contracting parties, that no difference or distinction whatever shall be made in this respect.

9. In regard to the commerce to be carried on in Austrian vessels with the British possessions in the East Indies, her Britannic Majesty consents to grant the same facilities and privileges to the subjects of his Imperial and Royal Apostolic Majesty, as are or may be enjoyed under any treaty or act of parliament, by the subjects or citizens of the most favoured nations; subject to the laws, rules, regulations, and restrictions, which are or may become applicable to the vessels and subjects of any other foreign country enjoying the like advantages and privileges of trading with the said possessions.

10. The present treaty does not include the navigation and carrying trade between one port and another, situated in the dominions of one contracting party, by the vessels of the other, as far as regards the carrying of passengers, commodities, and articles of commerce; this navigation and transport being reserved to national vessels.

11. The vessels and subjects of the high contracting parties shall, by the present treaty, enjoy reciprocally all the advantages, immunities, and privileges, within the ports of their respective states and possessions, which are now enjoyed by the navigation and commerce of the most favoured nations: the effect hereof being to secure, in the United Kingdom and British possessions, to Austrian vessels and subjects, the full and entire advantages of navigation and commerce allowed by the Navigation Act passed in London on the 28th of August, 1833, and by another act of the same date, regulating the trade of the British possessions abroad; or which may be accorded by orders in council or by treaty to other powers: and in like manner British vessels and subjects shall enjoy, in the ports of the states and possessions of his Imperial and Royal Apostolic Majesty, the full and entire advantages of navigation and commerce granted by existing laws, regulations, and ordinances, or by treaty, to foreign powers: and her Majesty the Queen of the United Kingdom of Great Britain and Ireland, and his Imperial and Royal Apostolic Majesty, engage reciprocally not to grant any favours, privileges, or immunities whatsoever, in matters of commerce and navigation, to the subjects of any other state, which shall not be also at the same time extended to the subjects of the one or of the other of the high contracting parties, gratuitously, if the concession in favour of the other state shall have been gratuitous, or upon giving as nearly as possible the same compensation or equivalent, in case the concession shall have been conditional.

12. The clause of Article VII. of the convention concluded at Paris the 5th November, 1815, between the courts of Great Britain, Austria, Prussia, and Russia, relative to the commerce between the states of his Imperial and Royal Apostolic Majesty and the United States of the Ionian Islands, shall remain in force.

13. The present treaty, after being signed and ratified, shall replace the convention of navigation and commerce concluded the 21st December, 1829, in London, between the governments of his Britannic Majesty and of his Imperial and Royal Apostolic Majesty; and shall continue in force until the 31st of December, 1848; and further, until the expiration of 12 months after one of the high contracting parties shall have notified to the other the intention to terminate its duration. It is further agreed, that in 12 months after one of the high contracting parties has received from the other such notification, this treaty, and all the stipulations it contains, shall cease to be obligatory upon either party.

14. The present treaty shall be ratified, and the ratifications exchanged at Vienna, in the space of one month, or sooner if possible.

In witness whereof, &c. plenipotentiaries have signed the same, and have affixed thereto the seals of their arms.

Done at Vienna the 3d day of July, in the year of our Lord 1838.

FREDERIC JAMES LAMB.
METTERNICH.

Declaration signed by the respective Plenipotentiaries on the conclusion of the preceding Treaty.

With a view to prevent beforehand all doubt which might hereafter arise with regard to the true sense of the expressions contained in the treaty of commerce and navigation, signed this day between the plenipotentiaries of her Majesty the Queen of the United Kingdom of Great Britain and Ireland, and of his Majesty the Emperor of Austria, King of Hungary and Bohemia, the high contracting parties have agreed, by common consent, that the French text of the said treaty shall be considered by the Austrian government as the original text.

In witness whereof, the present declaration has been done in duplicate, and signed by the respective plenipotentiaries.

Vienna, 3d July, 1838.

FREDERIC JAMES LAMB.
METTERNICH.

Declaration made by the Plenipotentiary of her Britannic Majesty, on the Exchange of the Ratifications of the preceding Treaty.

In proceeding to the exchange of the ratifications of the treaty of commerce and navigation, between her Majesty the Queen of the United Kingdom of Great Britain and Ireland and his Majesty the Emperor of Austria, King of Hungary and Bohemia, concluded and signed at Vienna on the 3d of July, 1838, the undersigned plenipotentiary of her Britannic Majesty is commanded by her Majesty to explain and declare: —

1. That in the preamble of the said treaty, the words "the commercial relations of their respective states and possessions" shall be understood to mean "the commercial relations between their respective states and possessions," the latter form of words being that adopted in the preamble of the convention of commerce between Great Britain and Austria, signed at London, December 21. 1829.

2. That the stipulations of the third article of the aforesaid treaty of the 3d of July, 1838, relating to goods not the produce of the respective states, shall be understood to be mutual.

3. That by the seventh article of the aforesaid treaty of the 3d of July, 1838, it is understood that goods placed in warehouse shall not be liable to duty unless entered for consumption; and may be exported on the same terms in the ships of the one as in those of the other country.

Her Britannic Majesty's ratification of the aforesaid treaty of commerce and navigation is exchanged under the explicit declarations and understandings above mentioned.

Done at Milan, the 14th day of September, 1838.

FREDERIC JAMES LAMB.

Counter Declaration made by the Austrian Plenipotentiary.

In consequence of the declaration presented this day by his Excellency, Sir Frederic Lamb, Ambassador of her Britannic Majesty to his Imperial and Royal Apostolic Majesty, on the occasion of the exchange of the ratifications of the treaty of commerce and navigation, concluded and signed at Vienna on the 3d of July, between the plenipotentiaries of his Imperial and Royal Apostolic Majesty, and of her Britannic Majesty, which declaration is conceived in the following terms: —

1. That in the preamble of the said treaty the words "the commercial relations of their respective states and possessions" shall be understood to mean "the commercial relations between their respective states and possessions," the latter form of words being that adopted in the preamble of the convention of commerce signed at London on the 21st of December, 1829, between Austria and Great Britain.

2. That the stipulations of the 3d article of the aforesaid treaty of the 3d of July, 1838, relating to goods not the produce of the respective states, shall be understood to be mutual.

3. That by the 7th article of the treaty of the 3d of July, 1838, it is understood that goods placed in warehouse, shall not be liable to duty, unless entered for consumption; and may be exported on the same terms in the ships of the one as in those of the other country.

The undersigned, chancellor of court and state, is authorised by his Majesty the Emperor, his august master, to accede, in every particular, to this declaration presented by his Excellency the Ambassador of her Britannic Majesty.

Done at Milan, the 14th of September, 1838.

METTERNICH.

CHINA.

Treaty between Her Majesty and the Emperor of China, signed, in the English and Chinese Languages, at Nanking, August 29. 1842. Ratifications exchanged at Hong-Kong, 26th June, 1843.

Article I. There shall henceforward be peace and friendship between her Majesty the Queen of the United Kingdom of Great Britain and Ireland and his Majesty the Emperor of China, and between their respective subjects, who shall enjoy full security and protection for their persons and property within the dominions of the other.

2. His Majesty the Emperor of China agrees, that British subjects, with their families and establishments, shall be allowed to reside, for the purpose of carrying on their mercantile pursuits, without molestation or restraint, at the cities and towns of Canton, Amoy, Foo-chow-foo, Ningpo, and Shanghai; and her Majesty the Queen of Great Britain, &c. will appoint superintendents, or consular officers, to reside at each of the above-named cities or towns, to be the medium of communication between the Chinese authorities and the said merchants, and to see that the just duties and other dues of the Chinese government, as hereafter provided for, are duly discharged by her Britannic Majesty's subjects.

3. It being obviously necessary and desirable that British subjects should have some port whereat they may careen and refit their ships when required, and keep stores for that purpose, his Majesty the Emperor of China cedes to her Majesty the Queen of Great Britain, &c. the island of Hong-Kong, to be possessed in perpetuity by her Britannic Majesty, her heirs and successors, and to be governed by such laws and regulations as her Majesty the Queen of Great Britain, &c. shall see fit to direct.

4. The Emperor of China agrees to pay the sum of six millions of dollars, as the value of the opium which was delivered up at Canton in the month of March, 1839, as a ransom for the lives of her Britannic Majesty's superintendent and subjects who had been imprisoned and threatened with death by the Chinese high officers.

5. The government of China having compelled the British merchants trading at Canton to deal exclusively with certain Chinese merchants, called Hong merchants (or Co-Hong), who had been licensed by the Chinese government for that purpose, the Emperor of China agrees to abolish that practice in future at all ports where British merchants may reside, and to permit them to carry on their mercantile transactions with whatever persons they please; and his Imperial Majesty further agrees to pay to the British government the sum of three millions of dollars, on account of debts due to British subjects by some of the said Hong merchants, or Co-Hong, who have become insolvent, and who owe very large sums of money to subjects of her Britannic Majesty.

6. The government of her Britannic Majesty having been obliged to send out an expedition to demand and obtain redress for the violent and unjust proceedings of the Chinese high authorities towards her Britannic Majesty's officer and subjects, the Emperor of China agrees to pay the sum of twelve millions of dollars, on account of the expenses incurred; and her Britannic Majesty's plenipotentiary voluntarily agrees, on behalf of her Majesty, to deduct from the said amount of twelve millions of dollars, any sums which may have been received by her Majesty's combined forces, as ransom for cities and towns in China subsequent to the 1st day of August, 1841.

7. It is agreed, that the total amount of twenty-one millions of dollars, described in the three preceding articles, shall be paid as follows:—

Six millions immediately.

Six millions in 1843; that is, three millions on or before the 30th of the month of June, and three millions on or before the 31st of December.

Five millions in 1844; that is, two millions and a half on or before the 30th of June, and two millions and a half on or before the 31st of December.

Four millions in 1845; that is, two millions on or before the 30th of June, and two millions on or before the 31st of December.

And it is further stipulated, that interest, at the rate of 5 per cent. per annum, shall be paid by the government of China on any portion of the above sums that are not punctually discharged at the periods fixed.

8. The Emperor of China agrees to release, unconditionally, all subjects of her Britannic Majesty (whether natives of Europe or India), who may be in confinement at this moment in any part of the Chinese empire.

9. The Emperor of China agrees to publish and promulgate, under his imperial sign manual and seal, a full and entire amnesty and act of indemnity to all subjects of China, on account of their having resided under, or having had dealings and intercourse with, or having entered the service of, her Britannic Majesty, or of her Majesty's officers; and his Imperial Majesty further engages to release all Chinese subjects who may be at this moment in confinement for similar reasons.

10. The Emperor of China agrees to establish at all the ports which are, by the second article of this treaty, to be thrown open for the resort of British merchants, a fair and regular tariff of export and import customs and other dues, which tariff shall be publicly notified and promulgated for general information; and the Emperor further engages, that, when British merchandise shall have once paid at any of the said ports the regulated customs and dues, agreeable to the tariff to be hereafter fixed, such merchandise may be conveyed by Chinese merchants to any province or city in the interior of the empire of China, on paying a further amount as transit duties, which shall not exceed per cent. on the tariff value of such goods.—(See, for Tariff, art. CANTON.)

11. It is agreed that her Britannic Majesty's chief high officer in China shall correspond with the Chinese high officers, both at the capital and in the provinces, under the term "communication;" the subordinate British officers and Chinese high officers in the provinces, under the term "statement," on the part of the former, and on the part of the latter, "declaration;" and the subordinates of both countries on a footing of perfect equality: merchants and others not holding official situations, and therefore not included in the above, on both sides, to use the term "representation" in all papers addressed to, or intended for the notice of, the respective governments.

12. On the assent of the Emperor of China to this treaty being received, and the discharge of the first instalment of money, her Britannic Majesty's forces will retire from Nanking and the Grand Canal, and will no longer molest or stop the trade of China. The military post at Chinhae will also be withdrawn; but the islands of Koolangsoo, and that of Chusan, will continue to be held by her Majesty's forces until the money payments, and the arrangements for opening the ports to British merchants, be completed.

13. The ratification of this treaty by her Majesty the Queen of Great Britain, &c. and his Majesty the Emperor of China, shall be exchanged as soon as the great distance which separates England from China will admit; but, in the meantime, counterpart copies of it, signed and sealed by the plenipotentiaries on behalf of their respective sovereigns, shall be mutually delivered, and all its provisions and arrangements shall take effect.

Done at Nanking, and signed and sealed by the plenipotentiaries on board her Britannic Majesty's ship "Cornwallis," this 29th day of August, 1842; corresponding with the Chinese date, twenty-fourth day of the seventh month, in the twenty-second year of Taoukwang.

HENRY POTTINGER,
Her Majesty's Plenipotentiary,

And signed by the seals of four Chinese commissioners.

DENMARK.

Convention of Commerce between Great Britain and Denmark, signed at London, the 16th of June, 1824.

Article 1. From and after the 1st day of July next, Danish vessels entering or departing from the ports of the United Kingdom of Great Britain and Ireland, and British vessels entering or departing from the ports of his Danish Majesty's dominions, shall not be subject to any other or higher duties or charges whatever, than are or shall be levied on national vessels entering or departing from such ports respectively.

1. All articles of the growth, produce, or manufacture of any of the dominions of either of the high contracting parties, which are or shall be permitted to be imported into or exported from the ports of the United Kingdom and of Denmark respectively, in vessels of the one country, shall, in like manner, be imported into and exported from those ports in vessels of the other.

3. All articles not of the growth, produce, or manufacture of the dominions of his Britannic Majesty, which can legally be imported from the United Kingdom of Great Britain and Ireland into the ports and dominions of the King of Denmark, in British ships, shall be subject only to the same duties as are payable upon the like articles, if imported in Danish ships; and the same reciprocity shall be observed with regard to Danish vessels in the ports of the said United Kingdom of Great Britain and Ireland, in respect to all articles not the growth, produce, or manufacture of the dominions of his Danish Majesty, which can legally be imported into the ports of the United Kingdom in Danish ships.

4. All goods which can legally be imported into the ports of either country, shall be admitted at the same rate of duty, whether imported in vessels of the other country, or in national vessels; and all goods which can be legally exported from the ports of either country, shall be entitled to the same bounties, drawbacks, and allowances, whether exported in vessels of the other country, or in national vessels.

5. No priority or preference shall be given, directly or indirectly, by the government of either country, or by any company, corporation, or agent, acting on its behalf or under its authority, in the purchase of any article the growth, produce, or manufacture of either country imported into the other, on account of or in reference to the character of the vessel in which such article was imported: it being the true intent and meaning of the high contracting parties, that no distinction or difference whatever shall be made in this respect.

6. The high contracting parties having mutually determined not to include in the present convention their respective colonies, in which are comprehended, on the part of Denmark, Greenland, Iceland, and the islands of Ferroe; it is expressly agreed that the intercourse which may at present legally be carried on by the subjects or ships of either of the said high contracting parties with the colonies of the other, shall remain upon the same footing as if this convention had never been concluded.

7. The present convention shall be in force for the term of 10 years from the date hereof; and further, until the end of 12 months after either of the high contracting parties shall have given notice to the other of its intention to terminate the same; each of the high contracting parties reserving to itself the right of giving such notice to the other, at the end of the said term of 10 years; and it is hereby agreed between them, that at the expiration of 12 months after such notice shall have been received by either party from the other, this convention, and all the provisions thereof, shall altogether cease and determine.

8. The present convention shall be ratified, and the ratifications shall be exchanged at London, within one month from the date hereof, or sooner if possible.

In witness whereof, the respective plenipotentiaries have signed the same, and have affixed thereto the seals of their arms.

Done at London, the 16th of June, 1824,

GEORGE CANNING.
W. HUSKISSON.
C. E. MOLTKE.

Separate Article.

The high contracting parties reserve to themselves to enter upon additional stipulations for the purpose of facilitating and extending, even beyond what is comprehended in the convention of this date, the commercial regulations of their respective subjects and dominions, upon the principle either of reciprocal or equivalent advantages, as the case may be. And in the event of any articles or article being concluded between the said high contracting parties, for giving effect to such stipulations, it is hereby agreed, that the article or articles which may hereafter be so concluded shall be considered as forming part of the aforesaid convention.

Additional Article.

Their Britannic and Danish Majesties mutually agree, that no higher or other duties shall be levied in either of their dominions (their respective colonies being excepted from the convention of this date), upon any personal property of their respective subjects, on the removal of same from the dominions of their said Majesties reciprocally, either upon the inheritance of such property, or otherwise, than are or shall be payable in each state, upon the like property, when removed by a subject of such state respectively.

FRANCE.

Convention of Commerce between His Britannic Majesty and the Most Christian King, together with two additional Articles thereunto annexed, signed at London, January 26. 1826.

Article 1. French vessels coming from or departing for the ports of France, or, if in ballast, coming from or departing for any place, shall not be subject, in the ports of the United Kingdom, either on entering into or departing from the same, to any higher duties of tonnage, harbour, light-house, pilotage, quarantine, or other similar or corresponding duties, of whatever nature, or under whatever denomination, than those to which British vessels, in respect of the same voyages, are or may be subject, on entering into or departing from such ports; and, reciprocally, from and after the same period, British vessels coming from or departing for the ports of the U. Kingdom, or, if in ballast, coming from or departing for any place, shall not be subject, in the ports of France, either in entering into or departing from the same, to any higher duties of tonnage, harbour, light-house, pilotage, quarantine, or other similar or corresponding duties, of whatever nature, or under whatever denomination, than those to which French vessels, in respect of the same voyages, are or may be subject, on entering into or departing from such ports; whether such duties are collected separately, or are consolidated in one and the same duty; — his Most Christian Majesty reserving to himself to regulate the amount of such duty or duties in France, according to the rate at which they are or may be established in the U. Kingdom: at the same time, with a view of diminishing the burdens imposed upon the navigation of the two countries, his Most Christian Majesty will always be disposed to reduce the amount of the said burdens in France, in proportion to any reduction which may hereafter be made of those now levied in the ports of the U. Kingdom.

2. Goods which can or may be legally imported into the ports of the U. Kingdom, from the ports of France, if so imported in French vessels, shall be subject to no higher duties than if imported in British vessels; and, reciprocally, goods which can or may be legally imported into the ports of France, from the ports of the U. Kingdom, if so imported in British vessels, shall be subject to no higher duties than if imported in French vessels. The produce of Asia, Africa, and America, not being allowed to be imported from the said countries, nor from any other, in French vessels, nor from France in French, British, or any other vessels, into the ports of the U. Kingdom, for home consumption, but only for warehousing and re-exportation, his Most Christian Majesty reserves to himself to direct that, in like manner, the produce of Asia, Africa, and America, shall not be imported from the said countries, nor from any other, in British vessels, nor from the United Kingdom in British, French, or any other vessels, into the ports of France, for the consumption of that kingdom, but only for warehousing, and re-exportation.

With regard to the productions of the countries of Europe, it is understood between the high contracting parties, that such productions shall not be imported, in British ships, into France, for the consumption of that kingdom, unless such ships shall have been laden therewith in some port of the United Kingdom; and that his Britannic Majesty may adopt, if he shall think fit, some corresponding restrictive measure, with regard to the productions of the countries of Europe imported into the ports of the United Kingdom in French vessels: the high contracting parties reserving, however, to themselves the power of making, by mutual consent, such relaxations in the strict execution of the present article, as they may think useful to the respective interests of the 2 countries upon the principal of mutual concessions, affording each to the other reciprocal or equivalent advantages.

3. All goods which can or may be legally exported from the ports of either of the 2 countries, shall, on their export, pay the same duties of exportation, whether the exportation of such goods be made in British or in French vessels, provided the said vessels proceed, respectively, direct from the ports of the one country to those of the other. And all the said goods so exported in British or French vessels, shall be reciprocally entitled to the same bounties, drawbacks, and other allowances of the same nature, which are granted by the regulations of each country, respectively.

4. It is mutually agreed between the high contracting parties, that in the intercourse of navigation between their 2 countries, the vessels of any third power shall in no case obtain more favourable conditions than those stipulated, in the present convention, in favour of British and French vessels.

5. The fishing-boats of either of the 2 countries, which may be forced by stress of weather to seek shelter in the ports or on the coast of the other country, shall not be subject to any duties or port charges of any description whatsoever; provided the said boats, when so driven in by stress of weather, shall not discharge or receive on board any cargo, or portion of cargo, in the ports or on the parts of the coast where they shall have sought shelter.

6. It is agreed that the provisions of the present convention between the high contracting parties shall be reciprocally extended and in force, in all the possessions subject to their respective dominions in Europe.

7. The present convention shall be in force for the term of 10 years, from the 5th of April of the present year; and further, until the end of 12 months after either of the high contracting parties shall have given notice to the other of its intention to terminate its operation; each of the high contracting parties reserving to itself the right of giving such notice to the other, at the end of the said term of 10 years: and it is agreed between them, that, at the end of 12 months' extension agreed to on both sides, this convention, and all the stipulations thereof, shall altogether cease and determine.

8. The present convention shall be ratified, and the ratifications shall be exchanged in London, within the space of 1 month, or sooner if possible.

In witness whereof, the respective plenipotentiaries have signed the same, and have affixed thereto the seals of their arms.

Done at London, the 26th day of January, in the year of our Lord 1826,

GEORGE CANNING.
WILLIAM HUSKISSON.
LE PRINCE DE POLIGNAC.

Additional Articles.

Article 1. French vessels shall be allowed to sail from any port whatever of the countries under the dominion of his Most Christian Majesty, to all the colonies of the United Kingdom (except those possessed by the East India Company), and to import into the said colonies all kinds of merchandise (being productions the growth or manufacture of France, or of any country under the dominion of France), with the exception of such as are prohibited to be imported into the said colonies, or are permitted to be imported only from countries under the British dominion; and the said French vessels, as well as the merchandise imported in the same, shall not be subject, in the colonies of the United Kingdom, to other or higher duties than those to which British vessels may be subject, on importing the same merchandise from any foreign country, or which are imposed upon the merchandise itself.

The same facilities shall be granted, reciprocally, in the colonies of France, with regard to the importation in British vessels of all kinds of merchandise, (being productions the growth and manufacture of the United Kingdom, or any country under the British dominion,) with the exception of such as are prohibited to be imported into the said colonies, or are permitted to be imported only from countries under the dominion of France. And whereas all goods, the produce of any foreign country, may now be imported into the colonies of the United Kingdom, in the ships of that country, with the exception of a limited list of specified articles, which can only be imported into the said colonies in British ships, his Majesty the King of the United Kingdom reserves to himself the power of adding to the said list of excepted articles any other, the produce of the French dominions, the addition whereof may appear to his Majesty to be necessary for placing the commerce and navigation to be permitted to the subjects of each of the high contracting parties with the colonies of the other, upon a footing of fair reciprocity.

2 French vessels shall be allowed to export from all the colonies of the United Kingdom (except those possessed by the East India Company) all kinds of merchandise which are not prohibited to be exported from such colonies in vessels other than those of Great Britain; and the said vessels, as well as the merchandise exported in the same, shall not be subject to other or higher duties than those to which British vessels may be subject, on exporting the said merchandise, or which are imposed upon the merchandise itself; and they shall be entitled to the same bounties, drawbacks, and other allowances of the same nature, to which British vessels would be entitled, on such exportation.

The same facilities and privileges shall be granted, reciprocally, in all the colonies of France, for the exportation in British vessels, of all kinds of merchandise, which are not prohibited to be exported from such colonies in vessels other than those of France.

These 2 additional articles shall have the same force and validity as if they were inserted, word for word, in the convention signed this day. They shall be ratified, and the ratifications shall be exchanged at the same time.

In witness whereof, the respective plenipotentiaries have signed the same, and have affixed thereto the seals of their arms.

Done at London, Jan. 26. 1826.

GEORGE CANNING. LE PRINCE DE POLIGNAC.
WILLIAM HUSKISSON.

A Treasury letter, dated 28th of March, 1826, directs that French vessels, and their cargoes legally imported or exported on board the same, according to the terms of the convention in the preceding pages, are, from the 5th of April, 1826, to be charged with such and the like duties only, of whatever kind they may be, that are charged on British vessels, and similar cargoes laden on board thereof; and in like manner the same bounties, drawbacks, and allowances are to be paid on articles exported in French vessels, that are paid, granted, or allowed on similar articles exported in British vessels. And the necessary instructions are to be transmitted to the officers in the colonies for carrying into effect the stipulations contained in the 2 additional articles of the said convention, respecting French vessels and their cargoes, from the 1st of October, 1826.

A convention regulating the respective limits of the British and French oyster and other fisheries was signed at Paris, on the 2nd of August, 1839.

HANSE TOWNS.

Convention of Commerce between His Britannic Majesty, and the Free Hanseatic Republics of Lubeck, Bremen, and Hamburg, signed at London, Sept. 29. 1825.

Article 1. From and after the date hereof, British vessels entering or departing from the ports of the free Hanseatic republics of Lubeck; Bremen, or Hamburg; and Lubeck, Bremen, or Hamburg vessels entering or departing from the ports of the United Kingdom of Great Britain and Ireland, shall not be subject to any other or higher ship duties or charges than are or shall be levied on national vessels entering or departing from such ports respectively.

2. All goods, whether the production of the territories of the free Hanseatic republics of Lubeck, Bremen, or Hamburg, or of any other country, which may be legally imported from any of the ports of the said republics into the United Kingdom of Great Britain and Ireland in British vessels, shall, in like manner, be permitted to be imported in Lubeck, Bremen, or Hamburg vessels; and all goods, whether the productions of any of the dominions of his Britannic Majesty, or of any other country, which may be legally exported from the ports of the United Kingdom in British vessels, shall, in like manner, be permitted to be exported from the said ports in Lubeck, Bremen, or Hamburg vessels. And all goods, which may be legally imported into or exported from the ports of Lubeck, Bremen, or Hamburg, in national vessels, shall, in like manner, be permitted to be imported into or exported from the ports of Lubeck, Bremen, or Hamburg, in British vessels.

3. All goods which can be legally imported into the ports of the United Kingdom directly from the ports of Lubeck, Bremen, or Hamburg, or either of them, shall be admitted at the same rate of duty, whether imported in British vessels, or in vessels belonging to either of the said republics; and all goods which can be legally exported from the United Kingdom, shall be entitled to the same bounties, drawbacks, and allowances, whether exported in British or Hanseatic vessels. And the like reciprocity shall be observed, in the ports of the said republics, in respect to all goods which can be legally imported into or exported from any or either of the said ports in vessels belonging to the United Kingdom.

4. No priority or preference shall be given, directly or indirectly, by any or either of the contracting parties, nor by any company, corporation, or agent, acting on their behalf or under their authority, in the purchase of any article, the growth, produce, or manufacture of their states respectively, imported into the other, on account of or in reference to the character of the vessel in which such article was imported; it being the true intent and meaning of the high contracting parties that no distinction or difference whatever shall be made in this respect.

5. In consideration of the limited extent of the territories belonging to the republics of Lubeck, Bremen, and Hamburg, and the intimate connection of trade and navigation subsisting between these republics, it is hereby stipulated and agreed, that any vessel which shall have been built in any or either of the ports of the said republics, and which shall be owned exclusively by a citizen or citizens of any or either of them, and of which the master shall also be a citizen of either of them, and provided 3-4ths of the crew shall be subjects or citizens of any or either of the said republics, or of any or either of the states comprised in the Germanic Confederation, such vessel, so built, owned, and navigated, shall, for all the purposes of this convention, be taken to be and be considered as a vessel belonging to Lubeck, Bremen, or Hamburg.

6. Any vessel, together with her cargo, belonging to either of the three free Hanseatic republics of Lubeck, Bremen, or Hamburg, and coming from either of the said ports to the United Kingdom, shall,

for all the purposes of this convention, be deemed to come from the country to which such vessel belongs; and any British vessel and her cargo trading to the ports of Lubeck, Bremen, or Hamburg, directly or in succession, shall, for the like purposes, be on the footing of a Hanseatic vessel and her cargo making the same voyage.

7. It is further mutually agreed that no higher or other duties shall be levied, in any or either of the states of the high contracting parties, upon any personal property of the subjects and citizens of each respectively, on the removal of the same from the dominions or territory of such states, (either upon inheritance of such property, or otherwise,) than are or shall be payable, in each state, upon the like property when removed by a subject or citizen of such state respectively.

8. The high contracting parties reserve to themselves to enter upon additional stipulations for the purpose of facilitating and extending, even beyond what is comprehended in the convention of this date, the commercial relations of their respective subjects and dominions, citizens and territories, upon the principle either of reciprocal or equivalent advantages, as the case may be; and, in the event of any article or articles being concluded between the said high contracting parties, for giving effect to such stipulations, it is hereby agreed that the article or articles which may hereafter be so concluded shall be considered as forming part of the present convention.

9. The present convention shall be in force for the term of 10 years from the date hereof; and further, until the end of 12 months after the King of the United Kingdom of Great Britain and Ireland, on the one part, or the governments of the free Hanseatic republics of Lubeck, Bremen, or Hamburg, or either of them, on the other part, shall have given notice of their intention to terminate the same; each of the said high contracting parties reserving to itself the right of giving such notice to the other at the end of the said term of 10 years; and it is hereby agreed between them, that, at the expiration of 12 months after such notice shall have been received by either of the parties from the other, this convention, and all the provisions thereof, shall altogether cease and determine, as far as regards the states giving and receiving such notice; it being always understood and agreed, that, if one or more of the Hanseatic republics aforesaid shall, at the expiration of 10 years from the date hereof, give or receive notice of the proposed termination of this convention, such convention shall, nevertheless, remain in full force and operation as far as regards the remaining Hanseatic republics or republic which may not have given or received such notice.

10. The present convention shall be ratified, and the ratifications shall be exchanged at London, within one month from the date hereof, or sooner if possible.

In witness whereof, the respective plenipotentiaries have signed the same, and have affixed thereto the seals of their arms.

Done at London, Sept. 29. 1825.

GEORGE CANNING.

JAMES COLQUHOUN.

Supplementary Convention to the Treaty of Commerce and Navigation of the 29th of September, 1825, between the Senates of the Free Hanseatic Cities of Lubeck, Bremen, and Hamburg, and her Majesty the Queen of Great Britain and Ireland; signed at London, the 3d of August, 1841.

Art. 1. The senate of the free Hanseatic cities of Lubeck, Bremen, and Hamburg, hereby agree that British vessels coming from countries not being part of the dominions of her Britannic Majesty, shall henceforward, together with their cargoes, be admitted into the ports of Lubeck, Bremen, and Hamburg, and all vessels shall on their admission pay dues not higher nor other than those which shall be paid in similar circumstances by vessels belonging to Lubeck, Bremen, or Hamburg, and the duties to be paid upon the cargoes of such British vessels shall not be higher nor other than if such cargoes had been imported in vessels belonging to Lubeck, Bremen, or Hamburg. And in consideration thereof, her Britannic Majesty agrees that from and after the date of the exchange of the ratification of this present convention, the vessels of the said free Hanseatic republics of Lubeck, Bremen, and Hamburg, when coming from Hanseatic ports, shall, together with their cargoes, be admitted into the ports of all her Britannic Majesty's possessions; and such vessels shall, on their admission, pay dues not higher nor other than those which shall be paid in similar circumstances by British vessels; and the duties to be paid upon the cargoes of such Hanseatic vessels shall not be higher nor other than if such cargoes had been imported in British vessels.

2. In consideration of the privileges extended to British trade and navigation by the first article of the present convention, her Britannic Majesty further agrees that all goods, being the produce of the states of the free Hanseatic cities of Lubeck, Bremen, and Hamburg, or of the other states of the Germanic Confederation, or of the states comprised in the Germanic Union of Customs, and which may be imported in any foreign vessels from the ports of Lubeck, Bremen, and Hamburg, or from any port situated on the Elbe or Weser, into the ports of the British possessions abroad, including Gibraltar and Malta, shall also be permitted to be imported from the said ports of the free cities of Lubeck, Bremen, and Hamburg, into the ports of the said British possessions abroad, including Gibraltar and Malta, in vessels belonging to Lubeck, Bremen, and Hamburg, built, owned, and navigated as stipulated in the fifth article of the convention of commerce and navigation, concluded on the 29th of September, 1825, between Great Britain on the one part, and the free Hanseatic cities of Lubeck, Bremen, and Hamburg on the other part; and such goods, wares, and merchandise being the produce of the free Hanseatic republics, or of the other states of the German Confederation, or of the states of the Germanic Union of Customs, and so imported in Hanseatic vessels into the ports of the said British possessions abroad, including Gibraltar and Malta; and all goods, wares, and merchandise exported in Hanseatic vessels, built, owned, and navigated as aforesaid, from the ports of the British possessions abroad, including Gibraltar and Malta, to any foreign country whatever, shall pay no other or higher duties than if the same were imported or exported in British vessels.

3. The present convention, which shall be considered as supplementary to the convention concluded between Great Britain and the free Hanseatic republics on the 29th of September, 1825, shall be ratified, and the ratifications shall be exchanged at London as soon as possible within the space of six weeks.

In witness whereof, the respective plenipotentiaries have signed the same, and have affixed the seals of their arms.

Done at London, on the 3d day of August, in the year of our Lord 1841.

PALMERSTON.
BANKS.

By an order in council dated September 14. 1841, her Majesty is pleased to order that all goods being the produce of the states of the free Hanseatic cities of Lubeck, Bremen, and Hamburg, or of the other states of the Germanic Confederation, or of the states comprised in the Germanic Union of Customs, and which may be imported in any foreign vessels from the ports of Lubeck, Bremen, and Hamburg, or from any port situated on the Elbe or Weser into the ports of the British possessions abroad, including Gibraltar and Malta, shall also be permitted to be imported from the said ports of the free cities of Lubeck, Bremen, and Hamburg, into the ports of the said British possessions abroad (including Gibraltar and Malta) in vessels belonging to Lubeck, Bremen, and Hamburg, built, owned, and navigated as stipulated in the fifth article of the convention of commerce and navigation, concluded on the 29th of September, 1825, between Great Britain on the one part, and the free Hanseatic cities of Lubeck, Bremen, and Hamburg on the other part; and such goods, being the produce of the free Hanseatic republics, or of the other states of the Germanic Confederation, or of the states of the Germanic Union of Customs, and so imported in Hanseatic vessels into the ports of the said British possessions abroad

(including Gibraltar and Malta), and all goods exported in Hanseatic vessels, built, owned, and navigated as aforesaid, from the ports of the British possessions abroad (including Gibraltar and Malta) to any foreign country whatever, shall pay no other or higher duties than if the same were imported or exported in British vessels.

GREECE.

Convention of Commerce and Navigation between her Britannic Majesty and the King of Greece, signed at London, October 4th, 1837.

Art. 1. From and after the exchange of the ratifications of the present convention, Greek vessels entering into or departing from the ports of the United Kingdom of Great Britain and Ireland, and British vessels entering into or departing from the ports of the kingdom of Greece, shall not be subject to any other or higher duties or charges whatever, than are or shall be levied on national vessels entering into or departing from such ports, respectively.

2. All articles, the growth, produce, or manufacture of the dominions of either of the high contracting parties, which are or shall be permitted to be imported into or exported from the ports of the United Kingdom of Great Britain and Ireland, and of the kingdom of Greece, respectively, in vessels of the one country, shall, in like manner, be permitted to be imported into and exported from those ports, in vessels of the other country.

3. All articles not the growth, produce, or manufacture of the dominions of her Britannic Majesty, which can legally be imported from the United Kingdom of Great Britain and Ireland into the ports of the kingdom of Greece in British ships, shall be subject only to the same duties as are payable upon the like articles if imported in Greek vessels. And, reciprocally, a similar rule shall be observed in the ports of the United Kingdom, in respect of all articles not the growth, produce, or manufacture of the dominions of his Majesty the King of Greece, which can legally be imported into the ports of the United Kingdom in Greek vessels.

4. All goods, wares, and merchandise, which can legally be imported into the ports of either country, shall be admitted at the same rate of duty, whether imported in national vessels or in vessels of the other country; and all goods, wares, and merchandise which can legally be exported from the ports of either country, shall be entitled to the same bounties, drawbacks, and allowances, whether exported in vessels of the one country or in those of the other.

5. Neither of the two governments, and no company, corporation, or agent, acting on behalf of or under the authority of either government, shall, in the purchase of any article which is the growth, produce, or manufacture of one country, and is imported into the other, give, either directly or indirectly, any priority or preference on account of or in reference to the national character of the vessel in which such article may be imported; it being the true intent and meaning of the high contracting parties, that no distinction or difference whatever shall be made in this respect.

6. In order to avoid any misunderstanding with regard to the regulations which may determine the conditions which constitute a British or Greek vessel, it is hereby agreed that all vessels built in the dominions of her Britannic Majesty, and all vessels which, having been captured from an enemy by her Majesty's ships of war, or by the subjects of her said Majesty, furnished with letters of marque by the lords commissioners of the Admiralty, shall have been regularly condemned in one of her said Majesty's prize courts as lawful prize; and all vessels which shall have been condemned in any competent court for a breach of the laws made for the prevention of the slave trade; and which shall be owned, navigated, and registered according to the laws of Great Britain, shall be considered as British vessels: and that all vessels built in the territories of Greece, or which shall have been captured from an enemy by the ships of war of the Greek government, or by Greek subjects furnished with letters of marque, and shall have been regularly condemned in one of the prize courts of the kingdom of Greece as a lawful prize, and which shall be wholly owned by any subject or subjects of Greece, and whereof the master and three-fourths of the crew are subjects of Greece, shall be considered as Greek vessels.

7. If any ships of war or merchantmen of the one nation should be wrecked on the coasts of the other, all such parts of the said ships of war or merchantmen, or of the furniture or appurtenances thereof, as also all goods and merchandise which shall be saved, or the produce thereof, and likewise the papers found on board the vessel, shall be carefully preserved until they are claimed by the proprietors, or their agents duly authorised, or by the respective consuls in whose district such wreck may have taken place, if such claim be preferred within the period fixed by the laws in force in the states of the high contracting parties; and such consul, proprietor, or agent shall pay only the expenses incurred in the preservation of the property, and the rate of salvage which would have been payable, in the like case, upon a national vessel; and the said goods and merchandise saved from the wreck shall not be liable to pay duties, unless cleared for local consumption.

8. Her Britannic Majesty and his Majesty the King of Greece have agreed, that each of the high contracting parties shall have the right to nominate and appoint consuls-general, consuls, and vice-consuls, in all the ports of the dominions of the other contracting party wherein such consular officers are or may be necessary for the advancement of commerce and for the protection of the trade of the subjects of either crown; and it is expressly stipulated that such consuls, of whatever class, shall, in the country in which they are stationed, be placed upon the footing of the consuls of the most favoured nation.

9. Her Britannic Majesty consents to grant to the subjects of his Majesty the King of Greece, the same facilities and privileges, with respect to the commerce to be carried on in Greek vessels with the British dominions in the East Indies, as are or may be enjoyed under any treaty or act of parliament by the subjects or citizens of the most favoured nation; it being always understood that the laws, rules, regulations, and restrictions, which are or may be applicable to the ships and subjects of any other foreign country, enjoying the like facilities and privileges of trading with the said dominions, shall be equally applicable to the subjects of the king of Greece.

10 All subjects of her Britannic Majesty shall, within the dominions of the King of Greece, be as free as native Greeks to manage their own affairs themselves, or to commit the management of those affairs to any other person whom they may please to appoint as broker, factor, agent, or interpreter; nor shall British subjects be restrained in their choice of persons to act in such capacities, nor be called upon to pay any salary or remuneration to any person whom they shall not choose to employ. Absolute freedom shall also be allowed, in all cases, to the buyer and seller to bargain together, and to fix as to them may seem meet, the price of any goods, wares, or merchandise imported into, or to be exported from, the dominions of the King of Greece, observing the laws and established customs of the country. The same privileges shall be enjoyed in the dominions of her Britannic Majesty by the subjects of his Majesty the King of Greece, under the same conditions.

11. In all that relates to the police of ports, to the lading and unlading of vessels, and to the safety of merchandise, goods, and effects, the local laws and police regulations of each country shall be applied to the subjects of both, without discrimination or distinction; and, throughout the whole extent of the territories of each contracting party, the subjects of both shall enjoy full and entire protection for their persons and property. They shall have free and easy access to the courts of justice in the prosecution and defence of their rights, and shall be at liberty to employ the lawyers, attorneys, or agents, of whatever denomination, whom they may deem the best qualified to maintain and defend their interests: it being understood that they shall conform, in this respect, to the obligations imposed upon native subjects by the laws of the country. In all that concerns the administration of justice, they shall enjoy the same privileges, rights, and franchises, that belong to natives; and in none of these respects shall they be subject to any other duty or tax than is imposed upon natives. They shall be exempted from all com-

pulsory military service, either by sea or by land; no forced loan shall be imposed upon them; and their property shall be subject to no other charge, requisition, or tax, than those to which the property of natives shall be liable.

12. Her Majesty the Queen of the United Kingdom of Great Britain and Ireland, and his Majesty the King of Greece, agree that the subjects of the respective countries shall enjoy, within the dominions of the other, the full benefit of the complete toleration and protection for the professors of all religious opinions, which at present exists in both countries by law.

13. It shall be free for the subjects of her Britannic Majesty residing in the dominions of the King of Greece, and for the subjects of his Majesty the King of Greece residing in the dominions of her Britannic Majesty, to dispose of their property, of every description, by will or testament, as they may judge fit; and if any British subject shall die in the territories of the King of Greece, or any Greek subject shall die in the territories of the Queen of Great Britain, without will or testament, the respective consuls or vice-consuls shall exercise the right of administering to the property of subjects of their nation so dying intestate, for the benefit of the legitimate heirs to such property, and of the creditors upon the estate, so far as the laws of the respective countries shall admit.

14. The high contracting parties agree that the stipulations of the present convention shall be applicable to Gibraltar and to the island of Malta.

15. The present convention shall be in force for 10 years from the date of the exchange of the ratifications thereof; and further, until the end of 12 months after either of the high contracting parties shall have given notice to the other of its intention to terminate the same; each of the high contracting parties reserving to itself the right of giving such notice to the other at the end of the 10 years abovementioned, or at any other period after that time; and it is hereby agreed between them, that at the expiration of 12 months after such notice shall have been received by either party from the other, this convention, and all the provisions thereof, shall altogether cease and determine.

16. The present convention shall be ratified, and the ratifications shall be exchanged at London, within 3 months from the date hereof.

In witness whereof, the respective plenipotentiaries have signed the same, and have affixed thereto the seals of their arms.

Done at London, the 4th day of October, in the year of our Lord 1837.

PALMERSTON.
TRICOUPI.

An order in council, dated July 5th, 1838, directs that Greek vessels, entering or departing from the ports of the United Kingdom of Great Britain and Ireland, together with the cargoes on board the same (such cargoes consisting of articles which may be legally imported or exported), shall not be subject to any other or higher duties or charges whatever than are or shall be levied on British vessels entering or departing from such ports, or on similar articles, when imported into or exported from such ports in such vessels; and also, such articles, when exported from the said ports in Greek vessels, shall be entitled to the same bounties, drawbacks, and allowances that are granted on similar articles when exported in British vessels.

MEXICO.

Treaty of Amity, Commerce, and Navigation, between Great Britain and Mexico, signed at London, December 26. 1826.

Article 1. There shall be perpetual amity between the dominions and subjects of his Majesty the King of the United Kingdom of Great Britain and Ireland, and the United States of Mexico, and their citizens.

2. There shall be, between all the territories of his Britannic Majesty in Europe and the territories of Mexico, a reciprocal freedom of commerce. The inhabitants of the two countries, respectively, shall have liberty freely and securely to come, with their ships and cargoes, to all places and rivers in the territories aforesaid, saving only such particular ports to which other foreigners shall not be permitted to come, to enter into the same, and to remain and reside in any part of the said territories respectively; also to hire and occupy houses and warehouses for the purposes of their commerce; and, generally, the merchants and traders of each nation, respectively, shall enjoy the most complete protection and security for their commerce.

In like manner, the respective ships of war and post-office packets of the 2 countries shall have liberty freely and securely to come to all harbours, rivers, and places, saving only such particular ports (if any) to which other foreign ships of war and packets shall not be permitted to come, to enter into the same, to anchor, and to remain there and refit; subject always to the laws and statutes of the two countries respectively.

By the right of entering the places, ports, and rivers, mentioned in this article, the privilege of carrying on the coasting trade is not understood, in which national vessels only are permitted to engage.

3. His Majesty the King of the United Kingdom of Great Britain and Ireland engages further, that the inhabitants of Mexico shall have the like liberty of commerce and navigation stipulated for in the preceding article, in all his dominions situated out of Europe, to the full extent in which the same is permitted at present, or shall be permitted hereafter, to any other nation.

4. No higher or other duties shall be imposed on the importation into the dominions of his Britannic Majesty, of any article of the growth, produce, or manufacture of Mexico, and no higher or other duties shall be imposed on the importation into the territories of Mexico, of any articles of the growth, produce, or manufacture of his Britannic Majesty's dominions, than are or shall be payable on the like articles, being the growth, produce, or manufacture of any other foreign country; nor shall any other or higher duties or charges be imposed in the territories or dominions of either of the contracting parties, on the exportation of any articles to the territories of the other, than such as are or may be payable on the exportation of the like articles to any other foreign country; nor shall any prohibition be imposed upon the exportation of any articles, the growth, produce, or manufacture of his Britannic Majesty's dominions, or of the said territories of Mexico, to or from the said dominions of his Britannic Majesty, or to or from the said territories of Mexico, which shall not equally extend to all other nations.

5. No higher or other duties or charges on account of tonnage, light or harbour dues, pilotage, salvage in case of damage or shipwreck, or any other local charges, shall be imposed, in any of the ports of Mexico, on British vessels, than those payable in the same ports by Mexican vessels*; nor, in the ports of his Britannic Majesty's territories, on Mexican vessels, than shall be payable, in the same ports, on British vessels.

6. The same duties shall be paid on the importation into the territories of Mexico, of any article the growth, produce, or manufacture of his Britannic Majesty's dominions, whether such importation shall be in Mexican * or in British vessels; and the same duties shall be paid on the importation into the dominions of his Britannic Majesty, of any article the growth, produce, or manufacture of Mexico, whether such importation shall be in British or in Mexican vessels. The same duties shall be paid, and the same bounties and drawbacks allowed, on the exportation to Mexico of any articles of the growth, produce, or manufacture of his Britannic Majesty's dominions, whether such exportation shall be in Mexican or in British vessels; and the same duties shall be paid, and the same bounties and drawbacks allowed, on the exportation of any articles the growth, produce, or manufacture of Mexico, to his Britannic Majesty's dominions, whether such exportation shall be in British or in Mexican vessels.

* See additional articles at the end of this treaty.

7. In order to avoid any misunderstanding with respect to the regulations which may respectively constitute a British or Mexican vessel, it is hereby agreed that all vessels built in the dominions of his Britannic Majesty, or vessels which shall have been captured from an enemy by his Britannic Majesty's ships of war, or by subjects of his said Majesty furnished with letters of marque by the Lords Commissioners of the Admiralty and regularly condemned in one of his said Majesty's prize courts as a lawful prize, or which shall have been condemned in any competent court for the breach of the laws made for the prevention of the slave trade, and owned, navigated, and registered according to the laws of Great Britain, shall be considered as British vessels; and that all vessels built in the territories of Mexico, or captured from the enemy by the ships of Mexico, and condemned under similar circumstances, and which shall be owned by any citizen or citizens thereof, and whereof the master and 3-4ths of the mariners are citizens of Mexico, excepting where the laws provide for any extreme cases, shall be considered as Mexican vessels.

And it is further agreed, that every vessel, qualified to trade as above described under the provisions of this treaty, shall be furnished with a register, passport, or sea letter, under the signature of the proper person authorised to grant the same, according to the laws of the respective countries (the form of which shall be communicated), certifying the name, occupation, and residence of the owner or owners, in the dominions of his Britannic Majesty, or in the territories of Mexico, as the case may be; and that he or they is or are the sole owner or owners, in the proportion to be specified: together with the name, burden, and description of the vessel as to build and measurement, and the several particulars constituting the national character of the vessel, as the case may be.

8. All merchants, commanders of ships, and others, the subjects of his Britannic Majesty, shall have full liberty, in all the territories of Mexico, to manage their own affairs themselves, or to commit them to the management of whomsoever they please, as broker, factor, agent, or interpreter; nor shall they be obliged to employ any other persons for those purposes than those employed by Mexicans, nor to pay them any other salary or remuneration than such as is paid, in like cases, by Mexican citizens; and absolute freedom shall be allowed, in all cases, to the buyer and seller, to bargain and fix the price of any goods, imported into or exported from Mexico, as they shall see good, observing the laws and established customs of the country. The same privileges shall be enjoyed in the dominions of his Britannic Majesty, by the citizens of Mexico, under the same conditions.

The citizens and subjects of the contracting parties, in the territories of each other, shall receive and enjoy full and perfect protection for their persons and property, and shall have free and open access to the courts of justice in the said countries, respectively, for the prosecution and defence of their just rights; and they shall be at liberty to employ, in all causes, the advocates, attorneys, or agents of whatever description, whom they may think proper; and they shall enjoy, in this respect, the same rights and privileges therein as native citizens.

9. In whatever relates to the succession to personal estates, by will or otherwise, and the disposal of personal property of every sort and denomination, by sale, donation, exchange, or testament, or in any other manner whatsoever, as also the administration of justice, the subjects and citizens of the 2 contracting parties shall enjoy, in their respective dominions and territories, the same privileges, liberties, and rights, as native subjects; and shall not be charged, in any of these respects, with any higher imposts or duties than those which are paid, or may be paid, by the native subjects or citizens of the power in whose dominions or territories they may be resident.

10. In all that relates to the police of the ports, the lading and unlading of ships, the safety of merchandise, goods, and effects, the subjects of his Britannic Majesty, and the citizens of Mexico, respectively, shall be subject to the local laws and regulations of the dominions and territories in which they may reside. They shall be exempted from all compulsory military service, whether by sea or land. No forced loans shall be levied upon them; nor shall their property be subject to any other charges, requisitions, or taxes, than such as are paid by the native subjects or citizens of the contracting parties in their respective dominions.

11. It shall be free for each of the 2 contracting parties to appoint consuls for the protection of trade, to reside in the dominions and territories of the other party; but, before any consul shall act as such, he shall, in the usual form, be approved and admitted by the government to which he is sent; and either of the contracting parties may except from the residence of consuls such particular places as either of them may judge fit to be excepted. The Mexican diplomatic agents and consuls shall enjoy, in the dominions of his Britannic Majesty, whatever privileges, exceptions, and immunities are or shall be granted to agents of the same rank belonging to the most favoured nation; and, in like manner, the diplomatic agents and consuls of his Britannic Majesty in the Mexican territories shall enjoy, according to the strictest reciprocity, whatever privileges, exceptions, and immunities are or may be granted to the Mexican diplomatic agents and consuls in the dominions of his Britannic Majesty.

12. For the better security of commerce between the subjects of his Britannic Majesty and the citizens of the Mexican States, it is agreed that if, at any time, any interruption of friendly intercourse, or any rupture, should unfortunately take place between the 2 contracting parties, the merchants residing upon the coasts shall be allowed 6 months, and those of the interior a whole year, to wind up their accounts, and dispose of their property: and a safe-conduct shall be given them to embark at the port which they shall themselves select. All those who are established in the respective dominions and territories of the 2 contracting parties, in the exercise of any trade or special employment, shall have the privilege of remaining and continuing such trade and employment therein, without any manner of interruption, in full enjoyment of their liberty and property, as long as they behave peaceably, and commit no offence against the laws: and their goods and effects, of whatever description they may be, shall not be liable to seizure or sequestration, or to any other charges or demands than those which may be made upon the like effects or property belonging to the native subjects or citizens of the respective dominions or territories in which such subjects or citizens may reside. In the same case, debts between individuals, public funds, and the shares of companies, shall never be confiscated, sequestrated, or detained.

13. The subjects of his Britannic Majesty residing in the Mexican territories shall enjoy, in their houses, persons, and properties, the protection of the government; and continuing in possession of what they now enjoy, they shall not be disturbed, molested, or annoyed, in any manner, on account of their religion, provided they respect that of the nation in which they reside, as well as the constitution, laws, and customs of the country. They shall continue to enjoy, to the full, the privilege already granted to them of burying, in the places already assigned for that purpose, such subjects of his Britannic Majesty as may die within the Mexican territories; nor shall the funerals and sepulchres of the dead be disturbed in any way, or upon any account. The citizens of Mexico shall enjoy, in all the dominions of his Britannic Majesty, the same protection, and shall be allowed the free exercise of their religion, in public or private, either within their own houses, or in the chapels and places of worship set apart for that purpose.

14. The subjects of his Britannic Majesty shall on no account or pretext whatsoever be disturbed or molested in the peaceable possession and exercise of whatever rights, privileges, and immunities they have at any time enjoyed within the limits described and laid down in a convention signed between his said Majesty and the King of Spain, on the 14th of July, 1786; whether such rights, privileges, and immunities shall be derived from the stipulations of the said convention, or from any other concession which may at any time have been made by the King of Spain, or his predecessors, to British subjects and settlers residing and following their lawful occupations within the limits aforesaid: the 2 contracting parties reserving, however, for some more fitting opportunity, the further arrangements on this article.

15. The government of Mexico engages to co-operate with his Britannic Majesty for the total abolition

of the slave trade, and to prohibit all persons inhabiting within the territories of Mexico, in the most effectual manner, from taking any share in such trade.

16. The 2 contracting parties reserve to themselves the right of treating and agreeing hereafter, from time to time, upon such other articles as may appear to them to contribute still further to the improvement of their mutual intercourse, and the advancement of the general interests of their respective subjects and citizens; and such articles as may be so agreed upon, shall, when duly ratified, be regarded as forming a part of the present treaty, and shall have the same force as those now contained in it.

17. The present treaty shall be ratified, and the ratifications shall be exchanged at London within the space of 6 months, or sooner if possible.

In witness whereof, the respective plenipotentiaries have signed the same, and have affixed thereto their respective seals.

Done at London, the 26th day of December, in the year of our Lord 1826.

WILLIAM HUSKISSON. SEBASTIAN CAMACHO.
JAMES J. MORIER.

Additional Articles.

1. Whereas, in the present state of Mexican shipping, it would not be possible for Mexico to receive the full advantage of the reciprocity established by the articles 5, 6, 7. of the treaty signed this day, if that part of the 7th article which stipulates that, in order to be considered as a Mexican ship, a ship shall actually have been *built* in Mexico, should be strictly and literally observed, and immediately brought into operation; it is agreed that, for the space of 10 years, to be reckoned from the date of the exchange of the ratifications of this treaty, any ships, *wheresoever built*, being *bonâ fide* the property of and wholly owned by one or more citizens of Mexico, and whereof the master and 3-4ths of the mariners, at least, are also natural-born citizens of Mexico, or persons domiciliated in Mexico, by act of the government, as lawful subjects of Mexico, to be certified according to the laws of that country, shall be considered as Mexican ships; his Majesty the King of the United Kingdom of Great Britain and Ireland reserving to himself the right, at the end of the said term of 10 years, to claim the principle of reciprocal restriction stipulated for in the article 7. above referred to, if the interests of British navigation shall be found to be prejudiced by the present exception to that reciprocity, in favour of Mexican shipping.

2. It is further agreed that, for the like term of 10 years, the stipulations contained in articles 5. and 6. of the present treaty shall be suspended; and in lieu thereof, it is hereby agreed that, until the expiration of the said term of 10 years, British ships entering into the ports of Mexico from the United Kingdom of Great Britain and Ireland, or any other of his Britannic Majesty's dominions, and all articles the growth, produce, or manufacture of the United Kingdom, or of any of the said dominions, imported in such ships, shall pay no other or higher duties than are or may hereafter be payable, in the said ports, by the ships, and the like goods, the growth, produce, or manufacture of the most favoured nation; and, reciprocally, it is agreed, that Mexican ships entering into the ports of the United Kingdom of Great Britain and Ireland, or any other of his Britannic Majesty's dominions, from any port of the States of Mexico, and all articles the growth, produce, or manufacture of the said States, imported in such ships, shall pay no other or higher duties than are or may hereafter be payable in the said ports, by the ships, and the like goods, the growth, produce, or manufacture of the most favoured nation; and that no higher duties shall be paid, or bounties or drawbacks allowed, on the exportation of any article the growth, produce, or manufacture of the dominions of either country, in the ships of the other, than upon the exportation of the like articles in the ships of any other foreign country.

It being understood that, at the end of the said term of 10 years, the stipulations of the said 5th and 6th articles shall, from thenceforward, be in full force between the two countries.

The present additional articles shall have the same force and validity as if they were inserted, word for word, in the treaty signed this day. They shall be ratified, and the ratifications shall be exchanged at the same time.

In witness whereof, the respective plenipotentiaries have signed the same, and have affixed thereto their respective seals.

Done at London, the 26th day of December, in the year of our Lord 1826.

WILLIAM HUSKISSON. SEBASTIAN CAMACHO.
JAMES J. MORIER.

An order in council, dated September 3. 1827, orders, that vessels of the United States of Mexico, entering the ports of the United Kingdom of Great Britain and Ireland in ballast, or laden direct from any of the ports of Mexico, or departing from the ports of the said United Kingdom, together with the cargoes on board the same, such cargoes consisting of articles which may be legally imported or exported, shall not be subject to any other or higher duties or charges whatever than are or shall be levied on British vessels entering or departing from such ports, or on similar articles when imported into or exported from such ports in British vessels: and also such articles, when exported from the said ports in vessels of the United States of Mexico respectively, shall be entitled to the same bounties, drawbacks, and allowances that are granted on similar articles when exported in British vessels.

N.B.—Treaties similar to the above have been negotiated with Colombia, Buenos Ayres, &c.

NETHERLANDS.

Treaty of Commerce and Navigation between her Majesty and the King of the Netherlands, signed at the Hague, October 27th, 1837.

Article 1. There shall be reciprocal liberty of commerce and navigation between and amongst the subjects of the two high contracting parties; and the subjects of the two sovereigns respectively shall not pay in the ports, harbours, roads, cities, towns, or places whatsoever in either kingdom, any other or higher duties, taxes, or imposts, under whatsoever names designated or included, than those which are there paid by the subjects of the most favoured nation: and the subjects of each of the high contracting parties shall enjoy the same rights, privileges, liberties, favours, immunities, and exemptions, in matters of commerce and navigation, that are granted, or may hereafter be granted, in either kingdom, to the subjects of the most favoured nation. No duty of customs or other impost shall be charged upon any goods the produce of one country, upon importation, by sea or by land, from such country into the other, higher than the duty or impost charged upon goods of the same kind, the produce of or imported from any other country; and her Majesty the Queen of the United Kingdom of Great Britain and Ireland, and his Majesty the King of the Netherlands, do hereby bind and engage themselves, not to grant any favour, privilege, or immunity, in matters of commerce and navigation, to the subjects of any other state, which shall not be also, and at the same time, extended to the subjects of the other high contracting party, gratuitously, if the concession in favour of that other state shall have been gratuitous; and on giving as nearly as possible the same compensation or equivalent, in case the concession shall have been conditional.

2. No duties of tonnage, harbour, lighthouses, pilotage, quarantine, or other similar or corresponding duties, of whatever nature or under whatever denomination, shall be imposed in either country upon the vessels of the other, in respect of voyages between the two countries, if laden, or in respect of any voyage if in ballast, which shall not be equally imposed, in the like cases, on national vessels; and in neither country shall any duty, charge, restriction, or prohibition be imposed upon, nor any drawback, bounty, or allowance be withheld from, any goods imported from or exported to the other country, in

the vessel of that other country, which shall not be equally imposed upon or withheld from such goods when so imported or exported in national vessels.

3. In order to avoid any misunderstanding with regard to the regulations that determine the conditions which constitute a British or a Dutch vessel, it is hereby agreed, that all vessels built in the dominions of her Britannic Majesty, and all vessels which, having been captured from an enemy by her Majesty's ships of war, or by the subjects of her said Majesty, furnished by the lords commissioners of the Admiralty with letters of marque, shall have been regularly condemned in one of her said Majesty's prize courts as a lawful prize; and all vessels which shall have been condemned in any competent court, for a breach of the laws made for the prevention of the slave trade; shall, provided they are owned, navigated, and registered according to the laws of Great Britain, be considered as British vessels; and that all vessels built in the territories of the King of the Netherlands, or which, having been captured from an enemy by his Majesty's ships of war, or by the subjects of his said Majesty furnished with letters of marque, shall have been regularly condemned in one of the prize courts of the kingdom of the Netherlands as a lawful prize; and all vessels which shall have been condemned in any competent court, for a breach of the laws made for the prevention of the slave trade, shall, provided they are wholly owned by any subject or subjects of the King of the Netherlands, and provided that the master and three-fourths of the crew are Netherlands subjects, be considered as Netherland vessels.

4. It is further agreed, that in all cases where, in either kingdom, the duty to be levied upon any goods imported, shall be, not a fixed rate, but a proportion of the value of the goods, such *ad valorem* duty shall be ascertained and secured in the following manner; that is to say, the importer shall, on making his entry for the payment of duty at the custom-house of either country, sign a declaration, stating the value of the goods at such amount as he shall deem proper; and in case the officers of customs should be of opinion that such valuation is insufficient, he or they shall be at liberty to take the goods, on paying to the importer the value according to his declaration, together with the addition of 10 per cent., and on returning the duty paid.

The amount of these sums to be paid by the officers on the delivery of the goods to them, which must be within 15 days from the first detention of the goods.

5. Forasmuch as all merchandise, of whatever origin, whether admissible for home consumption or not, may be received and warehoused in all the ports of the United Kingdom of Great Britain and Ireland, which are by law appointed to be warehousing ports for such articles, pending the entry of the same either for home consumption or for re-exportation, as the case may be, under the regulations appointed for this purpose, and without such articles being liable, in the meantime, to the payment of any of the duties with which they would be charged, if upon arrival they were entered for consumption within the United Kingdom; in like manner, the King of the Netherlands consents and agrees, that all the ports of his Netherland Majesty's dominions, which are now or which shall hereafter become warehousing ports by law, shall be free ports for the reception and warehousing of all merchandise imported in British ships, and of all articles whatever, the produce or manufacture of the British dominions, in whatever ships imported, either for home consumption or for re-exportation, as the case may be; and the articles thus received and warehoused, subject to due regulations, shall not be liable, in the meantime, to any of the duties with which they would be charged, if they were entered for consumption on their arrival in the Netherlands.

6. If any ships of war or merchant vessels should be wrecked on the coasts of either of the high contracting parties, such ships or vessels, or all parts thereof, and all furniture and appurtenances belonging thereunto, and all goods and merchandise which shall be saved therefrom, or the produce thereof, if sold, shall be faithfully restored to the proprietors, upon being claimed by them or by their duly authorised factors; and if there are no such proprietors or factors on the spot, then the said goods and merchandise, or the proceeds thereof, as well as all the papers found on board such wrecked vessels, shall be delivered to the British or Netherland consul in whose district the wreck may have taken place; and such consul, proprietors, or factors shall pay only the expenses incurred in the preservation of the property, together with the rate of salvage which would have been payable in the like case of a wreck of a national vessel; and the goods and merchandise saved from the wreck shall not be subject to duties, unless cleared for home consumption.

7. The present treaty shall be in force for the term of 10 years from the date hereof, and further, until the end of 12 months after either of the high contracting parties shall have given notice to the other of its intention to terminate the same; each of the high contracting parties reserving to itself the right of giving such notice to the other at the end of the said term of 10 years.

And it is hereby agreed between them, that at the expiration of 12 months after such notice shall have been received by either party from the other, this treaty, and all the provisions thereof, shall altogether cease and determine.

8. The present treaty shall be ratified, and the ratifications shall be exchanged at the Hague within one month from the date hereof, or sooner if possible.

In witness whereof, the respective plenipotentiaries have signed the same, and have affixed thereto the seals of their arms.

Done at the Hague, this 27th day of October, in the year of our Lord 1837.

VERSTOLK DE SOELEN. EDWARD CROMWELL DISBROWE.

Declaration made by the Plenipotentiary of her Britannic Majesty, on the exchange of the Ratification of the preceding Treaty.

In proceeding to the exchange of the ratifications of the treaty of commerce and navigation between her Majesty the Queen of the United Kingdom of Great Britain and Ireland and his Majesty the King of the Netherlands, concluded and signed at the Hague on the 27th of October, 1837, the undersigned, plenipotentiary of her Britannic Majesty, is commanded by her Majesty to explain and declare that her Majesty has ratified the said treaty, notwithstanding that the preamble contains the words "in Europe," which her Majesty's government had objected to as redundant; but that her Majesty considers those words to be without meaning, so far as her Majesty's dominions are concerned; because those words appear to establish a distinction between a kingdom in Europe and a kingdom out of Europe, whereas, by the word "kingdom," in the said treaty, her Majesty, as far as regards her own territories, means only the United Kingdom of Great Britain and Ireland, which is well known to be in Europe, and does not mean any of the possessions of her Majesty's crown beyond sea. Her Majesty's ratification of the said treaty is exchanged under the explicit declaration and understanding above-mentioned.

Done at the Hague, the 22d day of November, 1837.

EDWARD CROMWELL DISBROWE.

Counter-Declaration of the Plenipotentiary of his Majesty the King of the Netherlands.

The plenipotentiary of her Britannic Majesty having, previously to the exchange of the ratifications of the treaty of commerce and navigation, concluded on the 27th of October 1837, between his Majesty the King of the Netherlands and her Majesty the Queen of the United Kingdom of Great Britain and Ireland, delivered to the undersigned, plenipotentiary of his Majesty the King of the Netherlands, a declaration stating that her Britannic Majesty had not in view in the said treaty the possessions of her crown beyond sea; the undersigned is charged by his Majesty the King of the Netherlands to declare that his said Majesty accepts the above-mentioned declaration, and that he likewise, on his part, has not meant to comprise in the said treaty the possessions of his crown beyond sea.

With regard to the observations made as to the use of the words "in Europe," the cabinet of the

Hague is of opinion, that their interpretation is to be found in the circumstance, that the phrase "in Europe" applies to the word "ports," and not to the word "kingdom."

The Hague, the 22d of November, 1837.

VERSTOLK DE SOELEN.

Treaty between his Britannic Majesty and the King of the Netherlands, respecting Territories and Commerce in the East Indies, signed at London, March 17. 1824.

Article 1. The high contracting parties engage to admit the subjects of each other to trade with their respective possessions in the Eastern Archipelago, and on the continent of India and in Ceylon, upon the footing of the most favoured nation; their respective subjects conforming themselves to the local regulations of each settlement.

2. The subjects and vessels of one nation shall not pay, upon importation or exportation, at the ports of the other in the Eastern seas, any duty at a rate beyond the double of that at which the subjects and vessels of the nation to which the port belongs are charged.

The duties paid on exports or imports at a British port, on the continent of India, or in Ceylon, on Dutch bottoms, shall be arranged so as in no case to be charged at more than double the amount of the duties paid by British subjects, and on British bottoms.

In regard to any article upon which no duty is imposed, when imported or exported by the subjects or on the vessels of the nation to which the port belongs, the duty charged upon the subjects or vessels of the other shall in no case exceed 6 per cent.

3. The high contracting parties engage, that no treaty hereafter made by either, with any native power in the Eastern seas, shall contain any article tending, either expressly, or by the imposition of unequal duties, to exclude the trade of the other party from the ports of such native power; and that if, in any treaty now existing on either part, any article to that effect has been admitted, such article shall be abrogated upon the conclusion of the present treaty.

It is understood that, before the conclusion of the present treaty, communication has been made by each of the contracting parties to the other, of all treaties or engagements subsisting between each of them, respectively, and any native powers in the Eastern seas; and that the like communication shall be made of all such treaties concluded by them, respectively, hereafter.

4. Their Britannic and Netherland Majesties engage to give strict orders, as well to their civil and military authorities, as to their ships of war, to respect the freedom of trade, established by articles 1, 2, and 3.; and in no case to impede a free communication of the natives in the Eastern Archipelago, with the ports of the 2 governments, respectively, or of the subjects of the 2 governments with the ports belonging to native powers.

5. Their Britannic and Netherland Majesties, in like manner, engage to concur effectually in repressing piracy in those seas: they will not grant either asylum or protection to vessels engaged in piracy, and they will in no case permit the ships or merchandise captured by such vessels, to be introduced, deposited, or sold, in any of their possessions.

6. It is agreed that orders shall be given by the 2 governments, to their officers and agents in the East, not to form any new settlement on any of the islands in the Eastern seas, without previous authority from their respective governments in Europe.

7. The Molucca Islands, and especially Amboyna, Banda, Ternate, and their immediate dependencies, are excepted from the operation of the 1st, 2d, 3d, and 4th articles, until the Netherland government shall think fit to abandon the monopoly of spices; but if the said government shall, at any time previous to such abandonment of the monopoly, allow the subjects of any power, other than the Asiatic native power, to carry on any commercial intercourse with the said islands, the subjects of his Britannic Majesty shall be admitted to such intercourse, upon a footing precisely similar.

8. His Netherland Majesty cedes to his Britannic Majesty all his establishment on the continent of India; and renounces all privileges and exemptions enjoyed or claimed in virtue of those establishments.

9. The factory of Fort Marlborough, and all the English possessions on the island of Sumatra, are hereby ceded to his Netherland Majesty: and his Britannic Majesty further engages that no British settlement shall be formed on that island, nor any treaty concluded by British authority, with any native prince, chief, or state therein.

10. The town and fort of Malacca, and its dependencies, are hereby ceded to his Britannic Majesty; and his Netherland Majesty engages, for himself and his subjects, never to form any establishment on any part of the peninsula of Malacca, or to conclude any treaty with any native prince, chief, or state therein.

13. All the colonies, possessions, and establishments which are ceded by the preceding articles, shall be delivered up to the officers of the respective sovereigns on the 1st of March, 1825. The fortifications shall remain in the state in which they shall be at the period of the notification of this treaty in India; but no claim shall be made, on either side, for ordnance, or stores of any description, either left or removed by the ceding power, nor for any arrears of revenue, or any charge of administration whatever.

16. It is agreed that all accounts and reclamations, arising out of the restoration of Java, and other possessions, to the officers of his Netherland Majesty in the East Indies,—as well those which were the subject of a convention made at Java on the 24th of June, 1817, between the commissioners of the 2 nations, as all others,—shall be finally and completely closed and satisfied, on the payment of the sum of 100,000*l.*, sterling money, to be made in London on the part of the Netherlands, before the expiration of the year 1825.

17. The present treaty shall be ratified, and the ratifications exchanged at London, within 3 months from the date hereof, or sooner if possible.

In witness whereof, the respective plenipotentiaries have signed the same, and affixed thereunto the seals of their arms.

Done at London, the 17th day of March, in the year of our Lord 1824.

GEORGE CANNING. CHARLES WATKINS WILLIAMS WYNN. H. FAGEL. A. R. FALCK.

PERSIA.

Treaty of Commerce between Her Majesty and the Shah of Persia, signed at Tehran, October 28. 1841.

Article 1. The merchants of the two mighty states are reciprocally permitted and allowed to carry into each other's territories their goods and manufactures of every description, and to sell or exchange them in any part of their respective countries; and on the goods which they import or export, custom duties shall be levied; that is to say, on entering the country the same amount of custom duties shall be levied, once for all, that is levied on merchandise imported by the merchants of the most favoured European nations; and at the time of going out of the country, the same amount of custom duties which is levied on the merchandise of merchants of the most favoured European nations shall be levied from the merchants, subjects of the high contracting parties; and except this, no claim shall be made upon the merchants of the two states in each other's dominions on any pretext or under any denomination; and the merchants or persons connected with or dependent upon the high contracting parties in each other's dominions, mutually, shall receive the same aid and support, and the same respect, which are received by the subjects of the most favoured nations.

2. As it is necessary, for the purpose of attending to the affairs of the merchants of the two parties respectively, that from both governments commercial agents should be appointed to reside in stated places; it is therefore arranged that two commercial agents on the part of the British government shall reside, one

in the capital, and one in Tabreez, and in those places only, and on this condition, that he who shall reside at Tabreez, and he alone, shall be honoured with the privileges of consul-general; and as for a series of years a resident of the British government has resided at Bushire, the Persian government grants permission that the said resident shall reside there as heretofore. And, in like manner, two commercial agents shall reside on the part of the Persian government, one in the capital of London, and one in the port of Bombay, and shall enjoy the same rank and privileges which the commercial agents of the British government shall enjoy in Persia.

3. This commercial treaty, we, the plenipotentiaries of the high contracting parties, have agreed to; and in witness thereof, have set thereunto our hands and seals, at the capital city of Tehran, this twenty-eighth day of October, in the year of our Lord 1841, corresponding to the 12th day of the month Ramazan, in the year of the Hejjira 1257.

JOHN M'NEILL.
MEERZA ABUL HASSAN KHAN.

PERU-BOLIVIAN CONFEDERATION.

Treaty of Amity, Commerce, and Navigation between His Majesty and the Peru-Bolivian Confederation, together with 2 additional Articles thereunto annexed.

Article 1. There shall be perpetual amity between the dominions and subjects of his Majesty the King of the United Kingdom of Great Britain and Ireland, his heirs and successors, and the Peru-Bolivian confederation and its citizens.

2. There shall be, between all the territories of his Britannic Majesty in Europe, and the territories of the Peru-Bolivian confederation, a reciprocal freedom of commerce. The subjects and citizens of the two countries respectively shall have liberty freely and securely to come with their ships and cargoes to all places, ports, and rivers in the territories aforesaid, to which other foreigners are or may be permitted to come, to enter into the same, and to remain and reside in any part of the said territories respectively; also to hire and occupy houses and warehouses for the purpose of their commerce; and, generally, the merchants and traders of each nation, respectively, shall enjoy the most complete protection and security for their commerce; subject always to the laws and statutes of the two countries respectively.

In like manner, the respective ships of war and post-office packets of the 2 countries shall have liberty freely and securely to come to all harbours, rivers, and places to which other foreign ships of war and packets are or may be permitted to come, to enter into the same, to anchor, and to remain there and refit; subject always to the laws and statutes of the two countries respectively.

By the right of entering the places, ports, and rivers mentioned in this article, the privilege of carrying on the coasting trade is not understood, in which national vessels only are permitted to engage.

3. His Majesty the King of the United Kingdom of Great Britain and Ireland engages further, that the inhabitants of the Peru-Bolivian confederation shall have the like liberty of commerce and navigation stipulated for in the preceding article, in all his dominions situated out of Europe, to the full extent in which the same is permitted at present, or may be permitted hereafter, to any other nation.

4. No higher or other duties shall be imposed on the importation into the dominions of His Britannic Majesty of any article of the growth, produce, or manufacture of the Peru-Bolivian confederation, and no higher or other duties shall be imposed on the importation into the territories of the Peru-Bolivian confederation of any articles of the growth, produce, or manufacture of his Britannic Majesty's dominions, than are or shall be payable on the like articles, being the growth, produce, or manufacture of any other foreign country; nor shall any other or higher duties or charges be imposed in the territories or dominions of either of the contracting parties, on the exportation of any articles to the territories or dominions of the other, than such as are or may be payable on the exportation of the like articles to any other foreign country; nor shall any prohibition be imposed upon the exportation or importation of any article, the growth, produce, or manufacture of his Britannic Majesty's dominions, or of the said territories of the Peru-Bolivian confederation, to or from the said dominions of his Britannic Majesty, or to or from the said territories of the Peru-Bolivian confederation, which shall not equally extend to all other nations.

5. No higher or other duties or charges on account of tonnage, light or harbour dues, pilotage, salvage in case of damage or shipwreck, or any other local charges, shall be imposed in any of the ports of the Peru-Bolivian confederation, on British vessels, than those payable, in the same ports, by Peru-Bolivian vessels; nor in the ports of his Britannic Majesty's territories, on Peru-Bolivian vessels, than shall be payable in the same ports on British vessels.

6. The same duties shall be paid on the importation into the territories of the Peru-Bolivian confederation of any article the growth, produce, or manufacture of his Britannic Majesty's dominions, whether such importation shall be in Peru-Bolivian or in British vessels; and the same duties shall be paid on the importation into the dominions of his Britannic Majesty, of any article the growth, produce, or manufacture of the territories of the Peru-Bolivian confederation, whether such importation shall be in British or in Peru-Bolivian vessels. The same duties shall be paid, and the same bounties and drawbacks allowed, on the exportation to the ports of the Peru-Bolivian confederation of any articles of the growth, produce, or manufacture of his Britannic Majesty's dominions, whether such exportation shall be in Peru-Bolivian or British vessels; and the same duties shall be paid, and the same bounties and drawbacks allowed, on the exportation of any articles the growth, produce, or manufacture of the Peru-Bolivian confederation, to his Britannic Majesty's dominions, whether such exportation shall be in British or in Peru-Bolivian vessels.

7. In order to avoid any misunderstanding with respect to the regulations which may respectively constitute a British or Peru-Bolivian vessel, it is hereby agreed that no ship shall be admitted to be a ship of either country, unless she shall be of the built of such country, or have been made prize of war to such country, and condemned as such; or have been forfeited to such country under any law of the same made for the prevention of the slave trade, and condemned in any competent court as forfeiture for a breach of such law; nor unless she be navigated by a master who is a subject of such country, and by a crew of whom $\frac{3}{4}$ at least are subjects of such country; nor unless she be wholly owned by subjects of such country, usually residing therein, or under the dominion thereof; excepting where the laws provide for any extreme cases. And it is further agreed, that no ship, admitted to be a ship of either country, shall be qualified to trade as above described, under the provisions of this treaty, unless furnished with a register, passport, or sea-letter, under the signature of the proper person authorised to grant the same, according to the laws of the respective countries, (the form of which shall be communicated), certifying the name, occupation, and residence of the owner or owners, in the dominions of his Britannic Majesty, or in the territories of the Peru-Bolivian confederation, as the case may be; and that he or they is or are the sole owner or owners, in the proportion to be specified; together with the name, burden, and description of the vessel, as to built and measurement, and the several particulars constituting the national character of the vessel, as the case may be.

8. All merchants, commanders of ships, and others, the subjects of his Britannic Majesty, shall have full liberty, in all the territories of the Peru-Bolivian confederation, to manage their own affairs, themselves, or to commit them to the management of whomsoever they please, as broker, factor, agent, or interpreter; nor shall they be obliged to employ any other persons for those purposes than those employed by Peru-Bolivians, nor to pay them any other salary or remuneration than such as is paid, in like cases, by Peru-Bolivian citizens; and absolute freedom shall be allowed, in all cases, to the buyer and seller to bargain and fix the price of any goods, wares, or merchandise imported into or exported from, the Peru-Bolivian confederation, as they shall see good, observing the laws and established customs of the country.

The same privileges shall be enjoyed in the dominions of his Britannic Majesty, by the citizens of the Peru-Bolivian confederation, under the same conditions.

The citizens and subjects of the contracting parties, in the territories of each other, shall receive and enjoy full and perfect protection for their persons and property, and shall have free and open access to the courts of justice in the said countries respectively, for the prosecution and defence of their just rights; and they shall be at liberty to employ, in all causes, the advocates, attorneys, or agents, of whatever description, whom they may think proper; and they shall enjoy, in this respect, the same rights and privileges therein as native citizens.

9. In whatever relates to the police of the ports, the lading and unlading of ships, the safety of merchandise, goods, and effects, the succession to personal estates by will or otherwise, and the disposal of personal property of every sort and denomination, by sale, donation, exchange, or testament, or in any other manner whatsoever, as also the administration of justice, the subjects and citizens of the two contracting parties shall enjoy, in their respective dominions and territories, the same privileges, liberties, and rights, as native subjects; and shall not be charged, in any of these respects, with any higher imposts or duties than those which are paid, or may be paid, by the native subjects or citizens of the power in whose dominions or territories they may be resident, subject of course to the local laws and regulations of such dominions or territories. In the event of any subject or citizen of either of the two contracting parties dying without will or testament, in the dominions or territories of the said contracting parties, the consul-general or consul of the said nation, or, in his absence, his representative, shall have the right to nominate curators, to take charge of the property of the deceased, so far as the laws of each country will permit, for the benefit of his lawful heirs and creditors, without interference, giving convenient notice thereof to the authorities of the country.

10. The subjects of his Britannic Majesty residing in the Peru-Bolivian confederation, and the natives and citizens of the confederation residing in the dominions of his Britannic Majesty, shall be exempted from all compulsory military service whatsoever, whether by sea or land; and from all forced loans or military exactions or requisitions; neither shall they be compelled, under any pretext whatsoever, to pay any other ordinary charges, requisitions, or taxes, greater than those that are paid by native subjects or citizens of the territories of the contracting parties, respectively.

11. It shall be free for each of the two contracting parties to appoint consuls for the protection of trade, to reside in the dominions and territories of the other party; but before any consul shall act as such, he shall, in the usual form, be approved and admitted by the government to which he is sent; and either of the contracting parties may except from the residence of consuls such particular places as either of them may judge fit to be excepted. The diplomatic agents and consuls of the Peru-Bolivian confederation shall enjoy, in the dominions of his Britannic Majesty, whatever privileges, exceptions, and immunities are or shall be granted to agents of the same rank belonging to the most favoured nation; and in like manner, the diplomatic agents and consuls of his Britannic Majesty in the territories of the Peru-Bolivian confederation shall enjoy, according to the strictest reciprocity, whatever privileges, exceptions, and immunities are or may be granted to the diplomatic agents and consuls of the most favoured nation in the territories of the Peru-Bolivian confederation.

12. For the better security of commerce between the subjects of his Britannic Majesty and the citizens of the Peru-Bolivian confederation, it is agreed that if, at any time, any interruption of friendly intercourse or any rupture should unfortunately take place between the two contracting parties, the subjects or citizens of either of the two contracting parties residing upon the coasts shall be allowed six months, and those residing in the interior a whole year, to wind up their accounts and dispose of their property; and a safe conduct shall be given them to embark at the port which they shall themselves select. All such subjects or citizens of either of the two contracting parties, who are established in the dominions or territories of the other in the exercise of any trade or special employment, shall have the privilege of remaining and continuing such trade and employment therein without any manner of interruption, in full enjoyment of their liberty and property, as long as they behave peaceably, and commit no offence against the laws; and their goods and effects, of whatever description they may be, whether in their own custody, or intrusted to individuals or to the state, shall not be liable to seizure or sequestration, or to any other charges or demands, than those which may be made upon the like effects or property belonging to the native subjects or citizens of the dominions or territories in which such subjects or citizens may reside. In the same case, debts between individuals, public funds, and the shares of companies, shall never be confiscated, sequestrated, or detained.

13. The subjects of his Britannic Majesty, and the citizens of the Peru-Bolivian confederation, respectively, shall enjoy, in their houses, persons, and properties, the protection of the government, and continue in possession of the privileges which they now enjoy. And the subjects of his Britannic Majesty residing in the territories of the Peru-Bolivian confederation shall furthermore enjoy the most perfect and entire security of conscience, without being annoyed, prevented, or disturbed on account of their religious belief. Neither shall they be annoyed, molested, or disturbed in the proper exercise of their religion, provided that this take place in private houses, and with the decorum due to divine worship, with due respect to the laws, usages, and customs of the country. In the like manner the citizens of the Peru-Bolivian confederation shall enjoy, within all the dominions of his Britannic Majesty, a perfect and unrestrained liberty of conscience, and of exercising their religion publicly or privately, within their own dwelling-houses, or in the chapels and places of worship appointed for that purpose, agreeably to the system of toleration established in the dominions of his said Majesty. Liberty shall also be granted to bury the subjects or citizens of either of the two contracting parties, who may die in the dominions or territories of the other, in burial-places of their own, which, in the same manner, they may freely establish and maintain; nor shall the funerals or sepulchres of the dead be disturbed in any way or upon any account.

14. The government of the Peru-Bolivian confederation engages to co-operate with his Britannic Majesty for the total abolition of the slave trade, and to prohibit all persons inhabiting within the territories of the Peru-Bolivian confederation, or subject to their jurisdiction, in the most effectual manner, and by the most solemn laws, from taking any share in such trade.

15. The two contracting parties reserve to themselves the right of treating and of agreeing hereafter, from time to time, upon such other articles as may appear to them to contribute still further to the improvement of their mutual intercourse, and to the advancement of the general interests of their respective subjects and citizens; and such articles as may be so agreed upon shall, when duly ratified, be regarded as forming a part of the present treaty, and shall have the same force as those now contained in it.

16. The present treaty shall be ratified, and the ratification shall be exchanged in London or at Lima, within the space of twenty months or sooner if possible.

In witness whereof, the respective plenipotentiaries have signed the same, and have affixed thereto their respective seals.

Done at Lima this 5th day of June, in the year of our Lord 1837.

BELFORD HINTON WILSON.
LORENZO BAZO.

Additional Articles.

Article I. Whereas, in the present state of Peru-Bolivian shipping, it would not be possible for the said confederation to receive the full advantage of the reciprocity established by the articles 5, 6, and 7. of the treaty signed this day, if that part of the 7th article which stipulates that, in order to be considered as a Peru-Bolivian ship, a ship shall actually have been built in the Peru-Bolivian confederation,

should be strictly and literally observed, and immediately brought into operation; it is agreed that, for the space of 15 years, to be reckoned from the date of the exchange of the ratifications of this treaty, any ships, wheresoever built, being *bonâ fide* the property of and wholly owned by one or more citizens of the Peru-Bolivian confederation, and whereof the masters and three-fourths of the mariners, at least, are also natural-born citizens of the Peru-Bolivian confederation, or persons domiciliated in the Peru-Bolivian confederation by act of the government, as lawful subjects of the Peru-Bolivian confederation, to be certified according to the laws of that country, shall be considered as Peru-Bolivian ships; his Majesty the King of the United Kingdom of Great Britain and Ireland reserving to himself the right, at the end of the said term of 15 years, to claim the principle of reciprocal restriction stipulated for in the article 7. above referred to, if the interests of British navigation shall be found to be prejudiced by the present exception to that reciprocity in favour of Peru-Bolivian shipping.

2. It is further agreed that, for the like term of 15 years, the stipulations contained in the articles 5. and 6. of the present treaty shall be suspended: and, in lieu thereof, it is hereby agreed that, until the expiration of the said term of fifteen years, British ships entering into the ports of the Peru-Bolivian confederation, from the U. Kingdom of Great Britain and Ireland, or any other of his Britannic Majesty's dominions, and all articles, the growth, produce, or manufacture of the U. Kingdom, or of any of the said dominions, imported in such ships, shall pay no other or higher duties than are or may hereafter be payable, in the said ports, by the ships, and the like goods the growth, produce, or manufacture of the most favoured nation; and reciprocally, it is agreed that Peru-Bolivian ships entering into the ports of the U. Kingdom of Great Britain and Ireland, or any other of his Britannic Majesty's dominions, from any port of the Peru-Bolivian confederation, and all articles, the growth, produce, or manufacture of the said confederation, imported in such ships, shall pay no other or higher duties than are or may hereafter be payable, in the said ports, by the ships, and the like goods, the growth, produce, or manufacture of the most favoured nation; and that no higher duties shall be paid, or bounties or drawbacks allowed, on the exportation of any article, the growth, produce, or manufacture of the dominions of either country, in the ships of the other, than upon the exportation of the like articles in the ships of any other foreign country.

It being understood that, at the end of the said term of 15 years, the stipulations of the said 5th and 6th articles shall from thenceforward be in full force between the two countries.

The present additional articles shall have the same force and validity as if they were inserted, word for word, in the treaty signed this day. They shall be ratified, and the ratification shall be exchanged at the same time.

In witness whereof, the respective plenipotentiaries have signed the same, and have affixed thereto their respective seals.

Done at Lima, 5th June, 1837.

PORTUGAL.

Treaty of Commerce between Great Britain and Portugal; signed at Lisbon, December 27. 1703.

Article 1. His Sacred Royal Majesty of Portugal promises, both in his own name and that of his successors, to admit, for ever hereafter, into Portugal, the woollen cloths, and the rest of the woollen manufactures of the Britons, as was accustomed till they were prohibited by the laws; nevertheless, upon this condition;

2. That is to say, that her Sacred Royal Majesty of Great Britain shall, in her own name and that of her successors, be obliged for ever hereafter to admit the wines of the growth of Portugal into Britain; so that at no time, whether there shall be peace or war between the kingdoms of Britain and France, any thing more shall be demanded for these wines, by the name of custom or duty, or by whatsoever other title, directly or indirectly, whether they shall be imported into Great Britain in pipes or hogsheads, or other casks, than what shall be demanded from the like quantity or measure of French wine, deducting or abating a third part of the custom or duty: but if at any time this deduction or abatement of customs, which is to be made as aforesaid, shall in any manner be attempted and prejudiced, it shall be just and lawful for his Sacred Royal Majesty of Portugal again to prohibit the woollen cloths, and the rest of the British woollen manufactures.

3. The most excellent Lords the plenipotentiaries promise, and take upon themselves, that their above named masters shall ratify this treaty, and that within the space of 2 months the ratifications shall be exchanged.

Given at Lisbon, the 27th of December, 1703.

JOHN METHUEN. MARCHIS ALEGRETENSIS.

Treaty of Commerce and Navigation between her Majesty and the Queen of Portugal, signed at Lisbon, July 3. 1842.

Article 1. The subjects of each of the high contracting parties shall, in the dominions of the other, enjoy all the privileges, immunities, and protection enjoyed by the subjects of the most favoured nation. They shall be entitled to travel, to reside, to occupy dwellings and warehouses, and to dispose of their personal, leasehold, and all other property lawfully held by them, by sale, gift, exchange, or will, or in any other way whatever, without the smallest let, and without any hindrance whatever.

They shall be exempt from forced loans, or any other extraordinary contributions not general, or not by law established, and from all military service by sea or by land. Their dwellings, warehouses, and every thing belonging thereto, shall be respected, and shall not be subjected to any arbitrary visit or search. No examination or inspection shall be made of their books, papers, or accounts, without the legal sentence of a competent court or judge.

The assessment of the amount to be paid by the British subjects in Portugal and its dominions for *mancio* or *decima industrial*, and from which they have hitherto enjoyed special exemption, shall in all cases in future be made, if so claimed by them, according to the rate to be given by *informadores*, of whom two shall be Portuguese and two British merchants, to be named by the *Concelho de Districto*; and in case any objection should be made by the parties assessed to the amount of the said assessment (which shall in all cases bear a just proportion to the rate at which the native subjects of Portugal are assessed), they shall have a right to appeal to the tribunal of the treasury, and to appear in person, or to be heard by counsel, before the said tribunal; and in the meantime no execution shall be made on their property, until an ultimate decision shall have been pronounced by the said tribunal.

It is, however, understood that British subjects resident in Portugal and its dominions, not carrying on trade, or exercising any branch of industry therein, but deriving their incomes from other sources, shall, in like manner with Portuguese subjects, be wholly exempt from the operation of the said *mancio* or *decima industrial* tax.

The subjects of each of the high contracting parties shall also, within the dominions of the other, be allowed the free use and exercise of their religion, without being in any manner disturbed on account of their religious opinions: they shall be allowed to assemble together for the purposes of public worship, and to celebrate the rites of their religion in their own dwelling-houses, or in the chapels or places of worship appointed for that purpose, without any the smallest hindrance or interruption whatever, either now or hereafter; and her Most Faithful Majesty does now and for ever graciously grant to the subjects of her Britannic Majesty permission to build and maintain such chapels and places of worship within her dominions. It being always understood that the said chapels and places of worship are not to have steeples and bells.

Her Britannic Majesty's subjects shall likewise have full liberty to bury their dead, after the manner

and with the ceremonies usual in their respective countries, and in the grounds and cemeteries which they shall have purchased and prepared for that purpose; and the sepulchres of the dead, in conformity to ancient and existing practice, shall in no way or on any account be disturbed.

2. The subjects of either of the contracting parties may freely dispose by will of the personal effects which they shall possess in the territories of the other; and their heirs, though subjects of the other contracting party, may succeed to their personal effects, either by will or *ab intestato*, and may obtain possession of the same in due course of law, either in person, or by other persons appointed by them to act on their behalf. In the event of the absence of heirs, or of persons duly appointed to act for them, the consul may be authorised to take charge, in due course of law, of the said effects, until the owner shall have made the necessary arrangements for obtaining possession of the property. If disputes shall arise between several claimants with respect to the title which each may have to the property, such disputes shall be decided by the courts of the country in which the property is situated; and if hereafter any favour as regards the possession or inheritance of landed or funded property (*biens fonds*) shall be granted, in the dominions of either of the high contracting parties, to the subjects of any other nation, the same favour shall extend reciprocally to their respective subjects, as the case may be, either in Portugal or Great Britain.

3. The subjects of either contracting party residing within the dominions of the other, shall be free to manage their own affairs themselves, or to commit those affairs to the management of any persons whom they may appoint as their broker, factor, agent, or interpreter; nor shall any such British subjects be restrained in their choice of persons to act in such capacities, nor shall they be called upon to pay any salary or remuneration to any person whom they shall not choose to employ. Absolute freedom shall be given, in all cases, to the buyer and seller to bargain together, and to fix the price of any goods, wares, or merchandise, imported into, or to be exported from, the dominions of either contracting party, the laws and established customs of the country being duly observed.

The subjects of either of the high contracting parties residing within the dominions of the other shall be at liberty to open retail stores and shops, under the same municipal and police regulations as native subjects; and they shall not, in this respect, be liable to any other or higher taxes or imposts than those which are or may be paid by native subjects.

4. There shall be reciprocal liberty of commerce and navigation between the subjects of the two high contracting parties; and the subjects of the two sovereigns respectively shall not pay, in the ports, harbours, roads, cities, towns, or places whatsoever in either kingdom, any other or higher duties, taxes, rates, or imposts, under whatsoever names designated or included, than those which are there paid by the subjects or citizens of the most favoured nation.

No duty of customs or other impost shall be charged upon any goods, the produce of the one country, upon importation by sea or by land from that country into the other, higher than the duty or impost charged upon goods of the same kind, the produce of and imported from any other country; and no duty, restriction, or prohibition shall be imposed upon the importation and exportation from one country to the other, of the goods and produce of each, which shall not be imposed upon goods of the same kind, when imported from or exported to any other country: and her Majesty the Queen of the United Kingdom of Great Britain and Ireland, and her Majesty the Queen of Portugal, do hereby bind and engage themselves, their heirs and successors, not to grant any favour, privilege, or immunity, in matters of commerce and navigation, to the subjects or citizens of any other state, which shall not also and at the same time be extended to the subjects of the other high contracting party, gratuitously, if the concession in favour of that other state shall have been gratuitous; and on giving, as nearly as possible, the same compensation or equivalent, if the concession shall have been conditional.

5. No duties of tonnage, and no harbour, light-house, pilotage, quarantine, or other similar or corresponding duties, of whatever nature, or under whatever denomination, shall be imposed in either country upon the vessels of the other, in respect of voyages between the two countries, if laden; or in respect of any voyage, if in ballast, which shall not be equally imposed, in the like cases, on national vessels.

6. All goods, the growth, produce, or manufacture of their respective possessions, which can legally be imported into either country from the other, in ships of that other country, shall, when so imported, be subject to the same duties, whether they be imported in ships of the one country or in ships of the other; and in like manner, all goods which can legally be exported from either country to the other, in ships of that other country, shall, when so exported, be subject to the same duties, and be entitled to the same drawbacks, bounties, and allowances, whether they be exported in ships of the one country or in ships of the other.

7. In order to promote and encourage the commercial intercourse between the dominions of the high contracting parties, for the mutual benefit of their respective subjects, her Britannic Majesty and her Most Faithful Majesty agree to take into consideration the duties now levied upon articles the produce or manufacture of either country, with a view to make such reductions in those duties as may be consistent with the interest of the high contracting parties respectively.

This matter shall without delay be made the subject of a special negotiation between the two governments.

8. British ships shall be allowed to proceed direct from any port of her Britannic Majesty's dominions to any colony of her Most Faithful Majesty, and to import into such colony any goods the growth, produce, or manufacture of the United Kingdom, or of any of the British dominions, except such goods as are prohibited to be imported into such colony, or which are admitted into it only from the dominions of her Most Faithful Majesty; and such British ships, and such goods so imported in them, shall be liable in such colony of her Most Faithful Majesty to no higher or other duties and charges, than would be there payable on Portuguese ships importing the like sort of goods, or on the like goods, the growth, produce, or manufacture of any foreign country, and allowed to be imported into the said colony in Portuguese ships.

In like manner, Portuguese ships shall be allowed to proceed direct from any port of her Most Faithful Majesty's dominions to any colony of her Britannic Majesty, and to import into such colony any goods the growth, produce, or manufacture of Portugal, or of any of the Portuguese dominions, except such goods as are prohibited to be imported into such colony, or which are admitted into it only from the dominions of her Britannic Majesty; and such Portuguese ships, and such goods so imported in them, shall be liable, in such colony of her Britannic Majesty, to no higher or other duties and charges, than would be there payable on British ships importing the like sort of goods, or on the like goods, the growth, produce, or manufacture of any foreign country, and allowed to be imported into the said colony in British ships.

9. British ships shall be allowed to export from any colony of her Most Faithful Majesty to any place not under the dominion of her said Majesty, any goods not generally prohibited to be exported from such colony; and such British ships, and such goods so exported in them, shall be liable, in such colony, to no other or higher charges than would be payable by, and shall be entitled to the same drawbacks or bounties as would be there allowable on, Portuguese ships exporting such goods, or on such goods exported in Portuguese ships.

In like manner Portuguese ships shall be allowed to export from any colony of her Britannic Majesty to any place not under the dominion of her said Majesty, any goods not generally prohibited to be exported from such colony; and such Portuguese ships, and such goods so exported in them, shall be liable in such colony to no other or higher charges than would be payable by, and shall be entitled to the same drawbacks or bounties as would be there allowable on, British ships exporting such goods, or on such goods exported in British ships.

10. It is hereby declared that the stipulations of the present treaty are not to be understood as applying

to the navigation and carrying trade between one port and another, situated in the dominions of either contracting party, if such navigation and trade should in those dominions be reserved by law exclusively to national vessels. Vessels of either country shall, however, be permitted to discharge part of their cargoes at one port in the dominions of either of the high contracting parties, and then to proceed, with the remainder of their cargo, to any other port or ports in the same dominions, without paying any higher or other duties in such cases, than national vessels would pay in like circumstances; and they shall be permitted to lade, in like manner, at different ports in the same voyage outwards.

11. The reciprocal liberty of commerce and navigation declared and stipulated for by the present treaty, shall not extend to contraband of war, or to articles the property of the enemies of either party.

The power granted by former treaties to carry, in the ships of either country, goods and merchandise of any description whatever, the property of the enemies of the other country, is now mutually renounced.

12. In all cases in which, in either kingdom, the duty to be levied upon any goods imported from the other kingdom shall be not a fixed rate, but a proportion of the value of the goods, such *ad valorem* duty shall be ascertained and secured in the following manner; that is to say, the importer shall, on making his entry for the payment of duty at the custom-house, sign a declaration, stating the description and value of the goods at such amount as he shall deem proper; and in case the officer or officers of the customs shall be of opinion that such valuation is insufficient, he or they shall be at liberty to take the goods, on paying to the importer the value thereof according to the declaration of the importer, together with an addition of 10 per cent.; and the custom-house officer shall, at the same time, return to the importer any duty which the importer may have paid upon such goods; and the amount of these sums shall be paid to the importer on the delivery of the goods to the said officer or officers, which must not be later than 15 days from the first detention of the goods.

13. Inasmuch as all merchandise, of whatever origin, whether admissible for home consumption or not, may be received and warehoused in all those ports of the United Kingdom of Great Britain and Ireland which are by law appointed to be warehousing ports for such articles, pending the entry of the same, either for home consumption or for re-exportation, as the case may be, under the regulations appointed for this purpose, and without such articles being liable, in the meantime, to the payment of any of the duties with which they would be charged, if upon arrival they were entered for consumption within the United Kingdom;—in like manner the Queen of Portugal consents and agrees that the ports of Her Most Faithful Majesty's dominions, which now are, or which shall hereafter become by law, warehousing ports, shall be free ports for receiving and warehousing, either for home consumption or for re-exportation, as the case may be, all merchandise imported in British ships, and all articles whatever, the produce or manufacture of the British dominions, imported by Portuguese ships; and the articles thus received and warehoused, subject to due regulations, shall not be liable, in the meantime, to any of the duties with which they would be charged, if they were entered for consumption on their arrival in the dominions of Her Most Faithful Majesty.

14. All goods or merchandise found on board of, or which shall have formed the cargo or part of the cargo of a vessel of the one country, which shall be wrecked, or left derelict, on or near the coast of the other country, unless the importation of such goods or merchandise shall be absolutely prohibited by law, shall be admitted for home consumption in the country on or near the coast of which such vessel shall be wrecked, or left derelict, or such goods or merchandise may be found, on payment of the same duty, as if the said goods or merchandise had been imported in a national vessel, even though such goods or merchandise could not by law be imported into the said country in any other than national vessels; and in fixing the amount of duty to be paid on such goods or merchandise, regard shall be had to any damage which the said goods or merchandise may have sustained.

To prevent frauds, the Board of Customs of each nation shall exercise their judgment as to the causes of wrecks; and when they are satisfied that the said wrecks were the result of accident or misfortune, and free from suspicion of collusion, they shall authorise, at the option of the proprietor or agent, if present, or otherwise of the consul, the transhipment, or the sale for home consumption, of the goods or merchandise, provided that such goods and merchandise could have been legally imported by the ships of the one country into the ports of the other country.

If any ships of war or merchant vessels should be wrecked on the coasts of either of the high contracting parties, such ships or vessels, or any parts thereof, and all furniture and appurtenances belonging thereunto, and all goods or merchandise which shall be saved therefrom, or the produce thereof if sold, shall be faithfully restored to the proprietors, upon being duly claimed by them, or by their agents duly authorised; or if there are no such proprietors or agents on the spot, by the respective consuls of the nation to which the proprietors of the said ships, vessels, or goods may belong, and in whose district such wreck may have taken place, provided such claim be preferred within a year and a day from the time of such wreck; and such consul, proprietor, or agent shall pay only the expenses incurred in the preservation of the property, together with the rate of salvage which would have been payable in the like case of a wreck of a national vessel; and the goods and merchandise saved from the wreck shall not be subject to duties, unless cleared for local consumption.

15. If any merchant vessel of either country should be driven into the ports of the other by stress of weather, for the purpose of effecting necessary repairs, every facility shall be afforded to such vessel for obtaining the assistance it may be in need of.

The strictest reciprocity shall be observed, in the most favourable sense, as to the relief to be afforded to such vessel from the duties, charges, and expenses in the ports of either nation, to which vessels, entering solely for the purposes of trade, are subjected. Sufficient time shall be allowed for the completion of repairs; and while the vessel shall be undergoing repair, its cargo shall not unnecessarily be required to be landed, either in whole or in part; and any difference of opinion which may arise between the custom-house authorities and the masters of the said vessels, as to the necessity of landing all or any part of the cargo, shall be referred to two sworn or public surveyors, one to be named by the chief custom-house authority of the port, and the other by the consul of the nation to which the vessel belongs.

Her Majesty the Queen of Portugal engages that the commerce of British subjects within the Portuguese dominions shall not be restrained, interrupted, or otherwise affected by the operation of any monopoly, contract, or exclusive privilege of sale or purchase whatsoever; but that the subjects of the United Kingdom shall have free and unrestrained permission to buy from and sell to whomsoever they please, and in whatever form and manner may be agreed upon between the purchaser and seller, without being obliged to give any preference or favour in consequence of any such monopoly, contract, or exclusive privilege of sale and purchase. And her Britannic Majesty engages that a like exemption from restraint, in respect to purchases or sales, shall be enjoyed by the subjects of her Most Faithful Majesty trading to or residing in the United Kingdom. But it is distinctly to be understood, that the present article shall not be interpreted as affecting the special regulations now in force, or which may hereafter be enacted, with a view solely to the encouragement and amelioration of the Douro wine trade, (it being always understood that British subjects shall in respect of the said trade be placed on the same footing as Portuguese subjects,) or with regard to the exportation of the salt of St. Ubes.

This article does not invalidate the exclusive right possessed by the crown of Portugal, within its own dominions, to the farm for the sale of ivory, urzela, gold dust, soap, gunpowder, and tobacco for home consumption: provided, however, that should the above-mentioned articles, generally or separately, ever become articles of free commerce within the dominions of her Most Faithful Majesty, the subjects of her Britannic Majesty shall be permitted to traffic in them as freely and on the same footing as the subjects or citizens of the most favoured nation.

16. It is agreed and covenanted that neither of the high contracting parties shall knowingly receive into, or retain in its service, any subjects of the other party who have deserted from the naval or military service of that other party; but that, on the contrary, each of the contracting parties shall respectively discharge from its service any such deserters, upon being required by the other party to do so.

It is further agreed and declared, that if either of the high contracting parties shall grant to any state any new favour or facility, with respect to the recovery of deserters, such favour or facility shall be considered as granted also to the other contracting party, in the same manner as if the said favour or facility had been expressly stipulated by the present treaty.

And it is further agreed, that if any apprentices or sailors shall desert from vessels belonging to the subjects of either of the high contracting parties, while such vessels are within any port in the territory of the other party, the magistrates of such port and territory shall be bound to give every assistance in their power for the apprehension of such deserters, on application to that effect being made by the consul of the party concerned, or by the deputy or representative of the consul; and no public body, civil or religious, shall protect or harbour such deserters.

17. Her Britannic Majesty, on the representation of her Most Faithful Majesty, and in contemplation of the improving system of law and justice in Portugal, hereby consents to give up the exercise of the rights connected witht he Conservatorial Court, so soon and so long as British subjects are admitted in Portugal to the benefit of securities similar or equivalent to those enjoyed by the subjects of her Most Faithful Majesty in Great Britain, as regards trial by jury, protection from arrest without a warrant from a magistrate, and examination within 24 hours after apprehension *in flagrante delicto*, and admission to bail. It being always understood, that in other respects the subjects of her Britannic Majesty in Portugal shall be placed on the same footing as Portuguese subjects, in all causes, whether civil or criminal; and that they shall not, except in cases *flagrantis delicti*, be liable to imprisonment without formal commitment (*culpa formada*) under a warrant signed by a legal authority.

18. It is hereby agreed that her Britannic Majesty, relying upon the guarantees which are or may be afforded to British subjects by the law of Portugal under the present constitutional system, henceforward claims for British subjects in Portugal no privileges which are not enjoyed by Portuguese subjects in the Portuguese or British dominions. It being, however, understood, that her Britannic Majesty will be entitled, in the event (which God forbid) of political troubles affecting the operation of the above mentioned guarantees, to claim the re-establishment and observance of the privileges surrendered by the present and preceding article.

19. The present treaty shall be in force for the term of 10 years from the date hereof; and further, until the end of 12 months after either of the high contracting parties shall have given notice to the other of its intention to terminate the same; each of the high contracting parties reserving to itself the right of giving such notice to the other at the end of the said term of 10 years, or at any subsequent time.

And it is hereby agreed between them, that, at the expiration of 12 months after such notice shall have been received by either party from the other, this treaty, and all the provisions thereof, shall altogether cease and determine.

It is agreed, nevertheless, that either of the two high contracting parties shall have the right, at the end of 5 years, to require a revision of any articles not affecting the principle of the treaty, on giving 6 months' notice of a desire to make such revision: provided, however, that it be distinctly understood that the power of giving such notice shall not extend beyond, nor be recognised after, the termination of the fifth year.

The present treaty shall be ratified, and the ratifications shall be exchanged at Lisbon at the expiration of two months from the date of its signature, or sooner if possible.

In witness whereof, the respective plenipotentiaries have signed the same, and have affixed thereto the seal of their arms.

Done at Lisbon, the 3d of July, in the year of our Lord 1842.

HOWARD DE WALDEN.
DUQUE DE PALMELLA.

True Intent and Spirit of certain Points of Treaty.

Lisbon, July 3. 1843.

The undersigned, her Britannic Majesty's plenipotentiary for the negotiation of a treaty of commerce and navigation between Great Britain and Portugal, has the honour to declare to his Excellency the Duke of Palmella, that with reference to article 5. all vessels built in the territory of her Most Faithful Majesty, or which shall be British built, or which shall have been captured from the enemy by the ships of the Portuguese government, and shall have vessels condemned under similar circumstances, and which shall be wholly owned by any subject or subjects of her Most Faithful Majesty, and whereof the master and three-fourths of the mariners are subjects of her Most Faithful Majesty, will be considered as Portuguese, and will be entitled to be placed on the footing of national vessels, and to be treated on an equality with the vessels of the most favoured nation, in the ports of her Britannic Majesty, *i. e.*, in Great Britain and Ireland and the colonies hereinafter enumerated.

With reference to article 8., in the words "growth, produce, and manufacture," the wines and brandies of Portugal are comprehended.

With reference to article 14., the jurisdiction of the Cinque Ports does not interfere with the stipulations of this article.

With reference to article 17., in respect to the declaration of her Britannic Majesty regarding the conditional surrender of the rights connected with the Conservatorial Court, whenever the Portuguese government shall have officially communicated to her Majesty's government any law or laws establishing the guarantees in question, her Majesty will recognise the right of the Portuguese government to declare the further jurisdiction and authority of the British Conservatorial Court to have ceased by consent of her Majesty.

The colonies referred to are Canada, Newfoundland, Nova Scotia, Cape Breton, New Brunswick, Prince Edward Island, and all other British possessions in North America, British West Indies, including the islands and possessions on the continent of South America, Cape of Good Hope, and other possessions in Africa; the Mauritius, the Island of Ceylon, Van Diemen's Land, New South Wales, New Zealand.

Howard de Walden. Lisbon, July 3. 1843.

The undersigned, her Most Faithful Majesty's plenipotentiary, has the honour to declare, by order of the government, to Lord Howard de Walden, in reference to the article 1. of the treaty of commerce and navigation, by both concluded and signed to-day, between Portugal and Great Britain, that the maximo that can be collected from any British subject for *mancio* or *decima industrial*, will be 20 per cent. upon the rent of their shops, dwellings, and warehouses, which will serve as an invariable rule to the tribunal of the treasury, for deciding the appeals made by British subjects.

Duke of Palmella. Lisbon, July 3. 1842.

PRUSSIA.

Convention of Commerce between his Britannic Majesty and the King of Prussia, signed at London, April 2. 1824.

Article 1. From and after the 1st day of May next, Prussian vessels entering or departing from the ports of the United Kingdom of Great Britain and Ireland, and British vessels entering or departing from the ports of his Prussian Majesty's dominions, shall not be subject to any other or higher duties or

charges whatever, than are or shall be levied on national vessels entering or departing from such ports respectively.

2. All articles of the growth, produce, or manufacture of any of the dominions of either of the high contracting parties, which are or shall be permitted to be imported into or exported from the ports of the United Kingdom and of Prussia, respectively, in vessels of the one country, shall, in like manner, be permitted to be imported into and exported from those ports in vessels of the other.

3. All articles not of the growth, produce, or manufacture of the dominions of his Britannic Majesty, which can legally be imported from the United Kingdom of Great Britain and Ireland, into the ports of Prussia, in British ships, shall be subject only to the same duties as are payable upon the like articles if imported in Prussian ships; and the same reciprocity shall be observed in the ports of the United Kingdom, in respect to all articles not the growth, produce, or manufacture of the dominions of his Prussian Majesty, which can legally be imported into the ports of the United Kingdom in Prussian ships.

4. All goods, which can legally be imported into the ports of either country, shall be admitted at the same rate of duty, whether imported in vessels of the other country, or in national vessels; and all goods which can be legally exported from the ports of either country, shall be entitled to the same bounties, drawbacks, and allowances, whether exported in vessels of the other country, or in national vessels.

5. No priority or preference shall be given, directly or indirectly, by the government of either country, or by any company, corporation, or agent, acting on its behalf or under its authority, in the purchase of any article, the growth, produce, or manufacture of either country, imported into the other, on account of or in reference to the character of the vessel in which such article was imported; it being the true intent and meaning of the high contracting parties, that no distinction or difference whatever shall be made in this respect.

6. The present convention shall be in force for the term of 10 years from the date hereof; and further, until the end of 12 months after either of the high contracting parties shall have given notice to the other of its intention to terminate the same; each of the high contracting parties reserving to itself the right of giving such notice to the other, at the end of the said term of 10 years: and it is hereby agreed between them, that, at the expiration of 12 months after such notice shall have been received by either party from the other, this convention, and all the provisions thereof, shall altogether cease and determine.

7. The present convention shall be ratified, and the ratifications shall be exchanged at London, within 1 month from the date hereof, or sooner if possible.

In witness whereof, the respective plenipotentiaries have signed the same, and have affixed thereto the seals of their arms.

Done at London, the 2d day of April, in the year of our Lord 1824.

GEORGE CANNING. W. HUSKISSON. WERTHER.

An order in council, dated May 25. 1824, directs that, from May 1. 1824, Prussian vessels entering or departing from the ports of the United Kingdom of Great Britain and Ireland, shall not be subject to any other or higher duties or charges whatever than are or shall be levied on British vessels entering or departing from such ports; that all articles of the growth, produce, or manufacture of any of the dominions of his Prussian Majesty, which are or shall be permitted to be imported into or exported from the ports of the United Kingdom of Great Britain and Ireland in British vessels, shall, in like manner, be permitted to be imported into and exported from the said ports in Prussian vessels; that all articles not of the growth, produce, or manufacture of the dominions of his Prussian Majesty, which can legally be imported from Prussia into the ports of the United Kingdom in Prussian vessels, shall be subject only to the same duties as are payable upon the like articles if imported in British ships; that all goods which can legally be imported into the ports of the United Kingdom shall be admitted at the same rate of duty, when imported in Prussian vessels, that is charged on similar articles imported in British vessels; and that all goods which can be legally exported from the ports of the United Kingdom, shall be entitled to the same bounties, drawbacks, and allowances, when exported in Prussian vessels, that are granted, paid, or allowed on similar articles when exported in British vessels

A Treasury letter, dated October 13. 1824, directs, that with respect to pilotage and all other duties charged on vessels belonging to Prussia, Sweden, and Norway, Denmark, Hanover, and Hamburg, which have entered or which may enter the ports of the United Kingdom, either from stress of weather or from any other causes, it was the intention of the Lords of the Committee of Privy Council for Trade, that such dues should not be higher than are charged upon British vessels, and that it is only to the case of goods imported into this country, and not brought direct from the country to which the vessel belongs, that the equality of duty does not apply.

An order in council, dated May 3. 1823, states, that his Majesty is pleased to declare, that the ships of and belonging to the dominions of his Majesty the King of Prussia are entitled to the privileges granted by the law of navigation, and may import from the dominions of his Majesty the King of Prussia, into any of the British possessions abroad, goods the produce of such dominions, and may export goods from such British possessions abroad, to be carried to any foreign country whatever.

PRUSSIA, BAVARIA, &c.

Convention of Commerce and Navigation between Great Britain, on the one part; and Prussia, Bavaria, Saxony, Wurtemberg, Baden, the Electorate of Hesse, the Grand Duchy of Hesse, the States forming the Commercial Union of Thuringia, Nassau, and Frankfort, on the other part.

Article 1. In consideration of the circumstance that British vessels are admitted, together with their cargoes, to entry in the ports of Prussia, and of the other states of the aforenamed Union of Customs, when coming from the ports of all countries, and in consideration of the concessions stipulated in this present convention for British trade with all the states of this Union of Customs; in consideration also of the facility which the application of steam power to inland navigation affords for the conveyance of produce and merchandise of all kinds up and down rivers; and in consideration of the new opening which may by these means be given to the trade and navigation between the U. Kingdom and the British possessions abroad on the one hand, and the states now composing the Union of Customs, on the other; some of which states use as the natural outlet of their commerce ports not within their own dominions; it is agreed that, from and after the date of the exchange of the ratifications of this present convention, Prussian vessels, and the vessels of the other states forming the said Union of Customs, together with their cargoes, consisting of all such goods as can be legally imported into the U. Kingdom and the British possessions abroad, by the said vessels from the ports of the countries to which they respectively belong, shall, when coming from the mouths of the Meuse, of the Ems, of the Weser, and of the Elbe, or from the mouths of any navigable river lying between the Elbe and the Meuse, and forming the means of communication between the sea and the territory of any of the German states which are parties to this treaty, be admitted into the ports of the U. Kingdom, and of the British possessions abroad, in as full and ample a manner, as if the ports from which such vessels may have come, as aforesaid, were within the dominions of Prussia, or of any other of the states aforesaid; and such vessels shall be permitted to import the goods above mentioned upon the same terms on which the said goods might be imported if coming from the national ports of such vessels; and also that, in like manner, such vessels proceeding from Great Britain and her colonial possessions abroad to the places thus referred to, shall be treated as if returning to a Prussian Baltic port: — it being understood that these privileges are to extend to the vessels of Prussia and of the states aforesaid, and to their cargoes, only in respect to each of the said ports in which British vessels and their cargoes shall, upon their arrival thereat, and depar-

ture therefrom, continue to be placed on the same footing as the vessels of Prussia and of the other states of the union.

2. The King of Prussia, in his own name, and in the name of the states aforesaid, agrees to place, always and in every way, the trade and navigation of the subjects of Her Britannic Majesty, in respect to the importation of sugar and rice, upon the same footing as that of the most favoured nation.

3. In the event of other German states joining the Germanic Union of Customs, it is hereby agreed that such other states shall be included in all the stipulations of the present convention.

4. The present convention shall be in force until the 1st of January, 1842, and further for the term of 6 years, provided neither of the high contracting parties shall have given to the other 6 months' previous notice that the same shall cease to be in force on the said 1st of January, 1842; and if neither party shall have given to the other six months' previous notice that the present convention shall cease on the 1st day of January, 1848, then the present convention shall further remain in force until the 1st of January, 1854, and further, until the end of 12 months after either of the high contracting parties shall have given notice to the other of its intention to terminate the same, each of the high contracting parties reserving to itself the right of giving such notice to the other; and it is hereby agreed between them, that at the expiration of 12 months after such notice shall have been received by either party from the other, this convention, and all the provisions thereof, shall altogether cease and determine.

The present convention shall be ratified, and the ratifications thereof shall be exchanged at London, at the expiration of 2 months, or sooner if possible.

In witness whereof, the respective plenipotentiaries have signed the same, and have affixed thereto the seals of their arms.

Done at London, the 2d day of March, in the year of our Lord 1841.

PALMERSTON.
H. LABOUCHERE.

By an order in council, dated August 28. 1841, it is ordered, that Prussian vessels, and the vessels of the other states forming the German Union of Customs, together with their cargoes, consisting of all such goods as can be legally imported into the U. Kingdom and the British possessions abroad, by the said vessels, from the ports of the countries to which they respectively belong, shall, when coming from the mouths of the Meuse, of the Ems, of the Weser, and of the Elbe, or from the mouths of any navigable river, lying between the Elbe and the Meuse, and forming the means of communication between the sea and the territory of any of the German states, which are parties to this treaty, be admitted into the ports of the U. Kingdom and of the British possessions abroad, in as full and ample a manner as if ports from which such vessels may have come as aforesaid, and such vessels shall be permitted to import the goods above-mentioned upon the same terms on which the said goods might be imported if coming from the national ports of such vessels; and also that in like manner such vessels proceeding from Great Britain and her colonial possessions abroad, to the ports or places thus referred to, shall be treated as if returning to a Prussian Baltic port; it being understood that these privileges are to extend to the vessels of Prussia and of the states aforesaid, and to their cargoes only in respect to each of the said states, which British vessels and their cargoes shall, upon their arrival thereat and departure therefrom, continue to be placed upon the same footing as the vessels of Prussia and of the other states of the union.

RIO DE LA PLATA (THE STATES OF).

Treaty of Amity, Commerce, and Navigation, between his Majesty and the United Provinces of Rio de La Plata.

Article 1. There shall be perpetual amity between the dominions and subjects of his Majesty the King of the United Kingdom of Great Britain and Ireland, and the United Provinces of Rio de la Plata and their inhabitants.

2. There shall be, between all the territories of his Britannic Majesty in Europe and the territories of the United Provinces of Rio de la Plata, a reciprocal freedom of commerce; the inhabitants of the two countries, respectively, shall have liberty freely and securely to come, with their ships and cargoes, to all such places, ports, and rivers in the territories aforesaid, to which other foreigners are or may be permitted to come, to enter into the same, and to remain and reside in any part of the said territories respectively; also to hire and occupy houses and warehouses for the purposes of their commerce; and generally, the merchants and traders of each nation respectively shall enjoy the most complete protection and security for their commerce, subject always to the laws and statutes of the two countries respectively.

3. His Majesty the King of the United Kingdom of Great Britain and Ireland engages further, that in all his dominions situated out of Europe, the inhabitants of the United Provinces of Rio de la Plata shall have the like liberty of commerce and navigation stipulated for in the preceding article, to the full extent in which the same is permitted at present, or shall be permitted hereafter, to any other nation.

4. No higher or other duties shall be imposed on the importation into the territories of his Britannic Majesty, of any articles of the growth, produce, or manufacture of the United Provinces of Rio de la Plata, and no higher or other duties shall be imposed on the importation into the said United Provinces, of any articles of the growth, produce, or manufacture of his Britannic Majesty's dominions, than are or shall be payable on the like articles, being the growth, produce, or manufacture of any other foreign country; nor shall any other or higher duties or charges be imposed, in the territories or dominions of either of the contracting parties, on the exportation of any articles to the territories or dominions of the other, than such as are or may be payable on the exportation of the like articles to any other foreign country; nor shall any prohibition be imposed upon the exportation or importation of any articles the growth, produce, or manufacture of his Britannic Majesty's dominions, or of the said United Provinces, which shall not equally extend to all other nations.

5. No higher or other duties or charges on account of tonnage, light, or harbour dues, pilotage, salvage in case of damage or shipwreck, or any other local charges, shall be imposed, in any of the ports of the said United Provinces, on British vessels of the burden of above 120 tons, than those payable in the same ports by vessels of the said United Provinces of the same burden, nor in the ports of any of his Britannic Majesty's territories on the vessels of the United Provinces of above 120 tons, than shall be payable, in the same ports, on British vessels of the same burden.

6. The same duties shall be paid on the importation into the said United Provinces of any article the growth, produce, or manufacture of his Britannic Majesty's dominions, whether such importation shall be in vessels of the said United Provinces, or in British vessels; and the same duties shall be paid on the importation into the dominions of his Britannic Majesty of any article the growth, produce, or manufacture of the said United Provinces, whether such importation shall be in British vessels, or in vessels of the said United Provinces; the same duties shall be paid, and the same drawbacks and bounties allowed on the exportation of any articles of the growth, produce, or manufacture of his Britannic Majesty's dominions to the said United Provinces, whether such exportation shall be in vessels of the said United Provinces, or in British vessels; and the same duties shall be paid, and the same drawbacks and bounties allowed on the exportation of any articles the growth, produce, or manufacture of the said United Provinces to his Britannic Majesty's dominions, whether such exportation shall be in British vessels or in vessels of the said United Provinces.

7. In order to avoid any misunderstanding with respect to the regulations which may respectively constitute a British vessel or a vessel of the said United Provinces, it is hereby agreed, that all vessels built in the dominions of his Britannic Majesty, and owned, navigated, and registered according to the laws of Great Britain, shall be considered as British vessels; and that all vessels built in the territories of the

said United Provinces, properly registered, and owned by the citizens thereof, or any of them, and whereof the master and three-fourths of the mariners, at least, are citizens of the said United Provinces, shall be considered as vessels of the United Provinces.

8. All merchants, commanders of ships, and others, the subjects of his Britannic Majesty, shall have the same liberty in all the territories of the said United Provinces as the natives thereof, to manage their own affairs themselves, or to commit them to the management of whomsoever they please, as broker, factor, agent, or interpreter; nor shall they be obliged to employ any other persons for those purposes, nor to pay them any salary or remuneration, unless they shall choose to employ them; and absolute freedom shall be allowed in all cases to the buyer and seller to bargain and fix the price of any goods imported into or exported from the said United Provinces, as they shall see good.

9. In whatever relates to the lading and unlading of ships, the safety of merchandise, goods, and effects, the disposal of property of every sort and denomination, by sale, donation, or exchange, or in any other manner whatsoever, as also the administration of justice, the subjects and citizens of the two contracting parties shall enjoy, in their respective dominions, the same privileges, liberties, and rights as the most favoured nation, and shall not be charged in any of these respects with any other duties or imposts than those which are paid or may be paid by the native subjects or citizens of the power in whose dominions they may be resident. They shall be exempted from all compulsory military service whatsoever, whether by sea or land, and from all forced loans, or military exactions or requisitions; neither shall they be compelled to pay any ordinary taxes, under any pretext whatsoever, greater than those that are paid by native subjects or citizens.

10. It shall be free for each of the two contracting parties to appoint consuls for the protection of trade, to reside in the dominions and territories of the other party; but before any consul shall act as such, he shall, in the usual form, be approved and admitted by the government to which he is sent; and either of the contracting parties may except from the residence of consuls such particular places as either of them may judge fit to be so excepted.

11. For the better security of commerce between the subjects of his Britannic Majesty and the inhabitants of the United Provinces of Rio de la Plata, it is agreed, that if at any time any interruption of friendly commercial intercourse, or any rupture, should unfortunately take place between the two contracting parties, the subjects or citizens of either of the two contracting parties residing in the dominions of the other shall have the privilege of remaining and continuing their trade therein without any manner of interruption, so long as they behave peaceably and commit no offence against the laws; and their effects and property, whether intrusted to individuals or to the state, shall not be liable to seizure or sequestration, or to any other demands than those which may be made upon the like effects or property belonging to the native inhabitants of the state in which such subjects or citizens may reside.

12. The subjects of his Britannic Majesty residing in the United Provinces of Rio de la Plata shall not be disturbed, persecuted, or annoyed on account of their religion, but they shall have perfect liberty of conscience therein, and to celebrate divine service either within their own private houses, or in their own particular churches or chapels, which they shall be at liberty to build and maintain in convenient places, approved of by the government of the said United Provinces: liberty shall also be granted to bury the subjects of his Britannic Majesty who may die in the territories of the said United Provinces in their own burial places, which, in the same manner, they may freely establish and maintain. In the like manner, the citizens of the said United Provinces shall enjoy, within all the dominions of his Britannic Majesty, a perfect and unrestrained liberty of conscience, and of exercising their religion publicly or privately, within their own dwelling houses, or in the chapels and places of worship appointed for that purpose, agreeably to the system of toleration established in the dominions of his said Majesty.

13. It shall be free for the subjects of his Britannic Majesty residing in the United Provinces of Rio de la Plata, to dispose of their property, of every description, by will or testament, as they may judge fit; and in the event of any British subject dying without such will or testament in the territories of the United Provinces, the British consul-general, or, in his absence, his representative, shall have the right to nominate curators to take charge of the property of the deceased for the benefit of his lawful heirs and creditors, without interference, giving convenient notice thereof to the authorities of the country; and reciprocally.

14. His Britannic Majesty being extremely desirous of totally abolishing the slave trade, the United Provinces of Rio de la Plata engage to co-operate with his Britannic Majesty for the completion of so beneficent a work, and to prohibit all persons inhabiting within the said United Provinces, or subject to their jurisdiction, in the most effectual manner, and by the most solemn laws, from taking any share in such trade.

15. The present treaty shall be ratified, and the ratifications shall be exchanged in London within 4 months, or sooner if possible.

In witness whereof, the respective plenipotentiaries have signed the same, and have affixed their seals thereunto.

Done at Buenos Ayres, 2d day of February, in the year of our Lord 1825.

WOODBINE PARISH, H.M. Consul-General.
MANL. J. GARCIA.

An order in council, dated 3d September, 1827, orders that vessels of the United Provinces of Rio de la Plata entering the ports of the United Kingdom of Great Britain and Ireland, in ballast, or laden direct from any of the ports of Rio de la Plata, or departing from the ports of the said United Kingdom, together with the cargoes on board the same, such cargoes consisting of articles which may be legally imported or exported, shall not be subject to any other or higher duties or charges whatever than are or shall be levied on British vessels entering or departing from such ports; or on similar articles when imported into or exported from such ports in British vessels; and also such articles, when exported from the said ports in vessels of the United Provinces of Rio de la Plata, respectively, shall be entitled to the same bounties, drawbacks, and allowances that are granted on similar articles when exported in British vessels.

Local Dues.—Provided nevertheless, that nothing herein shall extend to any duties or charges on account of tonnage, light or harbour dues, pilotage, salvage in case of damage or shipwreck, or any other local charges to which any vessels of the United Provinces of Rio de la Plata, of the burden of 120 tons, or of any less burden, are now by law liable in the ports of any of his Majesty's dominions; it appearing to his Majesty and his privy council, that British vessels of the burden of 120 tons, or of any less burden, are subject in the ports of the said United Provinces to higher duties and charges than are levied in those ports on vessels of the said United Provinces of the burden of 120 tons, or of any less burden.

RUSSIA.

Treaty of Commerce and Navigation between Her Majesty and the Emperor of all the Russias; with three Separate Articles thereunto annexed, signed at St. Petersburg January 12, 1859.

Article 1. There shall be between all the dominions and possessions of the two high contracting parties, reciprocal freedom of commerce and navigation. The subjects of each of the two contracting parties, respectively, shall have liberty freely and securely to come, with their ships and cargoes, to all places, ports, and rivers in the dominions and possessions of the other, to which other foreigners are or may be permitted to come; and shall, throughout the whole extent of the dominions and possessions of the other, enjoy the same rights, privileges, liberties, favours, immunities, and exemptions in matters of commerce and navigation, which are or may be enjoyed by native subjects generally.

It is understood, however, that the preceding stipulations in no wise affect the laws, decrees, and spe-

cial regulations regarding commerce, industry, and police, in vigour in each of the two countries, and generally applicable to all foreigners.

2. No other or higher duties shall be imposed on the importation into the dominions and possessions of Her Britannic Majesty, of any article the growth, produce, or manufacture of the dominions and possessions of His Majesty the Emperor of all the Russias, from whatever place arriving, and no other or higher duties shall be imposed on the importation into the dominions and possessions of His Majesty the Emperor of all the Russias, of any article the growth, produce, or manufacture of Her Britannic Majesty's dominions and possessions, from whatever place arriving, than are or shall be payable on the like article, the growth, produce, or manufacture of any other foreign country; nor shall any prohibition be imposed on the importation of any article the growth, produce, or manufacture of the dominions and possessions of either of the two contracting parties into the dominions and possessions of the other, which shall not equally extend to the importation of the like articles being the growth, produce, or manufacture of any other country.

3. No other or higher duties or charges shall be imposed in the dominions and possessions of either of the contracting parties, on the exportation of any article to the dominions and possessions of the other, than such as are, or may be, payable on the exportation of the like article to any other foreign country; nor shall any prohibition be imposed on the exportation of any article from the dominions and possessions of either of the two contracting parties to the dominions and possessions of the other, which shall not equally extend to the exportation of the like article to any other country.

4. The same reciprocal equality of treatment shall take effect in regard to warehousing, and to the transit trade, and also in regard to bounties, facilities, and drawbacks, which are or may be hereafter granted by the legislation of either country.

5. All merchandise and articles of commerce, the produce or manufacture either of the dominions and possessions of His Majesty the Emperor of all the Russias, or of any other country, which are or may be legally importable into the ports of the United Kingdom of Great Britain and Ireland, its dominions and possessions, in British vessels, may likewise be imported into those ports in Russian vessels, without being liable to any other or higher duties, of whatever denomination, than if such merchandise and articles were imported in British vessels; and reciprocally, all merchandise and articles of commerce, the produce or manufacture either of the United Kingdom of Great Britain and Ireland, its dominions and possessions, or of any other country, which are or may be legally importable into the ports of the dominions and possessions of His Majesty the Emperor of all the Russias, in Russian vessels, may likewise be imported into those ports in British vessels, without being liable to any other or higher duties, of whatever denomination, than if such merchandise and articles were imported in Russian vessels. Such reciprocal equality of treatment shall take effect without distinction whether such merchandise and articles come directly from the place of origin, or from any other place.

In the same manner, there shall be perfect equality of treatment in regard to exportation, so that the same export duties shall be paid, and the same bounties and drawbacks allowed, in the dominions and possessions of either of the high contracting parties, on the exportation of any article which is or may be legally exportable therefrom, without distinction, whether such exportation shall take place in Russian or in British vessels, and whatever may be the place of destination, whether a port of the other contracting party, or of any third power.

6. No duties of tonnage, harbour, pilotage, lighthouse, quarantine, or other similar or corresponding duties of whatever nature, or under whatever denomination, levied in the name or for the profit of government, public functionaries, private individuals, corporations, or establishments of any kind, shall be imposed in the ports of either country upon the vessels of the other country, which shall not equally and under the same conditions be imposed in the like cases on national vessels in general; the intention of the two high contracting parties being that, save certain exemptions which the shipping of some ports of the United Kingdom of Great Britain and Ireland enjoys from old times, in this respect there shall not exist in their respective dominions and possessions, in regard to the above-mentioned duties, any privilege or preference whatever favouring the national flag to the prejudice of the flag of the other party. Such equality of treatment shall apply reciprocally to the respective vessels, from whatever port or place they may arrive, and whatever may be their place of destination.

7. In all that regards the stationing, loading, and unloading of vessels in the ports, basins, docks, roadsteads, harbours, or rivers of the two countries, no privilege shall be granted to national vessels which shall not be equally granted to vessels of the other country; the intention of the contracting parties being that in this respect also the respective vessels shall be treated on the footing of perfect equality.

8. The stipulations of the preceding articles shall not apply to the coasting trade, which each of the high contracting parties shall regulate according to its own laws.

The vessels of each of the two contracting parties shall, however, be at liberty, according as the captain, proprietor, or other person duly authorised to act as agent for the vessel or cargo, shall consider advisable, to proceed from one port of one of the two States to one or several ports of the same State, in order to discharge the whole or part of their cargo brought from abroad, or in order to take in or complete their cargo, without paying other duties than those to which national vessels are, or may hereafter be liable in similar cases.

9. All vessels which according to the laws of Great Britain are to be deemed British vessels, and all vessels which according to the laws of the Empire of Russia are to be deemed Russian vessels, shall for the purposes of this treaty be deemed British and Russian vessels respectively.

10. Her Britannic Majesty engages that in all matters relating to commerce and navigation, the subjects of His Majesty the Emperor of all the Russias shall, in the British dominions, be entitled to every privilege, favour, and immunity which is actually granted, or may hereafter be granted, by Her Britannic Majesty to the subjects or citizens of any other power; and His Majesty the Emperor of all the Russias, actuated by a desire to foster and extend the commercial relations of the two countries, engages that any privilege, favour, or immunity whatever, in regard to commerce and navigation which His Imperial Majesty has actually granted, or may hereafter grant, to the subjects or citizens of any other State, shall be extended to the subjects of Her Britannic Majesty.

11. The subjects of either of the two high contracting parties, conforming themselves to the laws of the country, shall have—

(1.) Full liberty, with their families, to enter, travel, or reside in any part of the dominions and possessions of the other contracting party.

(2.) They shall be permitted, in the towns and ports, to hire or possess the houses, warehouses, shops, and premises, which may be necessary for them.

(3.) They may carry on their commerce, either in person or by any agents whom they may think fit to employ.

(4.) They shall not be subject, in respect of their persons or property, or in respect of passports, licences for residence or establishment, nor in respect of their commerce or industry, to any taxes, whether general or local, nor to imposts or obligations of any kind whatever, other or greater than those which are or may be imposed upon native subjects.

12. The dwellings and warehouses of the subjects of either of the two high contracting parties in the dominions and possessions of the other, and all premises appertaining thereto, destined for purposes of residence or commerce, shall be respected. If there should be occasion to make a search of, or a domiciliatory visit to, such dwellings and premises, or to examine or inspect books, papers or accounts, such measure shall be executed only in conformity with the legal warrant or order in writing of a tribunal, or of the competent authority.

The subjects of either of the two contracting parties in the dominions and possessions of the other shall have free access to the courts of justice for the prosecution and defence of their rights. They shall enjoy in this respect the same rights and privileges as subjects of the country, and shall, like them, be at liberty to employ, in all causes, their advocates, attorneys, or agents from among the persons admitted to the exercise of those professions according to the laws of the country.

13. The subjects of either of the two contracting parties in the dominions and possessions of the other shall be at full liberty to acquire, possess, and dispose of every description of property which the laws of the country may permit any foreigners, of whatsoever nation, to acquire and possess. They may acquire and dispose of the same, whether by purchase, sale, donation, exchange, marriage, testament, succession *ab intestato*, or in any other manner, under the same conditions as are established by the laws of the country for all foreigners. Their heirs and representatives may succeed to and take possession of such property, either in person or by agents acting on their behalf, in the same manner and in the same legal forms as subjects of the country. In the absence of heirs and representatives the property shall be treated in the same manner as the like property belonging to a subject of the country under similar circumstances.

In none of these respects shall they pay upon the value of such property any other or higher impost, duty, or charge, than is payable by subjects of the country. In every case the subjects of the contracting parties shall be permitted to export their property, or the proceeds thereof if sold, freely, and without being subjected on such exportation to pay any duty as foreigners, or any other or higher duties than those to which subjects of the country are liable under similar circumstances.

14. The subjects of either of the two high contracting parties in the dominions and possessions of the other, shall be exempted from all compulsory military service whatever, whether in the army, navy, or national guard or militia. They shall be equally exempted from all judicial and municipal charges and functions whatever, as well as from all contributions, whether pecuniary or in kind, imposed as a compensation for personal service; and, finally, from forced loans and military exactions or requisitions.

In regard, however, to judicial and municipal charges and functions, those shall be excepted which are consequent upon the possession of real property or of a lease; and in regard to military exactions and requisitions, those which all subjects of the country may be required to furnish as landed proprietors or as farmers.

15. It shall be free for each of the two high contracting parties to appoint consuls-general, consuls, vice-consuls, and consular agents, to reside in the towns and ports of the dominions and possessions of the other. Such consuls-general, consuls, vice-consuls, and consular agents, however, shall not enter upon their functions until after they shall have been approved and admitted in the usual form by the government to which they are sent. They shall exercise whatever functions, and enjoy whatever privileges, exemptions, and immunities are or shall be granted there to consuls of the most favoured nation.

16. Any ship of war or merchant-vessel of either of the high contracting parties which may be compelled by stress of weather or by accident to take shelter in a port of the other, shall be at liberty to refit therein, to procure all necessary stores, and to put to sea again, without paying any dues other than such as would be payable in a similar case by a national vessel. In case, however, the master of a merchant-vessel should be under the necessity of disposing of a part of his merchandise in order to defray his expenses, he shall be bound to conform to the regulations and tariffs of the place to which he may have come.

If any ship of war or merchant vessel of one of the high contracting parties should run aground or be wrecked upon the coasts of the other, such ship or vessel, and all parts thereof, and all furniture and appurtenances belonging thereunto, and all goods and merchandise saved therefrom, including any which may have been cast into the sea, or the proceeds thereof if sold, as well as all papers found on board such stranded or wrecked ship or vessel, shall be given up to the owners or their agents when claimed by them. If there are no such owners or agents on the spot, then the same shall be delivered to the British or Russian consul-general, consul, or vice-consul in whose district the wreck or stranding may have taken place, upon being claimed by him within the period fixed by the laws of the country; and such consuls, owners, or agents, shall pay only the expenses incurred in the preservation of the property, together with the salvage, or other expenses, which would have been payable in the like case of a wreck of a national vessel.

The goods and merchandise saved from the wreck shall be exempt from all duties of custom, unless cleared for consumption, in which case they shall pay the same rate of duty as if they had been imported in a national vessel.

In the case either of a vessel being driven in by stress of weather, run aground, or wrecked, the respective consuls-general, consuls, vice consuls, and consular agents shall, if the owner or master or other agent of the owner is not present, or is present and requires it, be authorised to interpose in order to afford the necessary assistance to their fellow-countrymen.

17. The consuls-general, consuls, vice-consuls, and consular agents of either of the high contracting parties, residing in the dominions and possessions of the other, shall receive from the local authorities such assistance as can by law be given to them for the recovery of deserters from ships of war or merchant vessels of their respective countries.

18. The Ionian Islands being under the protection of Her Britannic Majesty, the subjects and vessels of those Islands shall enjoy, in the dominions and possessions of His Majesty the Emperor of Russia, all the advantages which are granted by the present treaty to the subjects and vessels of Great Britain, as soon as the government of the Ionian Islands shall have agreed to grant the same reciprocal advantages in those Islands to Russian subjects and vessels; it being understood that, in order to prevent abuses, every Ionian vessel claiming the benefits of the present treaty shall be furnished with a patent signed by the lord high commissioner or his representative.

19. The stipulations of the present treaty shall be applicable to all vessels navigating under the Russian flag, without any distinction between the Russian Mercantile Marine, properly so called, and that which belongs more particularly to the Grand Duchy of Finland, which forms an integral part of the Empire of Russia.

In regard to commerce and navigation in the Russian possessions on the N.-W. coast of America, the convention concluded at St. Petersburg on the $\frac{16}{28}$th of February, 1825, shall continue in force.

20. The high contracting parties being desirous to secure, each within its own dominions, complete and effectual protection against fraud for the manufactures of the other, have agreed that any piracy or fraudulent imitation in one of the two countries of the manufacturers' or tradesmen's marks originally affixed, *bonâ fide*, to goods produced in the other, in attestation of their origin and quality, shall be strictly prohibited and repressed. Her Britannic Majesty engages to recommend to her parliament to adopt such measures as may be required to enable her to give the more complete execution to the stipulations of this article.

21. The high contracting parties reserve to themselves to determine hereafter, by a special convention, the means of reciprocally protecting copyright in works of literature and of the fine arts, within their respective dominions.

22. The present treaty of commerce and navigation shall remain in force for ten years from the date of the exchange of the ratifications; and further, until the expiration of twelve months after either of the high contracting parties shall have given notice to the other of its intention to terminate the same; each of the high contracting parties reserving to itself the right of giving such notice to the other at the expiration of the first nine years, or at any time afterwards.

The present treaty shall be ratified, and the ratifications shall be exchanged at London in six weeks or sooner if possible.

In witness whereof the respective plenipotentiaries have signed the same, and have affixed thereto the seal of their arms.

Done at St. Petersburg, this twelfth day of January / thirty-first day of December in the year of our Lord one thousand eight hundred and fifty / eight.

JOHN F. CRAMPTON.
PRINCE A. GORTCHACOW.

Separate Articles.

I. The commercial intercourse of Russia with the kingdoms of Sweden and Norway being regulated by special stipulations, which may hereafter be renewed, and which do not form part of the regulations applicable to foreign commerce in general, the two high contracting parties, being desirous of removing from their commercial relations every kind of doubt or cause for discussion, have agreed that those special stipulations granted in favour of the commerce of Sweden and Norway, in consideration of equivalent advantages granted in those countries to the commerce of the Grand Duchy of Finland, shall in no case apply to the relations of commerce and navigation established between the two high contracting parties by the present treaty.

II. It is equally understood that the exemptions, immunities, and privileges hereinafter mentioned, shall not be considered as at variance with the principle of reciprocity which forms the basis of the treaty of this date, that is to say:—

1. The exemption from navigation dues during the first three years, which is enjoyed by vessels built in Russia, and belonging to Russian subjects;

2. The permission granted to the inhabitants of the coast of the government of Archangel, to import duty free, or on payment of moderate duties, into the ports of the said government, dried or salted fish, as likewise certain kinds of furs, and to export therefrom, in the same manner, corn, rope and cordage, pitch and ravensduck;

3. The privilege of the Russian American Company;

4. The immunities granted in Russia to certain English and Netherland Companies, called "Yacht Clubs."

III. The present separate articles shall have the same force and validity as if they were inserted, word for word, in the treaty signed this day. They shall be ratified, and the ratifications thereof exchanged at the same time.

In witness whereof, &c.

Sardinia.

Treaty of Navigation between her Majesty and the King of Sardinia, signed at Turin, September 6. 1841.

Her Majesty the Queen of the United Kingdom of Great Britain and Ireland, and his Majesty the King of Sardinia, desiring to ameliorate, enlarge, and regulate the commercial relations between their respective kingdoms, and to furnish every sort of facility and encouragement to their respective subjects engaged in commercial operations with each other, and being persuaded that nothing can contribute more to the attainment of this desirable object than a reciprocal abrogation of all differential duties of navigation, of whatever nature, with regard to vessels of one of the two nations in the ports of the other, have named plenipotentiaries to conclude a treaty to this effect.

Article 1. British vessels which shall arrive laden in the ports of the kingdom of Sardinia, coming from the ports of the United Kingdom of Great Britain and Ireland; and reciprocally, Sardinian vessels which shall arrive laden in the ports of the U. Kingdom of Great Britain and Ireland, coming from the ports of Sardinia; as well as British or Sardinian vessels which shall arrive in ballast, in respect of any voyage whatever, in the ports of one or the other of these kingdoms, shall be treated on their entry, during their stay, and on their departure, on the same footing as national vessels, with respect to duties of tonnage, harbour, light-houses, pilotage, quarantine, wharfage, beaconage, signals, and any other duties of navigation whatever, which affect vessels, and are levied in the name and for the profit of government, public functionaries, communes, or establishments of whatever kind.

2. In order to avoid all misunderstanding with regard to the regulations according to which are fixed the conditions which establish the nationality of vessels, it is agreed that all vessels shall be considered as British vessels which are built in the dominions of her Britannic Majesty; and all those which, having been captured from an enemy by her Majesty's ships of war, or by her subjects furnished with letters of marque by the lords commissioners of the Admiralty, shall have been regularly declared a lawful prize by one of the prize courts of her Britannic Majesty; as well as all vessels which shall have been condemned by any competent court for a breach of the laws made for the prevention of the slave trade; provided that they are owned, navigated, and registered according to the laws of Great Britain; that they are the entire property of one or more of the subjects of her Majesty the Queen of Great Britain and Ireland; and that the master and three fourths of the crew are British subjects.

In the same manner, all vessels shall be considered as Sardinian vessels which are built in the dominions of his Sardinian Majesty; and all those which, having been captured from an enemy by his Majesty's ships of war, or by his subjects furnished with letters of marque, shall have been regularly declared a lawful prize by one of the prize courts of the kingdom of Sardinia; as well as all vessels which shall have been condemned by any competent court for a breach of the laws made for the prevention of the slave trade: provided that they are owned, navigated, and registered according to the laws of the said kingdom; that they are the entire property of one or more subjects of his Sardinian Majesty; and that the master and three-fourths of the crew are Sardinian subjects.

3. In all that regards the stationing of vessels, their loading and unloading in the ports, basins, roadsteads, and harbours, of one of the two countries, no privilege shall be accorded to national vessels which shall not be equally acceded to the vessels of the other country; the desire of the contracting parties being that in this respect likewise vessels shall be treated on a footing of perfect equality.

4. Vessels of the two countries shall be at liberty to discharge the whole or part of their cargo in the ports of the dominions of either of the high contracting parties, according as the captain or the proprietor, or whoever is duly authorised to act in the port as agent for the vessel or cargo shall consider advisable; and then proceed with the remainder of their cargo to the other ports of the same country.

5. Should any ships of war or mercantile vessels of one of the two countries be wrecked upon the coast of the other, such ships or vessels, or any part thereof, their rigging, and all the appurtenances thereof, as well as all effects and merchandise which shall be saved therefrom, or the proceeds of the sale thereof, shall be faithfully restored to the proprietors, or their duly authorised factors, upon being claimed by them. In the event of such proprietors or factors not being on the spot, the said appurtenances, merchandise, or the proceeds thereof, shall be delivered, together with all papers found on board such vessels, to the British or Sardinian consul in whose district the wreck may have taken place; and such consul, proprietor, or factor shall pay only the expenses incurred in the preservation of the property, together with the rate of salvage which would have been payable in the like case of a wreck of a national vessel. The merchandise and goods saved from the wreck shall not be subject to the established duties, unless cleared for consumption.

6. It is expressly understood that the preceding articles are not applicable to the navigation of the coast, or coasting trade of each of the two countries which is exclusively reserved to each of the high contracting parties.

7. British vessels arriving from Gibraltar or from Malta shall enjoy, in the ports of his Majesty the King of Sardinia, the same advantages as are accorded to British vessels arriving from the ports of the United Kingdom of Great Britain and Ireland; and reciprocally, Sardinian vessels, which shall enter the ports of the Island of Malta or of Gibraltar, shall enjoy all the advantages which are assured to them by the present treaty, when entering the ports of the United Kingdom of Great Britain and Ireland.

8. The present treaty shall be in force for the term of 10 years from the date of the exchange of the ratifications thereof, and further until the expiration of 12 months after one of the contracting parties shall have announced to the other the intention to terminate the same, each of the said high contracting parties reserving to itself the right of giving such notice to the other at the end of the said term of 10 years.

The ratifications of the present treaty shall be exchanged at Turin, within the space of 2 months from the date of the signature thereof, or sooner if possible.

In witness whereof, we have signed the same in double original, and have affixed thereto the seal of our arms.

Done at Turin, the 6th of September, 1841.

RALPH ABERCROMBY.
SOLAR DE LA MARGUERITE.

The Two Sicilies.

Treaty of Commerce and Navigation between His Britannic Majesty and the King of the Two Sicilies, signed at London, September 26. 1816.

Article 1. His Britannic Majesty consents, that all the privileges and exemptions which his subjects, their commerce and shipping, have enjoyed, and do enjoy, in the dominions, ports, and domains of his Sicilian Majesty, in virtue of the treaty of peace and commerce concluded at Madrid on the 10th of May (23d of May), 1667, between Great Britain and Spain; of the treaties of commerce between the same powers, signed at Utrecht, the 9th of December, 1713, and at Madrid, the 13th of December, 1715; and of the convention concluded at Utrecht, the 8th of March, 1712-1713, between Great Britain and the kingdom of Sicily, shall be *abolished*; and it is agreed upon in consequence, between their said Britannic and Sicilian Majesties, their heirs and successors, that the said privileges and exemptions, whether of persons, or of flags and shipping, are and shall continue for ever abolished.

2. His Sicilian Majesty engages not to continue, nor hereafter to grant, to the subjects of any other power whatever, the privileges and exemptions abolished by the present convention.

3. His Sicilian Majesty promises that the subjects of his Britannic Majesty shall not be subjected, within

his dominions, to a more rigorous system of examination and search by the officers of customs than that to which the subjects of his said Sicilian Majesty are liable.

4. His Majesty the King of the Two Sicilies promises that British commerce in general, and the British subjects who carry it on, shall be treated throughout his dominions upon the same footing as the most favoured nations, not only with respect to the persons and property of the said British subjects, but also with regard to every species of article in which they may traffic, and the taxes or other charges payable on the said articles, or on the shipping in which the importation shall be made.

5. With respect to the personal privileges to be enjoyed by the subjects of his Britannic Majesty, in the kingdom of the Two Sicilies, his Sicilian Majesty promises that they shall have a free and undoubted right to travel, and to reside in the territories and dominions of his said Majesty, subject to the same precautions of police which are practised towards the most favoured nations. They shall be entitled to occupy dwellings and warehouses, and to dispose of their personal property of every kind and description, by sale, gift, exchange, or will, and in any other way whatever, without the smallest loss or hindrance being given them on that head. They shall not be obliged to pay, under any pretence whatever, other taxes or rates than those which are paid, or that hereafter may be paid, by the most favoured nations in the dominions of his said Sicilian Majesty. They shall be exempt from all military service, whether by land or sea; their dwellings, warehouses, and every thing belonging or appertaining thereto for objects of commerce or residence, shall be respected. They shall not be subjected to any vexatious search or visits. No arbitrary examination or inspection of their books, papers, or accounts, shall be made under the pretence of the supreme authority of the state, but these shall alone be executed by the legal sentence of the competent tribunals. His Sicilian Majesty engages on all these occasions to guarantee to the subjects of his Britannic Majesty who shall reside in his states and dominions, the preservation of their property and personal security, in the same manner as those are guaranteed to his subjects and to all foreigners belonging to the most favoured and most highly privileged nations.

6. According to the tenor of the articles 1. and 2. of this treaty, his Sicilian Majesty engages not to declare null and void the privileges and exemptions which actually exist in favour of British commerce within his dominions, till the same day, and except by the same act, by which the privileges and exemptions, whatsoever they are, of all other nations, shall be declared null and void within the same.

7. His Sicilian Majesty promises, from the date when the general abolition of the privileges according to the articles 1, 2. and 6. shall take place, to make a reduction of 10 per cent. upon the amount of the duties payable according to the tariff in force the 1st of January, 1816, upon the total of the merchandise or production of the United Kingdom of Great Britain and Ireland, her colonies, possessions, and dependencies, imported into the states of his said Sicilian Majesty, according to the tenor of article 4. of the present convention; it being understood that nothing in this article shall be construed to prevent the King of the Two Sicilies from granting, if he shall think proper, the same reduction of duty to other foreign nations.

8. The subjects of the Ionian Islands shall, in consequence of their being actually under the immediate protection of his Britannic Majesty, enjoy all the advantages which are granted to the commerce and to the subjects of Great Britain by the present treaty; it being well understood, that to prevent all abuses, and to prove its identity, every Ionian vessel shall be furnished with a patent, signed by the Lord High Commissioner or his representative.

9. The present convention shall be ratified, and the ratifications thereof exchanged in London, within the space of 6 months, or sooner if possible.

In witness whereof, the respective plenipotentiaries have signed it, and thereunto affixed the seal of their arms.

Done at London, the 26th of September, 1816.

CASTLEREAGH. CASTELCICALA.

Separate and Additional Article.

In order to avoid all doubt respecting the reduction upon the duties in favour of British commerce which his Sicilian Majesty has promised in the 7th article of the convention signed this day between his Britannic Majesty and his Sicilian Majesty, it is declared, by this present separate and additional article, that by the concession of 10 per cent. of diminution, it is understood that in case the amount of the duty should be 20 per cent. upon the value of the merchandise, the effect of the reduction of 10 per cent. is to reduce the duty from 20 to 18; and so for other cases in proportion. And that for the articles which are not taxed *ad valorem* in the tariff, the reduction of the duty shall be proportionate; that is to say, a deduction of a tenth part upon the amount of the sum payable shall be granted.

The present separate and additional article shall have the same force and validity as if it had been inserted word for word in the convention of this day: it shall be ratified and the ratification thereof shall be exchanged at the same time.

In witness whereof, the respective plenipotentiaries have signed it, and have thereunto affixed the seal of their arms.

Done at London, the 26th of September, 1816.

CASTLEREAGH. CASTELCICALA.

Treaty of Commerce and Navigation between Her Majesty and the King of the Kingdom of the Two Sicilies, signed at Naples, April 29. 1845.

Article I. Her Britannic Majesty confirms the abolition agreed upon by the first article of the convention of Commerce and Navigation between Great Britain and the Kingdom of the Two Sicilies, signed at London on the 26th of September, 1816, of all the privileges and exemptions which her subjects, their commerce and merchant ships, did enjoy within the dominions, states, and ports of his Sicilian Majesty, in virtue of the treaty of peace and commerce between Great Britain and Spain, concluded at Madrid on the $\frac{13}{23}$ May, 1667; of the treaties of commerce between the same powers, signed at Utrecht the $\frac{28\text{ November}}{9\text{ December}}$, 1713, and at Madrid the $\frac{3}{14}$ December, 1715; and of the convention between Great Britain and the Kingdom of Sicily, concluded at Utrecht the $\frac{25\text{ February, 1712}}{8\text{ March, 1713}}$; and it is agreed in consequence, between their said Britannic and Sicilian Majesties, their heirs and successors, that the said privileges and exemptions, whether of persons, flags, or shipping, are and shall continue for ever abolished, even when the present treaty shall cease to be in force.

2. His Sicilian Majesty, on his part, confirms in like manner the engagement contained in the second article of the said convention of the 26th of September, 1816, not to grant for the future, to the subjects of any other power whatever, the privileges and exemptions abolished by that convention, and to which the preceding article refers.

3. With respect to the personal privileges to be enjoyed by the subjects of her Britannic Majesty in the Kingdom of the Two Sicilies, his Sicilian Majesty engages that they shall have a free and undoubted right to travel and to reside in the territories and dominions of his said Majesty, subject to the same precautions of police which are practised towards the subjects or citizens of the most favoured nations.

They shall be entitled to occupy dwellings and warehouses, and to dispose of all their personal property, of every kind and description, by sale, gift, exchange, will, or in any other way whatever, without

the smallest hindrance or obstacle. They shall not be obliged to pay, under any pretence whatever, any taxes or impositions other or greater than those which are paid, or may hereafter be paid, by the subjects or citizens of the most favoured nations in the dominions of his said Sicilian Majesty. They shall be exempt from all military service, whether by land or sea; from forced loans, and from every extraordinary contribution, not general or by law established. Their dwellings, warehouses, and all premises appertaining thereto, destined for purposes of residence or commerce, shall be respected. No arbitrary search of or visit to the houses of British subjects, and no arbitrary examination or inspection whatever of the books, papers, or accounts of their trade shall be made; but such measures shall be executed only in conformity with the legal sentence of a competent tribunal. And generally, his Sicilian Majesty engages that the subjects of her Britannic Majesty residing in his states or dominions shall enjoy their property and personal security in as full and ample manner as his own subjects, and as the subjects or citizens of the most favoured nations.

Her Britannic Majesty, on her part, engages to insure the enjoyment of the like privileges to the subjects of his Sicilian Majesty within her dominions.

4. The subjects of her Britannic Majesty within the dominions of his Sicilian Majesty, shall be free to manage their own affairs themselves, or to commit those affairs to the management of any persons whom they may appoint as their broker, factor, or agent; nor shall such British subjects be restrained in their choice of persons to act in such capacities; nor shall they be called upon to pay any salary or remuneration to any person whom they shall not choose to employ. Absolute freedom shall be given in all cases, to the buyer and seller to bargain together, and to fix the price of any goods or merchandise imported into or to be exported from the dominions of his Sicilian Majesty, save and except generally such cases wherein the laws and usages of the country may require the intervention of any special agents in the dominions of his Sicilian Majesty.

The same privileges shall be enjoyed in the dominions of her Britannic Majesty, by the subjects of his Sicilian Majesty, and upon the same conditions.

5. The subjects of her Britannic Majesty shall not be liable, within the dominions of his Sicilian Majesty, to a more rigorous system of examination and search by the officers of the customs, than the subjects of his Sicilian Majesty. And in like manner, the subjects of his Sicilian Majesty shall not be liable, within the dominions of her Britannic Majesty, to a more rigorous system of examination and search than British subjects.

6. There shall be reciprocal liberty of commerce and navigation between the U. Kingdom of Great Britain and Ireland and the Kingdom of the Two Sicilies. No duty of customs or other impost shall be charged upon any goods the produce or manufacture of one country, upon importation by sea or by land from such country into the other, other or higher than the duty or impost charged upon goods of the same kind the produce or manufacture of, or imported from, any other country; and her Majesty the Queen of the U. Kingdom of Great Britain and Ireland, and his Majesty the King of the Two Sicilies, do hereby engage that the subjects or citizens of any other state shall not enjoy any favour, privilege, or immunity whatever in matters of commerce and navigation, which shall not also and at the same time be extended to the subjects of the other high contracting party; gratuitously, if the concession in favour of that other state shall have been gratuitous, and in return for a compensation as nearly as possible of proportionate value and effect, to be adjusted by mutual agreement, if the concession shall have been conditional.

7. All articles of the produce or manufacture of either country, and of their respective dominions, which can legally be imported into either country from the other, in ships of that other country, shall, when so imported, be subject to the same duties and enjoy the same privileges, whether imported in ships of the one country or in ships of the other; and in like manner all goods which can legally be exported or re-exported from either country to the other, in ships of that other country, shall, when so exported or re-exported, be subject to the same duties, and be entitled to the same privileges, drawbacks, bounties, and allowances, whether exported in ships of the one country or in ships of the other.

8. No duties of tonnage, harbour, lighthouses, pilotage, quarantine, or other similar duties, of whatever nature or under whatever denomination, shall be imposed in either country upon the vessels of the other, in respect of voyages between the U. Kingdom of Great Britain and Ireland, or any of the British possessions in Europe, and the kingdom of the Two Sicilies, if laden, or in respect of any voyage if in ballast, which shall not be equally imposed in the like cases on national vessels.

9. In all cases in which, in either kingdom, the duty to be levied upon any goods imported from the other kingdom shall be not a fixed rate but a proportion of the value of the goods, such *ad valorem* duty shall be ascertained and secured in the following manner; that is to say, the importer shall, on making his entry for the payment of duty at the custom-house, sign a declaration stating the value of the goods at such amount as he shall deem proper; and in case the officer or officers of the customs shall be of opinion that such valuation is insufficient, he or they shall be at liberty to take the goods, on paying to the importer the value thereof according to the declaration of the importer, together with an addition of 10 per cent.; and the custom-house officer shall at the same time return to the importer any duty which the importer may have paid upon such goods.

10. It is hereby declared, that the stipulations of the present treaty are not to be understood as applying to the navigation and carrying trade between one port and another situated in the dominions of either contracting party; such navigation and trade being reserved exclusively to national vessels.

Vessels of either country shall, however, be permitted to load or unload part of their cargoes at one port in the dominions of either of the high contracting parties, and then to proceed to complete the said loading or unloading, to any other port or ports in the same dominions.

11. Neither of the two governments, nor any corporation or agent acting in behalf or under the authority of either government, shall in the purchase of any article which, being the growth, produce, or manufacture of the one country, shall be imported into the other, give, directly or indirectly, any priority or preference on account of or in reference to the national character of the vessel in which such article shall have been imported; it being the true intent and meaning of the high contracting parties, that no distinction or difference whatever shall be made in this respect.

12. Her Britannic Majesty declares that the commerce of Sicilian subjects within the U. Kingdom of Great Britain and Ireland is not restrained, interrupted, or in any manner affected by the operation of any monopoly, contract, or exclusive privilege of sale or purchase whatsoever; but that the subjects of his Sicilian Majesty within the U. Kingdom of Great Britain and Ireland, have unrestrained permission to buy from and sell to whomsoever they please, and in any form and manner which may be agreed upon between the purchaser and seller, and without being obliged to give any preference or favour in consequence of any such monopoly, contract, or exclusive privilege of sale or purchase; and her Britannic Majesty engages that no change shall in this respect be made in regard to the trade of the subjects of his Sicilian Majesty. His Sicilian Majesty engages on his part, that a like liberty in respect to purchases or sales shall be enjoyed by her Britannic Majesty's subjects trading to or residing in the Kingdom of the Two Sicilies: the royal Sicilian monopolies of tobacco, salt, playing cards, gunpowder, and nitre, being excepted.

It being understood that nothing agreed upon in the present treaty is opposed to the right of his Majesty the King of the Kingdom of the Two Sicilies to grant, whether to the authors or others, patents for inventions or improvements.

13. If any ships of war or merchant-vessels be wrecked on the coasts of either of the high contracting parties, such ships or vessels, or any parts thereof, and all furniture and appurtenances belonging thereunto, and all goods and merchandise which shall be saved therefrom, or the produce thereof, if sold,

shall be faithfully restored, with the least possible delay, to the proprietors, upon being claimed by them or by their duly authorised factors; and if there are no such proprietors or factors on the spot, then the said goods and merchandise, or the proceeds thereof, as well as all the papers found on board such wrecked ships or vessels, shall be delivered to the British or Sicilian consul or vice-consul in whose district the wreck may have taken place; and such consul, vice-consul, proprietors, or factors, shall pay only the expenses incurred in the preservation of the property, together with the rate of salvage and expenses of quarantine which would have been payable in the like case of a wreck of a national vessel; and the goods and merchandise saved from the wreck shall not be subject to duties unless cleared for consumption; it being understood that in case of any legal claim upon such wreck, goods, or merchandise, the same shall be referred for decision to the competent tribunals of the country.

14. Her Britannic Majesty consents that as soon as the present treaty shall be carried into effect, she will give up for ever the privilege of the reduction of 10 per cent. stipulated in favour of the trade of her subjects, by the 7th Article of the Convention signed at London on the 26th of September, 1816. And his Sicilian Majesty engages on his part, that, so long as this treaty shall last, the subjects of her Britannic Majesty shall continue to enjoy a reduction of 10 per cent. upon the duties payable according to the customs' tariff, upon the total of the merchandise or productions of the U. Kingdom of Great Britain and Ireland, her colonies, possessions, and dependencies, imported by them into his Majesty's dominions; and further, the subjects of her Britannic Majesty shall not pay any higher duties than those which upon the like merchandise or productions shall be paid by the subjects or citizens of any other nation, conformably always to the terms of the 6th Article of the present treaty, and the principles laid down in that article.

It is, however, understood, that nothing contained in this article shall prevent or restrict the right of his Majesty the King of the Kingdom of the Two Sicilies to continue to his own subjects the enjoyment of a like reduction of 10 per cent. on the custom-house duties, or to grant it, if he shall think proper, to other nations, and thus to place them in this respect on the same footing with Great Britain; and to make at any time such changes as his Majesty shall deem fit in the tariffs of his royal dominions.

15. The Ionian Islands being under the protection of her Britannic Majesty, the subjects and vessels of those islands shall enjoy, in the Sicilian dominions, all the advantages which are granted by the present treaty to the subjects and vessels of Great Britain, as soon as the government of the Ionian Islands shall have agreed to grant the same reciprocal advantages in those islands to the subjects and vessels of his Sicilian Majesty; it being understood that to prevent abuses, every Ionian vessel claiming the benefits of this treaty shall be furnished with a patent signed by the Lord High Commissioner, or by his representative.

16. The commerce and navigation between the dominions of his Sicilian Majesty and Gibraltar and Malta, shall enjoy all the advantages granted to the subjects and vessels of the U. Kingdom of Great Britain and Ireland, and the Kingdom of the Two Sicilies, by the present treaty.

17. As soon as the ratifications of the present treaty shall have been exchanged, the stipulations contained in the Convention of Commerce and Navigation between Great Britain and the Kingdom of the Two Sicilies, signed at London on the 26th of September, 1816, as well as in the Additional Articles of the same date, shall be, without distinction and for ever, considered as null and void.

18. The present treaty shall be in force for the term of 10 years from the date of the exchange of the ratifications thereof, and further until the end of 12 months after either of the high contracting parties shall have given notice to the other of its intention to terminate the same; each of the said high contracting parties reserving to itself the right of giving such notice at the end of the said term of 10 years, or at any subsequent time.

19. The present treaty shall be ratified, and the ratifications shall be exchanged at Naples at the expiration of 3 months from the date of its signature, or sooner if possible.

In witness whereof the respective plenipotentiaries have signed the same, and have affixed thereto the seals of their arms.

Done at Naples, the 29th day of April, 1845.

TURKEY.

Capitulations and Articles of Peace between Great Britain and the Ottoman Empire, as agreed upon, augmented, and altered, at different Periods, and, finally, confirmed by the Treaty of Peace concluded at the Dardanelles, in 1809.

SULTAN MEHEMED,

MAY HE LIVE FOR EVER.

"*Let every thing be done in conformity to these capitulations, and contrary thereto let nothing be done.*"

1. The English nation and merchants, and all other merchants sailing under the English flag, with their vessels and merchandise of all descriptions, may pass safely by sea, and go and come into our dominions, without any the least prejudice or molestation being given to their persons, property, or effects, by any person whatsoever, but they shall be left in the undisturbed enjoyment of their privileges, and be at liberty to attend to their affairs.

2. If any of the English coming into our dominions by land be molested or detained, such persons shall be instantly released, without any further obstruction being given to them.

3. English vessels entering the ports and harbours of our dominions shall and may at all times safely and securely abide and remain therein, and at their free will and pleasure depart therefrom, without any opposition or hindrance from any one.

4. If it shall happen that any of their ships suffer by stress of weather, and not be provided with necessary stores and requisites, they shall be assisted by all who happen to be present, whether the crews of our Imperial ships, or others, both by sea and land.

5. Being come into the ports and harbours of our dominions, they shall and may be at liberty to purchase at their pleasure, with their own money, provisions and all other necessary articles, and to provide themselves with water, without interruption or hindrance from any one.

6. If any of their ships be wrecked upon any of the coasts of our dominions, all beys, cadis, governors, commandants, and others our servants, who may be near or present, shall give them all help, protection, and assistance, and restore to them whatsoever goods and effects may be driven ashore; and in the event

of any plunder being committed, they shall make diligent search and inquiry to find out the property, which, when recovered, shall be wholly restored by them.

7. The merchants, interpreters, bankers, and others of the said nation, shall and may, both by sea and land, come into our dominions, and there trade with the most perfect security; and in coming and going, neither they nor their attendants shall receive any the least obstruction, molestation, or injury, either in their persons or property, from the beys, cadis, sea captains, soldiers, and others our slaves.

17. Our ships and galleys, and all other vessels, which may fall in with any English ships in the seas of our dominions, shall not give them any molestation, nor detain them by demanding any thing, but shall show good and mutual friendship the one to the other, without occasioning them any prejudice.

19. If the corsairs or galliots of the Levant be found to have taken any English vessels, or robbed or plundered them of their goods and effects, also if any one shall have forcibly taken any thing from the English, all possible diligence and exertion shall be used and employed for the discovery of the property, and inflicting condign punishment on those who may have committed such depredations; and their ships, goods, and effects shall be restored to them without delay or intrigue.

21. Duties shall not be demanded or taken of the English, or of the merchants sailing under the flag of that nation, on any piastres and sequins they may import into our sacred dominions, or on those they may transport to any other place.

26. English merchants, and all others sailing under their flag, may, freely and unrestrictedly, trade and purchase all sorts of merchandise (prohibited commodities alone excepted), and convey them, either by land or sea, or by way of the river Tanais, to the countries of Muscovy or Russia, and bring back thence other merchandise into our sacred dominions, for the purposes of traffic, and also transport others to Persia and other conquered countries.

38. Should the ships bound for Constantinople be forced by contrary winds to put into Caffa, or any other place of those parts, and not be disposed to buy or sell any thing, no one shall presume forcibly to take out or seize any part of their merchandise, or give to the ships or crews any molestation, or obstruct the vessels that are bound to these ports.

40. On their ships arriving at any port, and landing their goods, they may, after having paid their duties, safely and securely depart, without experiencing any molestation.

41. English ships bound to Constantinople, Alexandria, Tripoli of Syria, Scanderoon, or other ports of our sacred dominions, shall in future be bound to pay duties, according to custom, on such goods only as they shall, of their own free will, land with a view to sale; and for such merchandise as they shall not discharge, no duty shall be demanded, neither shall the least molestation or hindrance be given to them.

44. English and other merchants navigating under their flags, who trade to Aleppo, shall pay such duties on the silks, brought and laden by them on board their ships, as are paid by the French and Venetians, and not one asper more.

55. The Imperial fleet, galleys, and other vessels, departing from our sacred dominions, and falling in with English ships at sea, shall in no-wise molest or detain them, nor take from them any thing whatsoever. English ships shall no longer be liable to any further search, or exaction at sea under colour of search or examination.

70. English ships coming to the ports of Constantinople, Alexandria, Smyrna, Cyprus, and other ports of our sacred dominions, shall pay 300 aspers for anchorage duty, without an asper more being demanded of them.

72. No molestation shall be given to any of the aforesaid nation buying camlets, mohairs, or grogram yarn, at Angora and Beghbazar, and desirous of exporting the same from thence, after having paid the duty of 3 per cent., by any demand of customs for the exportation thereof, neither shall one asper more be demanded of them.

75. That it being represented to us that English merchants have been accustomed hitherto to pay no custom or scale duty, either on the silks bought by them at Brussa and Constantinople, or on those which come from Persia and Georgia, and are purchased by them at Smyrna from the Armenians; if such usage or custom really exists, and the same be not prejudicial to the empire, such duty shall not be paid in future.

(*N. B.* — These capitulations may be found entire in *Hertslet's Treaties;* and in *Chitty's Commercial Law*, vol. ii. pp. 290—511. Appen.)

Treaty between Great Britain and the Sublime Porte, concluded at the Dardanelles, the 5th of January, 1809.

1. From the moment of signing the present treaty, every act of hostility between England and Turkey shall cease.

5. In return for the indulgence and good treatment afforded by the Sublime Porte to English merchants, with respect to their goods and property, as well as in all matters tending to facilitate their commerce, England shall reciprocally extend every indulgence and friendly treatment to the flags, subjects, and merchants of the Sublime Porte, which may hereafter frequent the dominions of his Britannic Majesty for the purpose of commerce.

6. The last Custom-house tariff established at Constantinople, at the ancient rate of 3 per cent., and particularly the article relating to the interior commerce, shall continue to be observed, as they are at present regulated, and to which England promises to conform.

10. English patents of protection shall not be granted to dependants, or merchants who are subjects of the Sublime Porte, nor shall any passport be delivered to such persons, on the part of ambassadors or consuls, without permission previously obtained from the Sublime Porte.

Done near the Castles of the Dardanelles, the 5th of January, 1809, which corresponds with the year of the Hégira 1223, the 19th day of the moon Zilkaade.

SEYD MEHEMMED EMIN VAAID EFFENDI.
ROBERT ADAIR.

Convention of Commerce and Navigation between Her Majesty and the Sultan of the Ottoman Empire, with two additional Articles thereunto annexed.

Art. 1. — All rights, privileges, and immunities which have been conferred on the subjects or ships of Great Britain by the existing capitulations and treaties are confirmed now and for ever, except in as far as they may be specifically altered by the present convention: and it is, moreover, expressly stipulated that all rights, privileges, or immunities which the Sublime Porte now grants, or may hereafter grant, to the ships and subjects of any other foreign power, or which it may suffer the ships and subjects of any other foreign power to enjoy, shall be equally granted to, and exercised and enjoyed by, the subjects and ships of Great Britain.

Art. 2. — The subjects of Her Britannic Majesty, or their agents, shall be permitted to purchase at all places in the Ottoman dominions (whether for the purposes of internal trade or exportation) all articles, without any exception whatsoever, the produce, growth, or manufacture of the said dominions; and the Sublime Porte formally engages to abolish all monopolies of agricultural produce, or of any other articles whatsoever, as well as all permits from the local governors, either for the purchase of any article or for its removal from one place to another when purchased; and any attempt to compel the subjects of Her Britannic Majesty to receive such permits from the local governors shall be considered as an infraction of treaties, and the Sublime Porte shall immediately punish with severity any vizirs and other officers who shall have been guilty of such misconduct, and render full justice to British subjects for all injuries or losses which they may duly prove themselves to have suffered.

Art. 3. — If any article of Turkish produce, growth, or manufacture be purchased by the British mer-

chant or his agent, for the purpose of selling the same for internal consumption in Turkey, the British merchant or his agent shall pay, at the purchase and sale of such articles, and in any manner of trade therein, the same duties that are paid, in similar circumstances, by the most favoured class of Turkish subjects engaged in the internal trade of Turkey, whether Mussulmans or Rayahs.

Art. 4. — If any article of Turkish produce, growth, or manufacture be purchased for exportation, the same shall be conveyed by the British merchant or his agent, free of any kind of charge or duty whatsoever, to a convenient place of shipment, on its entry into which it shall be liable to one fixed duty of 9 per cent. *ad valorem*, in lieu of all other interior duties.

Subsequently, on exportation, the duty of 3 per cent., as established and existing at present, shall be paid. But all articles bought in the shipping ports for exportation, and which have already paid the interior duty at entering into the same, will only pay the 3 per cent. export duty.

Art. 5. — The regulations under which firmans are issued to British merchant vessels for passing the Dardanelles and the Bosphorus, shall be so framed as to occasion to such vessels the least possible delay.

Art. 6. — It is agreed by the Turkish government that the regulations established in the present convention shall be general throughout the Turkish empire, whether in Turkey in Europe, in Turkey in Asia, in Egypt, or other African possessions belonging to the Sublime Porte, and shall be applicable to all the subjects, whatever their description, of the Ottoman dominions; and the Turkish government also agrees not to object to other foreign powers settling their trade upon the basis of this present convention.

Art. 7. — It having been the custom of Great Britain and the Sublime Porte, with a view to prevent all difficulties and delay in estimating the value of articles imported into the Turkish dominions, or exported therefrom, by British subjects, to appoint at intervals of fourteen years, a commission of men well acquainted with the traffic of both countries, who have fixed by a tariff the sum of money in the coin of the Grand Signior which should be paid as duty on each article; and the term of fourteen years, during which the last adjustment of the said tariff was to remain in force, having expired, the high contracting parties have agreed to name conjointly fresh commissioners to fix and determine the amount in money which is to be paid by British subjects, as the duty of 3 per cent. upon the value of all commodities imported and exported by them; and the said commissioners shall establish an equitable arrangement for estimating the interior duties which, by the present treaty, are established on Turkish goods to be exported, and shall also determine on the places of shipment where it may be most convenient that such duties should be levied.

The new tariff thus established to be in force for 7 years after it has been fixed, at the end of which time it shall be in the power of either of the parties to demand a revision of that tariff; but if no such demand be made on either side within the 6 months after the end of the first 7 years, then the tariff shall remain in force for 7 years more, reckoned from the end of the preceding 7 years; and so it shall be at the end of each successive period of 7 years.

Art. 8. — The present convention shall be ratified, and the ratifications shall be exchanged at Constantinople within the space of 4 months.

In witness whereof, the respective plenipotentiaries have signed the same, and have affixed their seals thereunto.

Done at Balta-Liman, near Constantinople, the 16th day of August, 1838.

PONSONBY.

(Signed in the Turkish original)

MUSTAPHA RESCHID, &c.

Additional Articles.

Certain difficulties having arisen between the ambassador of her Britannic Majesty and the plenipotentiaries of the Sublime Porte, in fixing the new conditions which should regulate the commerce in British goods imported into the Turkish dominions, or passing through the same in transit, it is agreed between his Excellency the British ambassador and the plenipotentiaries of the Sublime Porte, that the present convention should receive their signatures, without the articles which have reference to the above-mentioned subjects forming part of the body of the said convention.

But at the same time it is also agreed — the following articles having been consented to by the Turkish government — that they shall be submitted to the approbation of her Majesty's government, and, should they be approved and accepted by her Majesty's government, they shall then form an integral part of the treaty now concluded.

The articles in question are the following: —

Art. 1. — All articles being the growth, produce, or manufacture of the U. Kingdom of Great Britain and Ireland and its dependencies, and all merchandise, of whatsoever description, embarked in British vessels, and being the property of British subjects, or being brought overland, or by sea, from other countries by the same, shall be admitted, as heretofore, into all ports of the Ottoman dominions, without exception, on the payment of 3 per cent. duty, calculated upon the value of such articles.

And in lieu of all other and interior duties, whether levied on the purchaser or seller, to which these articles are at present subject, it is agreed that the importer, after receiving his goods, shall pay, if he sells them at the place of reception, or if he send them thence to be sold elsewhere in the interior of the Turkish empire, one fixed duty of 2 per cent.; after which such goods may be sold and resold in the interior, or exported, without any further duty whatsoever being levied or demanded on them.

But all goods that have paid the 3 per cent. import duty at one port shall be sent to another free of any further duty, and it is only when sold there, or transmitted thence into the interior, that the second duty shall be paid.

It is always understood that Her Majesty's government do not pretend, either by this article or any other in the present treaty, to stipulate for more than the plain and fair construction of the terms employed; nor to preclude in any manner the Ottoman government from the exercise of its rights of internal administration, where the exercise of those rights does not evidently infringe upon the privileges accorded by ancient treaties, or the present treaty, to British merchandise or British subjects.

Art. 2. — All foreign goods brought into Turkey from other countries shall be freely purchased and traded in, in any manner, by the subjects of Her Britannic Majesty, or the agents of the same, at any place in the Ottoman dominions; and if such foreign goods have paid no other duty than the duty paid on importation, then the British subject or his agent shall be able to purchase such foreign goods on paying the extra duty of 2 per cent., which he will have to pay on the sale of his own imported goods, or on their transmission for sale into the interior; and after that such foreign goods shall be resold in the interior, or exported, without further duty; or, should such foreign goods have already paid the amount of the two duties (*i. e.* the import duty and the one fixed interior duty), then they shall be purchased by the British subject or his agent, and afterwards resold or exported, without being ever submitted to any further duty.

Act. 3. — No charge whatsoever shall be made upon British goods (such being the growth, produce, or manufacture of the U. Kingdom or its dependencies, or the growth, produce, or manufacture of any foreign country, and charged in British vessels, and belonging to British subjects) passing through the straits of the Dardanelles, of the Bosphorus, and of the Black Sea, whether such goods shall pass through those straits in the ships that brought them, or are transhipped in those straits, or, destined to be sold elsewhere, are landed with a view to their being transferred to other vessels (and thus to proceed on their voyage) within a reasonable time.

All merchandise imported into Turkey for the purpose of being transmitted to other countries, or

which, remaining in the hands of the importer, shall be transmitted by him for sale to other countries shall only pay the duty of 3 per cent. paid on importation, and no other duty whatsoever.

Done at Balta-Liman, near Constantinople, the 16th day of August, 1838.

PONSONBY.

(Signed in the Turkish original)

MUSTAHPA RESCHID, &c.

Official Note delivered to Lord Ponsonby by his Excellency Nouree Effendi, on the 27th of August, 1838, relative to the 2d Article of the preceding Convention.

(*Translation.*)

It is stipulated by the 2d article of the treaty of commerce concluded between the Sublime Porte and the British government on the 25th Djémaziulevel, 1254 (August 16. 1838), that English merchants are at liberty to purchase all kinds of merchandise in the Ottoman empire.

But in order that the right of English merchants to sell within the Ottoman empire, or to export the merchandise which they may purchase, may not be liable to misconception, the embassy of Her Britannic Majesty has desired that an explanation should be given on this point, either in the treaty itself, or in a special note.

The meaning of the passage of which an elucidation is requested is clear, from the relation which the subsequent points in the 2d article bear to each other. But we nevertheless repeat, that English merchants may, in virtue of the treaty, purchase within the Ottoman empire all kinds of merchandise; may, if they think proper, send the same abroad after having paid the duty thereon stipulated by the treaty; or may, if they think fit, resell the same within the Ottoman empire on conforming to the arrangements established by the said treaty with reference to internal commerce.

Such are the arrangements of the treaty; and we give this explanation to the ambassador, renewing to his Excellency the assurances of our sincere and perfect friendship.

The 7th Djémaziul-akir, 1254 (August 27. 1838.)

Convention between Great Britain, Austria, France, Prussia, Russia, and Turkey, respecting the Straits of the Dardanelles and of the Bosphorus. Signed at London, July 13. 1841.

Article 1. His Highness the Sultan, on the one part, declares that he is firmly resolved to maintain for the future the principle invariably established as the ancient rule of his empire, and in virtue of which it has at all times been prohibited for the ships of war of foreign powers to enter the straits of the Dardanelles and of the Bosphorus; and that, so long as the Porte is at peace, his Highness will admit no foreign ship of war into the said straits.

And their Majesties the Queen of the United Kingdom of Great Britain and Ireland, the Emperor of Austria, King of Hungary and Bohemia, the King of the French, the King of Prussia, and the Emperor of all the Russias, on the other part, engage to respect this determination of the Sultan, and to conform themselves to the principle above declared.

2. It is understood that in recording the inviolability of the ancient rule of the Ottoman empire mentioned in the preceding article, the Sultan reserves to himself, as in past times, to deliver firmans of passage for light vessels under flag of war, which shall be employed, as is usual, in the service of the missions of foreign powers.

3. His Highness the Sultan reserves to himself to communicate the present convention to all the powers with whom the Sublime Porte is in relations of friendship, inviting them to accede thereto.

The present convention shall be ratified, and the ratifications thereof shall be exchanged at London, at the expiration of 2 months, or sooner if possible.

In witness whereof, the respective plenipotentiaries have signed the same, and have affixed thereto the seals of their arms.

Done at London, the 13th day of July, in the year of our Lord 1841.

UNITED STATES.

Convention of Commerce between Great Britain and the U. States of America, signed at London, the 3d *of July*, 1815.

Article 1. There shall be between all the territories of his Britannic Majesty in Europe, and the territories of the U. States, a reciprocal liberty of commerce. The inhabitants of the 2 countries respectively shall have liberty freely and securely to come with their ships and cargoes to all such places, ports, and rivers in the territories aforesaid, to which other foreigners are permitted to come, to enter into the same, and to remain and reside in any part of the said territories respectively; and also to hire and occupy houses and warehouses for the purpose of their commerce; and generally the merchants and traders of each nation respectively shall enjoy the most complete protection and security for their commerce; but subject always to the laws and statutes of the 2 countries respectively.

2. No higher or other duties shall be imposed on the importation into the territories of his Britannic Majesty in Europe, of any articles, the growth, produce, or manufacture of the U. States, and no higher or other duties shall be imposed on the importation into the U. States, of any articles, the growth, produce, or manufacture of his Britannic Majesty's territories in Europe, than are or shall be payable on the like articles, being the growth, produce, or manufacture of any other foreign country; nor shall any higher or other duties or charges be imposed in either of the two countries on the exportation of any articles to his Britannic Majesty's territories in Europe, or to the U. States, respectively, than such as are payable on the exportation of the like articles to any other foreign country; nor shall any prohibition be imposed upon the exportation or importation of any articles, the growth, produce, or manufacture of the U. States, or of his Britannic Majesty's territories in Europe, to or from the said territories of his Britannic Majesty in Europe, or to or from the said U. States, which shall not equally extend to all other nations.

No higher or other duties or charges shall be imposed in any of the ports of the U. States on British vessels, than those payable in the same ports by vessels of the U. States; nor in the ports of any of his Britannic Majesty's territories in Europe on the vessels of the U. States, than shall be payable in the same ports on British vessels.

The same duties shall be paid on the importation into the U. States of any articles, the growth, produce, or manufacture of his Britannic Majesty's territories in Europe, whether such importation shall be in the vessels of the U. States, or in British vessels; and the same duties shall be paid on the importation into the ports of any of his Britannic Majesty's territories in Europe of any articles, the growth, produce, or manufacture of the U. States, whether such importation shall be in British vessels, or in vessels of the U. States.

The same duties shall be paid, and the same bounties allowed, on the exportation of any articles, the growth, produce, or manufacture of his Britannic Majesty's territories in Europe, to the U. States, whether such exportation shall be in vessels of the U. States, or in British vessels; and the same duties shall be paid, and the same bounties allowed, on the exportation of any articles, the growth, pro-

duce, or manufacture of the U. States, to his Britannic Majesty's territories in Europe, whether such exportation shall be in British vessels, or in vessels of the U. States.

It is further agreed, that in all cases where drawbacks are or may be allowed upon the re-exportation of any goods, the growth, produce or manufacture of either country respectively, the amount of the said drawbacks shall be the same, whether the said goods shall have been originally imported in a British or American vessel; but when such re-exportation shall take place from the U. States in a British vessel, or from the territories of his Britannic Majesty in Europe in an American vessel, to any other foreign nation, the 2 contracting parties reserve to themselves, respectively, the right of regulating or diminishing, in such case, the amount of the said drawback.

The intercourse between the U. States and his Britannic Majesty's possessions in the West Indies, and on the continent of North America, shall not be affected by any of the provisions of this article, but each party shall remain in the complete possession of its rights, with respect to such an intercourse.

3. His Britannic Majesty agrees that the vessels of the U. States of America shall be admitted and hospitably received at the principal settlements of the British dominions in the East Indies, viz. *Calcutta*, *Madras*, *Bombay*, and *Prince of Wales' Island*, and that the citizens of the said U. States may freely carry on trade between the said principal settlements and the said U. States, in all articles of which the importation and exportation respectively, to and from the said territories, shall not be entirely prohibited; provided only, that it shall not be lawful for them, in any time of war between the British government and any state or power whatever, to export from the said territories, without the special permission of the British government, any military stores, or naval stores, or rice. The citizens of the U. States shall pay for their vessels, when admitted, no higher or other duty or charge than shall be payable on the vessels of the most favoured European nations, and they shall pay no higher or other duties or charges on the importation or exportation of the cargoes of the said vessels, than shall be payable on the same articles when imported or exported in the vessels of the most favoured European nations.

But it is expressly agreed, that the vessels of the U. States shall not carry any articles from the said principal settlements to any port or place, except to some port or place in the U. States of America, where the same shall be unladen.

It is also understood, that the permission granted by this article is not to extend to allow the vessels of the U. States to carry on any part of the coasting trade of the said British territories; but the vessels of the U. States, having in the first instance proceeded to one of the said principal settlements of the British dominions in the East Indies, and then going with their original cargoes, or any part thereof, from one of the said principal settlements to another, shall not be considered as carrying on the coasting trade. The vessels of the U. States may also touch for refreshments, but not for commerce, in the course of their voyage to or from the British territories in India, or to or from the dominions of the Emperor of China, at the Cape of Good Hope, the island of St. Helena, or such other places as may be in the possession of Great Britain, in the African or Indian seas; it being well understood, that in all that regards this article, the citizens of the U. States shall be subject in all respects to the laws and regulations of the British government from time to time established.

4. It shall be free for each of the 2 contracting parties respectively to appoint consuls, for the protection of trade, to reside in the dominions and territories of the other party; but before any consul shall act as such, he shall in the usual form be approved and admitted by the government to which he is sent; and it is hereby declared, that in case of illegal and improper conduct towards the laws or government of the country to which he is sent, such consul may either be punished according to law, if the laws will reach the case, or be sent back, the offended government assigning to the other the reasons for the same.

It is hereby declared, that either of the contracting parties may except from the residence of consuls such particular places as such party shall judge fit to be so excepted.

5. This convention, when the same shall have been duly ratified by his Britannic Majesty and by the President of the U. States, by and with the advice and consent of their Senate, and the respective ratifications mutually exchanged, shall be binding and obligatory on his Majesty and on the said U. States for 4 years from the date of its signature; and the ratifications shall be exchanged in 6 months from this time, or sooner if possible.

Done at London, the 3d of July, 1815.

HENRY GOULBURN. H. CLAY.
WILLIAM ADAMS. ALBERT GALATIN.

This convention was subsequently prolonged by conventions for that purpose in 1818 and 1827.

Convention between Great Britain and the United States of America, signed at London, the 20th October. 1818.

Art. 1.—Whereas differences have arisen respecting the liberty claimed by the U. States for the inhabitants thereof, to take, dry, and cure fish, on certain coasts, bays, harbours, and creeks of his Britannic Majesty's dominions in America, it is agreed between the high contracting parties, that the inhabitants of the said United States shall have for ever, in common with the subjects of his Britannic Majesty, the liberty to take fish of every kind on that part of the coast of Newfoundland which extends from Cape Ray to the Rameau Islands, on the western and northern coasts of Newfoundland, from the said Cape Ray to the Quirpon Islands, on the shores of the Magdalen Islands, and also on the coasts, bays, harbours, and creeks, from Mount Joly, on the southern coast of Labrador, to and through the Straits of Belleisle, and thence northwardly indefinitely along the coast, without prejudice, however, to any of the exclusive rights of the Hudson Bay Company: and that the American fishermen shall also have liberty, for ever, to dry and cure fish in any of the unsettled bays, harbours, and creeks of the southern part of the coast of Newfoundland, and of the coast of Labrador; but so soon as the same, or any portion thereof, shall be settled, it shall not be lawful for the said fishermen to dry or cure fish, without previous agreement for such purpose with the inhabitants, proprietors, or possessors of the ground. And the U. States hereby renounce for ever any liberty heretofore enjoyed or claimed by the inhabitants thereof to take, dry, or cure fish on or within three marine miles of any of the coasts, bays, creeks, or harbours of his Britannic Majesty's dominions in America, not included within the above-mentioned limits; provided, however, that the American fishermen shall be admitted to enter such bays or harbours for the purpose of shelter and of repairing damages therein, of purchasing wood, and of obtaining water, and for no other purpose whatever: but they shall be under such restrictions as may be necessary to prevent their taking, drying, or curing fish therein, or in any other manner abusing the privileges hereby reserved to them.

2. It is agreed that a line drawn from the most north-western point of the Lake of the Woods, along the 49th parallel of north latitude, or if the said point shall not be in the 49th parallel of north latitude, then that a line drawn from the said point due north or south, as the case may be, until the said line shall intersect the said parallel of north latititude, and from the point of such intersection due west along and with the said parallel, shall be the line of demarcation between the territories of the U. States and those of his Britannic Majesty, and that the said line shall form the northern boundary of the said territories of the U. States, and the southern boundary of the territories of his Britannic Majesty, from the Lake of Woods to the Stony Mountains.

3. It is agreed that any country that may be claimed by either party on the north-west coast of America, westward of the Stony Mountains, shall, together with its harbours, bays, and creeks, and the navigation of all rivers within the same, be free and open, for the term of 10 years from the date of the signature of the present convention, to the vessels, citizens, and subjects of the two powers: it being well

understood, that this agreement is not to be construed to the prejudice of any claim which either of the two high contracting parties may have to any part of the said country, nor shall it be taken to affect the claims of any other power or state to any part of the said country, the only object of the high contracting parties, in that respect, being to prevent disputes and differences among themselves.

4. All the provisions of the convention to "regulate the commerce between the territories of the U. States and of his Britannic Majesty, concluded at London," on the 3d of July, in the year of our Lord 1815, with the exception of the clause which limited its duration to 4 years, and excepting, also, so far as the same was affected by the declaration of his Majesty respecting the island of St. Helena, are hereby extended and continued in force for the term of 10 years from the date of the signature of the present convention, in the same manner as if all the provisions of the said convention were herein specially recited.

5. Whereas it was agreed by the first article of the treaty of Ghent, that "all territory, places, and possessions whatever, taken by either party from the other during the war, or which may be taken after the signing of this treaty, excepting only the islands hereinafter mentioned, shall be restored without delay, and without causing any destruction, or carrying away any of the artillery, or other public property originally captured in the said forts or places, which shall remain therein upon the exchange of the ratifications of this treaty, or any slaves, or other private property;" and whereas, under the aforesaid article, the United States claim for their citizens, and as their private property, the restitution of, or full compensation for, all slaves who at the date of the exchange of the ratifications of the said treaty were in any territory, place, or possessions whatsoever, directed by the said treaty to be restored to the U. States, but then still occupied by the British forces, whether such slaves were, at the date aforesaid, on shore, or on board any British vessel lying in waters within the territory or jurisdiction of the U. States; and whereas differences have arisen whether, by the true intent and meaning of the aforesaid article of the treaty of Ghent, the U. States are entitled to the restoration of, or full compensation for, all or any slaves as above described, the high contracting parties hereby agree to refer the said differences to some friendly sovereign or state to be named for that purpose: and the high contracting parties further engage to consider the decision of such friendly sovereign or state to be final and conclusive on all the matters referred.

6. This convention, when the same shall have been duly ratified by the President of the U. States, by and with the advice and consent of their senate, and by his Britannic Majesty, and the respective ratifications mutually exchanged, shall be binding and obligatory on the said U. States and on his Majesty; and the ratifications shall be exchanged in six months from this date, or sooner if possible.

In witness whereof, the respective plenipotentiaries have signed the same, and have thereunto affixed the seal of their arms.

Done at London, the 20th October, 1818.

ALBERT GALATIN.
RICHARD RUSH.
FREDERICK JOHN ROBINSON.
HENRY GOULBURN.

Treaty between Her Majesty and the U. States of America, relative to Fisheries, Commerce, and Navigation, signed at Washington, June 5, 1854.

Article 1. It is agreed by the high contracting parties, that in addition to the liberty secured to the United States' fishermen by the above-mentioned Convention of October 20, 1818, of taking, curing, and drying fish on certain coasts of the British North American Colonies therein defined, the inhabitants of the United States shall have, in common with the subjects of her Britannic Majesty, the liberty to take fish of every kind, except shell-fish, on the sea-coasts and shores, and in the bays, harbours, and creeks of Canada, New Brunswick, Nova Scotia, Prince Edward's Island, and of the several islands thereunto adjacent, without being restricted to any distance from the shore; with permission to land upon the coasts and shores of those colonies and the islands thereof, and also upon the Magdalen Islands, for the purpose of drying their nets and curing their fish: provided that in so doing they do not interfere with the rights of private property, or with British fishermen in the peaceable use of any part of the said coast in their occupancy for the same purpose.

It is understood that the above-mentioned liberty applies solely to the sea fishery, and that the salmon and shad fisheries, and all fisheries in rivers and the mouths of rivers, are hereby reserved exclusively for British fishermen.

And it is further agreed that in order to prevent or settle any disputes as to the places to which the reservation of exclusive right to British fishermen contained in this article, and that of fishermen of the United States contained in the next succeeding article, apply, each of the high contracting parties, on the application of either to the other, shall, within six months thereafter, appoint a commissioner. The said commissioners, before proceeding to any business, shall make and subscribe a solemn declaration that they will impartially and carefully examine and decide, to the best of their judgment, and according to justice and equity, without fear, favour, or affection to their own country, upon all such places as are intended to be reserved and excluded from the common liberty of fishing under this and the next succeeding article; and such declaration shall be entered on the record of their proceedings. The commissioners shall name some third person to act as an arbitrator or umpire in any case or cases on which they may themselves differ in opinion. If they should not be able to agree upon the name of such third person, they shall each name a person, and it shall be determined by lot which of the two persons so named shall be the arbitrator or umpire in cases of difference or disagreement between the commissioners. The person so to be chosen to be arbitrator or umpire shall, before proceeding to act as such in any case, make and subscribe a solemn declaration in a form similar to that which shall already have been made and subscribed by the commissioners, which shall be entered on the record of their proceedings. In the event of the death, absence, or incapacity of either of the commissioners or of the arbitrator or umpire, or of their or his omitting, declining, or ceasing to act as such commissioner, arbitrator, or umpire another and different person shall be appointed or named as aforesaid, to act as such commissioner, arbitrator, or umpire, in the place and stead of the person so originally appointed or named as aforesaid, and shall make and subscribe such declaration as aforesaid.

Such commissioners shall proceed to examine the coasts of the North-American provinces and of the United States embraced within the provisions of the first and second articles of this treaty, and shall designate the places reserved by the said articles from the common right of fishing therein.

The decision of the commissioners and of the arbitrator or umpire shall be given in writing in each case, and shall be signed by them respectively.

The high contracting parties hereby solemnly engage to consider the decision of the commissioners conjointly, or of the arbitrator or umpire, as the case may be, as absolutely final and conclusive in each case decided upon by them or him respectively.

2. It is agreed by the high contracting parties that British subjects shall have, in common with the citizens of the United States, the liberty to take fish of every kind, except shell-fish, on the eastern sea coasts and shores of the United States north of the 36th parallel of north latitude, and on the shores of the several islands thereunto adjacent, and in the bays, harbours, and creeks of the said sea-coasts and shores of the United States and of the said islands, without being restricted to any distance from the shore; with permission to land upon the said coasts of the United States and of the islands aforesaid for the purpose of drying their nets and curing their fish, provided that in so doing they do not interfere with the rights of private property, or with the fishermen of the United States in the peaceable use of any part of the said coasts in their occupancy for the same purpose.

It is understood that the above-mentioned liberty applies solely to the sea fishery, and that salmon and shad fisheries, and all fisheries in rivers and mouths of rivers, are hereby reserved exclusively for fishermen of the United States.

3. It is agreed that the articles enumerated in the Schedule hereunto annexed, being the growth and produce of the aforesaid British colonies, or of the United States, shall be admitted into each country respectively free of duty:

Schedule.

Grain, flour, and bread-stuffs of all kinds. Animals of all kinds. Fresh, smoked, and salted meats. Cotton-wool, seeds, and vegetables. Undried fruits; dried fruits. Fish of all kinds. Products of fish and of all other creatures living in the water. Poultry. Eggs. Hides, furs, skins or tails undressed. Stone or marble in its crude or unwrought state. Slate. Butter, cheese, tallow. Lard, horns, manures. Ores of metals of all kinds. Coal. Pitch, tar, turpentine, ashes. Timber and lumber of all kinds, round, hewed, and sawed, unmanufactured in whole or in part. Fire-wood. Plants, shrubs, and trees. Pelts, wool. Fish-oil. Rice, broom-corn, and bark. Gypsum, ground or unground. Hewn, or wrought or unwrought burr or grindstones. Dye stuffs. Flax, hemp, and tow, unmanufactured. Unmanufactured tobacco. Rags.

4. It is agreed that the citizens and inhabitants of the United States shall have the right to navigate the river St. Lawrence and the canals in Canada used as the means of communicating between the Great Lakes and the Atlantic Ocean, with their vessels, boats, and crafts, as fully and freely as the subjects of her Britannic Majesty, subject only to the same tolls and other assessments as now are or may hereafter be exacted of her Majesty's said subjects; it being understood, however, that the British government retains the right of suspending this privilege, on giving due notice thereof to the government of the United States.

It is further agreed, that if at any time the British government should exercise the said reserved right, the government of the United States shall have the right of suspending, if it think fit, the operation of article 3 of the present treaty, in so far as the province of Canada is effected thereby, for so long as the suspension of the free navigation of the river St. Lawrence or the canals may continue.

It is further agreed, that British subjects shall have the right freely to navigate Lake Michigan with their vessels, boats, and crafts, so long as the privilege of navigating the river St. Lawrence secured to American citizens by the above clause of the present article shall continue; and the government of the United States further engages to urge upon the State governments to secure to the subjects of her Britannic Majesty the use of the several State canals on terms of equality with the inhabitants of the United States.

And it is further agreed, that no export duty or other duty shall be levied on lumber or timber of any kind cut on that portion of the American territory in the State of Maine watered by the River St. John and its tributaries and floated down that river to the sea, when the same is shipped to the United States from the province of New Brunswick.

5. The present treaty shall take effect as soon as the laws required to carry it into operation shall have been passed by the Imperial Parliament of Great Britain and by the Provincial Parliaments of those of the British North American Colonies which are affected by this treaty on the one hand, and by the Congress of the United States on the other. Such assent having been given, the treaty shall remain in force for ten years from the date at which it may come into operation, and further, until the expiration of twelve months after either of the high contracting parties shall give notice to the other of its wish to terminate the same; each of the high contracting parties being at liberty to give such notice to the other at the end of the said term of ten years, or at any time afterwards.

It is clearly understood, however, that this stipulation is not intended to affect the reservation made by article 4 of the present treaty with regard to the right of temporarily suspending the operation of articles 3 and 4 thereof.

6. And it is hereby further agreed, that the provisions and stipulations of the foregoing articles shall extend to the Island of Newfoundland, so far as they are applicable to that colony. But if the Imperial Parliament, the Provincial Parliament of Newfoundland, or the Congress of the United States, shall not embrace, in their laws enacted for carrying this treaty into effect, the colony of Newfoundland, then this article shall be of no effect; but the omission to make provision by law to give it effect by either of the legislative bodies aforesaid, shall not in any way impair the remaining articles of this treaty.

7. The present treaty shall be duly ratified, and the mutual exchange of ratification shall take place in Washington, within six months from the date hereof, or earlier if possible.

In faith whereof, we, the respective plenipotentiaries, have signed this treaty, and have hereunto affixed our seals.

Done, in triplicate, at *Washington*, the fifth day of June, Anno Domini one thousand eight hundred and fifty-four.

ELGIN AND KINCARDINE. W. L. MARCY.

URUGUAY.

Treaty of Amity, Commerce, and Navigation, between her Majesty and the Oriental Republic of the Uruguay, signed at London, August 26, 1842.

Article 1. There shall be perpetual peace and amity between the dominions and subjects of her Majesty the Queen of the United Kingdom of Great Britain and Ireland, her heirs and successors, and the Oriental Republic of the Uruguay and its citizens.

2. There shall be between all the territories of her Britannic Majesty in Europe, and the territories of the Oriental Republic of the Uruguay, a reciprocal freedom of commerce. The subjects and citizens of the two countries, respectively, shall have liberty freely and securely to come, with their ships and cargoes, to all places, ports, and rivers in the territories aforesaid, to which other foreigners are or may be permitted to come; to enter into the same, and to remain and reside in any part of the said territories respectively; also to hire and occupy houses and warehouses for the purposes of their commerce; and, generally, the merchants and traders of each nation shall enjoy, within the territories of the other, the most complete protection and security for their commerce; subject always to the laws and statutes of the land.

In like manner the respective ships of war and post-office packets of the two countries shall have liberty freely and securely to come to all harbours, rivers, and places, in either country, to which other foreign ships of war and packets are or may be permitted to come; and they shall be allowed to enter into the same, to anchor and to remain there and refit; subject always to the laws and statutes of the two countries respectively.

It is hereby declared, that the stipulations of the present article are not to be understood as applying to the navigation and carrying trade between one port and another, situated in the dominions of either contracting party; such navigation and trade being reserved exclusively to national vessels.

3. There shall be reciprocal liberty of commerce and navigation between and amongst the subjects and citizens of the two high contracting parties; and the subjects and citizens of the two countries respectively shall not pay in the ports, harbours, roads, cities, towns, or places whatsoever in either country, any other or higher duties, taxes, or imposts, under whatsoever names designated or included, than those which are there paid by the subjects or citizens of the most favoured nation; and the subjects and citizens of each of the high contracting parties shall enjoy the same rights, privileges, liberties, favours, immunities, and exemptions, in matters of commerce and navigation, that are granted or may hereafter be granted in either country to the subjects or citizens of the most favoured nation.

No duty of customs or other impost shall be charged upon any goods the produce of one country, upon importation by sea or by land from such country into the other, higher than the duty or impost charged upon goods of the same kind, the produce of or imported from any other country. And her Majesty the Queen of the United Kingdom of Great Britain and Ireland, and the Oriental Republic of the Uruguay, do hereby bind and engage themselves not to grant any favour, privilege, or immunity, in matters of commerce and navigation, to the subjects or citizens of any other state, which shall not be also and at the same time extended to the subjects or citizens of the other high contracting party; gratuitously, if the concession in favour of that other state shall have been gratuitous; and on giving as nearly as possible the same compensation or equivalent, in case the concession shall have been conditional.

4. No higher or other duties or payments on account of tonnage, light or harbour dues, pilotage, salvage in case of damage or shipwreck, or any local charges, shall be imposed in any of the ports of the one country upon the vessels of the other, than are payable in those ports upon national vessels.

5. The same duties shall be paid on all articles the growth, produce, or manufacture of her Britannic Majesty's dominions, when imported into the territories of the Oriental Republic of the Uruguay, whether such article be imported in vessels of the said republic, or in British vessels; and the same duties shall be paid on all articles the growth, produce, or manufacture of the said republic, when imported into the dominions of her Britannic Majesty, whether such articles be imported in British vessels or in vessels of the said republic. The same duties shall be paid, and the same bounties and drawbacks allowed, on all articles the growth, produce, or manufacture of her Britannic Majesty's dominions, when exported to the said republic of the Uruguay, whether such articles be exported in vessels of the said republic, or in British vessels; and the same duties shall be paid, and the same bounties and drawbacks allowed, on all articles the growth, produce, or manufacture of the said republic, when exported

to the dominions of her Britannic Majesty, whether such articles be exported in British vessels, or in vessels of the said republic.

6. In order to avoid any misunderstanding with respect to the regulations which may respectively determine what shall be considered a British vessel, or a vessel of the Oriental Republic of the Uruguay, when engaged in commerce between the two countries; it is hereby agreed, that all vessels built in the dominions of her Britannic Majesty, or having been made prize of war and condemned as such, or having been forfeited under any law made for the prevention of the slave trade, and condemned in any competent court for a breach of such law, and which shall be owned and navigated by subjects of her Majesty, and whereof the master and three-fourths at least of the mariners shall be subjects of her Britannic Majesty, and which shall be registered according to the laws of Great Britain, shall be considered as British vessels; and that all vessels built within the territory of the said Oriental Republic of the Uruguay, or having been made prize of war and condemned as such, or having been forfeited under any law made for the prevention of the slave trade, and condemned in any competent court for a breach of such law, or being of *bonâ fide* British construction, built in any port of her Britannic Majesty's dominions, and acquired by purchase; and which shall be owned and navigated by citizens of the said republic, and whereof the master and three-fourths at least of the mariners shall be citizens of the said republic, or matriculated subjects of her Britannic Majesty, and which shall be registered according to the laws of the said republic, shall be considered as vessels of the said Oriental Republic of the Uruguay, so far as shall relate to any commercial rights or privileges in the several ports of her Britannic Majesty's dominions.

And it is further agreed, that no ship considered as being the ship of either country shall be qualified to trade as above described under the provisions of this treaty, unless she be furnished with a register, passport, or sea-letter, under the signature of the proper person authorised to grant the same, according to the laws of the respective countries, and in a form to be reciprocally communicated by the two governments to each other. Such register, passport, or sea-letter shall certify the name, occupation, and residence of the owner or owners in the dominions of her Britannic Majesty, or in the territories of the Oriental Republic of the Uruguay, as the case may be; shall declare that he or they is or are the sole owner of the ship, or owners in the proportion to be specified; and shall state the name, burden, and description of the vessel, as to build and measurement; and if the vessel is of foreign build, of what country, and, as far as may be possible, when and from whom purchased; and all other particulars constituting the national character of the vessel, as the case may be.

7. The subjects of her Britannic Majesty shall have full liberty, in all the territories of the Oriental Republic of the Uruguay, to manage their own affairs themselves, or to commit them to the management of whomsoever they please, as broker, factor, agent, or interpreter; and they shall not be obliged to employ any other persons in those capacities, than those employed by the citizens of the Oriental Republic of the Uruguay; and they shall not be restrained in their choice of persons to act in such capacities, nor be obliged to pay them any other salary or remuneration, than such as is paid in like cases by the citizens of the said republic; and absolute freedom shall be allowed in all cases to the buyer and seller to bargain and fix the price of any goods, wares, or merchandise imported into and exported from the Oriental Republic of the Uruguay, as they shall see fit, provided they observe the laws and established customs of the country. The same privileges shall be enjoyed in the dominions of her Britannic Majesty by the citizens of the Oriental Republic of the Uruguay, under the same conditions.

The subjects and citizens of each of the contracting parties respectively shall, in the territories of the other, receive and enjoy full and perfect protection for their persons and property, and shall have free and open access to the courts of justice in the said countries respectively, for the prosecution and defence of their just rights; and they shall be at liberty to employ, in all causes, the advocates, attornies, or agents of whatever description, whom they may think proper; and they shall enjoy, in this respect, the same rights and privileges therein as native citizens.

8. In whatever relates to the police of ports; the lading and unlading of ships; the safety of merchandise, goods, and effects; the succession to personal estates by will or otherwise; and the disposal of personal property of every sort and denomination by sale, donation, exchange, or in any other manner whatsoever; and to the administration of justice; the subjects and citizens of each of the two contracting parties shall enjoy, in the dominions and territories of the other, the same privileges, liberties, and rights, as native subjects or citizens; and they shall not be charged in any of these respects with any higher imposts or duties than those which are or may be paid by natives; conforming of course to the local laws and regulations of such dominions or territories.

And it is further agreed, that the subjects and citizens of the two contracting parties shall have and enjoy, in all the dominions or territories of each other, the most full and perfect liberty to devise or dispose of their property and effects of every kind and denomination, and wheresoever situate, by will or testament, to such person or persons, and in such proportions, as their own free will may dictate.

If any subject or citizen of either of the two contracting parties should die without will or testament in the dominions or territories of the other, the consul-general or consul, or, in his absence, the representative of such consul-general or consul, shall have the right to nominate curators to take charge of the property of the deceased, so far as the laws of the country will permit, for the benefit of the lawful heirs and creditors of the deceased, without being interfered with by the authorities of the country, but giving to those authorities due and proper notice.

9. The subjects of her Britannic Majesty residing in the territories of the Oriental Republic of the Uruguay, and the citizens of the said republic residing in the dominions of her Britannic Majesty, shall be exempted from all compulsory military service whatsoever, either by sea or land, and from all forced loans or military exactions or requisitions.

Neither shall they be compelled, under any pretext whatsoever, to pay any charges, requisitions, or taxes, greater than those which are or may be paid by native subjects or citizens of the territories in which they reside.

10. It shall be free for each of the two contracting parties to appoint consuls for the protection of trade, to reside in the dominions and territories of the other party; but no consul shall act as such until he shall in the usual form be approved and admitted by the government to which he is sent; and either of the contracting parties may except from the residence of consuls such particular places as they may judge fit to be excepted. The diplomatic agents and consuls of the Oriental Republic of the Uruguay, in the dominions of her Britannic Majesty, shall enjoy whatever privileges, exemptions, and immunities are or may there be granted to agents of the same rank belonging to the most favoured nation; and in like manner the diplomatic agents and consuls of her Britannic Majesty, in the territories of the Oriental Republic of the Uruguay, shall enjoy, according to the strictest reciprocity, whatever privileges, exemptions, and immunities are or may there be granted to the diplomatic agents and consuls of the most favoured nation.

11. For the better security of commerce between the subjects of her Britannic Majesty and the citizens of the Oriental Republic of the Uruguay, it is agreed, that if at any time any interruption of friendly intercourse or any rupture should unfortunately take place between the two countries, the subjects or citizens of either of the two contracting parties who may be within the territories of the other, shall, if residing upon the coasts, be allowed 4 months, and if residing in the interior, 9 months, to wind up their accounts and to dispose of their property; and a safe conduct shall be given to all such of the aforesaid persons as may choose to quit the country, to enable them to embark unmolested at the port which the government of the country shall select. It is, moreover, further agreed, that all subjects or citizens of either of the two contracting parties who, at the time of any such interruption of friendly relations between the two countries, shall be established in the exercise of any trade or special employment in the dominions

or territories of the other, shall have the privilege of remaining and of continuing such trade and employment therein, without any manner of interruption, in full enjoyment of their liberty and property, so long as they conduct themselves peaceably, and commit no offence against the laws; and their goods and effects, of whatever description, whether in their own custody or intrusted to individuals or to the state, shall not be liable to seizure or sequestration, or to any other charges or demands than those to which like effects or property belonging to native subjects or citizens may be liable. Debts between individuals, property in the public funds, and shares of companies, shall never be confiscated, sequestrated, or detained.

12. The subjects of her Britannic Majesty, and the citizens of the Oriental Republic of the Uruguay, respectively, residing in the territories of the other party, shall enjoy, in their houses, persons, and properties, the protection of the government, and continue in possession of the privileges which they now legally enjoy. They shall not be disturbed, molested, or annoyed in any manner on account of their religion, but they shall have perfect liberty of conscience, provided they respect the religion of the country in which they reside, as well as the constitution, laws, and customs of the land. They shall also have permission to celebrate divine service, according to the rites and ceremonies of their own church, either within their own private houses, or in their own particular churches or chapels, which they shall be at liberty to build and maintain in convenient places, approved of by the government. Liberty shall also be granted to the subjects or citizens of either of the two contracting parties resident in the territories of the other, to bury, in burial places of their own, such of their fellow-subjects or fellow-citizens who may die in such territories. Such burial places may be freely established and maintained; and the funerals and sepulchres of the dead shall not be disturbed in any way, or upon any account.

13. The present treaty shall be in force for the term of 10 years from the date thereof; and further, until the end of 12 months after either of the high contracting parties shall have given notice to the other of its intention to terminate the same: each of the high contracting parties reserving to itself the right of giving such notice to the other at the end of the said term of 10 years, or at any subsequent time.

And it is hereby agreed between them, that at the expiration of 12 months after such notice shall have been received by either party from the other, this treaty, and all the provisions thereof, shall altogether cease and determine.

14. The present treaty shall be ratified, and the ratifications shall be exchanged at London, as soon as possible within the period of 18 months from the date thereof.

In witness whereof, the respective plenipotentiaries have signed the same, and have affixed thereto their respective seals.

Done at London, the 26th day of August, in the year of our Lord 1842.

JOSE ELLAURI.

Additional Article.

Whereas by Art. 9. of the treaty of amity, commerce, and navigation, concluded and signed this day between her Britannic Majesty and the Oriental Republic of the Uruguay, it is stipulated that the subjects of her Britannic Majesty residing in the said republic shall not be compelled, under any pretext whatsoever, to pay any charges, requisitions, or taxes, greater than those which are or may be paid by native citizens; and whereas, by a law of the Oriental Republic of the Uruguay, a foreigner pays for the licence to open a shop, or other establishment included in the provisions of the said law, a sum greater than that which is paid by a native citizen; her Britannic Majesty engages, notwithstanding the provisions of the above-mentioned article, not to insist upon the abolition of this distinction, so long as it exists impartially with regard to the subjects or citizens of every other foreign nation.

And his Excellency the President of the Oriental Republic of the Uruguay engages, on his part, that if at any future time the amount payable by British subjects for such licence should be increased, a corresponding increase shall at the same time be made in the sum payable by native citizens of the republic; so that the proportion between the sum payable by British subjects and the sum payable by citizens of the Oriental Republic of the Uruguay, respectively, shall never be altered to the prejudice of British subjects.

The present additional article shall have the same force and validity as if it were inserted, word for word, in the treaty signed this day. It shall be ratified, and the ratifications shall be exchanged at the same time.

In witness whereof, the respective plenipotentiaries have signed the same, and have affixed thereto their respective seals.

Done at London, the 26th day of August, in the year of our Lord 1842.

Second Additional Article.

Whereas a strict and immediate execution of that part of article 6. of the treaty of amity, commerce, and navigation, signed at London on the 26th of August, 1842, between her Majesty the Queen of the U. Kingdom of Great Britain and Ireland, and the Oriental Republic of the Uruguay, which stipulates that a ship must have been actually built within the territory of the Oriental Republic of the Uruguay, to be considered a ship of that republic, would, in the present state of Uruguay shipping, deprive the republic of the full advantage of the reciprocity intended to be established by the treaty; it is agreed that, for the space of 7 years from the date of the exchange of the ratifications of the said treaty, any ships, wheresoever built, being owned, navigated, and registered in conformity with the provisions of article 6. of the treaty, shall be considered as ships of the Oriental Republic of the Uruguay: her Majesty the Queen of the U. Kingdom of Great Britain and Ireland reserving to herself the right to claim, at the end of the said term of 7 years, the strict enforcement of all the stipulations contained in the said article of the treaty, relative to the conditions which are to determine the national character of vessels of the Oriental Republic of the Uruguay.

The present additional article shall have the same force and validity as if it had been inserted, word for word, in the aforesaid treaty of the 26th of August, 1842. It shall be ratified, and the ratifications shall be exchanged at the same time and place as those of the treaty.

In witness whereof, the undersigned, plenipotentiaries of her Britannic Majesty, and of the Oriental Republic of the Uruguay, have signed the same, and have affixed thereto the seals of their arms.

Done at Montevideo, the 8th day of March, in the year of our Lord 1843.

SANTIAGO VASQUEZ.

TREBISOND, anciently Trapezus, from its resemblance to a trapezium, a town of Asia Minor, on the south-east coast of the Black Sea, lat. 40° 1′ N., lon. 39° 44′ 52″ E. Population variously estimated at from 15,000 to 30,000. The town is built on the declivity of a hill rising gently from the sea. It is a place of great antiquity; and from the year 1203 to the final subversion of the Eastern empire by Mahommed II.,

in the 15th century was the seat of a dukedom, or, as it was sometimes called, an empire, comprising the country between the Phasis and the Halys. Its fortifications are still of considerable strength, at least for a Turkish city. The space included within the walls is of great extent; but it is principally filled with gardens and groves. The houses are mean in their outward appearance, and comfortless within.—(*Tournefort, Voyage du Levant*, tome ii. pp. 231—239.; *Kinneir's Journey through Asia Minor, &c.* p. 338.)

Such is the account of this city given by two of the highest authorities on all matters relating to the countries which they visited. But the increase in the commerce of Trebisond, in consequence of its becoming the *entrepôt* for the transit trade with Persia, as well as for the trade with the adjacent countries, led to its extension and improvement; and the stimulus so given was greatly increased by circumstances growing out of the late war with Russia. There is still, no doubt, a great deal of misery and occasional destitution in the town and its vicinity. "But," says the consul, "the three years' war threw a great quantity of gold into the place, and several of the chief traders have been benefited. Buildings are daily rising, the town assumes a remarkable extension, the natives are better clothed and live better, and although the poor have been thinned by suffering and privation, strangers from all parts fill up the gap. Some 4 or 5 years back, the population of the city and suburbs was reckoned at 50,000 souls; it is now calculated, and I think without exaggeration, at 70,000."

Harbour.—Trebisond has two ports, one on the W. and one on the E. side of a small peninsula, or point of land, projecting a short way into the sea. That on the east is the best sheltered, and is the place of anchorage for the largest ships. It is, however, exposed to all but the southerly gales; but it does not appear that, with ordinary precaution, any danger need be apprehended. The ground, from ½ to ¾ a mile E. from the point, is clean, and holds extremely well. Ships moor with open hawse to the N., and a good hawser and stream anchor on shore, as a stern-fast. At night, the wind always comes off the land. Captain Middleton says that the only bad weather is from the N. W.; but that, though the swell be considerable, it does not cause any heavy strain upon the cables.—(*Nautical Magazine*, vol. ii. p. 181.)—At Platana, near Trebisond, and quite as exposed, Turkish vessels have from time immemorial rode in safety the whole winter; a satisfactory proof that the danger supposed to be incident to the roads along the coast are wholly visionary.—(*Ibid.* p. 214.)

Trade.—In antiquity, and in more modern times, previously to the conquest of Constantinople by the Turks, and the exclusion of all foreign vessels from the Black Sea, Trebisond was the seat of an extensive trade. Any one, indeed, who casts his eye over a map of W. Asia, must be satisfied that this city is the natural emporium of all the countries to the S. E. of the Black Sea, from Kars on the east, round by Diarbeker to Amasia on the west. Erzeroum, the principal city of Armenia, is only about 135 miles S.E. from Trebisond. Its merchants are distinguished by their superior attainments, and by their enterprise and activity. For a lengthened period they derived most part of their supplies of European commodities by way of Smyrna or Constantinople: nothing, however, but the impossibility of obtaining them at so convenient a port as Trebisond, could have made them resort to such distant markets as those now mentioned; and it may well excite surprise, considering the period during which the Black Sea has been open, that efforts were not sooner made to establish an intercourse with Armenia, Georgia, and the north-western parts of Persia, through this channel. We are glad, however, to have to state, that within these few years this has been done; and, notwithstanding the difficulties that necessarily attach to every attempt to open new channels of commerce with semi-civilised nations, the experiment has proved more than ordinarily successful.

Besides the transit trade with Persia, and the supply of the surrounding country, Trebisond has an extensive trade with Redout Kalé, and other Russian ports on the Black Sea; and sometimes, when the crops in the adjacent territory are deficient, it imports large quantities of corn from the Danube and Odessa. The imports from England principally consist of cotton stuffs and twist; iron, hardware, machinery, and coal; tin and tin-plates; sugar, and other articles of colonial produce, &c. We annex a statement of the

Shipping Trade of Trebisond in 1858.

Passengers arrived and departed by sea during the year, 50,500.

Of the exports, silk is by far the most important; and next to it are nuts, saffron, tobacco, copper, wax, shawls, beans, galls, leeches, &c. Their total value was estimated in 1846 at 479,874*l.*, of which silk made nearly a half, or 210,080*l.*

Money, Weights, and Measures, same as at CONSTANTINOPLE; which see.

Port Regulations.—When a vessel arrives at Trebisond, the master comes ashore to the Health Office, to exhibit his bill of health, and, after undergoing a short interrogation, is admitted to pratique, unless his bill of health happens to be a foul one. Sometimes the Health Office sends a boat off to the vessel, and thus saves the master the trouble.

Mode of Landing Cargo.—After a vessel receives pratique, the master may begin to discharge, at his pleasure, into lighters provided by the consignees of the goods at their expense. Each of these lighters takes from 6 to 7 tons goods.

Custom-House.—There are no forms to undergo at the custom-house prior to discharging, nor even after the vessel has landed her cargo. The goods from the vessel are taken to the custom-house, and claimed from thence by the owners, the captain's consignee sending a person to superintend the delivery.

Ballast, consisting of sand and shingle, may be had, on application to the harbour master, for about 10 shillings (50 piastres) the lighter of 6 or 7 tons. The captain may, however, send his own boat to the beach, abreast of his ship, and, by the aid of his crew, load his own ballast, without paying any fee for it.

Water is to be obtained from the Mariamana river, E. of the anchorage. Masters of vessels may send their own boat and men for it; but it is advisable to employ a native boat, the latter being better acquainted with the entrance of the river, and better adapted to the service. English boats are liable to be swamped if there be any swell at the mouth of the stream. The expense of a native boat is moderate, say 5*s.* to 7*s.* 6*d.*

Labourers may be hired to assist at the loading or discharge of vessels at 2*s.* (10 piastres) per diem each.

Provisions are abundant, and moderate in price. The following are about the average rates of the articles generally required by shipping:—

Bread - -	1 piastre or	2½*d.* per oke.
Beef - -	1 —	2½*d.* —
Mutton - -	1½ —	3¾*d.* +
Vegetables -	½ —	1¼*d.* —
Wine - -	2 —	4¾*d.* @ 5*d.* per oke.
Eggs - -	1½ —	3¾*d.* per dozen.
Tobacco - -	12 —	2*s.* 6*d.* per oke.

Weights and Measures.—Everything excepting linen, silken, and cotton stuffs, is sold by weight. Stuffs are sold by measure. The following will serve as a guide to the shipmaster:—

1 kintal,	44 okes	= 121 lbs.
1 batman,	6 —	= 16½ —
1 oke	-	= 2¾ —

The measure of length is called a pike, and is equal to 26 inches English.

Quarantine Dues.—A fee, not exceeding 2 dollars (9*s.* 6*d.*), is exacted by the Health Office for every bill of health granted to a vessel; but its cost depends upon the tonnage of the vessel.

No light dues or port dues are exacted; but the harbour master, who, on seeing the vessel approaching the port, goes off and pilots her to her anchorage, is entitled to 20 piastres=1*s* (*Private Information.*)

TRIESTE, a city and sea-port of the Austrian dominions, the capital of a district of Illyria, situated near the N. E. extremity of the Gulph of Venice, lat. of lighthouse 45° 38′ 6″ N., lon. 13° 46′ 5″ E. Population, in 1850-51, of the city only 60,000 (?), and including the district comprised within the limits of the free port 82,596. It is divided into the old and new towns. The former is built upon elevated ground; the latter, which is lower down, is laid out with greater regularity, and is partly intersected by a canal, into which vessels not drawing more than 9 or 10 feet water enter to load and unload.

Harbour.—The harbour of Trieste, though rather limited in size, is easy of access and convenient. It is protected from southerly gales by the *Molo Teresiano*, so called from the Empress Maria Theresa, at the extremity of which the new lighthouse, mentioned below, has been constructed. The port, with the mole, forms a crescent 1⅛ mile in length, being a continued quay, faced with hewn stones, with stairs and jetties for the convenience of embarkation. On the north side of the port is a dock or harbour, appropriated exclusively for vessels performing quarantine. It is walled round; and is furnished with hotels, warehouses, and every sort of accommodation required for the use of passengers and goods. Ships under 300 tons burden lie close to the quays; those of greater size mooring a little further out.

The principal defects of the port are, its limited size, and its being exposed to the N. W. winds, which sometimes blow with much violence, and throw in a heavy sea. The gales, however, are seldom of long continuance; and the holding ground being good, when the anchors are backed and proper precautions taken, no accident occurs. The tide at Trieste is scarcely perceptible; but the depth of water is influenced by the wind, being increased by a long continued sirocco or S. E. wind, and diminished by the prevalence of the E. N. E. wind, known by the name of *Boro*. The access to the port is not obstructed by any bar or shallow; and there is good anchorage in the roads, in from 6 to 7 and 10 fathoms water. A good sailing vessel may beat in by night or by day, except it blow hard from the N. E. or E. N. E., when she had better anchor in the Bay of Roses, or Pirano, where she will ride in perfect safety.

Pilots.—Ships bound for Trieste are under no obligation to take pilots; but those entering the port for the first time would do well to take one on making the coast of Istria. Boats are always hovering off Rovigno; they are not manned by regular pilots, but by fishermen, who, though unfit to be trusted with the management of the ship, know the bearings of the places and the depth of water. The fee usually paid them for pilotage is 20 dollars; in addition to which, they are supported at the ship's expense during the performance of quarantine.

Lighthouses.—The lighthouse at the extremity of the Theresian mole is 106 feet (Eng.) high. The light is intermittent; and may be seen, supposing the eye of the observer to be elevated 12 feet above the level of the sea, about 12 nautical miles, or from Pirano on the side of Istria, and the shoals of Grado on the Italian coast. A lighthouse has also been erected on the point of Salvore, bearing from Trieste W. by S., distant about 18 miles. The lantern is elevated about 103 feet above the level of the sea. From this point Pirano Bay opens, where vessels may anchor in safety in all sorts of weather.

Money.—Mercantile accounts are usually kept at Trieste in what is commonly called *convention* money, from an agreement entered into with respect to it by some of the German princes, in 1763. The current coins that are legal tender are dollars, ½ dollars or florins, and zwanzigers, or pieces of 20 kreutzers. Ten dollars are coined out of the Cologne marc (3,608 gr. Eng.) of pure silver, so that the value of the dollar is 4*s.* 3*d.* sterling.

The florin, or ½ dollar = 2*s.* 1½*d.* sterling; zwanzigers, or pieces of 20 kreutzers (60 to the marc), = 8½*d.* sterling. Hence it follows that 1*s.* sterling = 28⅝ kreutzers (60 to a florin); and the pound sterling=9 fl. 24½ kr., or, as it is commonly taken, 9 fl. 25 kr. All contracts are either expressly declared, or are understood, to be in silver money; gold coins, not being legal tender, pass only as merchandise.

Weights and Measures.—Those chiefly in use at Trieste are those of Vienna and Venice. The commercial pound contains 4 quarters, 16 ounces, or 32 loths: it is=8.639 English grains. Thus, 100 lbs. at Trieste=123·6 lbs. avoirdupois; or 90½ lbs. of Trieste=112 lbs. avoirdupois.

The principal dry measure is the stajo or staro=2·34 Winch. bushels. The Vienna metzen, which is sometimes used,=1·723 Winch. bushel. The polonick=0·861 Winch. bushel.

The principal liquid measure is the orna or eimer = 40 boccali = 15 wine or 12¼ Imperial gallons very nearly. The barile=173⅓ English wine gallons.

The orna of oil contains 5⅓ caffisi, and weighs about 107 commercial pounds. It is = 17 wine or 14·16 Imperial gallons.

The ell woollen measure 26·6 English inches. The ell for silk = 25·2 English inches.

Trade.—Trieste has no command of internal navigation; but being the most convenient, or rather the only sea-port, not merely of the Illyrian provinces, but of the duchy of Austria, and the greater part of Hungary, she possesses an extensive commerce. This has been increased by the facilities afforded to all sorts of mercantile transactions by the privilege of *porto franco* conferred on the town, and a considerable extent of contiguous country. Under this franchise, all goods, with but very few exceptions, may be imported into and exported from the city free of all duties whatever. Foreign products, when taken for consumption into the interior, are subject to the duties mentioned under the head *Tariff*, in a subsequent part of this article.

Exports.—These are very various, consisting partly of the raw and partly of the manufactured products of Austria Proper, Illyria, Dalmatia, Hungary, and Italy; with foreign articles imported and warehoused. Among the principal articles of raw produce may be specified, corn, chiefly wheat and maize, with rice, wine, oil, shumac, tobacco, wax, &c.; silk, silk rags and waste, hemp, wool, flax, linen rags, hides, furs, skins, &c.; the produce of the mines makes an important item, consisting of quicksilver, cinnabar, iron, lead, copper, brass, litharge, alum, vitriol, &c.; the forests of Carniola furnish timber, for ship building and other purposes, of excellent quality and in great abundance, with staves, cork-wood, box, hoops, &c.; marble also ranks under this head. Of manufactured articles, the most important are, thrown silk, silk stuffs, printed cottons from Austria and Switzerland, coarse and fine linens, and all sorts of

leather; under this head are also ranked soap, Venetian treacle, liqueurs, &c., with jewellery, tools and utensils of all sorts, glass ware and mirrors, Venetian beads, refined sugar, and a host of other articles. Of foreign articles imported and re-shipped, the most important are sugar, coffee, and dye stuffs. Trieste is also a considerable *depôt* for all sorts of produce from the Black Sea, Turkey, and Egypt.

It is not possible to obtain any accurate account of the quantity and value of the exports; but Mr. Money, the late British consul at Trieste, who carefully inquired into the subject, supposed that they might amount, in 1833, exclusive of those shipped for Venice, Fiume, and other Austrian ports, to about 1,800,000*l.* a year, which he divided as follows:—

	£
Raw Produce, viz. — Grain, rice, oil, honey, wax, shumac, tobacco, &c.	350,000
Silk, hemp, wool, rags, hides and skins	380,800
Metals, mineral and other products; as, quicksilver, iron, lead, copper, brass, zinc, litharge, argol, antimony, arsenic, alum, vitriol, potash, turpentine, marbles, &c.	230,000
Timber, plank, boards, &c.	180,000
Manufactures, viz. — Of silk, cotton, wool, linen, leather, &c.	225,000
Soap, candles, Venetian treacle, and medicines	80,000
Tools, machinery, arms, &c.	25,000
Household furniture, musical instruments, glass and glass wares, porcelain, &c.	20,000
Foreign Articles re-shipped for exportation, exclusive of those for Lombardy and the Papal States	300,000
Total	£1,800,000

Mr. Money further supposed that these articles were distributed amongst the countries trading with Trieste, as follows:—

	£
To Turkey and the Levant	380,000
Egypt	300,000
Greece, the Ionian Islands, and Malta	130,000
the Kingdom of the Two Sicilies	550,000
Ports in France, Sardinia, and Tuscany	100,000
Spain, Portugal, and Barbary	120,000
Great Britain	220,000
Ports in the North of Germany	150,000
the United States of America	30,000
South America and the West Indies	20,000
Total exports	£1,800,000

There has, however, been a considerable increase in the interval; and we have been assured by high mercantile authority, that the entire value of the exports from Trieste to foreign countries may be at present (1859) estimated at 2,500,000*l.* a year. We subjoin

An Account of the Total Number and Tonnage of Vessels, of each Nation, entered and cleared at the Port of Trieste in 1856 and 1857.

Imports.— There is a great difference between the imports into and the exports from Trieste; the value of the former being certainly not less than 4,000,000*l.* sterling. The excess of imports is explained partly by the fact that large quantities of foreign goods imported into Trieste are subsequently transhipped by coasting vessels to Venice, Fiume, and other ports, partly by the residence of English and other foreigners at Vienna, and partly by their being an excess of exports as compared with imports from other parts of the empire. The great articles of import are sugar, cotton goods and raw cotton, oil, coffee, wheat, silks, indigo and other dye stuffs, valonia, &c.

Trieste being a free port, goods destined for its consumption, and that of the adjoining territory, pay no duties whatever, and are exported and imported without notice by the customs. Goods brought from the interior for export at Trieste are charged an export duty on passing the custom-house line. Goods imported at Trieste, to be conveyed through the Austrian dominions to those of any other power, are charged a small transit duty.

Gunpowder, salt, and tobacco, being articles monopolised by government, are not allowed to be imported into Trieste except for sale to the government or its contractors. Vessels arriving with gunpowder on board deliver it at the arsenal, and on their clearing out it is returned to them free of expense. The utmost vigilance is exerted to prevent the introduction of tobacco; but with very little effect. The only articles the exportation of which from the Austrian dominions is at present prohibited are gold and silver in bars, and silk cocoons.

Shipping. — Since the loss of Flanders, the mercantile navy of Austria has been confined wholly to the ports on the Adriatic. But it is, notwithstanding, very considerable; and engrosses at this moment a large share of the trade of the Mediterranean and the Black Sea. The oak timber of Carniola and the Dalmatian coast is reckoned about the very best in the world, so that the Austrian ships, being built of it, are very strong, at the same time that they are particularly handsome. They are also well manned and provided. The seamen are expert, temperate, and orderly; and Mr. Money says that the laws for the regulation of the merchant service are excellent. Altogether the mercantile navy of Austria engaged in foreign trade is at present (1858) estimated to comprise about 680 ships of about 252,000 tons burden. But exclusive of the above 452 vessels, of about 100 tons, are engaged in the coasting trade, with many smaller coasters, fishing boats, and about 60 steamers. There arrived at Trieste in 1857, 2,215 ships, ex small coasting vessels, of the aggregate burden of 582,692 tons.

By far the greater number of vessels of large burden belong to Trieste. The rest belong to Venice, Fiume, Ragusa, and the Bocche di Cattaro. On the other hand, the smaller vessels employed in the coasting trade, which is very considerable, are more equally divided; Venice having, probably, as many as Trieste, while a good number belong to the ports of Istria, Hungary, and Dalmatia.

The foreign trade of this port comprises all voyages beyond the limits of the Adriatic; and may be divided as follows: —

1. The Levant trade, including the Ionian Islands, Greece, Constantinople, Smyrna, Odessa, &c., the ports in Syria, Cyprus, Candia, and Egypt, more especially Alexandria.
2. The *ponente* or Mediterranean trade, in the west, comprising the coast of Barbary, Spain, France, and Italy; being principally carried on with Marseilles, Genoa, and Leghorn.
3. The commerce on the ocean, which the Austrian merchants have attempted with considerable success. Several ships sail for Brazil, the U. States, England, Hamburg, &c.

Customs Regulations. — The Custom-house at Trieste has nothing whatever to do with the entry, reporting, &c. of vessels. When a ship arrives, she is reported to the Health Office; which publishes a list of arrivals and departures, with a statement of their cargoes, as they ap, ear in the manifests. Ships are cleared by the same office; the masters being assisted by the consuls of the country to which they belong. As soon as a vessel has performed quarantine, she loads or unloads without any interference or inspection by the customs officers, or by any one else. Goods unsusceptible of contagion may be landed during quarantine.

Being a free port, the bonding and warehousing system is, of course, unknown at Trieste.

Port Charges. — These are paid at the office of the harbour master on clearing out. They are the same, whatever may be the ship's stay; and are, perhaps, the most moderate of any in Europe.

Port Charges paid by Austrian and Foreign Ships.

Austrian, and foreign privileged ships:	*Fl.*	*kr.*
Anchorage, per ton admeasurement	0	4
Lighthouse	0	3
Cargo duty, per ton weight of goods	0	3
N.B.—If grain, per 20 staja.		

Foreign ships not privileged:	*Fl.*	*kr.*
Anchorage, lighthouse, and cargo as above, per ton admeasurement, and per ton weight of goods	0	10
New tonnage duty, per ton admeasurement	0	16
Abboraggio, payable by ships departing in ballast, or with less than half a cargo	0	9

Comparative Statement of the Port Charges paid at Trieste, respectively, by a native and privileged foreign Ship, and a foreign Ship not privileged, each of 300 Tons Burden, with mixed Cargoes.

Native and privileged.	*Fl.*	*kr.*
Anchorage and light, as above, 300 tons, at 7 kreutzers per ton admeasurement	55	0
Cargo duty, 300 tons, at 3 kreutzers	15	0
Total	50	0

or about 4*l.* 18*s.* sterling.

Foreign, not privileged:	*Fl.*	*kr.*
Anchorage, light and cargo duty, as above	50	0
Tonnage duty, 300 tons, at 16 kreutzers	80	0
	150	0

or about 12*l.* 10*s.* sterling.

If the ship depart in ballast, or with less than ½ a cargo, there is a further charge of 9 kreutzers per ton, or 45 florins; making in all 175 florins.

Quarantine is strictly enforced at Trieste, and the establishments for facilitating its performance are complete and efficient. The Board of Health at this port is the central or principal one for the Austrian States; and maintains an active correspondence with all the principal ports, both in the Mediterranean and elsewhere. There are 2 lazarettos, — that called St. Teresa, or Lazaretto *Nuovo*, is appropriated to vessels from the Levant and Egypt, which are, for the most part, subjected to the long or full quarantine of 40 days. It is spacious, and properly guarded; having a sufficient number of military and medical officers and assistants; with extensive quays and magazines for housing and airing goods, dwelling houses and apartments for resident officers and passengers, &c. It is, in fact, one of the most perfect establishments of the kind in existence. The other, or old (*Vecchio*) lazaretto, contiguous to the great mole, is appropriated to ships and passengers performing a quarantine of not more than 28 days; and, though inferior to the former, is sufficiently capacious and convenient. The sanitary officers, including that of harbour master, are near the centre of the port; where also are moored vessels under observation for a term not exceeding 8 days. Here also are facilities for communicating *vivâ voce* with persons under quarantine; and spacious warehouses, with adequate guards and other officers. But, notwithstanding these conveniences, if a vessel arrive having an infectious malady on board, she is not allowed to enter either lazaretto at Trieste, but is sent to an island near Venice, fitted out for the purpose, where assistance may be afforded with less risk of propagating infection.

Quarantine Dues payable on Goods. — Non-susceptible goods pay *ad valorem* at the rate of 6 kreutzers per 100 florins or 1 mille. Susceptible goods pay an extra charge, according to tariff, or to circumstances. Besides the above *ad valorem* duty, goods not susceptible pay 4 kreutzers (1½*d.*) per every 1,000 lbs. weight of Vienna. Grain is subject to an extra charge of about ½ per cent.

Brokers, Commission Merchants, Brokerage, &c.—There are a few exceptions to the freedom generally enjoyed of settling and exercising any trade at Trieste. Brokers, for example, are limited in number, and appointed by the Chamber of Commerce. They are obliged to give security, are under various regulations, and may not themselves trade as principals. They are of 3 classes: 1st, brokers for the sale and purchase of merchandise, who are again subdivided into particular classes, according to the articles they are conversant with, as grain, oil, cotton, drugs, hides and leather, colonial produce, manufactures, &c.; 2nd, bill brokers, or exchange agents; and, 3rd, ship and insurance brokers. Such authorised brokers are alone allowed to extend contracts, certificates, surveys, or other documents; and they are considered as public functionaries, whose depositions are received as legal evidence.

Any one may be a commission merchant or factor, but he may not issue printed circulars or lists of prices; nor will his books, however regularly kept, be considered as evidence in a court of justice, unless he is *matriculated*, for which the possession of a certain amount of capital is required. This, however, is little more than mere form, and a great deal of business is done by persons acting both as merchants and brokers, without being duly authorised.

The usual rate of a merchant's or factor's commission on the purchase of goods is 2 per cent.; on sales, ½ per cent. *del credere* is sometimes added.

A merchant's commission for collecting freight, and doing other shipping business, is 2 per cent. on the inward cargo; and by custom of the place, the house to which a ship is consigned or recommended by the charterers, is entitled to a commission of 2 per cent. on the outward cargo, whether it has or has not been instrumental in procuring the goods that are laden outwards.

A broker's commission for freighting a ship, or procuring a charter, is 2 per cent. This does not include the charge for writing charter, or for any other services performed in the clearance. In case of general cargoes, when the broker has to collect goods from different merchants, he charges 3 per cent. commission. A bill broker's commission (courtage) is sometimes 1 per mille, more commonly ¼ per mille. Brokerage for the sale or purchase of merchandise varies from ¼ per cent. to 1 per cent., according to circumstances, and the nature of the article.

Insurance.—The insurance of ships is carried on to a considerable extent at Trieste. The security is unexceptionable, the terms more moderate than in England, and losses are said to be adjusted promptly and liberally. The oppressive duties on policies of insurance in England have been the cause that most insurances on ships for the Adriatic, that were formerly effected in London, Liverpool, &c., are now effected at Trieste. The insurance of houses is universal; and that of lives is also, of late years, practised to a considerable extent. House insurance is carried on by joint companies, of limited responsibility.

Bankruptcy is not of very frequent occurrence at Trieste. The laws with respect to it do not differ much from those in force in most other countries. Frauds are punishable by imprisonment; but here, as elsewhere, they are very difficult to detect. Honest bankrupts are discharged, on making a complete disclosure of their affairs, and a surrender of their assets. Property settled on a wife is not affected by the debts of the husband; a regulation which, it is evident, must lead to fraud.

Communications by Land. — The intercourse between Trieste and Austria, Hungary, &c., is necessarily all carried on by land. The roads leading to the Austrian and Hungarian towns, particularly the first, are kept in good repair, and the tolls are moderate; but owing to the rugged nature of the country, the ascent is in some places very considerable. The draught horses employed on the roads are excellent; but, in some of the mountainous districts, bullocks are used.

Despite the difficulties in the way, a railway has been constructed between Vienna and Trieste, a distance of more than 340 miles, and is now (1859) in full operation. This was a very great undertaking, and its completion reflects great credit on the Austrian government and engineers.

Careening, Stores, &c. — Timber at Trieste is excellent, workmen good, and their wages moderate; so that it is a very favourable place for careening and repairing. Water is very good, but rather scarce; so that, if a large supply be required, due notice must be given. Ships are served in regular rotation. Beef is very good, but rather high priced. Butter and cheese are dear; and fuel is excessively so. On the whole, therefore, Trieste cannot be considered as a favourable place for the provisioning of a ship.

Banking. — There are no public banks at Trieste. The bank of Vienna has an office here, but it is merely for the exchange of its notes for cash, or, more frequently, of large notes for small ones. These notes, being guaranteed by government, are legal tender, and in general circulation, but no other company is allowed to issue notes to be used as a circulating medium. There is not, however, any deficiency of currency. Banking business is transacted by private companies, or by individuals, who are subject to certain regulations, and are obliged to lay before competent authority an attested statement of the capital embarked in their concerns. Their business principally consists in procuring bills of exchange from other places for the use of the merchants of Trieste, or in discounting, (in which latter operation they have many private competitors,) at the rate of from 4 to 6 per cent. per annum, according to the nature of the paper offered, and in proportion to the scarcity or abundance of cash.

The principal bankers of Trieste are of undoubted solidity, and do not indulge in dangerous speculations; and notwithstanding the apparent want of great banking establishments, the business of buying and selling, and of making payments and remittances, whether in bills or specie, is transacted at this port with great facility; and there seldom arises any distress, pressure, or stagnation, from want of money or credit.

It is not usual for respectable bankers to give interest on deposits. The partners in joint-stock companies, banks, &c., are, in general, responsible only to the extent of their declared capital; and the individuals composing them are only liable each to the extent of their share. The same individual is frequently a general merchant, a partner in a banking house, and a member of an insurance company. All these businesses may at present be said to be prosperous.

Credit.—Goods imported into Trieste are sometimes sold for ready money, a discount being usually understood, and allowed in such case, of 2 or 2½ per cent. But they are commonly sold at 3 months' credit, that is, by bills of that date; occasionally, but rarely, they are sold at six months.

Bills thus obtained, though offering no other guarantee than the signature of the drawer or acceptor, may be discounted or insured at a moderate rate by companies who dedicate themselves to this branch of business, and who, from their extensive dealings, are good judges of the risk. The practice has become almost universal; and it not only facilitates sales, but has a tendency to prevent bankruptcies, as it is difficult for a house long to conceal its insolvency; and its credit is, by this mode of trial, soon ascertained.

Tares. — Real tare is allowed on most articles of export; and on all articles of import, except cotton and sugar. The tare on Brazil sugar in chests depends on their length and size, but in general it amounts to from 15 to 18 per cent.; on Brazil sugar in bags the tare is 3 per cent.; on Havannah sugar a tare is allowed of 62 lbs. English per box, being from 13 to 14 per cent.; on Jamaica sugar the tare is 14 per cent. Tare on American cotton, 4 per cent.

Trade of Austria with the U. Kingdom. —The direct trade carried on with Austria by the ports on the Adriatic is not so great as might, perhaps, be expected; but it has in-

creased rapidly of late years; the value of the exports of British produce to Austria having risen from 637,353*l.* in 1853, to no less than 1,297,355*l.* in 1858. And in addition to this, our indirect trade, or that carried on with Austria by means of the Elbe and other inlets to her land frontier, though it cannot be exactly ascertained, is known to be much greater; and there is every prospect of its future increase. We have already noticed (PRUSSIAN OR GERMAN COMMERCIAL UNION) the reductions that were made in the tariff of Austria, and the liberal commercial treaty she negociated in 1853 with Prussia.

The great drawback under which Austria labours, is the situation of by far the larger portion of her provinces in the central parts of Europe; and separated from the great markets for their produce, either by a wide tract of intervening country, or by high mountain ridges, Austria is naturally an agricultural country; and, unless compelled by circumstances to devote a portion of her energies to manufactures, will, no doubt, continue such for a lengthened period: and hence, as the products of agricultural industry are at once heavy and bulky in proportion to their value, the advantage of opening improved channels of communication with other countries. In this respect, the free navigation of the Danube is of much importance, though a great deal more stress has been laid upon it in this country than it deserves. The expense of carrying corn and timber from Hungary to the Black Sea, and thence to the ports of Western Europe, will, we apprehend, always be found too heavy to admit of England or France ever supplying themselves, at least to any considerable extent, with the corn, flax, or timber of Hungary or Transylvania. The cost of conveying produce from the interior of the continent to the nearest shipping ports is a most important element, which is too generally lost sight of in this country. To show its influence we may mention that on various occasions where wheat has sold at Lemberg, one of the principal markets of Galicia, for 15*s.* or 16*s.* a quarter, its price at Dantzic at the same time has been 40*s.* and upwards; the difference being occasioned by the difficulty and expense of conveying corn down the Vistula from Lemberg to Dantzic.

The Austrian government and people have long been alive to the many advantages that would result from opening a communication between Hungary and Fiume, and other ports on the Adriatic. And notwithstanding the obstacles opposed by the interposition of the Julian Alps, and other mountain ridges, an excellent road has been carried from Carlstadt to Fiume. Still, however, the expenses of the carriage of bulky products are too great to make this route sufficiently available; and the advantage of further improving and cheapening the communication is too obvious to need being pointed out.

One Vienna pound=1·235 lb. avoirdupois; hence the centner of 100 Vienna pounds=123·5 or 123¼ lbs. avoirdupois.

The Austrian florin of the standard of 20 to the Cologne marc, is almost exactly 2 shillings sterling.
In the Lombardo-Venetian kingdom, the centner of 100 kilogrammes is still the weight used in levying the duty, the difference between 100 kilogrammes=78·8 lbs. of Austria being allowed.

TRINITY HOUSE. This society was incorporated by Henry VIII., in 1515, for the promotion of commerce and navigation by licensing and regulating pilots, and ordering and erecting beacons, lighthouses, buoys, &c. A similar society, for the like purposes, was afterwards established at Hull; and also another at Newcastle-upon-Tyne in 1537; which 3 establishments, says Hakluyt, were in imitation of that founded by the Emperor Charles V. at Seville, in Spain; who, observing the numerous shipwrecks in the voyages to and from the West Indies, occasioned by the ignorance of seamen, established, at the *Casa de Contratacion*, lectures on navigation, and a pilot-major for the examination of other pilots and mariners; having also directed books to be published on that subject for the use of navigators.

Henry VIII., by his charter, confirmed to the Deptford Trinity House Society all the ancient rights, privileges, &c., of the shipmen and mariners of England, and their several possessions at Deptford, from which it is plain that the Society had existed long previously. The corporation was confirmed, in 1658, in the enjoyment of its privileges and possessions, by letters patent of the 1st James II. by the name of the Master, Wardens, and Assistants of the Guild or Fraternity of the most glorious and undivided Trinity and of St. Clement's in the parish of Deptford Strond, in the County of Kent. At first, the corporation appears to have consisted of seamen only; but since the charter of James II., noblemen and gentlemen have been enrolled among its elder brethren. It is governed by 31 elder brothers, of whom 1 is master, 4 wardens, and 8 assistants: but the inferior members of the fraternity, named younger brethren, are not limited in point of number; every master or mate, expert in navigation, being admissible as such. Besides the power of erecting lighthouses, and other sea-marks, on the several coasts of the kingdom, for the security of navigation—(see LIGHTHOUSES),—the master, wardens, assistants, and elder brethren are invested by charter with the following powers; viz. the examination of the mathematical scholars of Christ's Hospital; the appointment of pilots to conduct ships into and out of the Thames; the settling the several rates of pilotage; and the granting licences to poor seamen, not free of the city or past going to sea, to row on the river Thames for their support. They formerly, also, enjoyed several other powers, which have since fallen into disuse or been vested in other hands. To this company belongs the Ballast Office, for clearing and deepening the Thames, by taking up a sufficient quantity of ballast for the supply of all ships that sail out of the river, for which they pay certain rates.—(See BALLAST.) The corporation is authorised to receive voluntary subscriptions, benefactions, &c.; and to purchase, in mortmain, lands, tenements, &c. to the amount of 500*l.* per annum. The ancient Hall of the Trinity House at Deptford, where the meetings of the brethren were formerly held, was pulled down long ago. They now meet in an elegant building erected for the purpose in London, near the Tower.

The revenue under the management of the Trinity House, which arose from dues payable to the corporation on account of lighthouses, buoyage, and beaconage, and ballastage, and from the interest of money in the funds, the rent of freehold property, has been principally expended on pensions to poor disabled seamen, and on the maintenance of their widows, orphans, &c. and it is admitted that it was both judiciously and economically administered. It is henceforth, however, under the provisions of the 16 & 17 Vict. c. 131., to form part of the "Mercantile Marine Fund." The act provides that payments now chargeable on the "fund" for pensions, &c., may be commuted. The expenses of lighthouses, ballastage, and beaconage, are also to be charged on the "fund," and the rates of toll are to be revised and fixed by H. M. in council. The ballastage rates under the Trinity House, being a charge peculiar to the Thames, are to be made peculiarly applicable to services performed for the safety and convenience of the shipping frequenting that river.—(See BALLAST.)

TRIPANG, OR SEA SLUG (*Biche de Mer*), a species of fish of the genus *Holuthuria*, found chiefly on coral reefs in the Eastern seas, and highly esteemed in China, into which it is imported in large quantities. It is an unseemly looking substance, of a dirty brown colour, hard, rigid, scarcely possessing any power of locomotion, or appearance of animation. Sometimes the slug is as much as 2 feet in length, and from 7 to 8 inches in circumference. A span in length, and 2 or 3 inches in girth, is, however, the ordinary size. The quality and value of the fish, however, do not by any means depend upon its size, but upon properties in it neither obvious to nor discernible by those who have not been long and extensively engaged in the trade. In shallow water the animal is taken out by the hand, but in deeper water it is sometimes speared. When taken it is gutted, dried in the sun, and smoked over a wood fire; this being the only preparation it receives.

The fishery is carried on from the western shores of New Guinea, and the southern shores of Australia, to Ceylon inclusive. Indeed, within the last few years it has been successfully prosecuted on the shores of the Mauritius. The whole produce goes to China. In the market of Macassar, the great staple of this fishery, not less than *thirty* varieties are distinguished, varying in price from 5 Spanish dollars a *picul* (133⅓ lbs.) to 14 times that price, each variety being distinguished by well-known names! The quantity of tripang sent annually to China from Macassar is about 7,000 piculs, or 8,333 cwt.; the price usually varying from 8 dollars a picul to 110 and 115, according to quality. — (*Crawfurd's Indian Archipelago*, vol. iii. p. 441.) There is also a considerable export of tripang from Manilla to Canton.

Besides tripang, *fish-maws* and *sharks' fins* are exported to China from every maritime country of India.

TROY WEIGHT, one of the most ancient of the different kinds used in Britain. The pound English Troy contains 12 ounces, or 5,760 grains. It is used in the weighing of gold, silver, and jewels; the compounding of medicines; in experiments in natural philosophy; in comparing different weights with each other; and is now (by 5 Geo. 4. c. 74.) made the standard of weight.

TROY WEIGHT, *Scotch*, was established by James VI. in the year 1618, who enacted that only one weight should be used in Scotland, viz. the French Troy stone of 16 pounds, and 16 ounces to the pound. The pound contains 7,609 grains, and is equal to 17 oz. 6 dr. avoirdupois. The cwt. or 112 lbs. avoirdupois, contains only 103 lbs. 2½ oz. of this weight, though generally reckoned equal to 104 lbs. This weight is very nearly identical with that formerly used at Paris and Amsterdam; and is generally known by the name of Dutch weight. Though prohibited by the articles of Union, it has been used in most parts of Scotland in weighing iron, hemp, flax, and other Dutch and Baltic goods, meal, butcher's meat, lead, &c. — (See WEIGHTS AND MEASURES.)

TRUCK SYSTEM, a name given to a practice that has prevailed, particularly in the mining and manufacturing districts, of paying the wages of workmen in goods instead of money. The plan has been, for the masters to establish warehouses or shops; and the workmen in their employment have either got their wages accounted for to them by supplies of goods from such *depôts*, without receiving any money; or they have got the money, with a tacit or express understanding that they were to resort to the warehouses or shops of their master for such articles as they were furnished with.

Advantages and Disadvantages of the Truck System. — A great deal of contradictory evidence has been given, and very opposite opinions have been held, as to the practical operation and real effect of this system on the workmen. Nor is this to be wondered at, seeing that every thing depends on the mode in which it is administered, and that it may be either highly advantageous or highly injurious to the labourer. If a manufacturer of character establish a shop supplied with the principal articles required for the use of the workmen in his employment, and give them free liberty to resort to it or not as they please, it can, at all events, do them no harm, and will, most likely, render them material service. The manufacturer, having the command of capital, may, in general, lay in his goods to greater advantage than they can be laid in by the greater number of retail tradesmen in moderate-sized towns; and not being dependent on the profits of his shop for support, he is, even though he had no advantage in their purchase, able to sell his goods at a cheaper rate than they can be afforded by the majority of shopkeepers. Some times, also, a factory is established in a district where shops either do not exist at all, or are very deficient; and in such cases the master consults the interest and convenience of those dependent on him when he provides a supply of the principal articles required for their subsistence. It is easy, therefore, to see that the keeping of shops by masters for the use of their workmen may be very beneficial to the latter. But to insure its being so, it is indispensable that the masters should be above taking an advantage when it is within their reach, and that their conduct towards the workmen should not be in any degree influenced by the circumstance of the latter dealing or not dealing with their shops.

Such disinterestedness is, however, a great deal more than could be rationally expected from the generality of men; and hence, though many instances may be specified in which the truck system was advantageous to the workmen, those of a contrary description were unfortunately, far more numerous. It is obvious, indeed, that a practice of this sort affords very great facilities for fraudulent dealings. Under the old law, a manufacturer who had a shop, had means, supposing he were inclined to use them, not possessed by any ordinary shopkeeper as respects his customers, for forcing upon his workmen inferior goods at an exorbitant price. They are at first supplied on liberal terms, and are readily accommodated with goods in anticipation of wages, till they get considerably into debt. The pernicious influence of this deceitful system then begins fully to disclose itself. The workmen cease to be free agents; they are compelled to take such goods and at such prices as the master pleases; for, were they to attempt to emancipate themselves from this state of thraldom by leaving their employment, they would be exposed to the risk of prosecution and imprisonment for the debts they had incurred. It is not easy to imagine the extent to which these facilities for defrauding the labouring class were taken advantage of in various districts of the country. In many instances, indeed, the profits made by the shops exceeded those made by the business to which they were contingent; and thousands of workmen, whose wages were nominally 30*s.* a week, did not really receive, owing to the bad quality and high price of the goods supplied to them, more than 20*s.*, and often not so much.

Abolition of the Truck System. — A system of dealing with the labouring classes, so very susceptible of abuse, and which, in point of fact, was very extensively abused, was loudly and justly complained of. A bill was in consequence introduced for its suppression by Mr. Littleton (now Lord Hatherton), which, after a great deal of opposition and discussion, was passed into a law, 1 & 2 Will. 4. c. 32. — (*See abstract subjoined.*)

Those who opposed this act did so on two grounds; — 1st, that it was improper to interfere at all in a matter of this sort; and, 2d, that the interference would not be effective. The first of these objections does not appear entitled to any weight. In suppressing the truck system, the legislature did nothing that could in anywise regulate or fetter the fair employment of capital: it interfered merely to put down abuse; to carry, in fact, the contract of wages into full effect, by preventing the workman from being defrauded of a portion of the wages he had stipulated for. The presumption no doubt is, in questions between workmen and their employers, that government had better abstain from all interference, and leave it to the parties to adjust their disputes on the principle of mutual interest and compromised advantage. Still, however, this is merely a presumption; and must not be viewed as an absolute rule. Instances have repeatedly occurred where the interference of the legislature to prevent or suppress abuse, on occasions of the sort now alluded to, has been imperiously required, and been highly advantageous. Those who claim its interposition are, indeed, bound to show clearly that it is called for to obviate some gross abuse, or that it will materially redound to the public advantage; and this, we think, was done in the completest manner, by the opponents of the truck system. Regard for the interests of the more respectable part of the masters, as well as for those of the workmen, required its abolition; for, while it continued, those who despised taking an advantage of their dependants were less favourably situated than those who did. It is ludicrous, therefore, in a case of this sort, to set up a cuckoo cry about the "freedom of industry." The good incident to the truck system was in practice found to be vastly overbalanced by the abuses that grew out of it; and as these could not, under the existing law of debtor and creditor, be separately destroyed, the legislature did right in attempting to suppress it altogether.

It was said, indeed, that this would be found to be impracticable; and the manufacturers would enter underhand into partnerships with the keepers of shops, and that the system would really be continued, in another and, perhaps, more objectionable form. This anticipation has, we believe, been in some degree realised; but the system has notwithstanding been in many places abandoned, and is nowhere practised to any thing like the extent to which it was carried previously to the passing of Lord Hatherton's act. It will not, however, be completely rooted out, till all small debts, however they originate, be put beyond the pale of the law. We have already vindicated the expediency of this measure on other grounds — (see CREDIT); and the influence it would have in effectually destroying whatever is most pernicious in the truck system, is a weighty additional recommendation in its favour. Were all right of action upon debts for less than 50*l.* or 100*l.* taken away, no master would think of acquiring a control over the free agency of his workmen, by getting them in debt to him; and no workman would, under such circumstances, submit to be directed in his choice of shops or goods. The case of the Scotch colliers affords a curious illustration of what is now stated. Down to 1775, these persons were really *adscripti glebæ*, or prædial slaves; that is, they and their descendants were bound to perpetual service at the works to which they belonged, — a right to their labour being acquired by any new proprietor to whom the works were sold! The 15 Geo. 3. c. 28. was passed for the emancipation of the colliers from this state of bondage. It, however, failed of practically accomplishing its object; for the masters speedily contrived, by making them advances in anticipation of their wages, to retain them as completely as ever under their control! To obviate this abuse, the 39 Geo. 3. c. 56. was passed; which most properly took from the masters all title to pursue the colliers for loans, unless advanced for the support of the collier and his family during sickness. This act had the desired effect; and the colliers have since been as free as any other class of labourers. — (See edition of the *Wealth of Nations* by the author of this work, p. 172.) In fact, were small debts put beyond the pale of the law, it would not be necessary to interfere directly with the truck system; for it would not then be possible to pervert it to any very injurious purpose.

The following are the principal clauses in the act 1 & 2 Will. 4. c. 37., entitled, "An Act to prohibit the Payment in certain Trades, of Wages in Goods, or otherwise than in the Current Coin of the Realm:" —

1. In all contracts hereafter to be made for the hiring of any artificer in any of the trades herein-after enumerated, or for the performance by any artificer of any labour in any of the said trades, the wages of such artificer shall be made payable only in the current coin of this realm, and not otherwise; any contract to the contrary being illegal, null, and void.
2. If such contract contain any stipulations as to the manner in which the wages shall be expended, it is void.
3. Wages must be paid to the workman in coin only. Payment in goods illegal and void.
4. Artificers may recover wages, if not paid in the current coin.
5. In an action brought for wages, no set-off shall be allowed for goods supplied by the employer, or by any shop in which he is interested
6. No employer shall have any action or suit in equity against his artificer, for goods supplied to him on account of wages, or supplied by any shop in which he has an interest.
7. If the artificer, or his wife or children, become chargeable

to the parish, the overseers may recover any wages earned within the 3 preceding months, and not paid in cash.

8. Nothing in this act is to invalidate the payment of wages in bank notes or drafts on any bankers within 15 miles, if artificer consents.

9. Any employer of any artificer in any of the trades hereinafter enumerated, who shall, by himself or by the agency of any other person, directly or indirectly enter into any contract, or make any payment hereby declared illegal, shall for the first offence forfeit a sum not exceeding 10*l.* nor less than 5*l.*, and for the second offence any sum not exceeding 20*l.* nor less than 10*l.*, and for a third offence he shall be guilty of a misdemeanour, and be punished by fine only, at the discretion of the court, so that the fines shall not in any case exceed 100*l.*

10. Offences shall be inquired of and fines recovered before 2 justices, and the amount of the fines shall be in the discretion of such justices, or in cases of misdemeanour, of the court before which the offence may be tried; and in case of a second offence, it shall be sufficient evidence of the previous conviction, if a certificate, signed by the officer having the custody of the record, be produced, stating in a compendious form the general nature of the offence. But a second or third offence shall only be punished as a first or second offence, if committed within 10 days after the prior conviction; and a fourth or any subsequent offence shall be punished as a third offence. But no second or third offence shall be prosecuted after more than 2 years from the commission of the next preceding offence.

11. Justices may compel the attendance of witnesses, on the request of the parties. Penalty for non-attendance without excuse, and after proof of due service of summons at the usual place of abode for such persons, 24 hours at the least before the time appointed for appearance, a commitment to some prison within the jurisdiction of the justices, without bail or mainprize, for not exceeding 14 days, or until such person shall submit to be examined.

Section from 12. to 18. inclusive, regulate proceedings.

19. Act only to apply to the following trades: — Making, casting, converting, or manufacturing of iron or steel, or any parts, branches, or processes thereof; working any mines of coal, ironstone, limestone, salt rock; or working or getting stone, slate, or clay; or making or preparing salt, bricks, tiles, or quarries; or making or manufacturing any kinds of nails, chains, rivets, anvils, &c., keys, &c., or any other articles or hardwares made of iron or steel, or of iron and steel combined, or of any plated articles of cutlery, or of any goods or wares made of brass, tin, lead, pewter, or other metal, or of any japanned goods or wares whatsoever; or making, spinning, throwing, doubling, winding, weaving, combing, knitting, bleaching, dyeing, printing, or otherwise preparing any kinds of woollen, worsted, yarn, stuff, kersey, linen, fustian, cloth, serge, cotton, leather, fur, hemp, flax, mohair, or silk manufacturer whatsoever, or any manufactures whatsoever made of the said last mentioned materials, whether the same be or be not mixed one with another; or making or otherwise preparing, ornamenting, or finishing any glass, porcelain, china, or earthenware whatsoever, or any parts, branches, or processes thereof, or any materials used in any of such last mentioned trades; or making or preparing of bone, thread, silk, or cotton lace, or of lace made of any mixed materials.

20. Not to extend to any domestic servant, or servant in husbandry.

21. No one engaged in any of the trades or occupations enumerated, or his father, son, or brother, shall act as a justice.

22. County magistrates to act in cases where those of towns are disqualified as above.

23. Not to prevent any employer from supplying or contracting to supply to any artificer any medicine or medical attendance, or any fuel, or any materials, tools, or implements to be by such artificer employed in his trade or occupation, if such artificers be employed in mining, or any hay, corn, or other provender to be consumed by any horse or other beast of burden employed by any such artificer in his trade and occupation; nor from demising to any artificer employed in any of the trades or occupations enumerated the whole or any part of any tenement at any rent; nor from supplying or contracting to supply to any such artificer any victuals dressed or prepared under the roof of any such employer, and there consumed by such artificer; nor from making or contracting to make any deduction from the wages of any artificer for any such rent, or medicine or medical attendance, or fuel, materials, tools, implements, hay, corn, or provender, or such victuals, or for any money advanced to each artificer for any such purpose; but such deduction shall not exceed the true value of such fuel, materials, tools, implements, hay, corn, and provender, and shall not be in any case made from the wages of such artificer unless the agreement for such deduction shall be in writing and signed by such artificer.

24. Not to prevent any such employer from advancing to any such artificer any money to be by him contributed to any friendly society or bank for savings, or for his relief in sickness, or for the education of any child of such artificer, nor from deducting or contracting to deduct any money from the wages of such artificers for the education of any such child, provided the agreement for such deduction shall be in writing and signed by such artificer.

25. Workmen, labourers, and other persons in any manner engaged in any employment or operation, in or about the several trades and occupations aforesaid, shall be deemed "artificers;" and all masters, bailiffs, foremen, managers, clerks, and other persons engaged in the hiring, employment, or superintendence of the labour of any such artificers shall be deemed to be "employers;" and any money or other thing had or contracted to be paid, or given as a remuneration for any labour done or to be done, whether within a certain time or to a certain amount, or for a time or an amount uncertain, shall be deemed to be the "wages" of such labour; and any agreement, understanding, device, contrivance, collusion, or arrangement whatsoever on the subject of wages, whether written or oral, whether direct or indirect, to which the employer and artificer are parties, or are assenting, or by which they are mutually bound to each other, or whereby either of them shall have endeavoured to impose an obligation on the other of them, shall be deemed a "contract."

TRUFFLES, a sort of vegetable production, like a mushroom, formed under ground. A few have been found in Northamptonshire; they are pretty abundant in Italy, the south of France, and several other countries. They are reckoned a great delicacy. The *pâtés au truffes d'Angoulême* are highly esteemed, and are sent as presents to very distant places. — (*Rees's Cyclopædia.*)

TUNIS, the capital of the regency of the same name, on the northern coast of Africa, the Goletta fort being in lat. 36° 48′ 30″ N., lon. 10° 25′ 45″ E. The bay of Tunis is somewhat in the form of a horseshoe. Its western extremity, Cape Carthage, is situated about 4 miles N.E. from the Goletta; and its eastern extremity, Cape Zafran, bears from Cape Carthage E. by S., distant about 13 miles. The bay is about 16 miles deep, and has good anchorage all over, in from 10 to 4 fathoms water. It is exposed to the N. and N. E. gales; but they seldom occasion any damage. Tunis lies on the west side of the bay, being separated from it by a large lagoon, having, where deepest, about 7 feet water. The port is at the Goletta, or channel, passing through the narrow belt of land separating the lagoon from the sea; the entrance to it is by a canal, in which there is at all times 15 feet water; and ships may use it on paying a fee of 3 dollars a day. It is not, however, much resorted to; all vessels of considerable burden loading and unloading from their moorings in the bay, by means of lighters. The population of Tunis has been variously estimated; and may probably amount to 100,000, being the most populous of any African city after Cairo. The streets are narrow, unpaved, and filthy. The buildings, though of stone, are mean and poor; and the inhabitants present the picture of poverty and oppression. There is a fort at the Goletta, of considerable strength.

Trade. — Notwithstanding the various drawbacks arising out of the nature of the government, and the ignorance and prejudices of the people, commerce and industry are in a more advanced state in Tunis than in any other part of Northern Africa, Egypt excepted. Though subject to droughts, the climate is, on the whole, excellent. The soil still preserves that exuberant fertility for which it was famous in antiquity.

Non quicquid Libycis terit
Fervens area messibus. — (*Senec. in Thyest.*)

It seldom receives any other manure than that of sometimes burning the weeds and stubble; and yet, in despite of its slovenly culture, the crops are luxuriant; and there is generally a considerable excess of wheat and barley for exportation. Corn is principally shipped at Biserta, about 50 miles W. of Tunis. Olive oil is one of the principal articles of export. It is of various qualities; some good, and some very indifferent. Susa is said to be the best place for its shipment. Soap of an excellent quality is largely manufactured in the regency. It may be had either soft or in wedges. The soft is made of barilla and pure oil, and is much esteemed. The hard soap is made from the lees of oil, and is reckoned

very strong. The principal soap-works are at Susa. Little, however, is prepared on a speculative anticipation of a demand for exportation; but any quantity may be had by contracting for it a few months before the period when it is wanted. A sort of woollen scull-caps are largely exported. They are in extensive demand all over the Levant, and are nowhere made in such perfection as here. Ivory and gold dust, hides, wax, morocco leather, sponge, barilla, coral, dates, ostrich feathers, &c. are among the articles of export.

The imports from Europe consist of woollens, coarse German and Irish linens, cotton stuffs, hardware, sugar, coffee, spices, tin plates, lead, alum, dye stuffs, wine, silk, Spanish wool, &c. There is very little direct trade between Tunis and England; but a good deal is indirectly carried on, through the intervention of Malta and Gibraltar. Marseilles has probably the largest share of the trade with the regency. In 1830, there entered the different ports of Tunis 194 ships, of the burden of 20,747 tons, exclusive of those engaged in the trade with the other African states and Turkey.

Exclusive of the trade by sea, a considerable trade is carried on between Tunis and the interior of Africa, by means of caravans. These import slaves, gold dust, ivory, feathers, drugs, &c. They carry back cotton stuffs, linens, hardware, spices, cochineal, &c.

Naval and military stores imported into Tunis pay no duty. Other articles pay a duty of 3 per cent. *ad valorem* on a rated tariff. Obstructions arising out of monopolies, &c. are occasionally thrown in the way of exportation; and in general it is necessary, before proceeding to ship, to obtain a *tiskery*, or licence to that effect, from the bey. That, however, may be, for the most part, procured without much difficulty.

Money. — Accounts are kept in piastres of 16 carobas or 52 aspers. The piastre is worth about 1*s.* 1*d.* sterling. The asper is an imaginary money. The value of foreign coins depends on the state of the exchange.

Weights. — Gold, silver, and pearls are weighed by the ounce of 8 meticals; 16 of these ounces make the Tunis pound = 7,773·5 Eng. grs. The principal commercial weight is the cantaro, containing 100 lbs., or rottoli, being equivalent to 111·05 lbs. avoird., or 50·36 kilog.

Measures. — The principal corn measure is the cafiz, divided into 16 whibas; and the whiba into 12 sahas. One cafiz = 14¼ Imperial bushels.

The wine measure is the millerolle of Marseilles = 14·1 Imp. gallons, or 64·33 litres. It is divid.d into 6½ mitres. The principal oil measure is the metal or mettar = 5·125 wine gallons, or 19·39 litres; but it is of different dimensions in different parts of the country; and is larger at Susa, whence most of the oil is exported, than at Tunis.

The pic, or principal long measure, is of 3 sorts; viz. the pic woollen measure = 26·5 Eng. inches; the pic silk measure = 24·8 do.; and the pic linen measure = 18·6 do.

For further particulars, see that chapter of *Shaw's Travels in Barbary, &c.* (one of the most learned and excellent works of the kind in the English language), that treats of the kingdom of *Tunis*; *Macgill's Account of Tunis*, passim; *Jackson's Commerce of the Mediterranean*, pp. 55—96.; *Kelly's Cambist, &c.*

RUINS OF CARTHAGE. — The famous city of Carthage, one of the greatest emporiums of the ancient world, long the mistress of the sea, and the most formidable enemy of Rome, was situated near the cape which still bears her name, about 10 miles N.E. from Tunis. Such, however, have been the alterations on the coast, that the port of the city, within whose ample expanse whole navies used to ride, is now wholly filled up: antiquaries differ as to its situation; and the sea has in some places receded from 2 to 3 miles from the ruins of the buildings by which it was formerly skirted. The common sewers are still in a very perfect state, as are several cisterns, public reservoirs, and other remains of that sort, with the fragment of a noble aqueduct that supplied the city with water. But besides these and a very few Punic inscriptions that have been dug up, there is nothing left to attest the ancient grandeur and magnificence of the city, or to identify it with the illustrious people by whom it was founded and occupied till its destruction by Scipio Nasica. There are no temples, no triumphal arches, no granite columns or obelisks covered with Phœnician characters, and no ancient entablatures. These have all fallen a sacrifice to hostile attacks, or to the destroying hand of time.

> Nunc passim, vix reliquias, vix nomina servans,
> Obruitur, propriis non agnoscenda ruinis.

Such mutilated fragments of buildings as still remain are evidently the work of a later age; of those who occupied the city between the period when a colony was sent to it by Augustus, and its final subversion by the Saracens in the 7th century.

TURBITH, OR TURPETH, the cortical part of the root of a species of *Convolvulus*, brought from different parts of the East Indies. It is a longish root about the thickness of the finger, resinous, heavy, of a brownish hue without and whitish within. It is imported cloven in the middle, lengthwise, and the heart or woody matter taken out The best is ponderous, not wrinkled, easy to break, and discovers to the eye a large quantity of resinous matter. At first it makes an impression of sweetness on the taste; but, when chewed for some time, betrays a nauseous acrimony. It is used in medicine, but only to a small extent. — (*Lewis's Mat. Med.*)

TURBITH (MINERAL), the name given by chemists to the subsulphate of mercury.

TURBOT (*Pleuronectes maximus*), a well-known and highly esteemed species of fish. Very considerable quantities of turbot are now taken on various parts of our coasts, from the Orkneys to the Land's End, yet a preference is given in the London markets to those caught by the Dutch. The latter are said to have sometimes drawn as much as 80,000*l.* in a single year, for turbots sold in London.

Fresh turbots, however taken, or in whatever ship imported, may be imported free of duty. — (See FISH.)

TURMERIC, the root of the *Curcuma longa*. It is externally greyish, and internally of a deep lively yellow or saffron colour; very hard; and not unlike, either in figure or size, to ginger. That should be preferred which is large, new, resinous, difficult to break, and heavy. It is imported from Bengal, Java, China, &c. Small quantities of it have also been grown in England. It has a somewhat aromatic, and not very agreeable smell; and a bitterish, slightly acrid, but rather warm taste. It used to be in con-

siderable estimation as a medicine; and is extensively used in India for culinary purposes, entering into the composition of curry powder and other articles: in Europe, it is only used as a dye. It yields a beautiful bright yellow colour; which, however, is extremely fugitive, and no means have hitherto been discovered of fixing it. It is sometimes employed to heighten the yellows made with weld, and to give an orange tint to scarlet; but the shade imparted by the turmeric soon disappears. — (*Lewis's Mat. Med.*; *Bancroft on Colours*, vol. i. p. 276.)

The duties on turmeric, after being reduced in 1842, were wholly repealed in 1845. The imports, which have been very largely augmented within the last 3 years, amounted in 1852 to 1252 tons; the re-exports during the same year being 683 tons. The price of turmeric in London in October, 1853, varied from 6*s.* to 14*s.* per cwt. The Madras brings the lowest, and the Chinese the highest price.

TURPENTINE (Ger. *Turpentin*; Fr. *Térébenthine*; It. *Trementina*; Rus. *Skipidar*; Pol. *Terpentyna*). There are several species of turpentine, but all of them possess the same general and chemical properties.

1. *Common Turpentine*, is a resinous juice which exudes from the Scotch fir or wild pine (*Pinus sylvestris*). The trees which are most exposed to the sun, and have the thickest barks, yield it in the greatest abundance. They begin to produce it when about 40 years old. The bark of the tree is wounded and the turpentine flows out in drops, which fall into a hole, or sort of cup, previously dug at the foot of the tree, holding about 1½ pint. It is purified by being exposed to liquefy in the sun's rays, in barrels perforated in the bottom, through which it filters. In the U. States, the collection of turpentine is confided chiefly to negroes, each of whom has the charge of from 3,000 to 4,000 trees. The process lasts all the year, although the incisions are not made in the trees till the middle of March, and the flow of the turpentine generally ceases about the end of October. The boxes are emptied 5 or 6 times during the year; and it is estimated that 250 boxes will produce a barrel weighing 320 lbs. Turpentine has a strong, somewhat fragrant odour, and a bitter, disagreeable taste; its consistence is greater than that of honey; its colour dirty yellow; and it is more opaque than the other sorts. We import it almost entirely from the U. States.

2. *Venice Turpentine*, is the produce of the larch (*Pinus Larix*). It is obtained by boring a hole into the heart of the tree about 2 feet from the ground, and fitting into it a small tube through which the turpentine flows into vessels prepared for its reception. It is purified by straining through cloths, or hair sieves. It is more fluid, having the consistence of new honey, a yellowish colour, and is less unpleasant to the smell and taste, than the common turpentine. Genuine Venetian turpentine is principally obtained from the forests of Baye, in Provence; but much of that to be found in the shops comes from America, and is, perhaps, obtained from a different species of fir.

3. *Canadian Balsam*, or *Turpentine*, is obtained from incisions in the bark of the *Pinus Balsamea*, a native of the coldest regions of North America. It is imported in casks, each containing about 1 cwt. It has a strong, not disagreeable odour, and a bitterish taste; is transparent, whitish, and has the consistence of copaiva balsam. — (See BALSAM.)

4. *Chian*, or *Cyprus Turpentine*, is obtained from the *Pistacia Terebinthus*, a native of the north of Africa and the south of Europe, and cultivated in Chios and Cyprus. It flows out of incisions made in the bark of the tree in the month of July; and is subsequently strained and purified. It has a fragrant odour, a moderately warm taste, devoid of acrimony or bitterness, and a white or very pale yellow colour; it is about as consistent as thick honey, is clear, transparent, and tenacious. From its comparative high price, Chian turpentine is seldom procured genuine, being for the most part adulterated either with Venetian or common turpentine. The different species of turpentine may be dissolved in rectified spirit, or pure alcohol; and, by distillation, they all give similar oils, which, from their being distilled (and not from any resemblance to alcohol, or spirits properly so called), are vulgarly termed spirit of turpentine. If the distillation be performed with water, the produce is an essential oil, the common spirit of turpentine; and if the distillation be carried on in a *retort*, without water, the product is more volatile and pungent, — a concentrated oil, as it were, — and is called the ethereal spirit of turpentine. The residuum that is left, in both cases, is a brownish resinous mass, brittle, capable of being melted, highly inflammable, insoluble in water, but mixing freely with oils: it is the common rosin of commerce. — (*Lib. of Entert. Knowledge, Vegetable Substances*; *Thomson's Dispensatory.*)

In 1852 the imports and exports of common turpentine were respectively 481,616, and 729 cwts. It is entirely imported from the U. States.

TURPENTINE, OIL OF (Ger. *Terpentinöl*; Fr. *Eau de raze*, *Huile de térébenthine*; It. *Acqua di rasa*; Sp. *Aguarras*), the essential oil drawn from turpentine by distillation. There are two sorts of this oil: the best, red; and the second, white. It is very extensively used by house painters, and in the manufacture of varnish, &c. The distillers have been charged with using it in the preparation of gin. Oil of turpentine is very often adulterated.

TURQUOISE (Ger. *Türkiss*; Fr. *Turquoise*; It. *Turchina*; Sp. *Turquesa*), a precious stone in considerable estimation.

Its colour, which is its principal recommendation, is a beautiful celestial blue, which migrates into pale blue, and is sometimes tinged with green. Specific gravity, 3·127. It is destitute of lustre, opaque, and does not admit of a very high polish. It is much worn in necklaces, and every part of ornamental jewellery, from the size of a pin's head to that of an almond: it contrasts beautifully with brilliants, or pearls, set in fine gold, and appears to most advantage when cut spheroidal.—(*Mawe on Diamonds*, 2d ed. p. 129.)

Real turquoises are exclusively furnished by Persia. The mines whence they are obtained are situated near Nishapore. They are the property of the Crown, and are farmed to the highest bidder. They bring a rent of from 2,000*l.* to 2,700*l.* a year.—(*Fraser's Travels on the Shores of the Caspian*, pp. 343—347.)

TUTENAGUE, the name given in commercial language to the zinc or spelter of China.—(See ZINC.)

But it is improperly applied; for the article to which the Portuguese originally gave the name of *tutenag*, is, in fact, the gong metal of the Chinese, that is, an alloy of copper and tin. It is harder than zinc, though less so than iron, sonorous, compact, and has some malleability. The fresh fracture is brilliant, but soon tarnishes. It is made by melting 100 catties of the mineral called *hung-tung* or red copper, with 25 catties of tin, and running it, when intended for gongs, into a thin plate. The sonorous quality of these instruments is owing chiefly to long continued and expert hammering, and their price depends in great measure upon the sound. Other instruments are also made of this alloy, as well as wash-basins, dishes, and small bells. Notwithstanding the prohibition which formerly existed against exporting unwrought metals from China, it is supposed that previously to 1820 about 2,500 tons tutenague were annually sent to India and the Malay countries. But this exportation has been superseded by the supplies of zinc which India, &c., now get from Europe, and which is better fitted for the purposes to which tutenague was applied. European zinc is, also, finding its way to China. The export price of tutenague varies from 14 to 40 dols. per picul. Large gongs sell at from 40 to 50 cts. a catty. Small ones at half that price.—(*Chinese Commercial Guide*, p. 199.)

TYRE, the principal city of Phœnicia, and the most celebrated emporium of the ancient world. This famous city was situated on the S. E. coast of the Mediterranean, where the inconsiderable town of Tsour now stands, in lat. 33° 17′ N., lon. 35° 14′ 35″ E. The trade that is at present carried on at Tsour is too trifling to deserve notice; but as this work is intended to give some account, however imperfect, of the revolutions in the channels of commercial enterprise, we may, perhaps, be excused for submitting a few statements with respect to the commerce carried on by so renowned a people as the Tyrians.

Tyre was founded by a colony from Sidon, the most ancient of the Phœnician cities. The date of this event is not certainly known, but Larcher supposes it to have been 1,690 years before the Christian æra.—(*Chronologie d'Hérodote*, cap. ii. p. 131.) It is singular, that while Homer mentions Sidon, he takes no notice of Tyre, whose glory speedily eclipsed that of the mother city; but this is no conclusive proof that the latter was not then a considerable emporium. The prophets Isaiah, Jeremiah, and Ezekiel, who flourished from 700 to 600 years before Christ, represent Tyre as a city of unrivalled wealth, whose "merchants were princes, and her traffickers the honourable of the earth." Originally, the city was built on the main land: but having been besieged for a lengthened period by the Babylonian monarch Nebuchadnezzar, the inhabitants conveyed themselves and their goods to an island at a little distance, where a new city was founded, which enjoyed an increased degree of celebrity and commercial prosperity. The old city was, on that account, entitled Palætyre, and the other simply Tyre. The new city continued to flourish, extending its colonies and its commerce on all sides, till it was attacked by Alexander the Great. The resistance made by the Tyrians to that conqueror showed that they had not been enervated by luxury, and that their martial virtues were nowise inferior to their commercial skill and enterprise. The overthrow of the Persian empire was effected with less difficulty than the capture of this single city. The victor had not magnanimity to treat the vanquished as their heroic conduct deserved. In despite, however, of the cruelties inflicted on the city, she rose again to considerable eminence. But the foundation of Alexandria, by diverting the commerce that had formerly centered at Tyre into a new channel, gave her an irreparable blow; and she gradually declined till, consistently with the denunciation of the prophet, her palaces have been levelled with the dust, and she has become "a place for the spreading of nets in the midst of the sea."

Commerce, Colonies, &c. of Tyre.—Phœnicia was one of the smallest countries of antiquity. It occupied that part of the Syrian coast which stretches from Aradus (the modern Rouad) on the north, to a little below Tyre on the south, a distance of about 50 leagues. Its breadth was much less considerable, being for the most part bounded by Mount Libanus to the east, and Mount Carmel on the south. The surface of this narrow tract was generally rugged and mountainous; and the soil in the valleys, though moderately fertile, did not afford sufficient supplies of food to feed the population. Libanus and its dependent ridges were, however, covered with timber suitable for ship building; and besides Tyre and Sidon, Phœnicia possessed the ports of Tripoli, Byblos, Berytus, &c. In this situation, occupying a country unable to supply them with sufficient quantities of corn, hemmed in by mountains, and by powerful and warlike neighbours, on the one hand, and having, on the other, the wide expanse of the Mediterranean, studded with islands, and surrounded by fertile countries, to invite the

enterprise of her citizens, they were naturally led to engage in maritime and commercial adventures; and became the boldest and most experienced mariners, and the greatest discoverers, of ancient times.

From the remotest antiquity, a considerable trade seems to have been carried on between the Eastern and Western worlds. The spices, drugs, precious stones, and other valuable products of Arabia and India, have always been highly esteemed in Europe, and have been exchanged for the gold and silver, the tin, wines, &c. of the latter. At the first dawn of authentic history, we find Phœnicia the principal centre of this commerce. Her inhabitants are designated in the early sacred writings by the name of Canaanites, —a term which, in the language of the East, means merchants. The products of Arabia, India, Persia, &c. were originally conveyed to her by companies of travelling merchants, or caravans; which seem to have been constituted in the same way, and to have performed exactly the same part in the commerce of the East, in the days of Jacob, that they do at present.—(*Gen.* xxxvii. 25, &c.) At a later period, however, in the reigns of David and Solomon, the Phœnicians, having formed an alliance with the Hebrews, acquired the ports of Elath and Ezion-geber, at the north-east extremity of the Red Sea. Here they fitted out fleets, which traded with the ports on that sea, and probably with those of southern Arabia, the west coast of India, and Ethiopia. The ships are said to have visited Ophir; and a great deal of erudition has been expended in attempting to determine the exact situation of that emporium or country. We agree, however, with Heeren, in thinking that it was not the name of any particular place; but that it was a sort of general designation given to the coasts of Arabia, India, and Africa, bordering on the Indian Ocean; somewhat in the same loose way as we now use the terms East and West Indies.—(See the chapter on the *Navigation and Commerce of the Phœnicians*, in the translation of Heeren's work.)

The distance of the Red Sea from Tyre being very considerable, the conveyance of goods from the one to the other by land must have been tedious and expensive. To lessen this inconvenience, the Tyrians, shortly after they got possession of Elath and Ezion-geber, seized upon Rhinoculura, the port in the Mediterranean nearest to the Red Sea. The products of Arabia, India, &c., being carried hither by the most compendious route, were then put on board ships, and conveyed by a brief and easy voyage to Tyre. If we except the transit by Egypt, this was the shortest and most direct, and for that reason, no doubt, the cheapest, channel by which the commerce between Southern Asia and Europe could then be conducted. But it is not believed that the Phœnicians possessed any permanent footing on the Red Sea after the death of Solomon. The want of it does not, however, seem to have sensibly affected their trade; and Tyre continued, till the foundation of Alexandria, to be the grand emporium for Eastern products, with which it was abundantly supplied by caravans from Arabia, the bottom of the Persian Gulph, and from Babylon, by way of Palmyra.

The commerce of the Phœnicians with the countries bordering on the Mediterranean was still more extensive and valuable. At an early period, they established settlements in Cyprus and Rhodes. The former was a very valuable acquisition, from its proximity, the number of its ports, its fertility, and the variety of its vegetable and mineral productions. Having passed successively into Greece, Italy, and Sardinia, they proceeded to explore the southern shores of France and Spain, and the northern shores of Africa. They afterwards adventured upon the Atlantic; and were the first people whose flag was displayed beyond the pillars of Hercules.*

Of the colonies of Tyre, Gades, now Cadiz, was one of the most ancient and important. It is supposed by M. de St. Croix to have originally been distinguished by the name of Tartessus or Tarshish, mentioned in the sacred writings.—(*De l'Etat et du Sort des Anciennes Colonies*, p. 14.) Heeren, on the other hand, contends, as in the case of Ophir, that by Tarshish is to be understood the whole southern part of Spain, which was early occupied and settled by Phœnician colonists.—(See also *Huet, Commerce des Anciens*, cap. 8.) At all events, however, it is certain that Cadiz early became the centre of a commerce that extended all along the coasts of Europe as far as Britain, and perhaps the Baltic. There can be no doubt that by the Cassiterides, or Tin Islands, visited by the Phœnicians, are to be understood the Scilly Islands and Cornwall.—(See TIN.) The navigation of the Phœnicians, probably, also, extended a considerable way along the western coast of Africa; of this, however, no details have reached us.

But, of all the colonies founded by Tyre, Carthage has been by far the most celebrated. It was at first only a simple factory; but was materially increased by the arrival of a large body of colonists, forced by dissensions at home to leave their native land, about 883 years before Christ.—(*St. Croix*, p. 20.) Imbued with the enterprising mercantile spirit of their ancestors, the Carthaginians rose, in no very long period, to the highest eminence as a naval and commercial state. The settlements founded by the Phœnicians in Africa, Spain, Sicily, &c. gradually fell into their hands; and after

* Mons Calpe and Mons Abyla, the Gibraltar and Ceuta of modern times.

the destruction of Tyre by Alexander, Carthage engrossed a large share of the commerce of which it had previously been the centre. The subsequent history of Carthage, and the misfortunes by which she was overwhelmed, are well known. We shall only, therefore, observe, that commerce, instead of being, as some shallow theorists have imagined, the cause of her decline, was the real source of her power and greatness; the means by which she was enabled to wage a lengthened, doubtful, and desperate contest with Rome herself for the empire of the world.

The commerce and navigation of Tyre probably attained their maximum from 650 to 550 years before Christ. At that period the Tyrians were the factors and merchants of the civilised world; and they enjoyed an undisputed pre-eminence in maritime affairs. The prophet Ezekiel (chap. xxvii.) has described in magnificent terms the glory of Tyre; and has enumerated several of the most valuable productions found in her markets, and the countries whence they were brought. The fir trees of Senir (Hermon), the cedars of Lebanon, the oaks of Bashan (the country to the east of Galilee), the ivory of the Indies, the fine linen of Egypt, and the purple and hyacinth of the isles of Elishah (Peloponnesus), are specified among the articles used for her ships. The inhabitants of Sidon, Arvad (Aradus), Gebel (Byblos), served her as mariners and carpenters. Gold, silver, lead, tin, iron, and vessels of brass; slaves, horses, mules, sheep, and goats; pearls, precious stones, and coral; wheat, balm, honey, oil, spices, and gums; wine, wool, and silk; are mentioned as being brought into the port of Tyre by sea, or to its markets by land, from Syria, Arabia, Damascus, Greece, Tarshish, and other places, the exact site of which it is difficult to determine.*

Such, according to the inspired writer, was Tyre, the "Queen of the waters" before she was besieged by Nebuchadnezzar. But, as has been already remarked, the result of that siege did not affect her trade, which was as successfully and advantageously carried on from the new city as from the old. Inasmuch, however, as Carthage soon after began to rival her as a maritime and mercantile state, this may, perhaps, be considered as the æra of her greatest celebrity.

It would not be easy to over-rate the beneficial influence of that extensive commerce from which the Phœnicians derived such immense wealth. It inspired the people with whom they traded with new wants and desires, at the same time that it gave them the means of gratifying them. It everywhere gave fresh life to industry, and a new and powerful stimulus to invention. The rude uncivilised inhabitants of Greece, Spain, and Northern Africa acquired some knowledge of the arts and sciences practised by the Phœnicians; and the advantages of which they were found to be productive secured their gradual though slow advancement.

Nor were the Phœnicians celebrated only for their wealth, and the extent of their commerce and navigation. Their fame, and their right to be classed amongst those who have conferred the greatest benefits on mankind, rest on a still more unassailable foundation. Antiquity is unanimous in ascribing to them the invention and practice of all those arts, sciences, and contrivances that facilitate the prosecution of commercial undertakings. They are held to be the inventors of arithmetic, weights and measures, of money, of the art of keeping accounts, and, in short, of every thing that belongs to the business of a counting-house. They were also famous for the invention of ship building and navigation; for the discovery of glass—(See Glass); for their manufactures of fine linen and tapestry; for their skill in architecture, and in the art of working metals and ivory; and still more for the incomparable splendour and beauty of their purple dye.—(See the learned and invaluable work of the President de Goguet, *Sur L'Origine des Loix, &c.* Eng. trans. vol. i. p. 296., and vol. ii. pp. 95—100.; see also the chapter of Heeren on the *Manufactures and Land Commerce of the Phœnicians.*)

But the invention and dissemination of these highly useful arts form but a part of what the people of Europe owe to the Phœnicians. It is not possible to say in what degree the religion of the Greeks was borrowed from theirs; but that it was to a pretty large extent seems abundantly certain. Hercules, under the name of Melcarthus, was the tutelar deity of Tyre; and his expeditions along the shores of the Mediterranean, and to the straits connecting it with the ocean, seem to be merely a poetical representation of the progress of the Phœnician navigators, who introduced arts and civilisation, and established the worship of Hercules, wherever they went. The temple erected in honour of the god at Gades was long regarded with peculiar veneration.

The Greeks were, however, indebted to the Phœnicians, not merely for the rudiments of civilisation, but for the great instrument of its future progress—the gift of letters. No fact in ancient history is better established than that a knowledge of alpha-

* There is, in Dr. Vincent's *Commerce and Navigation of the Ancients in the Indian Ocean* (vol. ii. pp. 624—652.), an elaborate and (like the other parts of that work) prolix commentary on this chapter of Ezekiel, in which most of the names of the things and places mentioned are satisfactorily explained.—(See also *Heeren on the Phœnicians*, cap. iv.)

betic writing was first carried to Greece by Phœnician adventurers: and it may be safely affirmed, that this was the greatest boon any people ever received at the hands of another.

Before quitting this subject, we may briefly advert to the statement of Herodotus with respect to the circumnavigation of Africa by Phœnician sailors. The venerable Father of History mentions, that a fleet fitted out by Necho king of Egypt, but manned and commanded by Phœnicians, took its departure from a port on the Red Sea, at an epoch which is believed to correspond with the year 604 before the Christian æra, and that, keeping always to the right, they doubled the southern promontory of Africa; and returned, after a voyage of 3 years, to Egypt, by the Pillars of Hercules.—(*Herod.* lib. iv. § 42.) Herodotus further mentions, that they related that, in sailing round Africa, they had the sun on their right hand, or to the north,—a circumstance which he frankly acknowledges seemed incredible to him, but which, as every one is now aware, must have been the case if the voyage was actually performed.

Many learned and able writers, and particularly Gosselin (*Récherches sur la Géographie Systématique et Positive des Anciens*, tome i. pp. 204—217.), have treated this account as fabulous. But the objections of Gosselin have been successfully answered in an elaborate note by Larcher (*Hérodote*, tome iii. pp. 458—464. ed. 1802; and Major Rennell has sufficiently demonstrated the practicability of the voyage (*Geography of Herodotus*, p. 682, &c.). Without entering upon this discussion, we may observe, that not one of those who question the authenticity of the account given by Herodotus, presumes to doubt that the Phœnicians braved the boisterous seas on the coasts of Spain, Gaul, and Britain; and that they had, partially at least, explored the Indian Ocean. But the ships and seamen that did this much, might, undoubtedly, under favourable circumstances, double the Cape of Good Hope. The relation of Herodotus has, besides, such an appearance of good faith; and the circumstance, which he doubts, of the navigators having the sun on the right, affords so strong a confirmation of its truth, that there really seems no reasonable ground for doubting that the Phœnicians preceded, by 2,000 years, Vasco de Gama in his perilous enterprise.

Present State of Syria. — The principal modern ports on the coast of Syria are Alexandretta, Latakia, Tripoli, Beyrout, Seyde, and Acre. The commerce which they carry on is but inconsiderable compared with the extent and fertility of the countries of which they are the inlets. This, however, is not owing to the badness of the ports, the unsuitableness of the country, or to any natural cause, but wholly to long continued oppression and misgovernment. There is a passage in the dedication to Sandys's *Travels* that describes the state of Syria, Asia Minor, Egypt, &c., about 250 years ago, with a force and eloquence which it is not very likely will soon be surpassed: —

"Those countries, once so glorious and famous for their happy estate, are now, through vice and ingratitude, become the most deplored spectacles of extreme misery; the wild beasts of mankinde having broken in upon them and rooted out all civilitie, and the pride of a sterne and barbarous tyrant possessing the thrones of ancient and just dominion; who, ayming onely at the height of greatnesse and sensualitie, hath in tract of time reduced so great and goodly a part of the world, to that lamentable distresse and servitude under which (to the astonishment of the understanding beholders) it now faints and groneth. Those rich lands at this present remain waste and overgrowne with bushes, receptacles of wild beasts, of theeves and murderers; large territories dispeopled or thinly inhabited; goodly cities made desolate; sumptuous buildings become ruines; glorious temples either subverted, or prostituted to impietie; true religion discountenanced and oppressed; all nobilitie extinguished; no light of learning permitted, nor vertue cherished: violence and rapine insulting over all, and leaving no securitie save to an abject mind and unlookt on povertie."

Those who compare this beautiful passage with the authentic statements of Volney — incomparably the best of the modern travellers who have visited the countries referred to — will find that it continued down to a comparatively late period to be as accurate as it is eloquent. Latterly, however, thanks to the decay of the Turkish power, some improvement has taken place. And the trade of Beyrout, and the other ports referred to above, has considerably increased.

U. V.

VALONIA, a species of acorn, forming a very considerable article of export from the Morea and the Levant. The more substance there is in the husk, or cup of the acorn, the better. It is of a bright drab colour, which it preserves so long as it is kept dry: any dampness injures it; as it then turns black, and loses both its strength and value. It is principally used by tanners, and is always in demand. Though a very bulky article, it is uniformly bought and sold by weight. A ship can only take a small proportion of her registered tonnage of valonia, so that its freight per ton is always high.

Of 24,023 tons of valonia imported in 1857, 23,161 tons were brought from Turkey, and the residue from Greece and Italy. The duty, after being reduced in 1842 from 20*s.* to 5*s.* a ton, was wholly repealed in 1845. The price of valonia in the London market in 1857 varied from 11*l.* to 15*l.* a ton.

VALPARAISO, the principal sea-port of Chili, lat. (Fort St. Antonio), 33° 1′ 9″ S., lon. 71° 41′ 5″ W. Population perhaps 28,000 or 30,000. The water in the bay is deep, and it affords secure anchorage, except during northerly gales, to the violence of which it is exposed; but as the holding ground is good, and the pull of the anchor against a steep hill, accidents seldom occur to ships properly found in anchors and cables. There is no mole or jetty; but the water close to the shore is so deep, that it is customary for the smaller class of vessels to carry out an anchor to the northward, and to moor the ship with the stern ashore by another cable made fast to the shore. Large ships lie a little further off, and load and unload by means of lighters. The best shelter is in that part called the Fisherman's Bay, lying between the castle and Fort St. Antonio, where, close to a clear shingle beach, there is 9 fathoms water. In the very worst weather, a landing may be effected in this part of the bay. — (See *Miers's Chili and La Plata*, i. 440., where there is a plan of Valparaiso.)

The harbours of Valdivia and Concepcion are much superior to that of Valparaiso; the former being, indeed, not only the best in Chili, but second to few in any part of the world. But Valparaiso, being near the capital, Santiago, and being the central *dépôt* for the resources of the province, is most frequented. The town is conveniently situated, at the extremity of a mountainous ridge; most part of the houses being built either upon its acclivity or in its breaches. Large quantities of corn and other articles of provision are shipped here for Callao and other ports along the Peruvian coast: the exports for San Francisco have nearly ceased. The principal articles of export are the precious metals, copper in bars and ores, tallow and hides, wheat and flour, wool, saltpetre, sarsaparilla, &c. The productiveness of the Chilian mines of gold and silver has increased during the last few years, and their average produce may now be taken at about 4,000,000 dollars, or 800,000*l.* a year. But the increase in the production of copper has been much more considerable, having fully trebled since 1845. In 1855 the entire value of the mineral products exported from Chili was estimated at 9,805,498 dollars. The import and export trade of the republic have more than doubled since 1848, when their agg. amount was 16,954,952 dollars. The following were the principal articles of export, with their values, in 1856.

Coal	$195,080	Copper and silver ore	$513,470
Barley	279,118	Wool	226,235
Dried beef	65,341	Silver in bars	2,589,563
Copper, in bars	3,000,173	Silver ore	1,076,780
Copper, in pigs	3,314,179	Flour	1,423,387
Copper ore	1,840,532	Wheat	936,319
Gold and silver coin	528,941		

Total value of the exports during the same year 18,159,522 dollars, of which, native produce amounted to 17,062,731 dollars, and re-exports to 1,087,781 dollars. The total imports in 1856 were valued at 19,804,045 dollars. Of these by far the largest portion is supplied by the U. K., the U. States, France, the Hanse Towns, Brazil, Peru, &c.

The exports from the U. Kingdom to Chili amounted, *in* 1857, to 1,520,678*l.* Among other items they comprised, cottons worth 588,707*l.*, woollens 273,108*l.*, linens 78,165*l.*, hardware and cutlery 105,262*l.*, iron and steel 89,020*l.*, apparel and slops 23,707*l.*, coal 45,419*l.*, &c. Exclusive of gold and silver, we import from Chili considerable quantities of copper ore and copper, saltpetre, hides, and tallow, wool, &c.

Chilian Port Regulations. Export Duties.—Chile Guano, 1½ cents per 1,000 lbs.; 5 per cent. on the following articles: Bar silver, on valuation of $9 per marc; unsmelted silver (pina), do.; old plate (chafalonia), do.; copper, in bars, on valuation of $14 per 100 lbs.; do. retalla do., $9 do.; do regutus ores, calcined ores, silver ores, mixed ores, and tailings not capable of amalgamation, and tailings, pay 5 per cent. on proceeds of account sales when received from place of destination.

The provincial contribution on export of copper ores is abolished.

Port Charges.—Tonnage dues, 25 cents per ton; light dues, 3½ cents per ton; role and captain of the port's fees, $1; harbour master's fees, $8. Whale ships, vessels in distress or in ballast, or discharging under 20 packages, are exempt from tonnage and light dues. Tonnage dues paid at one port are not levied in another.

The lading charges which are on account of the owner of the goods, may be calculated at from $125 to $150 per ton, according to the description of merchandise. Consignee's charge generally 5 per cent. commission for sales, and 2½ guaranties.

Foreign Flags.—The only ports of entry for foreign flags are Ancud, Valdivia, Talcahuano, Concepcion, Valparaiso, Coquimbo, and Caldera, and Lota and Coronel in ballast; and vessels from abroad entering any other port are liable to seizure. Coasting trade is prohibited to foreign flags, but they may discharge portions of their original cargoes in one or more ports, and load Chilian produce for a foreign port.

All communication with the shore is prohibited until after the visit of the port and revenue officer, who will require a general manifest of the cargo, or the bill of lading, and a list of stores. 24 hours are allowed for correction of errors or omissions. For any mistake discovered afterward, the captain is subjected to fines or seizure. Passengers' luggage free.

In 1856, the mercantile marine of Chili comprised 265 ships of the agg. burden of 62,005 tons. In 1855 the ports of Chili were entered by 515 foreign ships, of which 278 bore the flag of England, 110 that of the U. States, 25 that of France, &c.

Perhaps no part of S. America has profited more than Chili by the establishment of independence. The contrast between her present state and that in which she was found by M. de la Perouse is most striking. "The influence of the government," said that accomplished navigator, "is in constant opposition to that of the climate. The system of prohibition exists at Chili in its fullest extent. This kingdom, of which the productions would, if increased to their maximum, supply all Europe; whose wool would be sufficient for the manufactures of France and England; and whose herds, converted into salt provisions, would yield a vast produce;—this kingdom, alas! has no commerce. Four or five small vessels bring, every year, from Lima, tobacco, sugar, and some articles of European manufacture, which the miserable inhabitants can obtain only at second or third hand, after they have been charged with heavy customs duties at Cadiz, at Lima, and lastly, at their arrival at Chili; in exchange they give their tallow, hides, some deals, and their wheat, which, however, is *at so low* a price, that the cultivator has no inducement to extend his tillage. Thus Chili, with all its gold, and articles of exchange, can scarcely procure sugars, tobacco, snuffs, linens, cambrics, and hardware, necessary to the ordinary wants of life." —(*Perouse's Voyage*, vol. i. p. 50. Eng. ed.)

Instead, however, of 4 or 5 small ships from Lima, Valparaiso only is now annually visited by hundreds of ships of all nations, exclusive of those visiting the other ports!

All sorts of European goods are carried direct to Chili, and are admitted at reasonable duties. The advantages resulting from this extensive intercourse with foreigners, and from the settlement of English and American adventurers in the country, have been already immense, and will every day become more visible. It was impossible, considering the ignorance of the mass of the people, that the old system of tyranny and superstition could be pulled to pieces without a good deal of violence and mischief; but the foundations of a better order of things have been laid, and Chili is becoming an opulent and a flourishing country.

The population is believed to amount to about 1,500,000, ex Indians. And Rosalis states in his excellent work on Chili (*Essai sur Le Chile*, Hambourg, 1857), that in 1855 the consumption of sugar amounted to 32,785,250 lbs., being nearly 22 lbs. to each individual, (p. 428.) As a farther evidence of its prosperity, we may mention that the public revenue, which in 1817 amounted to 1,752,127 doll., had in 1846 increased to 3,623,918 doll., and in 1855 to 6,287,526 doll.!

Monies, Weights, and Measures of Chili are the same as those of Spain; for which, see CADIZ. The quintal of 4 arrobas, or 100 lbs.,=101·44 lbs. avoirdupois. The fanega, or principal corn measure, contains 3,439 English cubic inches, and is therefore = 1·599 Winch. bushels. Hence 5 fanegas = 1 Winch. quarter very nearly. The yara, or measure of length,=33·384 Eng. inches.

VAN DIEMEN'S LAND, OR TASMANIA, a large island belonging to Great Britain, forming part of Australia, lying between 41° 20′ and 43° 30′ S. lat., and 144° 40′ and 148° 20′ W. lon. It is supposed to contain about 27,000 square miles. — (See the *Mercator's Chart* prefixed to this work.)

This land was discovered by the Dutch navigator Tasman, in 1642, and was named in honour of Anthony Van Diemen, at that time governor-general of the Dutch possessions in the East Indies; but it is now usually called Tasmania, from its discoverer. Previously to 1798, it was supposed to form part of New Holland, but it was then ascertained to be an island. It was taken possession of by the British in 1803; and in 1804 Hobart Town, the capital, was founded.

The surface is generally hilly and mountainous; but, though none of the land be of the first quality, there are several moderately fertile plains, and a good deal of the hilly ground is susceptible of being cultivated. On the whole, however, it is not supposed that more than about a third part of the entire surface of the island can be considered arable: but about a third more may be advantageously used as sheep pasture. As compared with New Holland, it is well watered. The climate, though variable, is generally speaking, good, and suitable for European constitutions; and it is not exposed to the tremendous droughts that occasion so much mischief in New South Wales. Wheat is raised in considerable quantities; though wool is at present the staple produce of the colony.

Van Diemen's Land, like New South Wales, was originally intended to serve as a penal colony, and it received between 1823 and 1850 no fewer than 58,243 convicts. It has also received, especially of late years, large numbers of free settlers. In 1857 the total population of the island (ex aborigines, who, perhaps, do not exceed 3,000 or 4,000, and military), amounted to 80,802. Of these, 3,008 were convicts.

For some considerable time great dissatisfaction was felt by the colonists at the continued importation of convicts; and previously to 1850 very vigorous measures were taken to effect its suppression. It was finally abandoned in 1853. In truth, after the discovery of the gold fields in the adjoining continent, it could no longer be continued. The convicts landed in Van Diemen's Land very speedily escaped to Victoria or N. S. Wales; where a large proportion of them recommenced the same career which had led to their ejection from their mother country. A nuisance of this sort could not be tolerated. And however our criminal population may be disposed of, it is no longer to be permitted to contaminate and brutalise the Australian continent.

Hobart Town or Hobarton, as it is usually termed, is situated in the southern part of the island, on the west side of the river Derwent, near its junction with Storm Bay, lat. (Fort Mulgrave) 42° 53′ 5″ S., lon. 147° 21′ 5″ E. The water is deep, and the anchorage good. A jetty has been constructed, accessible to the largest ships. The situation appears to have been very well chosen; and the town has been judiciously laid out. In 1848, the district of Hobarton contained 21,467 inhabitants, of whom 5,265 were convicts. The houses are supposed to be worth, at an average, 50*l.* a year. There are several printing establishments in the town, and various newspapers, some of them very well conducted. There is also a Book Society, a Mechanics' Institute, and several respectable schools and academies. The Van Diemen's Land Banking Company, the Australasian Bank, the Union Bank, the Commercial Bank, &c., have offices in Hobarton. They are joint-stock companies. A lighthouse, with a fixed light 70 ft. in height, has been erected on Cape Direction, on a small island about 6 miles S. from Hobarton.

Launceston, the second town in the island, is situated in the northern part, at the head of the navigable river Tamar, which falls into Port Dalrymple. Its population may amount to about 10,000. It has a considerable trade with Sydney and Hobarton, and with England.

Trade of Van Diemen's Land.—Haberdashery, apparel, cotton and linen goods, hardware, woollens, malt liquor, spirits, sugar, wine, &c., form the principal articles of import.

Here, as in New South Wales, wool forms by far the most important article of export; next to it are flour and oats, live stock, timber, whale oil, potatoes, mimosa bark, and various less important articles. The usual excess of the imports over the exports is accounted for by the remittances to defray the cost of the convict establishment.

We subjoin accounts of the principal articles imported into, and exported from, Tasmania in 1854, 1855, and 1856.

Account of the Quantities and Values of the Principal Articles imported into Tasmania in each of the Years 1854, 1855, and 1856.

The discovery of the gold fields in Victoria and N. S. Wales had an instantaneous and powerful effect on Tasmania. All sorts of industrious undertakings were paralysed. The emigration from the colony was sudden and excessive; and many farmers were all but totally deserted by their labourers. But, though exposed for a while to great difficulties, a revulsion soon began to take effect in favour of the Tasmanian colonists. An unlimited market, at greatly advanced prices, was opened in the adjoining continent for their grain, potatoes, timber, and other products. Hence many of the better class of labourers again returned to the colony, some with considerable sums of money. And the emigration had the effect of ridding the island of the worst portion of the convicts, who were found carrying on their depredations at the "diggings," on the roads, and in the towns of Victoria and N. S. Wales.—(See the valuable work of Westgarth, entitled *Victoria, its Gold Mines, &c.*, cap. vi.)

Tariff.—The legislature of Van Diemen's Land, after advising with the other Australian colonies, passed an act, which came into operation in February, 1853, simplifying and reducing the tariff. It proceeds on the principle of imposing duties on a few articles in extensive demand, and more especially on those belonging to the class of stimulants, and exempting the others. Hence ardent spirits have attracted the marked attention of the Tasmanian financiers. But we see no reason for their apparent dislike to brandy, or for their charging it with a duty of 12*s.* a gallon, while they admit rum, hollands, &c. at 9*s.* The duties are as follows, viz.—

	£	s.	d.
Brandy, per gallon	0	12	0
Hollands, rum, gin, and all other spirits, per do.	0	9	0
Wine, in wood	0	1	0
in bottle	0	2	0
Tobacco, per lb.	0	2	0
Sugar, raw, per cwt.	0	3	0
refined	0	6	0

	£	s.	d.
Tea, per lb.	0	0	3
Coffee, per lb.	0	0	1½
Beer, in wood, per gallon	0	0	2
in bottle	0	0	6
Dried fruits, per lb.	0	0	1
Hops, per lb.	0	0	2

Rates of Pilotage, Harbour Dues, &c.

	£	s.	d.
Wharfage.—On landing each cask, bale, or package	0	0	9
On landing iron, per ton	0	9	0
On landing salt, per ton	0	3	0
On landing timber, per 1,000 feet	0	2	0
On shipping each cask, bale, or package	0	0	3
On shipping iron, per ton	0	3	0
On shipping salt, per ton	0	1	0

Colonial produce, when landed or shipped, is not subjected to any charge, except for a sufferance.

	£	s.	d.
Fees.—A sufferance to land or ship goods	0	1	0
A warrant to remove goods from under bond	0	1	0
On landing each cask or package of spirits or wine	0	0	6
On the registry of vessels not exceeding 40 tons	2	0	0

If the pilot does not board the vessel outside the middle ground at the Heads at George Town, or, the weather not permitting his going outside, if he be not ready to show the channel by keeping his boat in the fair way until the ship can be boarded, he shall forfeit half the pilotage inwards.

For every number of inches below 6, no charge is to be made; for ½ a foot and upwards, one foot is to be charged.

Colonial vessels are exempted from the payment of pilotage, unless the master shall make the signal for a pilot and accept his service.

These details have been principally derived from the *Statistics of the Colony*, published at Hobart Town: and partly from Mr. Westgarth's book, and different *Parliamentary Papers*.

VANILLA, the fruit of the *Epidendrum Vanilla*, a species of vine extensively cultivated in Mexico.

It has a trailing stem, not unlike the common ivy, but not so woody, which attaches itself to any tree that grows near it. The Indians propagate it by planting cuttings at the foot of trees selected for that purpose. It rises to the height of 18 or 20 feet; the flowers are of a greenish yellow colour, mixed with white; the fruit is about 8 or 10 inches long, of a yellow colour when gathered, but dark brown or black when imported into Europe; it is wrinkled on the outside, and full of a vast number of seeds like grains of sand, having, when properly prepared, a peculiar and delicious fragrance. It is principally used for mixing with and perfuming chocolate; and is, on that account, largely imported into Spain; but as chocolate, owing to oppressive duties, is little used in England, vanilla is not much known in this country.

Vanilla is principally gathered in the intendancy of Vera Cruz, in Mexico, at Misantla, Colipa, Vacuatla, and other places. It is collected by the Indians who sell it to the whites (*gente de razon*), who prepare it for market. They spread it to dry in the sun for some hours, then wrap it in woollen cloths to sweat. Like pepper it changes its colour in this operation — becoming almost black. It is finally dried by exposing it to the sun for a day. There are four varieties of vanilla, all differing in price and excellence; viz. the *vanilla fina*, the *xacate*, the *rezacate*, and the *vasura*. The best comes from the forests surrounding the village of Zentilla, in the intendancy of Oaxaca. According to Humboldt, the mean exportation of vanilla from Vera Cruz may amount to from 900 to 1,000 millares, worth at Vera Cruz from 30,000 to 40,000 dollars.—Vanilla is also imported from Brazil, but it is very inferior. The finest Mexican vanilla is extremely high priced. The duty of 5*s* 3*d*. per lb. formerly charged on vanilla was repealed in 1853. — (See *Humboldt, Nouvelle Espagne*, 2d edit. tome iii. pp. 37, 46.; *Poinsett's Notes on Mexico*, p. 194. &c.)

VEGETABLE WAX. The produce of the berry of a tree (*Rhus succedaneum*) growing in Japan. The tree, which is well known to botanists, is said to be abundant; it varies in height from 15 to 25 feet, and the berries which it produces are found in clusters, not unlike bunches of grapes.

The native method of preparing the wax is of a very primitive description. The berries having been gathered, are washed and bruised after a rude fashion; and being then slowly boiled, the wax is extracted and thrown to the surface. Having been skimmed off, it is moulded into cakes of about 30 lbs. each, which, being dried in the sun, are fit for use.

This beautiful wax, one parcel of which varies but little from another, has a bright cream colour, is nearly of the consistence of bees' wax, bears without softening a high degree of atmospheric heat; and as it contains a large percentage of stearine, it is highly suitable for the manufacture of candles, particularly of those known as "composite," as well as for other purposes.

Little is as yet known in this country of this valuable commodity. Small lots of it have occasionally been indirectly imported, but the first cargo brought hither direct, was imported into London in April this year, by the American ship "Florence," from Nangasacki, the principal seaport of Japan. It has been partially disposed of at 70*s*. per cwt., at which the remainder is now (June, 1859) held; but it has not sold readily at that price. At anything near the price of Petersburg Y.C. tallow, at present worth 57*s*. per cwt., it would go off freely. The cargo of the "Florence" consisted, besides some trifling articles, of 8,696 cases of this wax, averaging about 1¼ cwt. nett each.

VELLUM, a species of fine parchment. (See PARCHMENT.)

VENICE, a famous city of Austrian Italy, formerly the capital of the republic of that name, on a cluster of small islands towards the northern extremity of the Adriatic, in lat. 45° 25′ 53″ N., lon. 12° 20′ 31″ E. Population about 112,000. The commerce of Venice, once the most extensive of any European city, is now comparatively trifling; and the population is gradually diminishing both in numbers and wealth.

Her imports consist of wheat and other sorts of grain, from the adjoining provinces of Lombardy and the Black Sea; olive oil, principally from the Ionian Islands; cotton stuffs and hardware from England; sugar, coffee, and other colonial products from England, the United States, Brazil, &c.; dried fish, dye stuffs, &c. The exports principally consist of grain, raw and wrought silk, paper, woollen manufactures, fruits, cheese, &c., the products of the adjoining provinces of Italy, and of her own industry; but her manufactures, so famous in the middle ages, are now much decayed.

Port. — The islands on which Venice is built lie within a line of long, low, narrow islands, running N. and S., and enclosing what is termed the lagoon, or shallows, that surround the city, and separate it from the main land. The principal entrance from the sea to the lagoon is at Malamocco, about 1½ league S. from the city; but there are other, though less frequented, entrances, both to the S. and the N. of this one. There is a bar outside Malamocco, on which there are not more than 10 feet at high water at spring tides; but there is a channel between the western point of the bar and the village of San Pietro, which has 16 feet water at springs, and 14 at neaps. Merchant vessels usually moor off the ducal palace; but sometimes they come into the grand canal which intersects the city, and sometimes they moor in the wider channel of the Giudecca. Vessels coming from the south for the most part make Pirano or Rovigno on the coast of Istria, where they take on board pilots, who carry them to the bar opposite to Malamocco. But the employment of Istrian pilots is quite optional with the master, and is not, as is sometimes represented, a compulsory regulation. When one is taken, the usual fee from Pirano or Rovigno to the bar is 20 Austrian dollars, or about 4*l.* On arriving at the bar, ships are conducted across it and into port by pilots, whose duty it is to meet them outside, or on the bar, and of whose services they must avail themselves. — (For the charges on account of pilotage, see *post.*)

Money. — Formerly there were various methods of accounting here; but now accounts are kept, as at Genoa, in lire Italiane, divided into centesimi, or 100th parts. The lira is supposed to be of the same weight, fineness, and, consequently, value as the franc. But the coins *actually in circulation*, denominated lire, are respectively equal in sterling value to about 5*d.* and 4½*d.* The latter are coined by the Austrian government.

Weights and Measures. — The commercial weights are here, as at Genoa, of two sorts; the *peso sottile* and the *peso grosso*. The French kilogramme, called the libra Italiana, is also sometimes introduced.

100 lbs. peso grosso =	105·186 lbs. avoirdupois.	100 lbs. peso sottile =	66·428 lbs. avoirdupois.
—	127·830 lbs. Troy.	—	80·728 lbs. Troy.
—	47·698 kilogrammes.	—	30·123 kilogrammes.
—	98·485 lbs. of Hamburg.	—	62·196 lbs. of Hamburg.
—	96·569 lbs. of Amsterdam.	—	60·986 lbs. of Amsterdam.

The moggio, or measure for corn, is divided into 4 staje, 16 quarte, or 64 quartaroli. The staja = 2·27 Winch. bushels.

The measure for wine, anfora = 4 bigonzi, or 8 mastelli, or 48 sechii, or 192 bozze, or 768 quartuzzi. It contains 137 English wine gallons.

The botta = 5 bigonzi. Oil is sold by weight or measure. The botta contains 2 migliaje, or 80 miri of 25 lbs. peso grosso. The miro = 4·028 English wine gallons.

The braccio, or long measure, for woollen = 26·6 English inches; the braccio for silks = 24·8 do. The foot of Venice = 13·68 English inches. — (*Nelkenbrecher*, and *Kelly.*)

Historical Notice. — Venice was the earliest, and for a lengthened period the most considerable, commercial city of modern Europe. Her origin dates from the invasion of Italy by Attila in 452. A number of the inhabitants of Aquileia, and the neighbouring territory, flying from the ravages of the barbarians, found a poor but secure asylum in the cluster of small islands opposite the mouth of the Brenta, near the head of the Adriatic Gulph. In this situation they were forced to cultivate commerce and its subsidiary arts, as the only means by which they could maintain themselves. At a very early period they began to trade with Constantinople and the Levant; and notwithstanding the competition of the Genoese and Pisans, they continued to engross the principal trade in Eastern products, till the discovery of a route to India by the Cape of Good Hope turned this traffic into a totally new channel. The crusades contributed to increase the wealth and to extend the commerce and the possessions of Venice. Towards the middle of the 15th century, when the Turkish sultan, Mahomet II., entered Constantinople sword in hand, and placed himself on the throne of Constantine and Justinian, the power of the Venetians had attained its maximum. At that period, besides several extensive, populous, and well cultivated provinces in Lombardy, the republic was mistress of Crete and Cyprus, of the greater part of the Morea, and most of the isles in the Egean Sea. She had secured a chain of forts and factories that extended along the coasts of Greece from the Morea to Dalmatia; while she monopolised almost the whole foreign trade of Egypt. The preservation of this monopoly, of the absolute dominion she had early usurped over the Adriatic, and of the dependence of her colonies and distant establishments, were amongst the principal objects of the Venetian government; and the measures it adopted in that view were skilfully devised, and prosecuted with inflexible constancy. With the single exception of Rome, Venice, in the 15th century, was by far the richest and most magnificent of European cities; and her singular situation in the midst of the sea, on which she seems to float, contributed to impress those who visited her with still higher notions of her wealth and grandeur. Sannazarius is not the only one who has preferred Venice to the ancient capital of the world; but none have so beautifully expressed their preference.

Viderat Adriacis Venetam Neptunus in undis,
Stare urbem, et toto ponere jura mari.
Nunc mihi Tarpeias quantumvis, Jupiter, arces
Objice, et illa tua mœnia Martis, ait:
Si Tiberim pelago præfers, urbem aspice utramque,
Illam homines dicas, hanc posuisse Deos.

Though justly regarded as one of the principal bulwarks of Christendom against the Turks, Venice had to contend, in the early part of the 16th century, against a combination of the European powers. The famous league of Cambray, of which Pope Julius II. was the real author, was formed for the avowed purpose of effecting the entire subjugation of the Venetians, and the partition of their territories. The emperor and the kings of France and Spain joined this powerful confederacy. But, owing less to the valour of the Venetians, than to dissensions amongst their enemies, the league was speedily dissolved without materially weakening the power of the republic. From that period the policy of Venice was comparatively pacific and cautious. But notwithstanding her efforts to keep on good terms with the Turks, the latter invaded Cyprus in 1570; and conquered it, after a gallant resistance, continued for 11 years. The Venetians had the principal share in the decisive victory gained over the Turks at Lepanto in 1571: but owing to the discordant views of the confederates, it was not properly followed up, and could not prevent the fall of Cyprus.

The war with the Turks in Candia commenced in 1645, and continued till 1670. The Venetians exerted all their energies in defence of this valuable island; and its acquisition cost the Turks above 200,000 men. The loss of Candia, and the rapid decline of the commerce of the republic, now almost wholly turned into other channels, reduced Venice, at the close of the 17th century, to a state of great exhaustion. She may be said, indeed, to have owed the last 100 years of her existence more to the forbearance and jealousies of others than to any strength of her own. Nothing, however, could avert that fate she had seen overwhelm so many once powerful states. In 1797, the "maiden city" submitted to the yoke of the conqueror; and the last surviving witness of antiquity — the link that united the ancient to the modern world — stripped of independence, of commerce, and of wealth, is now slowly sinking into the waves whence she arose.

The foundation of Venice is described by Gibbon, c. 35.; and in his 60th chapter he has eloquently depicted her prosperity in the year 1200. Mr. Hallam, in his work on the *Middle Ages* (vol. i. pp. 470—487.), has given a brief account of the changes of the Venetian government. Her history occupies a considerable space in the voluminous work of M. Sismondi on the *Italian Republics*; but his details as to her trade and commercial policy are singularly meagre and uninteresting. All previous histories of Venice have, however, been thrown into the shade by the valuable work of M. Daru (*Histoire de la République de Vénise*, 2d ed. 8 vols. 8vo. Paris, 1821.) Having had access to genuine sources of information, inaccessible to all his predecessors, M. Daru's work is as superior to theirs in accuracy, as it is in most other qualities required in a history.

Trade, Navigation, and Manufactures of the Venetians in the 15th Century. — The Venetian ships of the largest class were denominated galeasses, and were fitted out for the double purpose of war and commerce. Some of them carried 50 pieces of cannon, and crews of 600 men. These vessels were sometimes, also, called argosers or argosies. They had early an intercourse with England; and argosies used to be common in our ports. In 1325, Edward II. entered into a commercial treaty with Venice, in which full liberty is given to the Venetians, for 10 years, to sell their merchandise in England, and to return home in safety, without being made answerable, as was the practice in those days, for the crimes or debts of other strangers. — (*Anderson's Chron. Deduction, Anno* 1325.) Sir William Monson mentions, that the last argosie that sailed from Venice for England was lost, with a rich cargo and many passengers, on the coast of the Isle of Wight, in 1587.

In the beginning of the 15th century, the annual value of the goods exported from Venice by sea, exclusive of those exported to the states adjoining her provinces in Lombardy, was estimated, by contemporary writers, at 10,000,000 ducats; the profits of the out and home voyage, including freight, being estimated at 4,000,000 ducats. At the period in question, the Venetian shipping consisted of 3,000 vessels of from 100 to 200 tons burden, carrying 17,000 sailors; 300 ships with 8,000 sailors; and 45 galleys of various size, kept afloat by the republic for the protection of her trade, &c., having 11,000 men on board. In the dock-yard, 16,000 labourers were usually employed.* The trade to Syria and Egypt seems to have been conducted principally by ready money; for 500,000 ducats are said to have been annually exported to these countries; 100,000 were sent to England. — (*Daru*, tome ii. p. 189, &c.) The vessels of Venice visited every port of the Mediterranean, and every coast of Europe; and her maritime commerce was, probably, not much inferior to that of all the rest of Christendom. So late as 1518, 5 Venetian galeasses arrived at Antwerp, laden with spices, drugs, silks, &c. for the fair at that city.

The Venetians did not, however, confine themselves to the supply of Europe with the

* This is the statement of the native authorities; but there can be no doubt that it is greatly exaggerated; — 1,600 would be a more reasonable number.

commodities of the East, and to the extension and improvement of navigation. They attempted new arts, and prosecuted them with vigour and success, at a period when they were entirely unknown in other European countries. The glass manufacture of Venice was the first, and for a long time the most celebrated, of any in Europe; and her manufactures of silk, cloth of gold, leather, refined sugar, &c. were deservedly esteemed. The jealousy of the government, and their intolerance of any thing like free discussion, was unfavourable to the production of great literary works. Every scholar is, however, aware of the fame which Venice early acquired by the perfection to which she carried the art of printing. The classics that issued from the Aldine presses are still universally and justly admired for their beauty and correctness. The Bank of Venice was established in the 12th century. It continued throughout a bank of deposit merely, and was skilfully conducted.

But the policy of government, though favourable to the introduction and establishment of manufactures, was fatal to their progressive advancement. The importation of foreign manufactured commodities into the territories of the republic for domestic consumption was forbidden under the severest penalties. The processes to be followed in the manufacture of most articles were regulated by law. — "*Dès l'année* 1172, *un tribunal avoit été crée pour la police des arts et métiers, la qualité et la quantité des matières furent soigneusement déterminées.*" — (*Daru*, iii. 153.) Having, in this way, little to fear from foreign competition, and being tied down to a system of routine, there was nothing left to stimulate invention and discovery; and during the last century the manufactures of Venice were chiefly remarkable as evincing the extraordinary perfection to which they had early arrived, and the absence of all recent improvements. An unexceptionable judge, M. Berthollet, employed by the French government to report on the state of the arts of Venice, observed, "*Que l'industrie des Vénitiens, comme celle des Chinois, avoit été précoce, mais étoit restée stationnaire.*"— (*Daru*, tome iii. p. 161.)

M. Daru has given the following extract from an article in the statutes of the State Inquisition, which strikingly displays the real character of the Venetian government, and their jealousy of foreigners: — "If any workman or artisan carry his art to a foreign country, to the prejudice of the republic, he shall be ordered to return; if he do not obey, his nearest relations shall be imprisoned, that his regard for them may induce him to come back. If he return, the past shall be forgiven, and employment shall be provided for him in Venice. If, in despite of the imprisonment of his relations, he persevere in his absence, an *emissary shall be employed to despatch him*; and after his death his relations shall be set at liberty!"— (Tom. iii. p. 150.)

The 19th book of M. Daru's history contains a comprehensive and well-digested account of the commerce, manufactures, and navigation of Venice. But it was not possible, in a work on the general history of the republic, to enter so fully into the details as to these subjects as their importance would have justified. The *Storia Civile e Politica del Commercio de' Veneziani*, di Carlo Antonio Marin, in 8 vols. 8vo., published at Venice at different periods, from 1798 to 1808, is unworthy of the title. It contains, indeed, a great many curious statements; but it is exceedingly prolix; and while the most unimportant and trivial subjects are frequently discussed at extreme length, many of great interest are either entirely omitted, or are treated in a very brief and unsatisfactory manner. The commercial history of Venice remains to be written; and were it well executed, it would be a most valuable acquisition.

Present Trade and Manufactures of Venice. — From the period when Venice came into the possession of Austria, down to 1830, it seems to have been the policy of the government to encourage Trieste in preference to Venice; and the circumstance of the former being a free port, gave her a very decided advantage over the latter. Latterly, however, a more equitable policy has prevailed. In 1830, Venice was made a free port, and has since fully participated in every privilege conferred on Trieste. But, notwithstanding this circumstance, the latter still continues to preserve the ascendancy; and the revival of trade that has taken place at Venice has not been so great as might have been anticipated. The truth is, that except in so far as she is the *entrepôt* of the adjoining provinces of Lombardy, Venice has no considerable natural advantage as a trading city; and her extraordinary prosperity during the middle ages is more to be ascribed to the comparative security enjoyed by the inhabitants, and to their success in engrossing the principal share of the commerce of the Levant, than to any other circumstance. Still, however, her trade is far from inconsiderable. But, unfortunately, there are no means by which to ascertain its precise amount. The great articles of import are sugar, coffee, and other colonial products: indigo and other dye stuffs, olive oil, salted fish, various descriptions of cotton, woollen, and other manufactured goods; wheat and other grain, from the Black Sea; tin plates and hardware, raw cotton, &c.; amounting, in all, to the value probably of 1,500,000*l.* or 1,600,000*l.* The exports principally consist of silk and silk goods, wheat and other grain, paper, jewellery, glass, and glass wares, Venetian treacle, books, with a great variety of other articles, including portions of most of those that are imported. It should, however, be observed, that by far the greater part both of the import and export trade of the city is carried on through Trieste by coasting vessels, that are every day passing between the two cities. The smuggling of prohibited and overtaxed articles into Austrian Lombardy is practised to a great extent. It is believed that fully two thirds of the coffee made use of in Lombardy is clandestinely introduced; and sugar, British cottons, and hardware, with a variety of other articles, are supplied through illegitimate channels. The facilities for smuggling, owing to the nature of the frontier, and the ease with which the officers are corrupted, are such, that the articles passing through the hands of the fair trader afford no test of the real extent of the business done. It is to be hoped that the Austrian government may take an enlightened view of this important matter. It cannot but be anxious for the suppression of smuggling; and it may be assured that this is not practicable otherwise than

by a reduction of duties. The regulations as to the payment of the duties on goods destined for the interior, the clearing of ships, &c., are the same at Venice as at Trieste; which see.

The manufactures of Venice are very various, and more extensive than is generally supposed. The glassworks, which produce magnificent mirrors, with every variety of artificial pearls and gems, coloured beads, &c., situated on the island of Murano, employ, in all, about 4,000 hands, including the women and children employed in arranging the beads.—(*Bowring.*) Jewellery, including gold chains, is also extensively produced; as are gold and silver stuffs, velvets, silks, laces, and other expensive goods; and treacle, soap, earthenware, wax-lights, &c., to a greater or less extent. Printing is more extensively carried on in this than in any other city of Italy, and books form a considerable article of export. Ship-building is also carried on to some extent, both here and at Chiozza. In 1836, the first steam-engine seen in Venice was set up for a sugar refinery.

From the circumstance of Venice being situated nearly opposite the mouths of the Brenta, which bring down large quantities of mud, the probability is that the lagoon, by which she is surrounded, will ultimately be filled up. Under the republic this was a subject of great apprehension, and every device was resorted to that seemed likely to avert a result so pregnant with danger to the independence of the city. But now that there is no particular motive for hindering the mud from accumulating in the lagoon, it is probable that, in the course of time, the shallow will be converted into terra firma, and Venice lose her insular position.

Railway to Venice.—But whether the lagoon should, or should not, be filled up, Venice will very speedily be connected with the mainland by artificial means. A railway is now in the course of being constructed, which is to extend from the city to Padua, and thence to Verona, &c. That part of this important work which passes through the lagoon is to be supported on arches, the construction of which is already far advanced. It may be expected that the formation of this new and easy channel of communication with some of the most fertile districts of Lombardy, will be of considerable service to Venice; and will tend, in some degree, to revive her decaying energies.

There belong to the city, exclusive of fishing-boats, about 30,000 tons of shipping, of which a large proportion is employed in the coasting trade. Many of the inhabitants depend for their subsistence on fishing in the lagoon, and the contiguous portion of the Adriatic.—(Exclusive of the authorities already referred to, see *Bowring's Report on the Statistics of Italy; Geog. Dict.; Commercial Circulars, &c.*)

A steam-packet has been established between Venice and Trieste.

Shipping Charges in the Port of Venice on Ships of different Nations, of the Burden of 300 Tons.

Description of Charge.	If Austrian, or of a Nation having a Treaty of Reciprocity with Austria.		If of a Nation not having a Treaty of Reciprocity with Austria.	
	Austrian Livres.	£ s. d.	*Austrian Livres.*	£ s. d.
Pilotage.				
From the bar to the place of finally mooring	61 57	2 1 0½	61 57	2 1 0½
Out of the port of departure	61 57	2 1 0½	61 57	2 1 0½
Tonnage Duty.				
One Austrian livre (8*d.* sterling) per ton (Originally levied on all ships not Austrian.)	Free.	- - -	300 0	10 0 0
Clearing Charges.				
If to a port out of the Gulph of Venice (but if to a port in the Gulph, 1*s.* 5½*d.* less in all cases)	2 30	0 1 6½	16 78	0 11 2½
Quarantine Charges.				
If performing 7 days, being the usual time for vessels from England	39 27	1 6 2	53 38	1 15 7
Total of ordinary charges	164 71	5 9 9½	493 20	16 8 10½
If in long quarantine, all ships pay extra	25 74	0 17 2	25 74	0 17 2
If departing in ballast, or with less than ¼ a cargo, all ships, not Austrian, or not under treaty to be charged as such, pay extra tonnage duty, 45 cents (about 2½*d.* sterling) per ton, being, on a 300 ton ship	Free.	- -	135 0	4 10 0
Total of extreme charges	190 45	6 6 11½	653 94	21 16 0½

Banking Establishments.—The old bank of Venice was founded so far back as 1171, being the most ancient establishment of the kind in Europe. It was a bank of deposit; and such was the estimation in which it was held, that its paper continued to bear an agio as compared with coin down to 1797, when the bank fell with the government by which it had been guaranteed. At present there are no corporate banking establishments in the city; and no bank notes are in circulation. There are, however, several private banking houses, which buy, sell, and discount bills; and make advances on land and other securities. They are under no legal regulations of any sort, except formally declaring the amount of their capital to the authorities when they commence business. The legal and usual rate of interest and discount is 6 per cent. It is not the practice to allow interest on deposits. Bills on London are usually drawn at 3 months, and on Trieste at 1 month.

Brokers, Commission, &c.—The number of brokers is limited, and they are licensed by government; but the business of commission merchant and factor is open to every one. Before, however, commencing any trade or profession at Venice, a petition must be presented for leave to the authorities: but this is more a matter of form than any thing else; its prayer being rarely, if ever, refused.

The usual rate of commission and factorage on the purchase or sale of colonial produce is 2 per cent., and on manufactured goods 3 per cent., inclusive of broker's commission, 1 per cent. A ship broker's commission on the freight of a whole cargo is 2 per cent., and on a general cargo 4 per cent. By the custom of the place, merchants charge 2 per cent. on the inward and 2 per cent. on the outward freight of all ships consigned to them; and this, though they had done no more than recommend the master to a broker! A bill broker's commission is ¼ per mille. Merchants and bankers charge a commission on internal bills of ¼ per cent., and on foreign do. of 1 per cent.

Insurances are effected by companies and individuals. The government charges no duty on the policies.

Communications with Lombardy are effected by flat-bottomed vessels, which, passing through the lagoon, enter the canals and rivers, and make their way through most part of the country watered by the Po and its tributaries. The freight of goods from Milan to Venice, distant about 170 miles, is about 1*l.* per ton. The principal products they bring down are grain, silk, hemp, and flax, cheese, rhubarb, &c. The country to the north of Venice affords large quantities of deals, which are shipped for Malta, Sicily, and the Levant.

Quarantine is enforced here the same as at Trieste. Ships coming from without the Straits of Gibraltar, provided there be no infectious disease on board, are admitted to *pratique* on performing a short quarantine of 7 days in a part of the lagoon, about a mile from the city. Long quarantine is performed a little farther off. The lazaretto, and establishments for passengers, &c. performing quarantine, are among the best in Europe. Ships having foul bills, or coming from suspicious places, are sent thither from Trieste.—(For the quarantine charges, see *ante*.)

Provisions, Ships' Stores, &c.—These articles may all be had at Venice of excellent quality, but not

cheap, with, perhaps, the exception of bread. Water is conveyed to the city by lighters, and is, consequently, pretty dear; fuel is very scarce, and very high priced.

Tares. — On goods leaving the free port of Venice for the interior of the Austrian states, the Custom-house allows no tares; but cases, casks, and other coverings go into the scale with their contents, and the duty is levied on the gross weight. Wine, spirits, &c. consumed in this city, being liable to an excise duty to cover the municipal expenses, have an allowance, if in iron-bound casks, of 18 per cent. on the weight; and if not in iron-bound casks, of 12 per cent. The tares allowed between merchants are as follow:—

Cotton wool, Pernambuco and Bahia	2 per cent.
East India, &c.	4
Sugar, Brazil	15 to 18 per cent.
Jamaica, muscovado	14
Bourbon, brown and yellow, and East India of all colours	5
refined, crushed	12
Brimstone	10
Italian hemp	2
Madder root	4
Hungary potash	10

On other articles, real tares are usually taken.

VERA CRUZ, the principal sea-port on the western coast of Mexico; lat 19° 11′ 52″ N., lon. 96° 8′ 45″ W. Population (supposed) 16,000. Opposite the town, at the distance of about 400 fathoms, is a small island on which is built the strong castle of St. Juan d'Ulloa, which commands the town. The harbour lies between the town and the castle, and is exceedingly insecure; the anchorage being so very bad, that no vessel is considered safe unless made fast to rings fixed for the purpose in the castle wall: nor is this always a sufficient protection from the fury of the northerly winds (*los nortes*), which sometimes blow with tremendous violence. Humboldt mentions, in proof of what is now stated, that a ship of the line, moored by 9 cables to the castle, tore, during a tempest, the brass rings from the wall, and was dashed to pieces on the opposite shore. — (*Nouvelle Espagne*, ed. 2de, iv. 59.) Its extreme unhealthiness is, however, a more serious drawback upon Vera Cruz, than the badness of its port. It is said to be the original seat of the yellow fever. The city is well built, and the streets clean; but it is surrounded by sand hills and ponds of stagnant water, which, within the tropics, are quite enough to generate disease. The inhabitants, and those accustomed to the climate, are not subject to this formidable disorder; but all strangers, even those from the Havannah and the West India Islands, are liable to the infection. No precautions can prevent its attack; and many have died at Xalapa, on the road to Mexico, who merely passed through this pestilential spot. During the period that the foreign trade of Mexico was carried on exclusively by the *flota*, which sailed periodically from Cadiz, Vera Cruz was celebrated for its fair, held at the arrival of the ships. It was then crowded with dealers from Mexico and most parts of Spanish America; but the abolition of the system of regular fleets in 1778 proved fatal to this fair, as well as to the still more celebrated fair of Portobello.

A light-house has been erected on the N.W. angle of the castle of St. Juan. The light, which is a revolving one of great power and brilliancy, is elevated 79 feet above the level of the sea.

Commerce. — An individual, looking at a map of the world, would be apt to conclude that Mexico is one of the most favourably situated countries for commerce; and, in some respects, this is true. But her trade labours, notwithstanding, under some serious disadvantages. Though washed by the Atlantic and Pacific Oceans, neither of her coasts is accessible for several months of the year. On the E. coast, or that bordering the Gulph of Mexico, there is not a single good harbour; and during the season when the coasts are accessible, they are extremely unhealthy. Owing also to the rapid ascent from the shores to the interior, the construction of roads, and the transport of commodities to and from the inner provinces, is alike difficult and expensive. No doubt, however, an efficient government and an industrious people would speedily, in a great measure, overcome these obstacles to an extensive intercourse with the foreigner. But Mexico has neither the one nor the other; and, at present, her trade is confined within the narrowest limits. Down to 1778, when the Spanish government relaxed the old prohibitive system, the foreign goods legally imported into Mexico comprised only a few Chinese and European manufactures; the former brought annually in *one* galleon of about 1,400 tons, and the latter sent *once in three years* exclusively in ships chartered by government from Seville or Cadiz! On the opening of the trade in 1779, private capitalists engaged in it; and after that period, at an average of 12 years before and after, the returns for exports alone rose from 11,000,000 to 19,000,000 of dollars, the difference being chiefly in the quantity of specie. How much greater would the increase have been, if the trade had not been fettered with vexatious duties, first on articles of Spanish produce in the markets of Seville and Cadiz; 2. on shipping for Mexico; 3. at Vera Cruz; and, 4. with an *alcavala*, or transfer duty, at every step, from the merchant to the consumer? On the breaking out of the civil war, the ports of Tampico, Mazatlan, and San Blas were opened by the new government; and soon afterwards foreign vessels were admitted into all the ports on the same terms as Spaniards. The Spanish capitalists retired to Cuba or Spain; and their places were supplied by British and American merchants, who established themselves in the interior, and supplied the inhabs. in return for dollars with manufactured goods, the superior quality and cheapness of which has, no doubt, had some influence in depressing native manufactures. The jealousy of the natives, however, and the absurd threats of the

government against foreign artificers and traders, tended to prevent their settling in the country, and engaging in any considerable undertaking, other than the mines; and the depressed state of the latter, which have always furnished the principal article of export, has tended still further to depress and paralyse commerce. The roads, too, instead of being improved, have been suffered to fall into a state of almost irreparable decay. In this respect, the following extract from one of the letters of M. Chevalier is decisive. "The splendid road which, during the domination of the Spaniards, was constructed across deserts and precipices, by the merchants of Vera Cruz, to the summit of the upper country, is a melancholy instance of the carelessness with which the public interests of the country are directed. During the war of independence, this road was cut up in various points; and, down to this day, the enfranchised Mexicans have not replaced a single stone, or filled up a single trench, nor even cut down one of the trees, which, in the absence of any considerable traffic, and under the influence of a tropical sun, are rapidly growing up to a magnificent size in the very middle of the road. In the upper country nothing would be more easy than to open noble means of communication. The soil is naturally level: the basaltic rocks, particularly adapted for the construction of roads, are found in great abundance. But even where there are roads, the Mexicans make little use of them. They carry to a yet more extravagant length the inconceivable predilection of the Spanish race in favour of transporting their goods on the backs of animals. You expect to meet with carts and waggons: no such thing: everything is conveyed on the backs of mules or Indians. Troops of little consumptive donkeys bring into the city, in parcels not much bigger than a man's two fists, the charcoal required for the culinary operations of the inhabitants. The price of every bulky article is thus increased to an enormous degree. The interior districts are as inaccessible as if they were cut off by an enemy's army, and famine frequently ensues."

In consequence of this wretched state of the roads, of the insecurity consequent to the prevalence of revolutions, and the torpor and indolence of the inhabitants (occasioned partly and principally by physical, but partly, also, by moral causes), industry of all kinds is at an extremely low ebb; and the commerce of the republic is far from being commensurate either with her population, or the number and value of her exportable products.

For a considerable period after the town of Vera Cruz had thrown off the Spanish yoke, the castle of St. Juan d'Ulloa continued in possession of the Spaniards. During this interval, the commerce of Vera Cruz was almost entirely transferred to the port of Alvarado, 12 leagues to the south-east. Alvarado is built upon the left bank of a river of the same name. The bar at the mouth of the river, about 1⅛ mile below the town, renders it inaccessible for vessels drawing above 10 or 12 feet water. Large ships are obliged to anchor in the roads, where they are exposed to all the violence of the north winds, loading and unloading by means of lighters. Alvarado is supposed, but probably without much foundation, to be a little healthier than Vera Cruz. The trade has now mostly reverted to its old channel.

But within these few years, Tampico has risen to considerable importance as a commercial sea-port. It is situated about 60 leagues N. N. W. of Vera Cruz, in lat. 20° 15′ 30″ N., lon. 97° 52′ W., being about 104 leagues from Mexico. Hitherto it is said to have been free from fever. The shifting of the bar at the mouth of the river, and the shallowness of the water on it, which is sometimes under 8, and rarely above 15 feet, are serious obstacles to the growth of the port. Vessels coming in sight are boarded by pilots, who conduct them, provided they do not draw too much water, over the bar. Those that cannot enter the port load and unload by means of lighters; mooring so that they may get readily to sea in the event of a gale coming on from the north.

Exports and Imports.— The precious metals have always formed the principal article of export from Mexico. During the 10 years ending with 1801, the average annual produce of the Mexican mines amounted, according to M. Humboldt, to 23,000,000 dollars — (*Nouvelle Espagne*, iv. 137.); and in 1805 the produce was 27,165,888 dollars. — (*Id.* iv. 83.) But during the revolutionary war, the old Spanish capitalists, to whom most of the mines belonged, being proscribed, emigrated with all the property they could scrape together: and this withdrawal of capital from the mines, added to the injury several of them sustained by the destruction of their works during the contest, the interruption of all regular pursuits which it occasioned, and the insecurity and anarchy that afterwards prevailed, caused an extraordinary falling off in the produce of the mines. Within these few years, however, a considerable improvement has taken place. The efforts, and the lavish expenditure, of a few of the companies formed in this country for working the mines, assisted in bringing them into good order. Latterly, also, they have been conducted with greater skill and economy, and a considerable increase of produce has taken place. The coinage of gold and silver at the different Mexican mints in 1855, was as follows, viz.: —

	Gold.	Silver.	Total.		Gold.	Silver.	Total.
Culiacan .	$144,208	$737,968	$882,176	Guaçalajara .	$10,368	$652,662	$644,030
Chihuahua .	17,536	475,500	93,036	San Luis Potosi .	. .	1,849,795	1,849,795
Durango .	75,647	609,171	682,818	Zacatecas .	. .	3,619,000	3,619,000
Mexico .	155,263	4,013,359	4,168,622				
Guanajuanto .	555,200	4,698,800	5,254,000	Total .	. .	. .	$17,593,477

But to this may be added from 8,000,000 to 10,000,000 dollars for those raised and exported without being brought to the mints, and for bullion assayed at the mints, and exported in bars.

And but for the prevalence of insecurity, a large increase of this produce might be expected.

Besides the precious metals, cochineal, flour, indigo, provisions, leather, sarsaparilla, vanilla, jalap, soap, logwood, and pimento are the principal articles exported from Vera Cruz.

The imports consist principally of cotton, woollen, linen, and silk goods, paper, brandy, quicksilver, iron, steel, wine, wax, &c.

According to Humboldt, the imports at Vera Cruz, before the revolutionary struggles, might be estimated, at an average, at about 15,000,000 dollars, and the exports at about 22,000,000 do.

It must, however, be observed that this statement refers only to the *registered* articles, or to those that paid the duties on importation and exportation. And exclusive of these, the value of the articles clandestinely imported by the ports on the Gulph, previously to the revolution, was estimated at 4,500,000 dollars a year; and 2,500,000 dollars were supposed to be annually smuggled out of the country in plate and bars, and ingots of gold and silver. A regular contraband trade used to be carried on between Vera Cruz and Jamaica; and notwithstanding all the efforts of government for their exclusion and the excessive severity of its laws against smuggling, the shops of Mexico were always pretty well supplied with the products of England and Germany. — (*Humboldt, Nouvelle Espagne*, iv. 125.; *Poinsett's Notes on Mexico*, p. 133.)

Humboldt states that the total population of Mexico, exclusive of Guatemala, may be estimated at about 7,000,000. Of this number about ⅗ are Indians, the rest being descendants of Europeans, and mixed races. But notwithstanding this large amount of population, the indolence and want of industry of the mass of the people is such that the trade we carry on with them is quite inconsiderable compared with what might be expected. We subjoin in illustration of this remark an

It should, however, be observed, that the imports of British goods at second hand into Mexico and Columbia from the West Indies is still far from inconsiderable; and a pretty large proportion of the British goods sent to Chili are conveyed thence to Acapulco and other Mexican ports on the Pacific. Formerly the imports into Mexico supplied most part of the demand of Peru and the W. coast of S. America.

The Mexican government has issued a revised tariff, which came into operation on the 1st October, 1853. It does credit to those by whom it was prepared. Some of the more oppressive duties have been largely reduced; and, on the whole, it must be considered as a great advance towards a liberal system of commercial policy. But much depends on the way in which it may be carried out. In a government so fluctuating as that of Mexico, a policy or tariff in favour to-day may be repudiated to-morrow.

VERDIGRIS (Ger. *Grünspan;* Fr. *Vert-de-gris, Verdet;* It. *Verderame;* Sp. *Cardenillo, Verdete, Verde-gris;* Rus. *Jar*), a kind of rust of copper, of a beautiful blueish-green colour, formed from the corrosion of copper by fermented vegetables.

Its specific gravity is 1·78. Its taste is disagreeably metallic: and, like all the compounds into which copper enters, it is poisonous. It was known to the ancients, and various ways of preparing it are described by Pliny. It is very extensively used by painters, and in dyeing; it is also used to some extent in medicine. The best verdigris is made at Montpelier; the wines of Languedoc being particularly well suited for corroding copper, and forming this substance. It is generally exported in cakes of about 25 lbs. weight each. It is also manufactured in this country, by means of the refuse of cider, &c. The goodness of verdigris is judged of from the deepness and brightness of its colour, its dryness, and its forming, when rubbed on the hand with a little water or saliva, smooth paste, free from grittiness.—(*Thomson's Chemistry; Rees's Cyclopædia.*) In 1852 the imports and exports of verdigris were respectively 469 and 72 cwt. In 1853 the *ad valorem* duty of 10 per cent., with which it was previously burdened, was repealed.

VERJUICE (Ger. *Agrest;* Fr. *Verjus;* It. *Agresto;* Sp. *Agraz*), a kind of harsh, austere vinegar, made of the expressed juice of the wild apple, or crab. The French give this name to unripe grapes, and to the sour liquor obtained from them.

VERMICELLI (Ger. *Nudeln;* Du. *Meelneepen, Proppen;* Fr. *Vermicelli;* It. *Vermicelli, Tagliolini;* Sp. *Aletrias*), a species of wheaten paste formed into long, slender, hollow tubes, or threads, used amongst us in soups, broths, &c.—(See MACCARONI.)

VERMILION. See CINNABAR.

VINEGAR (Ger. *Essig*; Du. *Azyn*; Fr. *Vinaigre*; It. *Aceto*; Sp. and Port. *Vinagre*; Rus. *Uhzus*; Lat. *Acetum.*) — (See ACID (ACETIC), for a description of vinegar.) A duty of 2*d.* a gallon being formerly imposed on vinegar, its manufacture was placed under the control of the excise. A licence, costing 5*l.*, and renewable annually, has to be taken out by every maker of vinegar, or acetous acid. In 1842, the duty on vinegar produced 23,842*l.*, showing that 2,861,040 gallons had been brought to the charge. The manufacture is almost confined to England; the quantities produced in Scotland and Ireland being quite inconsiderable. The duty was repealed in 1844.

VITRIOL. See COPPERAS.

VITRIOL, OIL OF. See ACID (SULPHURIC).

ULTRAMARINE (Ger. *Ultramarin*; Fr. *Bleu d'outremer*; It. *Oltramarino*; Sp. *Ultramar*; Rus. *Ultramarin*), a very fine blue powder made from the blue parts of *lapis lazuli*. It has the valuable property of neither fading, nor becoming tarnished, on exposure to the air, or a moderate heat; and on this account is highly prized by painters. Owing to its great price, it is very apt to be adulterated. It was introduced about the end of the fifteenth century.

USANCE, a period of *one*, *two*, or *three* months, or of so many days, after the date of a bill of exchange, according to the custom of different places, before the bill becomes due. Double or treble usance is double or treble the usual time; and ½ usance is ½ the time. When a month is divided, the ½ usance, notwithstanding the differences in the lengths of the months, is uniformly 15 days. Usances are calculated exclusively of the date of the bill. Bills of exchange drawn at usance are allowed the usual days of grace, and on the last of the 3 days the bill should be presented for payment. — (See EXCHANGE.)

USURY. See INTEREST AND ANNUITIES.

W.

WALNUTS, the fruit of the *Juglans*, or walnut-tree, of which there are several varieties. The walnut is a large handsome tree, with strong spreading branches. The fruit is a pretty large smooth, ovate nut, containing an oily kernel, divided into four lobes. The nut has been always held in high estimation; it was called by the Romans *Jovis glans*, the acorn or mast of Jove, and hence the name of the tree.

The walnut tree is indigenous to Persia and the countries bordering on the Caspian Sea. It has long been introduced into Great Britain; but the fruit seldom ripens in the more northerly parts of the island. Previously to the very general introduction of mahogany, the wood of the walnut tree was extensively used among us in making of furniture; and it continues to be largely employed for that purpose in many parts of the Continent. It is much used by turners; and is superior to every other sort of wood for the mounting of guns; a circumstance which caused great devastation among our walnut plantations during the latter years of the war. Great numbers of walnut trees are annually consumed in the Haute Vienne and other departments of France, in the manufacture of the wooden shoes or clogs used by the peasantry. The nuts are either gathered when ripe, being served up at desserts without any preparation; or they are plucked green and pickled. — (*Poiret, Histoire Philosophique des Plantes*, tome vii. p. 213.; *Rees's Cyclopædia*, &c.)

In 1852, 32,531 bushels of walnuts were admitted to home consumption at a duty of 2*s.* 1⅛*d.* per bushel. This duty was reduced in 1853 to 1*s.* a bushel.

WANGHEES, sometimes called JAPAN CANES, a species of cane imported from China. They should be chosen pliable, tough, round, and taper; the knots at regular distances from each other; and the heavier the better. Such as are dark-coloured, badly glazed, and light, should be rejected. — (*Milburn's Orient. Com.*)

WAREHOUSING SYSTEM. By this system is meant the provisions made for lodging imported articles in public warehouses, at a reasonable rent, without payment of the duties on importation till they be withdrawn for home consumption. If re-exported, no duty is ever paid.

1. *Expediency and Origin of the Warehousing System.* — It is laid down by Dr. Smith in one of his justly celebrated maxims on the subject of taxation, that "Every tax ought to be levied at the time and in the manner that is most likely to be convenient for the contributor to pay it."—(*Wealth of Nations*, p. 371.) No one can doubt the soundness of this maxim; and yet it was very strangely neglected, down to 1803, in the management of the customs. Previously to this period, the duties on most goods imported had either to be paid at the moment of their importation, or a *bond*, with sufficient security for their future payment, had to be given to the revenue officers. The hardship and inconvenience of such a system is obvious. It was often very difficult to find sureties; and the merchant, in order to raise funds to pay the duties, was frequently reduced to the ruinous necessity of selling his goods immediately on their arrival, when, perhaps, the market was already glutted. Neither was this the only inconvenience that grew out of this system; for the duties having to be paid all at once, and not by degrees as the goods were sold for consumption, their price was raised by the amount of the profit on the capital

advanced in payment of the duties; competition, too, was diminished in consequence of the greater command of funds required to carry on trade under such disadvantages; and a few rich individuals were enabled to monopolise the importation of those commodities on which heavy duties were payable. The system had, besides, an obvious tendency to discourage the carrying trade. It prevented this country from becoming the *entrepôt* for foreign products, by hindering the importation of such as were not immediately wanted for home consumption; and thus tended to lessen the resort of foreigners to our markets, inasmuch as it rendered it difficult, or rather impossible, for them to complete an assorted cargo. And in addition to all these circumstances, the difficulty of granting a really equivalent drawback to the exporters of such commodities as had paid duty, opened a door for the commission of every species of fraud.

But these disadvantages and drawbacks, obvious as they may now appear, did not attract the public attention till a comparatively late period. Sir Robert Walpole seems to have been one of the first who had a clear perception of their injurious influence; and it was the principal object of the famous *Excise Scheme*, proposed by him in 1733, to oblige the importers of tobacco and wine to deposit them in public warehouses; relieving them, however, from the necessity of paying the duties chargeable on them till they were withdrawn for home consumption.

No doubt can now remain in the mind of any one, that the adoption of this scheme would have been of the greatest advantage to the commerce and industry of the country. But so powerful was the delusion generated in the public mind with respect to it, that its proposal well nigh caused a rebellion. Most of the merchants of the day had availed themselves of the facilities which the existing system afforded of defrauding the revenue; and they dexterously endeavoured to thwart the success of a scheme which would have given a serious check to such practices, by making the public believe that it would be fatal to the commercial prosperity of the country. The efforts of the merchants were powerfully seconded by the spirit of party, which then ran very high. The political opponents of the ministry anxious for an opportunity to prejudice them in the public estimation, contended that the scheme was only the first step towards the introduction of such a universal system of excise as would inevitably prove alike subversive of the comfort and liberty of the people. In consequence of these artful misrepresentations, the most violent clamours were everywhere excited against the scheme. On one occasion Sir Robert Walpole narrowly escaped falling a sacrifice to the ungovernable fury of the mob, which beset all the avenues to the House of Commons; and, after many violent and lengthened debates, the scheme was ultimately abandoned.

The disadvantages of the old plan, and the benefits to be derived from the establishment of a voluntary warehousing system, were most ably pointed out by Dean Tucker, in his "Essay on the Comparative Advantages and Disadvantages of Great Britain and France with respect to Trade," published in 1750. But so powerful was the impression made by the violent opposition to Sir Robert Walpole's scheme, and such is the force of prejudice, that this obvious and signal improvement — the greatest, perhaps, that has been made in our commercial and financial system — could not be safely adopted till 1803.

Regulations as to Warehousing.—The statute of 43 Geo. 3. c. 132. laid the foundation of the system; but it was much improved and extended by subsequent statutes.

The existing regulations as to warehousing are embodied in the Customs Consolidation Act, the 16 & 17 Vict. c. 107. It empowers the Commissioners of the Customs, under the authority and direction of the Lords of the Treasury, to nominate the ports at which goods may be warehoused without payment of duty, and the warehouses in which particular descriptions of goods may be deposited. It also fixes the time during which goods may be deposited. It also fixes the time during which goods are allowed to remain in the warehouse, the remission of the duties in case of loss by accident, the allowances for waste, &c. But being of much importance we have given a full abstract of the statute, (see *antè*, p. 698.)

Warehousing Ports, &c.—Certain ports only are warehousing ports; nor may all sorts of goods be warehoused in every warehousing port. We subjoin a list of the warehousing ports in Great Britain and Ireland. Goods of all sorts may, speaking generally, be warehoused in the principal ports; but the regulations as to those that may be warehoused in the lesser ports are perpetually varying.

WAREHOUSE RENT.

Rates for warehouse rent on goods deposited in the Queen's warehouses.

Articles.		Per Week. £	s.	d.
Firkins of butter - -	per firk.	0	0	1
Packages of baggage, and small packages of presents, such as boxes, kegs, jars, &c., empty casks, samples, and wines, spirits, or other liquids, not exceeding 1 gallon -	per pack.	0	0	2
Packages of wine, spirits, or other liquids, exceeding 1 gall. and not exceeding 20 galls. - -	—	0	0	4
Exceeding 20 galls. - -	—	0	0	6
Cheese, loose - - -	per ton	0	2	0
All other packages and goods, not exceeding 60 cubic feet, each, or when loose - -	per parcel	0	0	4
Exceeding 60 and not exceeding 80 cubic feet each, or when loose -	—	0	0	8
Exceeding 80, and not exceeding 100 cubic feet, each, or when loose -	—	0	1	0
And for every 10 cubic feet in addition thereto -	—	0	0	6

On large cases and vats containing toys or other merchandise, and packages of wine and other liquids, per week, 6*d.* each.

The baggage of passengers and surplus stores are allowed to remain a week, and other goods 3 days, free of rent, to give the parties time for their examination and clearance. Tobacco deposited in the Queen's warehouse at London pays 2*s.* per hogshead per week; and every hogshead taken out of the same pays 2*s.* Every hogshead of tobacco warehoused in the Queen's warehouse at the outports pays 1½*d.* per week.

WATCHES (Ger. *Uhren, Taschenuhren;* Fr. *Montres;* It. *Oriuoli da tasca, o da succoccia;* Sp. *Relojes de faltriquera;* Rus. *Karmannüe tschasü*), portable machines, generally of a small size and round flat shape, that measure and indicate the successive portions of time; having, for the most part, their motions regulated by a spiral spring. When constructed on the most approved principles, and executed in the best manner, a watch is not only an exceedingly useful, but a most admirable piece of mechanism. It has exercised the genius and invention of the most skilful mechanics, as well as of some of the ablest mathematicians, for nearly 3 centuries. And, considering the smallness of its size, its capacity of being carried about uninjured in every variety of position, the number and complexity of its movements, and the extraordinary accuracy with which it represents the successive portions of time as determined by the rotation of the earth on its axis, we need not wonder at Dr. Paley having referred to it as a striking specimen of human ingenuity.

Spring watches are constructed nearly on the same principle as pendulum clocks. Instead of the pendulum in the latter, a spring is used in the former, the isochronism of the vibrations of which corrects the unequal motions of the balance.

Historical Notice. — The invention of spring watches dates from about the middle of the 16th century, and has been warmly contested for Huygens and Hooke. The English writers generally incline in favour of the latter. Dr. Hutton says — (*Mathematical Dictionary*, art. *Watch*), that the words "Rob. Hooke invenit, 1658," were inscribed on the dial plate of a watch presented to Charles II. in 1675. But Montucla affirms (*Histoire des Mathématiques*, tom. ii. p. 413. ed. 1800), that Huygens made this "*belle découverte*" in 1656, and presented a spring watch to the States of Holland in 1657. Comparing these statements, it certainly appears that the claim of Huygens to the priority of the discovery is the better established of the two. We do not, however, believe that either of those distinguished persons owed, in this respect, any thing to the other. The probability seems to be, that the happy idea of employing a spring to regulate the motion of watches occurred to them both nearly at the same time.

Improvement of Watches. — Owing to the facility with which the longitude may be determined by the aid of accurately going watches, it is of great importance to have them made as perfect as possible. In this view, liberal premiums have been given to the makers of the best marine watches, or chronometers, by the governments of England, France, Spain, &c. In the reign of Queen Anne, parliament offered a reward of 20,000*l.* to any one who should make a watch, or other instrument, capable of determining the longitude at sea, within certain limits. This magnificent premium was awarded, in 1764, to the celebrated John Harrison, for a marine watch, which, being tried in a voyage to Barbadoes, determined its longitude with even more than the required accuracy. Other premiums, though of inferior amount, were subsequently given to Messrs. Mudge, Arnold, Earnshaw, &c. Since 1822, 2 prizes, one of 300*l.* and one of 200*l.*, have been annually given to the makers of the 2 chronometers adjudged to be the best, after having been submitted to a twelvemonth's trial at the Royal Observatory at Greenwich. And to such perfection has the manufacture attained, that some of the chronometers employed by navigators, though carried into the most opposite climates, have not varied to the extent of 2 seconds in their mean rate of going throughout the year.

Watch Manufacture. — The watch-making business, though latterly a good deal depressed, is largely carried on in London; the artists of which have attained to a high degree of excellence in this department. There may be about 14,000 gold and 85,000 silver watches annually assayed at Goldsmiths' Hall, London — (*Jacob on the Precious Metals*, vol. ii. p. 413.) — the aggregate value of which is, probably, not much under 600,000*l.* The manufacture is also carried on to a considerable extent at Liverpool, Coventry, Edinburgh, &c. Watch movements used to be extensively manufactured at Prescot in Lancashire; but latterly, we believe, the manufacturers have been withdrawing to Liverpool.

On the Continent, watches are principally manufactured in Paris, Geneva, and in Neufchâtel. Some of the French and Swiss watches, particularly the latter, are excellent; but, generally speaking, they are slight, and inferior to those made in London. Paris and Geneva watches are largely exported to foreign countries; and are everywhere in high estimation, particularly among the ladies.

Watches impressed with any mark or stamp, appearing to be or to represent any legal British assay mark or stamp, or purporting by any mark or appearance to be of the manufacture of the U. Kingdom, or not having the name and place of abode of some foreign maker abroad visible on the frame and also on the face, or not being in a complete state, with all the parts properly fixed in the case, may not be imported into the U. Kingdom, even for the purpose of being warehoused. — (3 & 4 *Will.* 4. c. 52. § 58.)

Watches in China. — Pretty considerable numbers of European watches are imported into China; and it may be worth mentioning, as a curious instance of the diversity of tastes, that the Chinese, as well as most other Eastern nations, who can afford it, uniformly *wear watches in pairs!* This sort of extravagance is not, however, confined to watches, but extends to a variety of other articles. Shawls, for example, are invariably worn in India in pairs of exactly the same pattern; and it is hardly possible, indeed, to find a native dealer who will sell a single shawl.

WATER. It may be thought unnecessary, perhaps, to say any thing in a work of this sort with respect to a fluid so well known and so abundant. But, besides being an indispensable necessary of life, water is, in most large cities, an *important commercial article.* It is in the latter point of view, principally, that we mean to consider it. — Inasmuch, however, as the mode of supplying different places with water, and its price, necessarily vary in every possible way, we shall limit our remarks on these subjects to the metropolis only. The few remarks we intend to offer of a general nature will apply indifferently to any populous place, the supply of which with water occasions a considerable expense.

1. *Quality of Water.* — Dr. Ure has made the following statements with respect to the quality of water: — "Water," says he, "is a very transparent fluid, possessing a moderate degree of activity with regard to organised substances, which renders it friendly to animal and vegetable life, for both which it is, indeed, indispensably necessary. Hence it acts but slightly on the organs of sense, and is therefore said to have neither taste nor smell. It appears to possess considerable elasticity, and yields in a perceptible degree to the pressure of air in the condensing machine.

"Native water is seldom, if ever, found perfectly pure. The waters that flow within or upon the surface of the earth contain various earthy, saline, metallic, vegetable, or animal particles, according to the substances over or through which they pass. Rain and snow waters are much purer than these, although they also contain whatever floats in the air, or has been exhaled along with the watery vapours.

" The purity of water may be known by the following marks or properties of pure water : —
" 1. Pure water is lighter than water that is not pure.
" 2. Pure water is more fluid than water that is not pure.
" 3. It has no colour, smell, or taste.
" 4. It wets more easily than the waters containing metallic and earthy salts, called hard waters, and feels softer when touched.
" 5. Soap, or a solution of soap in alcohol, mixes easily and perfectly with it.
" 6. It is not rendered turbid by adding to it a solution of gold in aqua regia; or a solution of silver, or of lead, or of mercury, in nitric acid; or a solution of acetate of lead in water.
" Water was, till modern times, considered as an elementary or simple substance; but it is now ascertained to be a compound of oxygen and hydrogen."

2. *Supply of Water.* — London was very ill supplied with water previously to the early part of the 17th century, when the New River water was introduced into the city. This exceedingly useful work was planned and carried into effect by the famous Sir Hugh Middleton, who expended his whole fortune on the project; having, like many other public benefactors, entailed poverty on himself and his posterity by embarking in an undertaking productive of vast wealth to others, and of great public utility. The New River has its principal source near Chadwell, between Hertford and Ware, about 20 miles from London; but the artificial channel in which the water is conveyed is about 40 miles in length. Sir Hugh Middleton encountered innumerable difficulties during the progress of the undertaking, which it is probable would have been abandoned, at least for a time, but for the aid afforded by James I. The New River Company was incorporated in 1619, 6 years after the water had been brought to the reservoir at Islington. The undertaking yielded very little profit for a considerable number of years; but it has since become extremely profitable; so much so, that an original 500*l.* share has been sold for 16,000*l.*!

The Chelsea Water-Works Company was formed in 1723, and (with the aid of 3 smaller companies, none of which are now in existence) it, and the New River, supplied all that part of the metropolis north of the Thames with water, down to the year 1810. In that year, however, 3 new companies, the East London, West Middlesex, and Grand Junction, were established, under the authority of different acts of parliament. At this moment the metropolis is supplied with water by the following companies: —

New River,	Grand Junction,
Chelsea,	Lambeth,
East London,	Vauxhall, or South London, and
West Middlesex,	Southwark Water Works.

The following statements with respect to these companies are taken from Mr. Wade's treatise on the police of the metropolis. The Report of the commissioners appointed by government in 1827, to inquire into the state of the supply of water in the metropolis, is the principal authority on which they are founded.

" *The New River Company* get their supply from the spring at Chadwell, between Hertford and Ware. It comes in an open channel, of about 40 miles in length, to reservoirs at Clerkenwell. There are 2 reservoirs, having between them a surface of about 5 acres, and an average depth of 10 feet. These reservoirs are 84½ feet above low water mark in the Thames; and, by means of steam engines and a stand-pipe, an additional height of 60 feet can be given to the water, so that all the mains belonging to this Company are kept full by a considerable pressure of water. The highest service given by the New River is the cistern on the top of Covent Garden Theatre. The aqueduct by which the water is brought has only a fall of 2 inches per mile; thus it wastes, by evaporation, during the drought of summer, and is impeded by frost in the winter. At these times the Company pump an additional supply from the Thames, at Broken Wharf, between Blackfriars and Southwark Bridges. To this, however, they seldom have recourse; and their engine, erected since the works at London Bridge were broken down, has worked only 176 hours in the year. The New River Company supply 66,000 houses with water, at an annual average of about 1,100 hogsheads each, or, in all, about 75,000,000 hogsheads annually.

" *The East London Water Works* are situated at Old Ford, on the river Lea, about 3 miles from the Thames, and a little below the point to which the tide flows up the Lea. By the act of parliament, this Company must take its water when the tide runs up and the mills below have ceased working. The water is pumped into reservoirs and allowed to settle; and a supply of 6,000,000 gallons is daily distributed to about 42,000 houses. This Company supply no water at a greater elevation than 30 feet, and the usual height at which the delivery is made to the tenants is 6 feet above the pavement; they have 200 miles of iron pipes, which, in some places, cost them 7 guineas a yard. This and the New River are the only companies which do not draw their supply of water entirely from the Thames.

" *The West Middlesex* derive their supply of water from the Thames, at the upper end of Hammersmith, about 9½ miles above London Bridge, and where the bed of the Thames is gravel. The water is forced by engines to a reservoir at Kensington, 309 feet long, 123 wide, and 20 deep, paved and lined with bricks, and elevated about 120 feet above low water in the Thames. They have another reservoir on Little Primrose Hill, about 70 feet higher, and containing 88,000 hogsheads of water, under the pressure of which the drains are kept charged, in case of fires. They serve about 15,000 tenants, and the average daily supply is about 2,250,000 gallons.

" *The Chelsea Water Works* derive their supply from the Thames, about ¼ of a mile east of Chelsea Hospital; and they have 2 reservoirs — one in the Green Park and another in Hyde Park — the former having an elevation of 44 feet, and the latter of 70. These reservoirs, till within these few months, had never been cleaned, nor had there been any preparation made for that purpose in their construction. About ⅛ of the water served out by this Company is allowed to settle in these reservoirs, and the remaining ⅞ are sent directly from the Thames. Latterly, the Company have been making preparations for filtering the water; and also for allowing it to settle in reservoirs, at Chelsea, before it is delivered into the mains. The Chelsea Company serve about 12,400 houses, and the average daily supply is 1,760,000 gallons.

" *The Grand Junction Company* derive the whole of their supply from the Thames, immediately adjoining Chelsea Hospital; thence it is pumped, without any filtration or settling, into 3 reservoirs at Paddington. These reservoirs are about 71, 86, and 92 feet above high water mark in the Thames; their

united contents are 19,355,840 gallons; and by means of a stand-pipe, the water is forced to the height of 147 feet, or about 61 feet above the average height in the reservoir. The number of houses supplied by the Grand Junction Company is 7,700, and the average daily supply is about 2,800,000 gallons.

"*The Lambeth Company* take their supply from the Thames, between Westminster and Waterloo Bridges. It is drawn from the bed of the river by a suction pipe, and delivered to the tenants without being allowed to subside; there being only a cistern of 400 barrels at the works, as a temporary supply, until the engines can be started. The greatest height to which the Company force water is about 40 feet; the number of houses that they supply is 16,000, and the average service is 1,244,000 gallons daily.

"*The South London, or Vauxhall Company*, take their supply from the river Thames by a tunnel, which is laid 6 feet below low water mark, and as far into the river as the third arch of Vauxhall Bridge. At that particular place, the bed of the Thames is described as being always clean, and without any of those depositions of mud and more offensive substances that are found in many other places. Besides the greater purity of the bed of the Thames here than where any other Company on the south side take their supply, the Company allow the water to settle in reservoirs. The Vauxhall Company supply about 10,000 houses with about 1,000,000 gallons of water daily.

"*The Southwark Water Works* (the property of an individual) are supplied from the middle of the Thames, below Southwark and London Bridges; and the water thus taken is sent out to the tenants without standing to settle, or any filtration further than it receives from passing through wire grates and small holes in metallic plates. The number of houses supplied by these works is about 7,000, and the average daily supply about 720,000 gallons."

The results for 1827 may be collected into a Table, as follows: —

Companies.	Services.	Average per Day, Gallons.	Gallons Annually.	Average per House, Gallons.
1. New River	67,000	13,000,000	4,056,000,000	182
2. East London	42,000	6,000,000	1,872,000,000	143
3. West Middlesex	15,000	2,250,000	702,000,000	150
4. Chelsea	12,400	1,750,000	549,120,000	142
5. Grand Junction	7,700	2,800,000	873,600,000	363
6. Lambeth	16,000	1,244,000	388,128,000	77
7. South London	10,000	1,000,000	312,000,000	100
8. Southwark	7,000	720,000	224,540,000	102
Total	183,100	28,774,000	8,977,388,000	157

Monopoly of the Water Companies. — The sanction of parliament was given to the 3 new companies formed in 1810, not so much in the view of increasing the actual supply of water, as of checking monopoly, and reducing the rates by their competition. But these expectations have not been realised. For a while, indeed, the competition of the several companies was exceedingly injurious to their interests, and occasioned the total destruction of some of the inferior ones; but no sooner had this happened, than the others discovered that their interests were in reality the same, and that the true way to promote them was to concert measures together. In furtherance of this object, the 5 companies for the supply of that part of the metropolis north of the river proceeded to divide the town into as many districts, binding themselves, under heavy penalties, *not to encroach on each other's estates:* and having in this way gone far to secure themselves against any new competitors, their next measure was to add *five and twenty* per cent. to the rates established in 1810; and these have, in several instances, been still further augmented! The peculiar benefits that were expected to result from their multiplication have, therefore, proved quite imaginary, and though the supply of water has been increased, it might have been more abundant and cheaper under a different system.

We borrow from the evidence taken before the committee of the House of Commons in 1851, on the Metropolis Water Bill, the following table relative to the supply of water in 1850: —

Account of the Capital, &c. of the different Metropolitan Water Companies, the Working Expenses of each, the Quantity of Water supplied by each, &c.

Water Companies.	Assumed Capital of each Company. Total Expenditure on Works.	Interest on Capital calculated 5 per cent.	Working Expenses, including Interest upon Debts.	Working Expenses, and Interest calculated 5 per cent. on assumed Capital.	Imperial Gallons supplied annually.	Water Rents per Annum.	Cost per Million Gallons to the Company.	Charge per Million Gallons.

Note. — 272,000 houses, daily supplied with 150 gallons of water, would annually require 14,892,000,000 imperial gallons, which is about the quantity said to be delivered to the houses.

The striking discrepancies that appear in this Table tend to confirm the principle we endeavoured to enforce in the article COMPANIES, that certain restrictions should, in almost all cases, be imposed on companies for the supply of water to a large city. These are not undertakings that can be safely trusted to the free principles that may generally be relied upon. If there be only one set of springs adjacent to a town, or if there be certain springs more conveniently situated for supplying it with water than any other, a company acquiring a right to such springs, and incorporated for the purpose of conveying the water to town, thereby gain an *exclusive advantage;* and if no limits be set to its dividends, its partners may make an enormous profit at the expense of the public, without its being possible materially to reduce them by means of competition. What has happened in the case of the New River Company sufficiently evinces the truth of what has now been stated. Had its dividends been limited to anything like a reasonable profit, the water that is at present supplied by its means might have been furnished for a small part of what it actually costs. But in cases of this sort, priority of occupation, even without any other peculiar advantage, goes far to exclude all regular

and wholesome competition. A company that has got pipes laid down in the streets may, if threatened by the competition of another company, lower its rates so as to make the latter withdraw from the field; and as soon as this is done, it may revert to its old, or even to higher charges. It is not, in fact, possible in cumbrous concerns of this sort, to have anything like competition, in the ordinary sense of the term; and experience shows that whenever it is attempted, it only continues for a limited period, and is sure to be in the end effectually suppressed. We are, therefore, clearly of opinion, that no company should ever be formed for the conveyance of water into a large city, without a maximum being set both to the rates and the dividends; giving the company an option, in the event of the maximum rate yielding more than the maximum dividend, either to reduce the rate, or to apply the surplus to the purchase of the company's stock; so that ultimately the charge on account of the dividends may be got rid of.

We are glad to have to add, that we are supported in what is now stated by the *Report* of the Select Committee of the House of Commons on the supply of water for the metropolis, printed in 1821. It is there said—"The public is at present without any protection even against a further indefinite extension of demand. In cases of dispute there is no tribunal but the Boards of the companies themselves, to which individuals can appeal; there are no regulations but such as the companies may have voluntarily imposed upon themselves, and may therefore at any time revoke, for the continuance of the supply in its present state, or for defining the cases in which it may be withdrawn from the householder. All these points, and some others of the same nature, indispensably require legislative regulation, where the subject matter is an article of the first necessity, and the supply has, from peculiar circumstances, got into such a course that it is not under the operation of those principles which govern supply and demand in other cases.

"The principle of the acts under which these companies were instituted, was to encourage competition; and certainly in this, as in other cases, it is only from competition, or the expectation of competition, that a perfect security can be had for a good supply. But your committee are satisfied, that, from the peculiar nature of these undertakings, the principle of competition requires to be guarded by particular checks and limits in its application to them, in order to render it effectual, without the risk of destruction to the competing parties, and thereby, ultimately, of a serious injury to the public." And the committee proceeds to remark—"The submission of their accounts annually to parliament, for a few years, would necessarily throw light on this part of the question."

We think that it would be highly expedient to adopt the suggestions of the committee, by calling upon the companies to lay annually detailed statements of their affairs before parliament. They should be obliged in these statements to give an account of the rates charged by them, and to make a special report as to every case in which they have withdrawn water from a householder. It is to no purpose to repeat in opposition to this proposal, the common-places about competition securing for the citizens a sufficient supply of water at the lowest prices, in the same way that the competition of bakers and butchers secures them supplies of beef and bread! The statements already made show that there is no analogy whatever in the circumstances under which these articles are supplied. If a man be dissatisfied with any particular butcher or baker, he may go to another, but *it is not possible for him to change his water merchant*, unless he also change the place of his residence. No water company will encroach upon the district assigned to another; and supposing an individual unlucky enough to quarrel with those who have the absolute *monopoly* of the supply of the district in which he resides, he must either migrate to another, or be without water, unless he can get a supply upon his own premises! Such being the actual state of things, it is quite ludicrous to talk about competition affording any real security against extortion and abuse. Even the publication of the proceedings of the companies would be a very inadequate check on their conduct; but such as it is, it is perhaps the only one that can now be resorted to; and as it would have considerable influence, it ought not to be neglected.

3. *Quality of the London Water.* — All the companies, with the exception of the New River and East London Companies, derive their supplies of water from the Thames; and in consequence of their taking it up within the limits to which the tide flows, and of the discharge of the sewerage of Oxford, Reading, and other towns on its banks into the river, the water taken from it is necessarily, in the first instance, loaded with many impurities. But the reports that were formerly so very prevalent, with respect to the deleterious quality of the London water, have been shown to have been grossly exaggerated. By far the greater part of the impurities complained of are mechanically suspended in, and not chemically combined with, it; and they may be separated from it by filtration, or by merely allowing it to stand at rest. Most of the companies have recently made very considerable efforts to improve their water; and though they have not done in this respect as much, perhaps, as they might and should have done, a great improvement has, on the whole, been effected: and notwithstanding all that has been said to the contrary, it is quite certain that, though not so pure as it might be, there is not the slightest foundation for the notion that its impurities have been such as to affect, in any degree, the health of the inhabitants.

4. *Water for Ships.* — Various improvements have been made in the art of preserving water on board ships. Of these, the principal are the charring the inside of the casks in which the water is kept, and the substitution of iron tanks for casks. The latter being made of the required shape, may be conveniently stowed into any part of the ship. In men-of-war, the iron tanks serve as ballast; the water being brought up by a forcing pump. Water is found to preserve better in them than in any other sort of vessel. Drip-stones may be employed with much advantage in the purification of water. When water is taken on board from a river into which the tide flows, it should, of course, be raised at low ebb.

But it is necessary to observe, that these remarks apply exclusively to 1850, and since that epoch the different water companies, prompted, perhaps, at least in part, by the outcry that was made against them, have made the most vigorous efforts to increase and improve their supplies of water, and have spared no expense that was at all likely to promote these objects. And we are glad to be able to add, that these efforts have been in a high degree successful. We doubt, indeed, whether there be at this moment any considerable town in the empire, or, indeed, in Europe, better supplied with excellent water than London.

We borrow from an official Report to the Board of Health the following statements with regard to the metropolitan supply of water in 1856: —

Account of the most prominent Particulars connected with the Works of the different Companies for the Supply of the Metropolis with Water in 1856.

List of Metropolis Water Companies.	Sources of Supply.	No. of Houses supplied.	Gross Quantity supplied per Day.	Aggregate nominal Steam Power.	Length of Mains and Branches.	Area of Subsiding Reservoirs.	Area of Filter Beds.	Area of open Reservoirs for filtered Water.	Area of covered Reservoirs for filtered Water.	Cost of Works as per former Return. "According to the return furnished by the several water companies in 1850, it appeared that 270,581 houses were then supplied with water, the gross daily quantity delivered having been 44,383,332 gallons. It will be observed from the preceding table that the supply of water to the metropolis has now reached the enormous quantity of upwards of 81 million gallons per day, *it having been nearly doubled in the short space of six years.* It is furnished to 328,561 of the 340,000 houses which now form the aggregate within the Registrar General's district. Thus, the average daily supply of water for all purposes which in 1850 was 164 gallons per house, is now, in 1856, 246 gallons per house. The total engine power employed and in reserve is equal to 7,324 horses. The mains and branch pipes for bringing the water from the several sources, and distributing it in the districts, exclusive of the private service pipes, form a total length of 2,086 miles. The filter beds cover an area of upwards of 40 acres. Before the passing of the Metropolis Water Act of 1852, considerably more than half the supply was not filtered; subsiding reservoirs were in such case the only means of clearing the water of impurities in suspension; these are now for the most part employed as well as the filter beds, the total area of subsiding reservoirs in use being upwards of 141 acres in extent. The filtered water is stored in fourteen covered reservoirs comprising an area of nearly 15 acres, and in four uncovered reservoirs, of not quite 3 acres, which are beyond five miles distance from St. Paul's. The cost of the new works executed under the Metropolis Water Act, 1852, and the recent Acts of the several companies, has amounted to 2,282,824*l.*, making with the former expenditure, as shown by the returns of 1850, the cost of the entire water works of the metropolis *upwards of seven millions sterling.* Even this amount, however, will fall short of the total expenditure; for the intermediate outlays between the former returns and the passing of the new Acts, and the cost of many works in hand, but not yet complete, are not included in this sum."

The learned Dr. Strang, of Glasgow, has given, in a paper on the Supply of Water to great Towns, read in 1858 before the British Association for the Advancement of Science, the following Table: —

Water Supply to Great Towns.—Summary of Results.

Towns.	Population within Bounds of Supply.	Daily Supply.	Daily Supply for each Inhabitant.	Cost of Undertaking.	Daily Supply for every £ expended.	Prospective Supply daily in addition.

* Independent of the cost of Canal de l'Ourcque.

This is a very valuable Table, and condenses a great deal of information within the narrowest compass. The magnificent project, now nearly completed, for conveying the surplus water of Loch Katrine to Glasgow is described by Dr. Strang as follows: —

"The idea of supplying Glasgow from the waters of a Highland lake, free of all contamination, 37 miles distant, was first broached in 1848; but it was reserved for the genius of Mr. J. F. Bateman, the engineer of the Manchester Waterworks, to put the idea into execution. Amid surrounding mountains of micaceous schist, subjected to a great rainfall, and isolated from all population, he found ready prepared a great natural reservoir, almost free of cost, and without danger. The superficial area of this reservoir extends to 114,940,000 square feet, and has a catchment basin of more than 35 square miles, to receive an annual rainfall of about 65 inches, and where the evaporation is so small a minimum product of 60 inches. By slightly raising the exit of Loch Katrine, and with a power of draining down the surface to 3 feet under its ordinary level, a reserve of 5,028 millions of gallons are obtained, which secures a service of 20 millions of gallons per day for 250 days of drought. The water is to be conveyed by mined tunnels, built tunnels, aqueducts, and pipes. The service reservoir is placed about six miles from Glasgow; and from the reservoir the water is conveyed by two lines of pipes, 36 inches in diameter. The surface of Loch Katrine is 360 feet above the level of the sea. The mean level of the ground on which the greater part of Glasgow is built is under 50 feet of that level. The average height of the houses may be taken at 50 feet. The extreme height of the ground at various points within the range of the distribution of water is 225 feet above high water, making the extreme height at which the water has to be delivered 275 feet above the level of the sea. The tunnels and conduits for conducting the water from Loch Katrine to Glasgow are capable of carrying 40 millions of gallons a day, but the pipes are at present only laid for 20 millions; but when more water is required, the addition of the pipeage portion only will require to be doubled. The cost of these works is estimated at about 700,000*l.*, and, limiting the supply to 20 millions of gallons, shows that for every pound sterling expended there will be a daily supply of 28½ gallons. As these works are now fast advancing, it is almost certain that the whole will be completed early in 1860. When that occurs the daily water supply will be as follows:—

From the Clyde	13,000,000
„ Gorbals	4,000,000
„ Loch Katrine	20,000,000
In all	37,000,000

but dispensing, as is proposed, with the Clyde supply, and thus getting rid of the expense of pumping, there will still remain 24 millions of gallons per day, with a power of increasing it by gravitation to 44 millions. With such a mighty store, it seems almost absurd to suppose that under any circumstances the supply should not be able to meet the demand; but when we recollect the wonderful increase of population which has taken place in Glasgow since the commencement of the century—an increase from 70,000 to 420,000—and the still more wonderful increase in the ratio of the consumption to the population, we do not think it at all improbable that Glasgow may feel ere many years, as New York does now, that she has not a gallon to spare."

Dr. Strang appears to have underrated the supply of water to each inhabitant in London. A considerable portion of the immense population within the bills of mortality derive their supplies of water from other sources than those specified above.

WAX, BEES. (Ger. *Wachs*; Fr. *Cire*; It. and Sp. *Cera*; Rus. *Wosk*), a vegetable product. Several plants contain wax in such abundance as to make it worth while to extract it from them. But all that was known in commerce, down to a comparatively recent period, consisted of bees' wax. The honey is first pressed from the comb, and the wax is then melted into cakes. It has a slight odour of honey, is insipid, and of a bright yellow hue. It is brittle, yet soft, and somewhat unctuous to the touch. It is often adulterated with earth, pea meal, resin, &c. The presence of the former may be suspected when the cake is very brittle, or when its colour inclines more to grey than to yellow; and the presence of resin may be suspected when the fracture appears smooth and shining, instead of being granulated. Wax, when bleached or purified, is white, perfectly insipid, inodorous, and somewhat translucent; it is harder, less unctuous to the touch, heavier, and less fusible than yellow wax. It is sometimes adulterated with the white oxide of lead to increase its weight, with white tallow, and with potato starch. The first is detected by melting the wax in water, when the oxide falls to the bottom; the presence of tallow is indicated by the wax being of a dull opaque white, and wanting the transparency which distinguishes pure wax; and starch may be detected by applying sulphuric acid to the suspected wax, as the acid carbonises the starch, without acting on the wax. — (*Thomson's Chemistry*, and *Dr. A. T. Thomson's Dispensatory.*)

Notwithstanding the large supply of wax produced at home, a large quantity is also imported from abroad. The duties on wax, which were formerly quite oppressive, after being greatly reduced in 1842, were wholly repealed in 1845. In 1833 the foreign wax retained for consumption amounted to 1,310 cwt. In 1857 the imports and re-exports of wax were respectively 12,639 and 1,118 cwt. Of

10,447 cwt. wax imported in 1851, 3,520 cwt. came from the Cape of Good Hope, 1,290 do. from the W. coast of Africa, 1,977 do. from the U. States, 1,817 from British India, &c.

WEIGHTS AND MEASURES. Weights are used to ascertain the gravity of bodies, — a quality depending partly on their magnitude, and partly on their density. Measures are used to determine the magnitude of bodies, or the space which they occupy.

(For an account of the weights and measures used in foreign countries, and their equivalents in English weights and measures, see the notices of the great sea-port towns dispersed throughout this work. Thus, for the Russian weights and measures, see PETERSBURG; for those of China, see CANTON; &c.)

Neither the magnitude nor the weight of any one body can be determined, unless by comparing it with some other body selected as a standard. It is impossible, indeed, to form any idea in respect of magnitude or weight, except in relation to some definite space or weight with which we are acquainted. We say that one article weighs 1 pound, another 2 pounds, a third 3, and so on; meaning not only that these weights are to each other as 1, 2, 3, &c., but also that the weight or specific gravity of the first is equal to the known and determinate weight denominated a pound, that the second is equal to 2 pounds, and so on.

Standards of Weight and Measure. — Standards of lineal measure must have been fixed upon at the earliest period, and appear to have consisted principally of parts of the human body, — as the cubit, or length of the arm from the elbow to the tip of the middle finger: the foot; the *ulna*, arm, or yard; the span; the digit, or finger; the fathom, or space from the extremity of one hand to that of the other, when they are both extended in opposite directions; the pace, &c. Large spaces were estimated by measures formed out of multiples of the smaller ones; and sometimes in day's journeys, or by the space which it was supposed an ordinary man might travel in a day, using a reasonable degree of diligence.

But lineal measures can only be used to determine the magnitude of solid bodies; the magnitude of bodies in a liquid or fluid state has to be determined by what are called measures of capacity. It is probable that, in the infancy of society, shells, or other hollow instruments afforded by nature, were used as standards. But the inaccuracy of the conclusions drawn from referring to them must soon have become obvious; and it early occurred, that to obtain an accurate measure of liquids nothing more was necessary than to constitute an artificial one, the dimensions, and consequently the capacity, of which should be determined by the lineal measures previously adopted.

The determination of the gravity or weight of different bodies supposes the invention of the balance. Nothing is known of the steps which led to its introduction; but it was used in the remotest antiquity. It seems probable that, at first, cubes of some common lineal measure, as a foot, or the fraction of a foot, formed of copper, iron, or some other metal, were used as standards of weight. When the standard was selected, if it was desired to ascertain the specific gravity or weight of any given article, all that was necessary was to put it into one of the scales of the balance, and as many cubes or parts of cubes on the other as might be necessary to counterpoise it.

Weights have, however, been frequently derived from grains of corn. Hence, in this, and in some other European countries, the lowest denomination of weight is a *grain*; and 32 of these grains are directed, by the ancient statute called *Compositio Mensurarum* to compose a pennyweight, whereof 20 make an ounce, 12 ounces a pound, and so upwards.

In every country in which commercial transactions are extensively carried on, the importance of having weights and measures determined by some fixed standard becomes obvious to every one. But as the size of different parts of the human body differ in different individuals, it is necessary to select some durable article, — a metallic rod, for example, — of the length of an ordinary cubit, foot, &c., and to make it a standard with which all the other cubits, feet, &c. used in mensuration shall correspond. These standards have always been preserved with the greatest care: at Rome, they were kept in the temple of Jupiter; and among the Jews, their custody was intrusted to the family of Aaron. — (*Paucton, Métrologie*, p. 223.)

The principal standards used in the ancient world, were, the cubit of the Jews, from which their other measures of length, capacity, and weight were derived; and the foot of the Greeks and Romans.

In England, our ancient historians tell us that a new, or rather a revived, standard of lineal measure was introduced by Henry I., who ordered that the ulna, or ancient ell, which corresponds to the modern yard, should be made of the exact length of his own arm, and that the other measures of length should be raised upon it. This standard has been maintained, without any sensible variation. In 1742, the Royal Society had a yard made, from a very careful comparison of the standard ells or yards of the reigns of Henry VII. and Elizabeth kept at the Exchequer. In 1758, an exact copy was

made of the Royal Society's yard; and this copy having been examined by a committee of the House of Commons, and reported by them to be equal to the standard yard, it was marked as such; and this identical yard is declared, by the act 5 Geo. 4. c. 74., to be the standard of lineal measure in Great Britain. The clause in the act is as follows: —

"From and after the 1st of May, 1825 (subsequently extended to the 1st of January, 1826), the straight line or distance between the centres of the 2 points in the gold studs in the straight brass rod, now in the custody of the clerk of the House of Commons, whereon the words and figures 'STANDARD YARD, 1760,' are engraved, shall be the original and genuine standard of that measure of length or lineal extension called a yard; and the same straight line or distance between the centres of the said 2 points in the said gold studs in the said brass rod, the brass being at the temperature of 62° by Fahrenheit's thermometer, shall be and is hereby denominated the 'IMPERIAL STANDARD YARD,' and shall be and is hereby declared to be the unit or only standard measure of extension, wherefrom or whereby all other measures of extension whatsoever, whether the same be lineal, superficial, or solid, shall be derived, computed, and ascertained; and that all measures of length shall be taken in parts or multiples or certain proportions of the said standard yard; and that 1-3d part of the said standard yard shall be a foot, and the 12th part of such foot shall be an inch; and that the pole or perch in length shall contain 5½ such yards, the furlong 220 such yards, and the mile 1,760 such yards."— § 1.

The superficial measures are formed on the basis of the square of this standard; it being enacted, that

"The rood of land shall contain 1,210 square yards, according to the said standard yard; and that the acre of land shall contain 4,840 such square yards, being 160 square perches, poles, or rods."— § 2.

Uniformity of Weights and Measures. — The confusion and inconvenience attending the use of weights and measures of the same denomination, but of different magnitudes, was early remarked; and there is hardly a country in which efforts have not been made to reduce them to the same uniform system. Numerous acts of parliament have been passed, having this object in view, and enjoining the use of the same weights and measures, under very severe penalties. But, owing to the inveteracy of ancient customs, and the difficulty of enforcing new regulations, these statutes have always had a very limited influence, and the greatest diversity has continued to prevail, except in lineal measures. But the statute of 5 Geo. 4. c. 74. seems to have, at length, effected what former statutes failed of accomplishing. It is, perhaps, indebted for its success in this respect to the moderate nature of the changes which it introduced. We have already seen that it made no alteration in the lineal measures previously in use. Neither did it affect the previously existing system of weights: both the Troy and the Avoirdupois weights having been preserved.

"The Troy weight," says Mr. Davies Gilbert, late President of the Royal Society, "appeared to us (the commissioners of weights and measures) to be the ancient weight of this kingdom, having, as we have reason to suppose, existed in the same state from the time of St. Edward the Confessor; and there are reasons, moreover, to believe that the word Troy has no reference to any town in France, but rather to the monkish name given to London, of Troy Novant, founded on the legend of Brute. Troy weight, therefore, according to this etymology, is, in fact, London weight. We were induced, moreover, to preserve the Troy weight, because all the coinage has been uniformly regulated by it; and all medical prescriptions or formulæ now are, and always have been, estimated by Troy weight, under a peculiar subdivision which the College of Physicians have expressed themselves most anxious to preserve."

It was resolved, therefore, to continue the use of Troy weight; and also, on account of the accuracy of the Troy standard, to raise the Avoirdupois weight from this basis.

"We found," said Mr. Davies Gilbert, "the Avoirdupois weight, by which all heavy goods have been for a long time weighed (probably derived from Avoirs (Averia), the ancient name for goods or chattels, and Poids, weight), to be universally used throughout the kingdom. This weight, however, seems not to have been preserved with such scrupulous accuracy as Troy weight, by which more precious articles have been weighed; but we had reason to believe that the pound cannot differ by more than 1, 2, or 3 grains, from 7,000 grains Troy; some being in excess, and others, though in a less degree, in defect, but in no case amounting to above 1, 2, or 3 grains. It therefore occurred to us, that we should be offering no violence to this system of weights, if we declared that 7,000 grains Troy should be hereafter considered as the pound Avoirdupois."

In accordance with these views, it was enacted, — "That from and after the 1st day of May, 1825, the standard brass weight of 1 pound Troy weight, made in the year 1758, now in the custody of the clerk of the House of Commons, shall be, and the same is hereby declared to be, the original and genuine standard measure of weight, and that such brass weight shall be, and is hereby denominated, the Imperial Standard Troy pound, and shall be, and the same is hereby declared to be, the unit or only standard measure of weight, from which all other weights shall be derived, computed, and ascertained; and that 1-12th part of the said Troy pound shall be an ounce; and that 1-20th part of such ounce shall be a pennyweight; and that 1-24th part of such pennyweight shall be a grain; so that 5,760 such grains shall be a Troy pound; and that 7,000 such grains shall be, and they are hereby declared to be, a pound Avoirdupois, and that 1-16th part of the said pound Avoirdupois shall be an ounce Avoirdupois, and that 1-16th part of such ounce shall be a dram."

The measures of capacity were found to be, at the period of passing the late statute, in the greatest confusion; and a considerable change has consequently been made in them. The wine gallon formerly amounted to 231 cubic inches, the corn gallon to 268·8, and the ale gallon to 282. But these are superseded by the Imperial gallon, which contains 277·274 cubic inches, or 277¼ very nearly. It is deduced as follows: —

"The standard measure of capacity, as well for liquids as for dry goods not measured by heaped measure, shall be the GALLON, containing 10 lbs. avoirdupois weight of distilled water weighed in air, at the temperature of 62° of Fahrenheit's thermometer, the barometer being at 30 inches; and a measure shall be forthwith made of brass, of such contents as aforesaid, under the directions of the Lord High Treasurer or the commissioners of his Majesty's treasury; and such brass measure shall be, and is hereby declared to be, the Imperial standard gallon, and shall be, and is hereby declared to be, the unit and only standard measure of capacity, from which all other measures of capacity to be used, as well fo-

wine, beer, ale, spirits, and all sorts of liquids, as for dry goods not measured by heaped measure, shall be derived, computed, and ascertained; and all measures shall be taken in parts or multiples or certain proportions of the said Imperial standard gallon; and the quart shall be $\frac{1}{4}$th part of such standard gallon, and the pint shall be $\frac{1}{8}$th of such standard gallon, and 2 such gallons shall be a peck, and 8 such gallons shall be a bushel, and 8 such bushels a quarter of corn or other dry goods, not measured by heaped measure."— § 6.

We subjoin a Table showing the contents of the different gallons, both in measure and weight.

	Cubic Inches.	Avoirdupois Weight.	Troy Weight.
		Lbs. oz. dr.	*Lbs. oz. dwt. grs.*
Imperial gallon	277·274	10 0 0	12 1 16 16
Corn gallon	268·8	9 10 13¾	11 9 7 12
Wine gallon	231	8 5 6¾	10 1 9 22
Ale gallon	262	10 2 11¾	12 4 6 8

Heaped Measures. — The greatest blemish, by far, in the act 5 Geo. 4. c. 74. was the continuance and legitimation of the practice of selling by heaped measure. This practice has since, however, been abolished, along with the use of all local and customary measures, by the act 5 & 6 Will. 4. c. 63., which contains several important provisions.

This act sets out with repealing the 4 & 5 of Will. 4. c. 49., and the provisions in the acts 5 Geo. 4. c. 74. and 6 Geo. 4. c. 12., which require that all weights and measures shall be exact models or copies in shape or form of the standards deposited in the exchequer; and those allowing the use of weights and measures, not in conformity with the Imperial standard, established by said acts; or that allow goods or merchandise to be bought or sold by weights or measures established by local custom, or founded on special agreement. It then goes on to enact as follows: —

Weights and Measures stamped at the Exchequer declared legal. — Weights and measures verified and stamped at the exchequer as copies of standard weights and measures, shall be taken to be legal weights and measures, to be used for comparison as copies of the Imperial standard weights and measures, although not similar in shape to those required under the provisions of the said acts; and the comptroller-general, or other duly authorised officer of the exchequer, may compare and verify, and stamp as correct, standard measures of a yard, standard weights and standard measures of capacity, any weights and measures which correspond in length, weight, and capacity with the standards, or parts or multiples thereof, deposited in the exchequer, under the 5 Geo. 4. c. 74., although such weights and measures may not be models or copies in shape or form of the standards so deposited. — § 4.

Copies of the Standard Weights and Measures worn to be re-verified. — All copies of the Imperial standard weights and measures which have become defective, or have been mended, in consequence of wear or accident, shall forthwith be sent to the exchequer, for the purpose of being again compared and verified, and shall be stamped as re-verified copies of such standard weights and measures, provided the comptroller-general, or other officer appointed for such verification, deem them fit for the purposes of standards; and every new comparison and verification shall be indorsed upon the original indenture of verification; and such weights and measures shall be stamped upon payment of fees of verification only; and the comptroller-general, or other officer, shall keep an account of all copies of the Imperial standard weights and measures verified at the exchequer. — § 5.

Local and Customary Measures abolished. — From and after the passing of this act, the Winchester bushel, the Scotch ell, and all *local or customary* measures, shall be abolished; and every person who shall sell by any measure other than one of the Imperial measures, or some multiple or aliquot part thereof, shall be liable to a penalty not exceeding 40*s.* for every such sale: but nothing therein shall prevent the sale of any articles in any vessel, where such vessel is not represented as containing any amount of Imperial measure, or of any fixed, local, or customary measure heretofore in use. — § 6.

Heaped Measure abolished. — From and after the passing of this act, so much of the said acts as relates to heaped measure is hereby repealed, and the use of heaped measure shall be abolished, and all bargains, sales, and contracts made after the passing of this act, by heaped measure, shall be null and void; and every person who shall sell any articles by heaped measure shall be liable to a penalty not exceeding 40*s.* for every such sale. — § 7.

Articles sold by Heaped Measure, how to be sold. — Whereas some articles heretofore sold by heaped measure are incapable of being stricken, and may not be conveniently sold by weight; it is enacted, that all such articles may henceforth be sold by a bushel measure, corresponding in shape with the bushel prescribed by the 5 Geo. 4. c. 74. for the sale of heaped measure, or by any multiple or aliquot part thereof, filled in all parts as nearly to the level of the brim as the size and shape of the articles will admit; but nothing herein shall prevent the sale by weight of any article heretofore sold by heaped measure. — § 8.

Coals to be sold by Weight. — From and after the 1st of January, 1836, all coals, slack, culm, and cannel of every description shall be sold by weight, and not by measure, under a penalty of 40*s.* for every sale. — § 9.

All Articles to be sold by Avoirdupois, except, &c. — From and after the passing of this act, all articles sold by weight shall be sold by avoirdupois weight, except gold, silver, platina, diamonds, or other precious stones, which may be sold by troy weight; and drugs, which, *when sold by retail*, may be sold by apothecaries' weight. — § 10.

The Stone, Hundred Weight, &c. — From and after the passing of this act, the weight denominated a stone shall, in all cases, consist of 14 standard pounds avoirdupois, the hundred weight of 8 such stones, and the ton of 20 such hundred weights; but nothing herein shall prevent any bargain, sale, or contract being made by any multiple or aliquot part of the pound weight. — § 11.

Contents of Weights and Measures to be stamped on them. — All weights made after the passing of this act of the weight of one pound avoirdupois, or more, shall have the number of pounds contained in them stamped or cast on the top or side thereof in legible figures and letters; and all measures of capacity made after the passing of this act, shall have their contents stamped or marked on the outside thereof in legible figures and letters. — § 12.

Weights of Lead or Pewter not to be stamped. — The stamping of weights of lead or pewter, or of any mixture thereof, is prohibited after the 1st of January, 1836; but nothing herein shall prevent the use of lead or pewter, or any mixture thereof, in the manufacture of weights wholly and substantially cased with brass, copper, or iron, and legibly stamped or marked "cased," or prevent the insertion of such a plug of lead or pewter into weights as shall be *bonâ fide* necessary for adjusting them and affixing the stamp thereon. — § 13.

Conversion of Rents, Tolls, &c. — Clause 14. and 15. regulate the proceedings that are to take place in England, Ireland, and Scotland, for the conversion of rents, tolls, &c. payable in weights or measures now abolished into Imperial standard weights and measures.

Fiar Prices. — In Scotland, from and after the passing of this act, the fiar prices of all grain in every county shall be struck by the Imperial quarter, and all other returns of the prices of grain shall be set forth by the same, without any reference to any other measure whatsoever; and any sheriff clerk, clerk of a market, or other person offending against this provision, shall forfeit not exceeding 5*l.* — § 16.

Copies of Standards, Inspectors, &c. — Clauses 17, 18, 19, and 20. prescribe the mode in which copies of the standard weights and measures shall be provided in counties, cities, boroughs, &c., the appointment of inspectors of weights and measures, &c. Clause 22. orders, that the expense of providing copies of standard weights, with the remuneration to inspectors, be defrayed out of the county rate. Clause 23. prohibits any maker or seller of weights or measures from being appointed inspector, and orders all inspectors to enter into a bond of 200*l.* for the due performance of the duties of their office, and the safe custody of the stamps and standard weights and measures committed to their care. Clause 24. orders inspectors to attend at market towns when ordered by justices. The following clauses are of general importance.

Magistrates to procure Stamps for Inspectors for stamping all Weights, &c. — In England, the justices in general or quarter sessions assembled, and in Scotland the justices and magistrates at a meeting called by the sheriff, and in Ireland the grand juries, shall provide the inspectors with good and sufficient stamps for stamping or sealing weights and measures; and all weights and measures whatsoever, except as herein excepted, used for buying and selling, or for the collecting of any tolls or duties, or for the making of any charges on the conveyance of any goods or merchandise, shall be examined and compared with one or more copies of the Imperial standard weights and measures provided under authority of this act for such inspectors, who shall stamp, so as best to prevent fraud, such weights and measures, if they be found to correspond with the said copies; and the fees for such examination, comparison, and stamping shall be those in the schedule at the end of this act; and every person using any weight or measure other than those authorised by this act, or some aliquot part thereof, or which has not been stamped as aforesaid, except as herein excepted, or which shall be found light or otherwise unjust, shall forfeit not exceeding 5*l.*; and any contract, bargain, or sale made by such weights or measures shall be wholly null and void; and every light or unjust weight and measure shall, on being discovered by any inspector, be seized, and, on conviction, forfeited; but nothing herein shall require any single weight above 56 lbs. to be inspected and stamped, nor any wooden or wicker measure used in the sale of lime, or other articles of the like nature, or any glass or earthenware jug or drinking cup, though represented as containing the amount of any Imperial measure, or of any multiple thereof; but any person buying by any vessel represented as containing the amount of an Imperial measure, or of any multiple thereof, is authorised to require the contents of such vessel to be ascertained by comparison with a stamped measure, such measure to be provided by the person using such wooden or wicker measure, glass, jug, or drinking cup; and in case the person using such last-mentioned measure or vessel refuse to make such comparison, or if, upon comparison being made, it be found to be deficient in quantity, the person using the same shall be subject to the forfeitures and penalties imposed on those using light or unjust weights or measures. — § 21.

Weights and Measures once stamped need not be re-stamped. — No weight or measure duly stamped by any inspector appointed under the 4 & 5 Will. 4. c. 49., or this act, or by any person or persons authorised to examine and stamp weights or measures, shall be liable to be re-stamped, although the same be used in any other place than that at which it was originally stamped, but shall be considered as a legal weight or measure throughout the U. K., unless found to be defective or unjust — § 27.

Power to Justices, &c. to enter Shops and inspect Weights and Measures. — Justices, sheriffs, magistrates, and inspectors are authorised to examine weights and measures, and to order such as are light or otherwise unjust to be seized and forfeited; those using such weights and measures are subjected to a penalty of not more than 5*l.*; and a like penalty is imposed on those refusing to produce such weights and measures, or obstructing the magistrates. — § 28.

Penalties on Inspectors counterfeiting Stamps, &c. — Inspectors or other persons authorised to inspect weights or measures, who shall stamp any weight or measure without verifying the same, or who shall otherwise misconduct themselves in their office, shall for every such offence forfeit not more than 5*l.*; persons forging or counterfeiting any stamp or mark used for stamping or marking weights or measures, forfeit for every offence not more than 50*l.* and not less than 10*l.*; and persons knowingly using weights or measures marked with such counterfeit stamps, forfeit for every offence not more than 10*l.* nor less than 2*l.* — §§ 29, 30.

Penalty on Price Lists, &c. — From and after the 1st of January, 1836, any person printing, or clerk of any market or other person making any return, price list, price current, or any journal or other paper containing price list or price current, in which the weights and measures quoted or referred to denote or imply a greater or less weight or measure than is denoted or implied by the same denomination of Imperial weights and measures under the provisions of this act, shall forfeit and pay not exceeding 10*s.* for *every copy* of every such return, price list, price current, journal, or other paper which they publish. — § 31.

The remaining clauses relate to the recovery of penalties; and save the rights of the Founders' Company, and of the Universities of Oxford and Cambridge.

Schedule of fees to be taken by all inspectors of weights and measures appointed under the authority of this act: —

For examining, comparing, and stamping all brass weights, within their respective jurisdictions, —

	s.	*d.*
Each half hundred weight	0	9
Each quarter of a hundred weight	0	6
Each stone	0	4
Each weight under a stone to a pound inclusiv	0	1
Each weight under a pound	0	0½
Each set of weights of a pound and under	0	2

For examining, comparing, and stamping all iron weights, or weights of other descriptions, not made of brass, within their respective jurisdictions, —

	s.	
Each half hundred weight	0	
Each quarter of a hundred weight	0	2
Each stone	0	1
Each weight under a stone	0	0½
Each set of weights of a pound and under	0	2

For examining, comparing, and stamping all wooden measures, within their respective jurisdictions, —

	s.	*d.*
Each bushel	0	3
Each half bushel	0	2
Each peck, and all under	0	1
Each yard	0	0½

For examining, comparing, and stamping all measures of capacity of liquids, made of copper or other metal, within their respective jurisdictions, —

Invariable or Natural Standards. — As the standards adopted in most countries have been in a great degree arbitrary, it has long been the opinion of scientific men, that, to construct a more perfect system of weights and measures, some natural and unchangeable basis should be adopted. It has, indeed, been contended by Paucton and Bailly, that the measures of the ancients were deduced from a basis of this sort; and that the *stadium* always formed an aliquot part of the earth's circumference, that part differing amongst different nations and authors. But no learning or ingenuity can induce any one to believe what is so obviously incredible. The ancients had no means of determining the earth's circumference with any thing like the accuracy required to render it the great unit of a system of measures; and, what is equally decisive, no ancient author ever makes the slightest allusion to any such standard.

In more modern times, however, the idea of seeking for a unit of weight and measure in some unchanging natural object has been practically carried into effect. The standards that have been usually proposed for this object, have been some aliquot part of the quadrant of the meridian, or the length of a pendulum vibrating seconds in some given latitude. The latter has been in so far adopted into the existing system of weights and measures established by the act of 1823, that the length of the standard yard, as compared with that of a pendulum vibrating seconds in the latitude of London, is specified in the act as follows:—

"Whereas it has been ascertained by the commissioners appointed by his Majesty to inquire into the subject of weights and measures, that the said yard hereby declared to be the Imperial standard yard, when compared with a pendulum vibrating seconds of mean time in the latitude of London, in a vacuum at the level of the sea, is in the proportion of 36 inches to 39 inches and 1,393 ten-thousandth parts of an inch; be it therefore enacted and declared, that if at any time hereafter the said Imperial standard yard shall be lost, or shall be in any manner destroyed, defaced, or otherwise injured, it shall and may be restored by making, under the direction of the Lord High Treasurer, or the commissioners of his Majesty's treasury of the United Kingdom of Great Britain and Ireland, or any 3 of them for the time being, a new standard yard, bearing the same proportion to such pendulum as aforesaid, as the said Imperial standard yard bears to such pendulum."

TABLES OF ENGLISH WEIGHTS AND MEASURES, ACCORDING TO THE NEW OR IMPERIAL MEASURE.

IMPERIAL TROY WEIGHT.

The standard pound containing 5,760 grs.

			French Grammes.
	1 Grain	=	0·0648
24 Grains	1 Pennyweight	=	1·5552
20 Pennyweights	1 Ounce	=	31·1027
12 Ounces	1 Pound	=	373·2330

Troy weight is used in the weighing of gold, silver, jewels, &c. It is also used in ascertaining the strength of spirituous liquors; in philosophical experiments; and in comparing different weights with each other.

APOTHECARIES' WEIGHT.

			Fr. Gram.
	1 Grain	=	0·0648
20 Grains	1 Scruple	=	1·296
3 Scruples	1 Dram	=	3·888
8 Drams	1 Ounce	=	31·102
12 Ounces	1 Pound	=	373·233

This weight is essentially the same as Troy weight, but differently divided. It is chiefly used for medical prescriptions; but drugs are mostly bought and sold by avoirdupois weight.

DIAMOND WEIGHT.—Diamonds and other precious stones are weighed by carats, the carat being divided into 4 grains, and the grain into 16 parts. The diamond carat weighs $3\frac{1}{5}$ grains Troy: thus,

Diamond Weight.		Troy Weight. Decigrammes.
16 Parts	1 Grain	$0\frac{8}{10}$ Grains = $51\frac{1}{2}$
4 Grains	1 Carat	$3\frac{1}{5}$ — = $205\frac{1}{2}$

IMPERIAL AVOIRDUPOIS WEIGHT.

			Fr. Gram.
	1 Dram	=	1·771
16 Drams	1 Ounce	=	28·346
16 Ounces	1 Pound	=	453·544
28 Pounds	1 Quarter	=	12·699 kil.
4 Quarters	1 Hundred wt.	=	50·796 —
20 Hundred wt.	1 Ton	=	1015·920 —

The dram is subdivided into 3 scruples, and each scruple into 10 grains; the pound, or 7,680 grains avoirdupois, equals 7,000 grains Troy, and hence 1 grain Troy equals 1·097 grains avoirdupois.

Hence also 144 lbs. avoirdupois = 175 lbs. Troy.
and 192 oz. ditto = 175 oz. ditto.

The stone is generally 14 lbs. avoirdupois weight, but for butcher's meat or fish it is 8 lbs. Hence, the hundred weight (cwt.) equals 8 stone of 14 lbs. or 14 stone of 8 lbs.

A stone of glass is 5 lbs. A seam of glass 24 stone, or 120 lbs.

Hay and straw are sold by the load of 36 trusses. The truss of hay weighs 56 lbs. and of straw 36 lbs. The truss of new hay is 60 lbs. until the 1st of September.

The custom of allowing more than 16 ounces to the pound of butter used to be very general in several parts of the country.

CHEESE AND BUTTER.

8 Pounds	=	1 Clove.
32 Cloves	=	1 Wey in Essex.
42 do.	=	1 do. in Suffolk.
56 Pounds	=	1 Firkin of Butter.

IMPERIAL LONG MEASURE.

			Fr. Metres.
12 Inches	1 Foot	=	0·3048
3 Feet	1 Yard	=	0·9144
$5\frac{1}{2}$ Yards	1 Pole or Rod	=	5·0291
40 Poles	1 Furlong	=	201·1632
8 Furlongs	1 Mile	=	1609·3059
3 Miles	1 League	=	4827·9179
60 Geographical or $69\frac{1}{6}$ Eng. Miles	1 Degree	=	111120·7442

Besides the above, there are the palm, which equals 3 inches; the hand, 4 inches; the span, 9 inches; and the fathom, 6 feet.

IMPERIAL SUPERFICIAL MEASURE.

			Fr. Sq. Metres.
144 Inches	1 Square foot	=	0·0929
9 Square feet	1 Square yard	=	0·8316
$30\frac{1}{4}$ Square yards	1 Square pole	=	25·2961
40 Square poles	1 Rood	=	1011·6662
4 Roods	1 Acre	=	4046·6648

The inch is generally divided, on scales, into 10ths, or decimal parts; but in squaring the dimensions of artificers' work, the duodecimal system is adopted; the inch being divided into 12 parts or lines, each part into 12 seconds, and each second into 12 thirds.

Land is usually measured by a chain of 4 poles, or 22 yards, which is divided into 100 links. Ten chains in length and 1 in breadth make an acre, which equals 160 square perches, or 4,840 square yards.

CUBIC OR SOLID MEASURE.

			Fr. Cubic Metres.
1,728 Cubic inches	1 Cubic foot	=	·0283
27 Cubic feet	1 Cubic yard	=	·7654
40 Feet of rough timber, or 50 Feet hewn do.	1 Load or Ton	=	1·1326 to 1·4157
12 Cubic feet	1 Ton of shipping	=	1·1892

By cubic measure, marble, stone, timber, masonry, and all artificers' works of length, breadth, and thickness, are measured, and also the contents of all measures of capacity, both liquid and dry.

IMPERIAL LIQUID AND DRY MEASURE.

Deduced from the Standard Gallon, containing 10 lbs. weight of distilled water, temperature 62°, barometer 30 inches.

Weight of Water	Cubic Feet.	Cubic Inches	Gills.	Pints.	Quarts.	Pottles.	Gallons.	Pecks.	Bushels.	Coomb.	Quarter.
5 oz.		8·665	1								
1 lbs. 1½		34·659	4	1							
2½		69·318	8	2	1						
5		138·637	16	4	2	1					
10		277·274	32	8	4	2	1				
20		554·548	64	16	16	4	2	1			
80	1.2837	2218·191	256	64	32	16	8	4	1		
320	5·1347	8872·763	1,024	256	128	64	32	16	4	1	
640	10·2694	17745·526	2,048	512	256	128	64	32	8	2	1

The dimensions of the Imperial standard bushel are as follows: — The outer diameter 19½ inches, and the inner diameter 18½. The depth is 8¼, and the height of the cone, for heaped measure, is 6 inches. The contents of the Imperial heaped bushel were 2815·4887 cubic inches. The subdivisions and multiples are in the same proportion.

WOOL WEIGHT.

Like all other bulky articles, wool is weighed by Avoirdupois weight, but the divisions differ; thus,

7 Pounds	=	1 Clove.	6½ Tods	=	1 Wey.
2 Cloves	=	1 Stone.	2 Weys	=	1 Sack.
2 Stone	=	1 Tod.	12 Sacks	=	1 Last.

A pack of wool contains 240 lbs.

OLD MEASURES SUPERSEDED BY THE IMPERIAL SYSTEM.

OLD WINE MEASURE.

		Cub. In.		Fr. Litres.
	1 Pint	28·875	=	0·4731
2 Pints	1 Quart	57·75	=	0·9463
4 Quarts	1 Gallon	231	=	3·3785
42 Gallons	1 Tierce	5·614 feet	=	158·9673
2 Tierces	1 Puncheon	11·228 —	=	317·9345
63 Gallons	1 Hogshead	8·421 —	=	238·4509
2 Hogshds.	1 Pipe or Butt	16·842 —	=	476·9018
2 Pipes	1 Tun	33·684 —	=	953·8036

The pint is subdivided into halves and quarters; the latter is called a gill. A rundlet is 18 gallons, and an anker 9.

Conversion of Old Wine Measure into Imperial Measure. — The old wine gallon contains 231 cubic inches, and the Imperial gallon 277·274 ditto. Hence to convert wine gallons into Imperial gallons, multiply by $\frac{231}{277\cdot274}$, or by ·83311; and to convert Imperial gallons into wine gallons, multiply by the reciprocal fraction $\frac{277\cdot274}{231}$, or by 1·20032. But for most practical purposes, wine measure multiplied by 5 and divided by 6 will give Imperial measure with sufficient accuracy, and conversely.

N.B. — The multipliers and divisors employed to reduce old wine, ale, &c. measures to Imperial measure, serve also to reduce prices by the former to the latter.

We subjoin, from the very complete and valuable work of Mr. Buchanan, of Edinburgh, on Weights and Measures, a

Table of English Wine Gallons, from 1 to 100, with their Equivalents in Imperial Gallons.

Wine Gallons.	Equivalents in Imperial Galls.	Wine Gallons.	Equivalents in Imperial Galls.	Wine Gallons.	Equivalents in Imperial Galls.	Wine Gallons.	Equivalents in Imperial Galls.
1	0·83311	26	21·66088	51	42·48866	76	63·31643
2	1·66622	27	22·49399	52	43·32177	77	64·14954
3	2·49933	28	23·32711	53	44·15489	78	64·98265

11	9·16422	36	29·99199	61	50·11976	86	71·64754
12	9·99733	37	30·82510	62	51·65288	87	72·48065
13	10·83044	38	31·65821	63	52·48599	88	73·31376
14	11·66355	39	32·49133	64	53·31910	89	74·14687
15	12·49666	40	33·32444	65	44·15221	90	74·97998
16	13·42977	41	34·15755	66	54·98532	91	75·81309
17	14·16289	42	34·99066	67	55·81843	92	76·64620
18	14·99600	43	35·82377	68	56·65145	93	77·47931
19	15·82910	44	56·65688	69	57·48465	94	78·31242
20	16·66222	45	37·48999	70	58·31776	95	79·14554
21	17·49533	46	38·32310	71	59·15087	96	79·97865
22	18·32844	47	39·16626	72	59·98398	97	80·81176
23	19·16155	48	39·99932	73	60·81710	98	81·64487
24	19·99466	49	40·82243	74	61·65021	99	82·47798
25	20·82777	50	41·65555	75	62·48332	100	83·31109

Hence, supposing the former denominations to be preserved, a tierce of wine = 35 Imperial gallons very nearly; a puncheon = 70 ditto very nearly; a hogshead = 52½ ditto very nearly; a pipe or butt = 105 ditto very nearly; and a tun = 210 ditto very nearly.

OLD ALE AND BEER MEASURE.

		Cub. In.		Fr. Litres.
	1 Pint	35·25	=	0·5776
2 Pints	1 Quart	70·5	=	1·1552
4 Quarts	1 Gallon	282	=	4·6208
8 Gallons	1 Firkin ale	1·305 feet	=	36·9669
9 Gallons	1 ditto beer	1·468 —	=	41·5872
2 Firkins	1 Kilderkin	2·937 —	=	83·1744
2 Kilderkins	1 Barrel	5·875 —	=	166·3488
1½ Barrel	1 Hogshead	8·812 —	=	249·5232
2 Barrels	1 Puncheon	10·750 —	=	332·6876
2 Hogsheads	1 Butt	17·624 —	=	499·0464
2 Butts	1 Tun	35·248 —	=	998·0928

Conversion of Old Ale and Beer Measure into Imperial Measure. — The old ale gallon contains 282 cubic inches, and the Imperial standard gallon 277·274 ditto. Hence, to convert ale gallons into Imperial gallons, multiply by $\frac{282}{277\cdot274}$, or by 1·0170445; and to convert Imperial gallons into ale gallons, multiply by the reciprocal fraction $\frac{277\cdot274}{282}$ or by ·9832411. Unless extreme accuracy be required, the first 3 decimals need only be used. And for most practical purposes, ale measure multiplied by 59 and divided by 60 will give Imperial measure with sufficient accuracy, and conversely.

Table of English Ale Gallons, from 1 to 100, with their Equivalents in Imperial Gallons.

OLD DRY OR WINCHESTER MEASURE.

		Cub. In.		Fr. Litres.
4 Gills	1 Pint	33·6	=	0·55053
2 Pints	1 Quart	67·2	=	1·10107
2 Quarts	1 Pottle	134·4	=	2·20214
2 Pottles	1 Gallon	268·8	=	4·40428
2 Gallons	1 Peck	537·6	=	8·80856
4 Pecks	1 Bushel	2150·42	=	35·23430
4 Bushel	1 Coom	4·977 feet	=	140·93721
2 Cooms	1 Quarter	9·954 —	=	281·87443
5 Quarters	1 Wey or Load	49·770 —	=	1409·37216
2 Weys	1 Last	99·540 —	=	2818·74432

The Winchester bushel is 18½ inches wide, and 8 inches deep. Corn and seeds are measured by striking the bushel from the brim, with a round piece of light wood, about 2 inches in diameter, and of equal thickness from one end to the other. All other dry goods are heaped.

Conversion of Winchester Bushels into Imperial Bushels. — The Winchester bushel contains 2150·42 cubic inches, and the Imperial standard bushel 2218·192 ditto. Hence, to convert Winchester bushels into Imperial bushels, multiply by $\frac{2150\cdot42}{2218\cdot192}$, or by ·969447; and to convert Imperial bushels into Winchester bushels, multiply by the reciprocal fraction $\frac{2218\cdot192}{2150\cdot42}$, or 1·0315157. For practical purposes, multiply Winchester measure by 31 and divide by 32 for Imperial measure, and the contrary.

In some markets, corn is sold by weight, which is the fairest mode of dealing, though not the most convenient in practice. Even where measures are used, it is customary to weigh certain quantities or proportions, and to regulate the prices accordingly. The average bushel of wheat is generally reckoned at 60 lbs. — of barley 47 lbs. — of oats 38 lbs. — peas 64, beans 63, clover 68, rye and canary 53, and rape 48 lbs. In some places, a load of corn, for a man, is reckoned 5 bushels, and a cart load 40 bushels.

Table of Winchester Quarters, from 1 to 100, with their Equivalents in Imperial Quarters.

COAL MEASURE.

Coals were formerly sold by the chaldron, which bears a certain proportion to Winchester measure.

4 Pecks - = 1 Bushel.
3 Bushels - = 1 Sack.
3 Sacks - = 1 Vat.
4 Vats - = 1 Chaldron.
21 Chaldrons - = 1 Score.

The coal bushel holds 1 Winchester quart more than the Winchester bushel; its contents being 2217·62 cubic inches. It is 19½ inches wide from outside to outside, and 8 inches deep. In measuring coals it was heaped up in the form of a cone, to the height of at least 6 inches above the brim (according to a regulation passed at Guildhall in 1806), the outside of the bushel being the extremity of the cone, so that the bushel should contain at least 2814·9 cubic inches, nearly equal to the Imperial heaped bushel. Hence the chaldron should measure 58·64 cubic feet.

But the sale of coals by measure has, in consequence of the frauds to which it led — (see *ante*, p. 361), — been abolished; and they are now sold by weight.

Of Wood Fuel, English Measure. — Wood fuel is assized into shids, billets, faggots, fall wood, and cord wood. A shid is to be 4 feet long, and, according as they are marked and notched, their proportion must be in the girth; viz. if they have but 1 notch, they must be 16 inches in the girth; if 2 notches, 23 inches; if 3 notches, 28 inches; if 4 notches, 33 inches; and if 5 notches, 38 inches about. Billets are to be 3 feet long, of which there should be 3 sorts; viz. a single cask, and a cask of 2; the 1st is 7 inches, the 2d 10 inches, and the 3d 14 inches about: they are sold by the 100 of 5 score. Faggots are to be 3 feet long, and at the band 24 inches about, besides the knot of such faggots; 50 go to the load. Bavins and spray wood are sold by the 100, which are accounted a load. Cord wood is the bigger sort of fire wood, and it is measured by a cord, or line, whereof there are 2 measures; that of 14 feet in length, 3 feet in breadth, and 3 feet in height. The other is 8 feet in length, 4 feet in height, and 4 feet in breadth.

MEASURES OF WOOD.

1,000 Billets of wood - = 1 Cord.
10 cwt. of ditto - = 1 Cord.
1 Cord of wood - = ½ Chaldron of coals.
100 lbs. of wood - = 1 Quintal of wood.

French System of Weights and Measures. — The new metrical system established in France subsequently to the Revolution, is founded on the measurement of the quadrant of the meridian, or of the distance from the pole to the equator. This distance having been determined with the greatest care, its ten-millionth part was assumed as the *mètre*, or unit of length, all the other lineal measures being multiples or submultiples of it, in decimal proportion. The mètre corresponds pretty nearly to the ancient French *aune*, or yard, being equal to 3·07844 French feet, or 3·281 English feet, or 39·3708 English inches.

The unit of weight is the *gramme*, which is a cubic centimètre, or the 100th part of a mètre of distilled water of the temperature of melting ice; it weighs 15·434 English Troy grains.

In order to express the decimal proportion, the following vocabulary of names has been adopted, in which the terms for multiplying are Greek, and those for dividing Latin.

For multipliers, the word
Deca prefixed means - 10 times.
Hecto - - - 100 —
Kilo - - - 1,000 —
Myria - - - 10,000 —

On the contrary, for divisors, the word *Deci* expresses the 10th part.
Centi - - 100th —
Milli - - 1,000th —

Thus, *Decamètre* means 10 mètres.
Decimètre — the 10th part of a mètre.
Kilogramme — 1,000 grammes, &c.

The *are* is the element of square measure, being a square decamètre, equal to 3·955 English perches.

The *stère* is the element of cubic measure, and contains 35·317 cubic feet English.

The *litre* is the element of all measures of capacity. It is a cubic decimètre, and equals 2·1135 English pints. 100 litres make the hectolitre, which equals 26·419 wine gallons, or 2·838 Winchester bushels.

SYSTEME USUEL, OR BINARY SYSTEM. — This new system has the metrical standards for its basis, but their divisions are binary, that is, by 2, 4, 8, &c; and instead of the new vocabulary, the names of the *ancient* weights and measures are used, annexing the term *usuel* to each. Thus the half kilogramme is called the livre usuelle, and the double mètre, the toise usuelle.

The following Tables show the proportions between the new or metrical French system and the English system: —

Comparison of FRENCH and ENGLISH WEIGHTS and MEASURES, containing the New or Metrical Weights and Measures of France, with their Proportion to those of England, both according to the Decimal System and the Système usuel.

DECIMAL SYSTEM.

Long Measures.

French.		English.
Millimètre	=	0·03937 inches.
Centimètre	=	0·39371 —
Decimètre	=	3·93710 —
Mètre	=	39·37100 —
Decamètre	=	32·80916 feet.
Hectomètre	=	328·09167 —
Kilomètre	=	1093·63890 yards.
Myriamètre	=	10936·38900 —
		or 6 miles 1 furlong 28 poles.

Solid Measures.

Décistère	=	3·5317 cubic feet.
Stère (a cubic mètre)	=	35·3174 —
Décastère	=	353·1741 —

Measures of Capacity.

Militre	= 0·06103 cubic inches.
Centilitre	= 0·61028 —
Décilitre	= 6·10280 —
Litre (a cubic decimètre)	= 61·02803 — or 2·1135 wine pints.
Décalitre	= 610·28028 cubic inches, or 2·642 wine gallons.
Hectolitre	= 3·5317 cubic feet, or 26·419 wine gallons, 22 Imperial gallons, or 2·839 Winchester bushels.
Kilolitre	= 35·3171 cubic feet, or 1 tun and 12 wine gallons.
Myrialitre	= 353·17146 cubic feet.

Superficial Measures.

Centiare	= 1·1960 sq. yards.
Are (a square decamètre)	= 119·6046 —
Décare	= 1196·0460 —
Hectare	= 11960·4604 — or 2 acres 1 rood 35 perches.

Weights.

Miligramme	= 0·0154 grains.
Centigramme	= 0·1543 —
Décigramme	= 1·5434 —
Gramme	= 15·4340 —
Décagramme	= 154·3402 — or 5·64 drams avoirdupois
Hectogramme	= 3·2154 oz. Troy, or 3·527 oz. avoirdupois.
Kilogramme	= 2 lbs. 8 oz. 3 dwt. 2 grs. Troy, or 2 lbs. 3 oz. 4·652 drams avoirdupois
Myriagramme	= 26·795 lbs. Troy, or 22·0485 lbs. avoirdupois.
Quintal	= 1 cwt. 3 qrs. 25 lbs. nearly.
Millier, or Bar	= 9 tons 16 cwt. 3 qrs. 12 lbs.

With halves and quarters in proportion.

Ancient Weights and Measures. — This subject is involved in considerable difficulty; and to enter fully into it would be quite inconsistent with our objects and limits. But the following details, abstracted from the best authorities, may be useful to such of our readers as have occasion to look into the ancient authors.

TABLE OF VARIOUS ANCIENT WEIGHTS (*according to different Authorities*).

	English Troy Grains.	
Attic obolus	8·2	Christiani.
	9·1	Arbuthnot.
Attic drachma	51·9	Chr.
	54·6	Arb.
	69	Paucton.
Lesser Mina	3,892	Chr.
Greater Mina	5,189	Chr.
	5,464	Arb.
	6,900	Pauc.
Medial Mina	6,994 gr. Arb.	
Talent = 60 minæ =	½ cwt. English.	
Old Greek drachm	146·5 Eng. Troy gr. Arb.	
	62·5 = Roman denarius, Arb.	
Old Greek mina	6,425	Do.
Egyptian mina	8,326	Do.
Ptolemaic mina of Cleopatra	8,985	Do.
Alexandrian mina of Dioscorides	9,992	Do.
Roman denarius	51·9 = ⅓ Rom. oz.	Chr.
	62·5 = ¼ Rom. oz.	Arb.
Denarius of Nero	54	Pauc.
Papyrius	61·7	Do.
Ounce	415·1	Chr.
	437·2	Arb.
	431·2	Pauc.
Pound of 10 oz.	4,150	Chr.
12 oz.	4,981½	Chr.
	5,246	Arb.
	5,174·4	Pauc.

WELD, OR DYER'S WEED (Ger. *Wau;* Du. *Wouw, Wouwe;* Fr. *Gaude;* It. *Guadarella;* Lat. *Luteola*), is an imperfect biennial, with small fusiform roots, and a leafy stem from 1 to 3 feet in height. It is a native of Britain, Italy, and various parts of Europe; and is cultivated for the sake of its stalk, flowers, and leaves, which are employed in the dyeing of yellow, whence its botanical name *Reseda luteola.* Weld requires the growth of nearly 2 summers before it comes to maturity; and the crop is liable to fail from so many causes, and is besides so exhausting, that its cultivation is by no means profitable, and is only carried on, in this country at least, to a small extent, principally in Essex. Weld is preferred to all other substances in giving the lively green lemon yellow. It is, however, expensive; and it is found, when employed in topical dyeing, to degrade and interfere with madder colours more than other yellows, and to stain the parts wanted to be kept white. Hence quercitron bark is now employed in calico printing, to the almost total exclusion of weld. It is still, however, employed in dyeing silk a golden yellow, and in paper staining.—(*Loudon's Ency. of Agriculture; Bancroft on Colours,* vol. ii. pp. 95—100.; *Rees's Cyclopædia.*)

WHALEBONE, a substance of the nature of horn, adhering in thin parallel laminæ to the upper jaw of the whale. These vary in size from 3 to 12 feet in length; the breadth of the largest at the thick end, where they are attached to the jaw, is about a foot. They are extremely elastic. All above 6 feet in length is called *size bone.*

Whalebone bore anciently a very high price, when the rigid stays and the expanded hoops of our grandmothers produced an extensive demand for this commodity. The Dutch have occasionally obtained 700*l.* per ton, and were accustomed to draw 100,000*l.* annually from England for this article. Even in 1763, it brought 500*l.*; but soon after fell, and has never risen again to the same value. During the present century the price has varied between 60*l.* and 300*l.*; seldom falling to the lowest rate, and rarely exceeding 150*l.* Mr. Scoresby reckoned the price, in the 5 years ending with 1818, at 90*l.*: in 1834 it amounted to from 130*l.* to 145*l.*; and at present (1844) it varies from 280*l.* for Southern to 350*l.* for Northern. This is for what is called *size bone,* or such pieces as measure 6 feet or upwards in length; those below this standard are usually sold at half price. It may appear singular that whalebone should rise, while oil has been so decidedly lowered; but the one change, it is obvious, causes the other. Oil, being the main product of the fishery, regulates its extent; which being diminished by the low price, the quantity of whalebone is lessened, while the demand for it continuing as great as before, the value consequently rises. It is, however, probable that the present high price of bone may, in some degree, tend to revive the fishery

It may be worth while to remark, as evincing the ignorance that at one time prevailed with respect to the whale, that, by an old feudal law, the *tail* of all whales belonged to the queen, as a perquisite, to furnish her Majesty's wardrobe with whalebone!—(*Blackstone,* vol. i. p. 233.)

WHALE (COMMON), the *Balæna mysticetus* of Linnæus, a marine animal of the cetaceous species, and the largest of all those with which men are acquainted. The whale has sometimes, it is affirmed, been found 160 feet in length; but this is most probably an exaggeration. In the Northern seas, it is at present seldom found above 60 feet long: being now, however, generally killed before it arrives at its full growth, this is no proof that the animal may not formerly have attained to a much larger size. The bodies of whales are covered, immediately under the skin, with a layer of fat or *blubber,* which, in a large fish, is from 12 to 18 inches thick. In young whales, this fatty matter resembles hog's lard; but in old ones it is of a reddish colour. This is the valuable part of the whale; and the desire to possess it has prompted man to attempt the capture of this mighty animal. The blubber yields, by expression, nearly its own weight of a

thick viscid oil (train oil). The common whale is now rarely found, except within the Arctic circle; but at a former period it was not unfrequently met with on our coasts. There is a good account of the common whale, and of the manner in which the fishery is carried on, in Mr. John Laing's "Voyage to Spitzbergen;" one of the shortest, cheapest, and best of the innumerable books published on this hacknied subject.

The *Physeter macrocephalus*, or black-headed spermaceti whale, is chiefly found in the Southern Ocean. It usually measures about 60 feet in length, and 30 in circumference at the thickest part. The valuable part of the fish is the spongy, oily mass dug from the cavity of the head; this is crude spermaceti; and of it an ordinary sized whale will yield about 12 large barrels.

WHALE FISHERY (NORTHERN). We do not propose entering, in this article, into any details as to the mode in which the fishery is carried on; but mean to confine ourselves to a brief sketch of its history, and value in a commercial point of view.

It is probably true, as has been sometimes contended, that the Norwegians occasionally captured the whale before any other European nation engaged in so perilous an enterprise. But the early efforts of the Norwegians were not conducted on any systematic plan, and should be regarded only in the same point of view as the fishing expeditions of the Esquimaux. The Biscayans were certainly the first people who prosecuted the whale fishery as a regular commercial pursuit. They carried it on with vigour and success in the 12th, 13th, and 14th centuries. In 1388, Edward III. relinquished to Peter de Puyanne a duty of 6*l.* sterling a whale, laid on those brought into the port of Biarritz, to indemnify him for the extraordinary expenses he had incurred in fitting out a fleet for the service of his Majesty. This fact proves beyond dispute that the fishery carried on from Biarritz at the period referred to must have been very considerable indeed; and it was also prosecuted to a greater or less extent from Cibourre, Vieux Boucan, and subsequently from Rochelle and other places.*

The whales captured by the Biscayans were not so large as those that are taken in the Polar seas, and are supposed to have been attracted southward in pursuit of herrings. They were not very productive of oil, but their flesh was used as an article of food, and the whalebone was applied to a variety of useful purposes, and brought a very high price.

This branch of industry ceased long since, and from the same cause that has occasioned the cessation of the whale fishery in many other places—the want of fish. Whether it were that the whales, from a sense of the dangers to which they exposed themselves in coming southwards, no longer left the Icy Sea, or that the breed had been nearly destroyed, certain it is, that they gradually became less numerous in the Bay of Biscay, and at length ceased almost entirely to frequent that sea; and the fishers being obliged to pursue their prey upon the banks of Newfoundland and the coasts of Iceland, the French fishery rapidly fell off.

The voyages of the Dutch and English to the Northern Ocean, in order, if possible, to discover a passage through it to India, though they failed of their main object, laid open the haunts of the whale. The companions of Barentz, who discovered Spitzbergen in 1596, and of Hudson, who soon after explored the same seas, represented to their countrymen the amazing number of whales with which they were crowded. Vessels were in consequence fitted out for the Northern whale fishery by the English and Dutch, the harpooners and a part of the crew being Biscayans. They did not, however, confine their efforts to a fair competition with each other as fishers. The Muscovy Company obtained a royal charter, prohibiting the ships of all other nations from fishing in the seas round Spitzbergen, on pretext of its having been first discovered by Sir Hugh Willoughby. There can, however, be no doubt that Barentz, and not Sir Hugh, was its original discoverer; though, supposing that the fact had been otherwise, the attempt to exclude other nations from the surrounding seas, on such a ground, was not one that could be tolerated. The Dutch, who were at the time prompt to embark in every commercial pursuit that gave any hopes of success, eagerly entered on this new career, and sent out ships fitted equally for the purposes of fishing, and of defence against the attacks of others. The Muscovy Company having attempted to vindicate its pretensions by force, several encounters took place between their ships and those of the Dutch. The conviction at length became general, that there was room enough for all parties in the Northern seas; and in order to avoid the chance of coming into collision with each other, they parcelled Spitzbergen and the adjacent ocean into districts, which were respectively assigned to the English, Dutch, Hamburghers, French, Danes, &c.

The Dutch, being thus left to prosecute the fishery without having their attention diverted by hostile attacks, speedily acquired a decided superiority over all their competitors.

When the Europeans first began to prosecute the fishery on the coast of Spitzbergen, whales were everywhere found in vast numbers. Ignorant of the strength and strata-

* See *Mémoire sur l'Antiquité de la Pêche de la Baleine, par Noel*, 12mo. Paris, 1795.

gems of the formidable foe by whom they were now assailed, instead of betraying any symptoms of fear, they surrounded the ships and crowded all the bays. Their capture was in consequence a comparatively easy task, and many were killed which it was afterwards necessary to abandon, from the ships being already full.

While fish were thus easily obtained, it was the practice to boil the blubber on shore in the North, and to fetch home only the oil and whalebone. And, perhaps, nothing can give a more vivid idea of the extent and importance of the Dutch fishery in the middle of the 17th century, than the fact, that they constructed a considerable village, the houses of which were all previously prepared in Holland, on the Isle of Amsterdam, on the northern shore of Spitzbergen, to which they gave the appropriate name of *Smeerenberg* (from *smeeren*, to melt, and *berg*, a mountain). This was the grand rendezvous of the Dutch whale ships, and was amply provided with boilers, tanks, and every sort of apparatus required for preparing the oil and the bone. But this was not all. The whale fleets were attended with a number of provision ships, the cargoes of which were landed at Smeerenberg; which abounded during the busy season with well-furnished shops, good inns, &c.; so that many of the conveniences and enjoyments of Amsterdam were found within about 11 degrees of the Pole! It is particularly mentioned, that the sailors and others were every morning supplied with what a Dutchman regards as a very great luxury — *hot rolls* for breakfast. Batavia and Smeerenberg were founded nearly at the same period, and it was for a considerable time doubted whether the latter was not the more important establishment. — (*De Reste Histoire des Pêches, &c.* tome i. p. 42.)

During the flourishing period of the Dutch fishery, the quantity of oil made in the North was so great that it could not be carried home by the whale ships; and every year vessels were sent out in ballast to assist in importing the produce of the fishery.

But the same cause that had destroyed the fishery of the Biscayans, ruined that which was carried on in the immediate neighbourhood of Spitzbergen. Whales became gradually less common, and more and more timid and difficult to catch. They retreated first to the open seas, and then to the great banks of ice on the eastern coast of Greenland. When the site of the fishery had been thus removed to a very great distance from Spitzbergen, it was found most economical to send the blubber direct to Holland. Smeerenberg was in consequence totally deserted, and its position is now with difficulty discoverable.

But though very extensive, the Dutch whale fishery was not, during the first 30 years of its existence, very profitable. This arose from the circumstance of the right to carry it on having been conceded, in 1614, to an exclusive company. The expense inseparable from such great associations, the wastefulness and unfaithfulness of their servants, who were much more intent upon advancing their own interests than those of the company, increased the outlays so much, that the returns, great as they were, proved little more than adequate to defray them, and the fishery was confined within far narrower limits than it would otherwise have reached. But after various prolongations of the charter of the first company, and the formation of some new ones, the trade was finally thrown open in 1642. The effects of this measure were most salutary, and afford one of the most striking examples to be met with of the advantages of free competition. Within a few years the fishery was vastly extended; and though it became progressively more and more difficult from the growing scarcity of fish, it proved, notwithstanding these disadvantages, more profitable to the private adventurers than it had ever been to the company; and continued for above a century to be prosecuted with equal energy and success. The famous John de Witt has alluded as follows to this change in the mode of conducting the trade: —

"In this respect," says he, "it is worthy of observation, that the authorised Greenland Company made heretofore little profit by their fishery, because of the great charge of setting out their ships; and that the train oil, blubber, and whale fins were not well made, handled, or cured; and being brought hither and put into warehouses, were not sold soon enough, nor to the Company's best advantage. Whereas now that every one equips their vessels at the cheapest rate, follow their fishing diligently, and manage all carefully, the blubber, train oil, and whale fins are employed for so many uses in several countries, that they can sell them with that conveniency, that though *there are now 15 ships for 1 that formerly sailed out of Holland on that account*, and consequently each of them could not take so many whales as heretofore, and notwithstanding the new prohibition of France and other countries to import these commodities, and though there is greater plenty of them imported by our fishers — yet those commodities are so much raised in the value above what they were whilst there was a company, that the common inhabitants do exercise that fishery with profit, to the much greater benefit of our country than when it was (under the management of a company) carried on but by a few."—(*True Interest of Holland*, p. 63. 8vo. ed. London, 1746.)

The private ships sent by the Dutch to the whale fishery were fitted out on a principle that secured the utmost economy and vigilance on the part of every one connected with them. The hull of a vessel was furnished by an individual, who commonly took upon himself the office of captain; a sail-maker supplied the sails, a cooper the casks, &c. The parties engaged as adventurers in the undertaking. The cargo being brought to Holland and disposed of, each person shared in the produce according to his proportion of the outfit. The crew was hired on the same principle; so that every one had a motive to exert himself, to see that all unnecessary expenses were avoided, and that those that were necessary were confined within the narrowest limits. This practice has been imitated to some extent in this and some other countries, but in none has it been carried so far as in Holland. It appears to us, that it might be advantageously introduced into other adventures.

When in its most flourishing state, towards the year 1680, the Dutch whale fishery employed about 260 ships, and 14,000 sailors.

The English whale fishery, like that of Holland, was originally carried on by an exclusive association. The Muscovy Company was, indeed, speedily driven from the field; but it was immediately succeeded by others, that did not prove more fortunate. In 1725, the South Sea Company embarked largely in the trade, and prosecuted it for 8 years; at the end of which, having lost a large sum, they gave it up. But the legislature, having resolved to support the trade, granted, in 1732, a bounty of 20*s.* a ton to every ship of more than 200 tons burden engaged in it; but this premium being insufficient, it was raised, in 1749, to 40*s.* a ton, when a number of ships were fitted out, as much certainly in the intention of catching the bounty as of catching fish. Deceived by the prosperous appearance of the fishery, parliament imagined that it was firmly established, and in 1777 the bounty was reduced to 30*s.* The effects of this reduction showed the factitious nature of the trade, the vessels engaged in it having fallen off in the course of the next 5 years from 105 to 39! To arrest this alarming decline, the bounty was raised to its old level in 1781, and of course the trade was soon restored to its previous state of apparent prosperity. The hostilities occasioned by the American war reduced the Dutch fishery to less than half its previous amount, and gave a proportional extension to that of England. The bounty, which had in consequence become very heavy, was reduced, in 1787, to 30*s.* a ton; in 1792 in was further reduced to 25*s.*; and in 1785 it was reduced to 20*s.*, at which sum it continued till 1824, when it ceased.

It appears from accounts given in Macpherson's *Annals of Commerce* (vol. iii. p. 511., vol. iv. p. 130.), that the total bounties paid for the encouragement of the whale fishery, in the interval between 1750 and 1788, amounted to no less than 1,577,935*l.* It will be seen from the official account which follows, that there are no means of furnishing any accurate account of the sums paid as bounties from the year 1789 to 1813 inclusive; but it is, notwithstanding, abundantly certain that the total bounties paid during the period from 1789 to 1824 considerably exceeded 1,000,000*l.* Here, then, we have a sum upwards of TWO MILLIONS AND A HALF laid out since 1750 in promoting the whale fishery. Now we believe that if we estimate the entire average value of the *gross* produce of the Northern whale fishery (and it is to it only that the preceding statements apply) during the last 3 or 4 years, at 100,000*l.* a year, we shall be considerably beyond the mark. But had the 2,500,000*l.* expended in bolstering up this branch of industry been laid out as capital in any ordinary employment, it would have produced 125,000*l.* a year of *nett* profit; being 25,000*l.* a year more than the total value of the produce of the fishery, without allowing anything for the capital wasted, and ships lost in carrying it on. Whatever, therefore, may be the value of the whale fishery as a nursery for seamen, it is absurd to regard it as contributing anything to the public wealth. The remark of Dr. Franklin, that he who draws a fish out of the sea draws out a piece of silver, is ever in the mouths of those who are clamouring for bounties and protection against competition. But we apprehend that even Franklin himself, sagacious as he was, would have found it rather difficult to show how the wealth of those is to be increased, who, in fishing up one piece of silver, are obliged to throw another of greater value into the sea. We subjoin

It is not even certain whether the expenditure of 2,500,000*l.* upon bounties would really have had the effect of making the whale fishery be carried on upon a considerable scale, but for the occupation of Holland by the French, and the consequent hostilities in which she was involved with this country. These did more to promote and consolidate the British fishery than anything else. The war entirely annihilated that of the Dutch: and our government having wisely offered to the fishers of Holland all the immunities enjoyed by the citizens of Great Britain in the event of their settling amongst us, many availed themselves of the invitation, bringing with them their capital, industry, and skill. In consequence of this signal encouragement, the whale fishery of England was prosecuted with greater success than at any previous period; and at the termination of the late war, in 1815, there were nearly 150 valuable ships and about 6,000 seamen engaged in the Northern fishery, and about 30 ships and 800 men in that to the South.

After peace was restored, the English capitalists and others became apprehensive lest the Dutch should engage anew with their ancient vigour and success in the whale fishery. But these apprehensions were without any real foundation. The Hollanders, during the 30 years they had been excluded from the sea, had lost all that practical acquaintance with the details of the fishery, for which they had long been so famous, and which is so essential to its success. The government attempted to rouse their dormant energies by the offer of considerable premiums and other advantages to those who embarked in the trade. Three companies were in consequence formed for carrying it on; 1 at Rotterdam, 1 at Harlingen, and 1 in South Holland. But their efforts were limited, and altogether unfortunate. In 1826, the company of South Holland was dissolved, while that of Harlingen despatched 4 ships, and that of Rotterdam 2. In 1827, Rotterdam sent only 1 ship, and Harlingen 2. In 1828, 1 solitary ship sailed from Holland — a feeble and last effort of the company of Harlingen! and since then a ship or two has been occasionally fitted out by private adventurers, but generally without success.

Such has been the fate of the Dutch whale fishery. The attempts to revive it failed, not because the ships sent out were ill calculated for the service, but because they were manned by unskilful seamen, and fish were deficient. In the early ages of the fishery, the former difficulty would have been got over, because, owing to the fewness of competitors, and the scanty supply of oil and whalebone, even a small cargo brought a high price; but at present, when the fishery is prosecuted on a very large scale and at a very low rate of profit by the English, Americans, and Hamburghers, no new competitor coming into the field could expect to maintain himself unless he had nearly equal advantages. The Dutch have, therefore, done wisely in withdrawing from the trade. Any attempt to establish it by the aid of bounties and other artificial encouragements would be one of which the ultimate success must be very doubtful, and which could lead to no really useful result. During the 20 years preceding the late French war, the fishery of Holland was gradually declining, and had, in a great measure, ceased to be profitable. It would be folly to endeavour to raise anew, and at a great expense, a branch of industry that had become unproductive at a former period, when there is no ground for supposing that it would be more productive at this moment.

We have already noticed several changes of the localities in which the whale fishery has been carried on at different periods; and within these few years others of the same kind have taken place. The Dutch fishers first began to frequent Davis's Straits in 1719; and as the whales had not hitherto been pursued into this vast recess, they were found in greater numbers than in the seas round Spitzbergen. From about this period it was usually resorted to by about 3-10ths of the Dutch ships. It was not till a comparatively late period that Davis's Straits began to be frequented by English whalers; and down to 1820, when Captain Scoresby published his elaborate and valuable work on the whale fishery, that carried on in the Greenland seas was by far the most considerable. But it will be seen from the subjoined account, that from 1826 down to 1837 the Greenland seas were nearly abandoned. This was principally a consequence of the greater abundance of whales in Davis's Straits, but it was, also, in part owing to the various discoveries made by the expeditions fitted out by government for exploring the seas and inlets to the westward of Davis's Straits and Baffin's Bay having made the fishers acquainted with several new and advantageous situations for the prosecution of their business. Since 1837, however, the few ships that have been sent out have gone mostly to the Greenland seas.

The sea in Davis's Straits is less incommoded with field ice than the Greenland and Spitzbergen seas, but it abounds with icebergs; and the fishery, when carried on in Baffin's Bay and Lancaster Sound, is more dangerous, perhaps, than any that has hitherto been attempted.

The Northern fishery declined rapidly down to 1842, from which period it continued nearly stationary down to 1846, when it revived a little.

It should, however, be observed that the fishery is now rather for seals than for whales; the value of the produce obtained from the former considerably exceeding the value of that obtained from the latter.

During 1857, we imported 5,410 tuns spermaceti oil, which were almost wholly retained for consumption. During the same year the imports and exports of train oil were respectively 15,765 and 2,754 tuns.

For a long time past the whale fishery has been more allied to a gambling than to an industrious pursuit, so that its decline is not really to be regretted. The extensive use of gas, and the increased imports of vegetable oils, occasioned by the reduction of the oppressive duties with which they were formerly affected, have prevented the diminution in the supply of whale oil from having any bad effect. Subjoined is

An Account of the Number and Tonnage of the Vessels that cleared out for the Whale Fishery in 1830 and 1857, specifying, also, the Ports from which the Vessels were sent, and the Number sent from each.

It is seen from this table, that there has been a singular change in the ports from which the Northern fishery has been carried on. In London were undertaken all the discoveries which led to its establishment; and the great companies formed in that city enjoyed for a lengthened period nearly a complete monopoly of the business. So late as 1780 and 1790, the metropolis sent out 4 times the number of vessels that sailed from any other port; but it was observed that her fishery was, on the whole, less fortunate than that of the new rivals which had sprung up; and her merchants were so much discouraged, that in Mr. Scoresby's time they equipped only 17 or 18 vessels. They have wholly abandoned the trade, and have not sent out a single ship since 1836.

Hull early became a rival to London, having sent out vessels at the very commencement of the fishery. Though checked at first by the monopoly of the great companies, as soon as the trade became free she prosecuted it with distinguished success. Towards the end of last century, she attained, and preserved down to 1837, the character of the first whale-fishing port in Great Britain. In 1819 she sent out 65 ships, and her imports of oil amounted in 1820 to 8,086 tuns. But such and so rapid was the decline of the fishery in the interval, that from 1838 to 1845 she only sent out a solitary ship! In 1846, however, the business took a start; and from that year down to the present time Hull has sent from 10 to 13 or 14 ships. But she is not supposed to have made anything by this pursuit.—(See Docks—Hull, p. 528.) At present, as seen above, Peterhead is the principal seat of the fishery.

WHALE FISHERY (SOUTHERN).—This consists of three distinct branches; viz., 1st, the catch of the spermaceti whale, which furnishes the valuable substance called spermaceti (see the term); 2d, that of the common black whale of the Southern seas; and, 3d, that of the sea elephant, or southern walrus.

The spermaceti whale (*Physeter macrocephalus*) is found in all tropical climates, and especially on the coasts of New Zealand and the adjoining seas. The ordinary duration of the voyage of a ship from England, employed in this department of the fishery, is about 3 years.

The common black whale of the Southern seas (*Physeter microps*) is met with in various places, but principally on the coast of Brazil; in the bays on the west coast of Africa; and in some of the bays of New South Wales, Van Diemen's Land, &c.

Sea elephants (intermediate between the walrus of the Northern seas and the seal) are principally met with in the seas round the Islands of Desolation, South Georgia, and South Shetland, the coast of California, &c. Vast numbers of these animals are annually captured; vessels frequently load entirely with them; and they are believed to furnish more oil than the common South Sea whale. The oil of the black whale and that of the sea elephant are both known in the market by the name of southern oil,

and they are so very similar that those most versed in the trade can with difficulty distinguish the one from the other. Hence ships commonly engage indifferently in either fishing as opportunity offers. The usual duration of the voyage of a ship from England in either of the last two departments, or in the two combined, varies from 12 to 18 months.

The South Sea fishery was not prosecuted by the English till about the beginning of the American war; and as the Americans had already entered on it with vigour and success, 4 American harpooners were sent out in each vessel. In 1791, 75 whale ships were sent to the South Sea; but the number has not been so great since; and latterly it has been unprosperous and declining, in consequence partly of the competition of the colonists in Australia, who are incomparably better situated for the prosecution of this branch of industry, and partly of that of the Americans. The *Macrocephalus*, or spermaceti whale, is particularly abundant in the neighbourhood of the Spice Islands; and Mr. Crawfurd, in his valuable work on the *Eastern Archipelago* (iii. 447.), entered into some details to show that the fishery carried on there was of greater importance than the spice trade. Unluckily, however, the statements on which Mr. Crawfurd founded his comparisons were entirely erroneous, neither the ships nor the men employed amounting to more than 1-5th or 1-6th part of what he represented. And the trade has now become quite insignificant. It is sufficient to mention, in proof of this statement, that in 1857 the Southern fishery supplied us with only 291 tuns oil!

American Whale Fishery. — For a lengthened period, the Americans have prosecuted the whale fishery with greater vigour and success than, perhaps, any other people. They commenced it in 1690, and for about 50 years found an ample supply of fish on their own shores. But the whale having abandoned them, the American navigators entered with extraordinary ardour into the fisheries carried on in the Northern and Southern Oceans. From 1758 to 1775, Massachusetts employed annually 183 vessels, carrying 13,820 tons, in the former; and 121 vessels, carrying 14,026 tons, in the latter. Mr. Burke, in his famous speech on American affairs in 1774, adverted to this wonderful display of daring enterprise as follows :—

"As to the wealth," said he, "which the colonies have drawn from the sea by their fisheries, you had all that matter fully opened at your bar. You surely thought these acquisitions of value, for they seemed to excite your envy; and yet the spirit by which that enterprising employment has been exercised ought rather, in my opinion, to have raised esteem and admiration. . And pray, Sir, what in the world is equal to it? Pass by the other parts, and look at the manner in which the New England people carry on the whale fishery. While we follow them among the trembling mountains of ice, and behold them penetrating into the deepest frozen recesses of Hudson's Bay and Davis's Straits; while we are looking for them beneath the Arctic circle, we hear that they have pierced into the opposite region of polar cold; that they are at the antipodes, and engaged under the frozen serpent of the South. Falkland Island, which seemed too remote and too romantic an object for the grasp of national ambition, is but a stage and resting-place for their victorious industry. Nor is the equinoctial heat more discouraging to them than the accumulated winter of both poles. We learn, that while some of them draw the line or strike the harpoon on the coast of Africa, others run the longitude and pursue their gigantic game along the coast of Brazil. No sea, but what is vexed with their fisheries; no climate that is not witness of their toils. Neither the perseverance of Holland, nor the activity of France, nor the dexterous and firm sagacity of English enterprise, ever carried this most perilous mode of hardy industry to the extent to which it has been pursued by this recent people; a people who are still in the gristle, and not hardened into manhood."

The unfortunate war that broke out soon after this speech was delivered, checked for a while the progress of the fishery; but it was resumed with renewed vigour as soon as peace was restored. The American fishery has been principally carried on from Nantucket and New Bedford in Massachusetts; and for a considerable time past the ships have mostly resorted to the Southern Seas. "Although," says Mr. Pitkin, "Great Britain has, at various times, given large bounties to her ships employed in this fishery, yet the whalemen of Nantucket and New Bedford, unprotected and unsupported by anything but their own industry and enterprise, have generally been able to meet their competitors in a foreign market."—(*Commerce of the U. States*, 2d. ed. p. 46.)

At present (1858) the American whale fishery is of very great extent and importance. It employs about 600 ships, of the aggregate burden (30th June 1858) of 198,593 tons, principally belonging to New Bedford, Nantucket, and other ports in Massachusetts, Rhode Island, and Connecticut. A very large portion of this immense fleet is employed in the Pacific; and the facilities which the possession of San Francisco

affords for the fitting out and repair of ships for this branch of the business, have given it an additional stimulus. On the whole, however, it appears more than probable that the American whale fishery has attained to, or rather, passed its zenith. The same cause that led to the cessation of the Biscay fisheries, and to those round Spitzbergen, is operating throughout the wide extent of the Pacific. The supply of whales is everywhere becoming exhausted. And the risks and losses that have always attended the trade, and given to it so much of a gambling character, are being constantly increased. Hence the probability seems to be that, despite its present magnitude, the fishery of the U. States will eventually experience the fate of that of Holland and England. The Sandwich Islands are at present the great resort of the ships engaged in the Southern fishery. And the accounts from thence confirm its decline. There is as much enterprise and energy as ever, but the "gigantic game" is deficient.

Account of the Value of the Exports of the Whale Fishery of the United States during each of the 4 Years ending June 30, 1857.

French Whale Fishery. — France, which preceded the other nations of Europe in the whale fishery can hardly be said, for many years past, to have had much share in it. In 1784, Louis XVI. endeavoured to revive the fishery. With this view he fitted out 6 ships at Dunkirk on his own account, which were furnished with harpooners and a number of experienced seamen brought at a great expense from Nantucket. The adventure was more successful than could have been reasonably expected, considering the auspices under which it was carried on. Several private individuals followed the example of his Majesty, and in 1790 France had about 40 ships employed in the fishery. The revolutionary war destroyed every vestige of this rising trade. But since the peace, government has made great efforts for its renewal; and high bounties have been granted to all vessels fitted out for the whale fisheries, but especially to those engaged in the sperm fishery. These, however, have not been so successful in forcing ships into this trade as might have been anticipated; for it appears from the official accounts that, in 1857, only 4 ships, of the aggregate burden of 1,867 tons, arrived in the ports of France from the whale fishery, bringing with them 933,388 kilog. of oil. (*Administration des Douanes*, 1857, p. 348.)

WHARF, a sort of quay, constructed of wood or stone, on the margin of a roadstead or harbour, alongside of which ships or lighters are brought for the sake of being conveniently loaded or unloaded.

There are 2 denominations of wharfs, viz., *legal quays* and *sufferance wharfs*. The former are certain wharfs in all sea-ports, at which all goods are required by the 1 Eliz. c. 11., to be landed and shipped, and they were set out for that purpose by commission from the Court of Exchequer, in the reign of Charles II. and subsequent sovereigns. Many others have been legalised by act of parliament. In some ports, as Chepstow, Gloucester, &c., certain wharfs are deemed legal quays by immemorial practice, though not set out by commission, or legalised by act of parliament.

Sufferance wharfs are places where certain goods may be landed and shipped, such as hemp, flax, coal, and other bulky goods, by special sufferance granted by the Crown for that purpose.

The goods that may be landed at the different wharfs are specified by the Commissioners of Customs, and depend partly on their situation, and partly on the character and capability of the warehouses connected with them.

WHARFAGE, the fee paid for landing goods on a wharf, or for shipping them off.

The stat. 22 Chas. 2. c. 11., after providing for the establishment of wharfs and quays, makes it lawful for any person to lade or unlade goods, on paying wharfage and cranage at the rates appointed by the king in council.

WHEAT (Ger. *Weitzen*; Du. *Tarw*; Da. *Hvede*; Sw. *Hvete*; Fr. *Froment, Bled, Blé*; It. *Grano, Formento*; Sp. and Port. *Trigo*; Rus. *Pschenzia*; Pol. *Pszenica*), a species of bread corn (*Triticum* Lin.), by far the most important of any cultivated in Europe. We are totally ignorant of the country whence this valuable grain was first derived; but it was very early cultivated in Sicily. It is raised in almost every part of the temperate zones, and in some places as high as 2,000 feet above the level of the sea.

The kinds of wheat sown are numerous, but they may be classed under 4 heads: viz. cone or bearded wheat, which, however, is now little cultivated; white wheat, of which there are innumerable varieties, the *white Dantzic* being considered one of the best; red wheat, which is seldom sown where the climate is good and early, and the land in proper condition; and spring wheat. A greater number of people are nourished by rice than by wheat; but owing to the greater quantity of gluten which the latter contains, it makes by far the best bread. Rye comes nearer to wheat in its bread-making qualities than any other sort of grain; still, however, it is very inferior to it. The finest samples of wheat are small in the berry, thin skinned, fresh, plump, and bright, slipping readily through the fingers.

Being very extensively cultivated on soils of very various qualities, and frequently with very imperfect preparation, the produce of wheat crops in Great Britain varies from about 12 to 56 bushels per acre.

The counties most distinguished for the quantity and quality of their wheat are, Kent, Essex, Suffolk, Rutland, Hertfordshire, Berkshire, Hampshire, and Herefordshire, in England; and Berwickshire, and the Lothians, in Scotland. In the northern counties it is, speaking generally, of an inferior quality; being cold to the feel, dark coloured, thick skinned, and yielding comparatively little flour. In the best wheat counties, and in good years, the weight of a Winchester bushel of wheat is from 60 to 62 lbs. In the Isle of Sheppey, in Kent (where, perhaps, the best samples of wheat sent to the London market are produced), this grain, in some favourable seasons, weighs 64 lbs. a bushel. Where the climate is colder, wetter, or more backward, or in bad seasons, the weight of the bushel of wheat is not more than 56 or 57 lbs. It is calculated that the average weight of the bushel of good English wheat is 58½ lbs.; and that the average yield of flour is 13 lbs. of flour to 14 lbs. of grain. — (See Mr. Stevenson's very valuable article on *England*, in *Brewster's Encyclopædia*, vol. viii. p. 720.; *Loudon's Ency. of Agriculture, &c.*)

For a view of the regulations with respect to the importation and exportation of wheat, &c., see Corn Laws and Corn Trade.

WHISKY, a spirit obtained by distillation from corn, sugar, or molasses, though generally from the former. Whisky is the *national spirit*, if we may so term it, of Scotland and Ireland; but that distilled in the former is generally reckoned superior to that of the latter. — (See Spirits.)

WINE (Ger. *Wein*; Fr. *Vin*; It. and Sp. *Vino*; Port. *Vinho*; Rus. *Wino, Winogradnoe winoe*; Lat. *Vinum*; Gr. Οινος; Arab. *Khumr*), the fermented juice of the grape, or berries of the vine (*Vitis vinifera*).

The vine is indigenous to Persia and the Levant; but it is now found in most temperate regions. The limits within which its cultivated in the northern hemisphere of the Old World vary from about 15° to 48° and 52°; but in North America it is not cultivated farther north than 38° or 40°. It is rarely grown at a greater altitude than 3,000 feet. From Asia the vine was introduced into Greece, and thence into Italy. The Phoceans, who founded Marseilles, carried the vine to the south of France; but it is doubtful whether it was introduced into Burgundy till the age of the Antonines.* The species of *Vitis* indigenous to North America is very different from the *Vitis vinifera*. In favourable seasons, the vine ripens in the open air in England; and in the eleventh and twelfth centuries, considerable quantities of inferior wine were made from native grapes. Vineyards are now, however, unknown in this country; but the grapes raised in hot-houses, and used in desserts, are excellent.

The vine grows in every sort of soil; but that which is light and gravelly seems best suited for the production of fine wines. It succeeds extremely well in volcanic countries. The best wines of Italy are produced in the neighbourhood of Vesuvius: the famous Tokay wine is also made in a volcanic district, as are several of the best French wines; many parts of the south of France bearing evident marks of extinct volcanoes. Hermitage

* The ancient writers give the most contradictory accounts with respect to the introduction of the vine into Gaul. — (See the learned and excellent work of Le Grand d'Aussy, *Vie Privée des Français*, tome ii. pp. 329—333.) The statement given above seems the most probable.

is grown among the *débris* of granite rocks. The most favourable situation for a vineyard is upon a rising ground or hill facing the south-east, and the situation should not be too confined;

——————apertos
Bacchus amat colles.

The art of expressing and fermenting the juice of the grape appears to have been practised from the remotest antiquity. The sacred writings tell us that Noah planted a vineyard soon after the deluge — (*Gen.* ix. 20.); and a modern Latin poet ingeniously represents the vine as a gift from Heaven, to console mankind for the miseries entailed upon them by that grand catastrophe!

Omnia vastatis ergo quum cerneret arvis
Desolata Deus, nobis felicia vini
Dona dedit; tristes hominum quo munere fovit
Reliquias, mundi solatus vite ruinam!
Vanierii Præd. Rusticum, lib. xi.

Species of Wine. — There are many varieties of vines; and this circumstance, combined with differences of soil, climate, mode of preparation, &c., occasions an extreme variety in the species of wine. But between places immediately contiguous to each other, and where even a careful observer would hardly remark any difference, the qualities of the wines, though produced by the same species of grape, and treated in the same way, are often very different. A great deal evidently depends upon the aspect of the vineyard; and it is probable that a good deal depends on peculiarities of soil. But whatever may be the cause, it is certain that there are wines raised in a few limited districts, such as Tokay, Johannisberger, Constantia, the best Burgundy, Champagne, claret, &c., that no art or care has hitherto succeeded in producing of equal goodness in other places.

Ancient Wines. — The wines of Lesbos and Chios among the Greeks, and the Falernian and Cecuban among the Romans, have acquired an immortality of renown. Great uncertainty, however, prevails as to the nature of these wines. Dr. Henderson thinks that the most celebrated of them all, the Falernian, approached, in its most essential characters, near to Madeira. In preparing their wines, the ancients often inspissated them till they became of the consistence of honey, or even thicker. These were diluted with water previously to their being drunk; and, indeed, the habit of mixing wine with water seems to have prevailed much more in antiquity than in modern times.

Modern Wines. — The principal wines made use of in this country are port, sherry, claret, Champagne, Madeira, hock, Marsala, Cape, &c.

Port, the after-dinner wine most commonly used in England, is produced in the province of Upper Douro, in Portugal; and is shipped at Oporto, whence its name. When it arrives in this country, it is of a dark purple or inky colour; has a full, rough body, with an astringent bitter-sweet taste, and a strong flavour and odour of brandy. After it has remained some years longer in the wood, the sweetness, roughness, and astringency of the flavour abate; but it is only after it has been kept 10 or 15 years in bottle, that the odour of the brandy is completely subdued, and the genuine aroma of the wine developed. When kept to too great an age, it becomes tawny, and loses its peculiar flavour. During the process of melioration, a considerable portion of the extractive and colouring matter is precipitated on the sides of the vessels in the form of crust. In some wines this change occurs much earlier than in others.

A large quantity of brandy is always mixed with the wine shipped from Oporto for England. Genuine unmixed port wine is very rarely met with in this country. We have been so long accustomed to the compounded article, that, were it possible to procure it unmixed, it is doubtful whether it would be at all suited to our taste. According to Mr. Brande's analysis, on which, however, owing to the differences in the quality of the wine, no great stress can be laid, port, as used in England, contains about 23 per cent. of alcohol. In 1852, 2,489,350 gallons of port were retained for consumption in the U. Kingdom.

Oporto Wine Company.—The quality of the wine shipped from Oporto has been materially injured by the monopoly so long enjoyed by the Oporto Wine Company. This company was originally founded in 1756, during the administration of the Marquis Pombal. A certain extent of territory was marked out by its charter as the only district on the Douro in which wine could be raised for exportation: the absolute disposal of the wines raised in this district was placed in the hands of the Company, who were further authorised to fix the prices to be paid for them to the cultivators, to prepare them for exportation, and to fix the price at which they should be sold to foreigners! It is obvious that a company with such powers could not be any thing else than an intolerable nuisance. What could be more arbitrary and unjust than to interdict the export of all wines raised out of the limits of the Company's territory? But even in its own district, its proceedings were oppressive and injurious. The Company annually fixed, by a fiat of their own, 2 rates of prices — one for the *vinho de feitoria*, or wine for exportation, the other for *vinho de ramo*, or wine for home consumption — at which the cultivators were to be paid, *whatever might be the quality of their wines!* They had, therefore, no motive to exert superior skill and ingenuity; but contented themselves with endeavouring to raise, at the least possible expense, the greatest supply of *vinho de feitoria*, for which the Company allowed the highest price. All emulation was thus effectually extinguished, and the proprietors who possessed vineyards of a superior quality adulterated their wines with

inferior growths, so as to reduce them to the average standard. "In this way," says Dr. Henderson, "the finer products of the Douro vintages have remained in great measure unknown to us; and port wine has come to be considered as a single liquor, if I may use the expression, of nearly uniform flavour and strength; varying, it is true, to a certain extent in quality, but still always approaching to a definite standard, and admitting of few degrees of excellence. The manipulations, the admixtures — in one word, the *adulterations* — to which the best wines of the Cimo do Douro are subjected, have much the same effect as if all the growths of Burgundy were to be mingled in one immense vat, and sent into the world as the only true Burgundian wine. The delicious produce of Romanée, Chambertin, and the Clos Vougéot, would disappear, and in their places we should find nothing better than a second-rate Beaune or Macon wine."—(*History of Ancient and Modern Wines*, p. 210.)

Not only, however, did the Oporto Wine Company deteriorate the quality, but they also raised the price of their wines to an enormous height. Secured against the competition of their countrymen, and enjoying down to 1831 a nearly absolute monopoly of the British markets for red wines by means of the high duties on those of France, they filled their pockets at our expense. At the very moment when the Company were shipping wine for England at 40*l.* a pipe, they frequently shipped the same wine to other countries at 20*l.*!—(*Fleetwood Williams on the Wine Trade.*) And the authentic Tables published by Balbi show that the price of wine was trebled or quadrupled under the management of this corporation.—(*Essai Statistique sur le Royaume de Portugal*, tome i. p. 157.)

It is long since the injurious influence of the Company on the commerce of this country was distinctly perceived and pointed out. So far back as 1767, the Board of Trade laid a memorial before his Majesty in council, in which they state, "With respect to many particular regulations of the Oporto Company, which we think justly objected to by the merchants as highly grievous and oppressive, we have not thought it necessary to enter into a minute description of them, being of opinion that one general and fatal objection lies against them all; viz.—that *they all contribute to establish in the Company a monopoly against your Majesty's subjects from which by treaty they have a right to be exempted.*"

But notwithstanding this authoritative exposition of the injury done to the English by this monopoly, and the experience which every subsequent year afforded of its mischievous influence, such was the inveteracy of ancient prejudice, that it was not till 1831 that we took that step which, had it been taken a century before, would have rid ourselves of its evils as well as a host of others, by equalising the duties on French and Portuguese wines, and putting an end to the injurious preference given to the latter by the Methuen treaty.

In 1833, Don Pedro, whose daughter had been raised to the Portuguese throne mainly by the intervention of the English, issued a decree abolishing the Old Oporto Company. And it might have been supposed that once abated, the nuisance would not have been again revived. But such was not the case. A new wine company was subsequently established with privileges little less oppressive than those of the old company. And as the taste for French wine had made little progress amongst us in the interval, we suffered from the monopoly and adulterations practised and sanctioned by the new company as we had done from those of its predecessor. Its mischievous influence being farther aggravated by a heavy export duty on wine shipped to any port in Europe*, was latterly so intolerable, that to defeat it considerable quantities of port were imported by the circuitous route of the U. States. Happily, however, the firm remonstrances of the British government, and the growing dissatisfaction of the Portuguese themselves, have at length succeeded in establishing a more equitable and less illiberal system. In October 1852, the new company was abolished, equal duties (about 14*s.* a pipe), were imposed on all wines exported, and considerable, though not entire, freedom was given to the trade.—(For farther details see art. OPORTO.)

Sherry is of a deep amber colour; when good, it has a fine aromatic odour; its taste is warm, with some degree of the agreeable bitterness of the peach kernel. When new, it tastes harsh and fiery; it is mellowed by being allowed to remain 4 or 5 years or longer in the wood; but it does not attain to its full flavour and perfection until it be kept for 15 or 20 years. It is a very strong wine, containing about 19 per cent. of alcohol. It is principally produced in the vicinity of Xeres, not far from Cadiz, in Spain. It is very extensively used in this country as a dinner wine. Dry sherry, or *amontillado*, when genuine and old, fetches a very high price. Perhaps no wine is so much adulterated as sherry. With the exception of Marsala, the consumption of sherry has been far more influenced than that of any other wine by the reduction of the duties in 1825. In 1852, the quantity retained for home consumption amounted to 2,606,857 gallons, being 458,000 gallons *more than double* the quantity retained for consumption at an average of 1823 and 1824!—(See *post.*)

The province of Valencia, in Spain, produces a great variety of wines. Large quantities of a strong, sweetish red wine, called Benicarlo, from the port whence it is shipped, is exported to Cette. It is thence conveyed, by the canal of Languedoc, to Bordeaux, where it is mixed up with the poorer sorts of the wines of the Gironde, to which it gives colour, body, and durability.

The *Val de Peñas*, a pleasant red wine of La Mancha, said by Swinburne to be "the most drinkable, for common use, of any in Spain,"—(*Travels in Spain*, p. 319, 4to ed.)—has probably been commended beyond its deserts.† But in whatever estimation it may be held in its native province, we doubt whether it is ever likely to be acceptable to foreigners. When carried to the coast it is conveyed in goat skins, smeared with pitch. This gives it the *olor de bota*, by which it is disagreeably distinguished.

Claret,—the term generally used in England, though not in France, to designate the red wines, the produce of the Gironde. Of these, Lafitte, Latour, Château-Margaux, and Haut-Brion, are so generally and deservedly esteemed, that they always sell at from 20 to 30 per cent. higher than any others of the department. The first mentioned is the most choice and delicate, and is characterised by its silky softness on the palate, and its charming perfume, which partakes of that of the violet and the raspberry. The Latour has a fuller body, and at the same time a considerable aroma, but wants the softness of the Lafitte. The Château-Margaux, on the other hand, is lighter, and possesses all the delicate qualities of the Lafitte, except that it has not quite so high a flavour. The Haut-Brion, again, has more spirit and body than any of the preceding, but is rough when new, and requires to be kept 6 or 7 years in the wood; while the others become fit for bottling in much less time.

* This was, in reality, a peculiar tax of 3*l.* 10*s.* a pipe on the wine sent to England, the shipments for other places in Europe being quite inconsiderable.

† It was reckoned among the best Spanish wines, in 1542, by Lobera de Avila, physician to Charles V.—(*Don Quixote, por Pellicer*, iv. 130, 8vo. 1788.)

Among the second-rate wines, that of Rozan, in the parish of St. Margaux, approaches in some respects to the growth of the Château-Margaux; Gorce, in the same territory, is little inferior to Latour; and the vineyards of Leoville, Larose, Bran-Mouton, Pichon-Longueville, and Calon in the canton of Pauillac, afford wines of good flavour, which, in favourable years, have much of the excellence of the finer growths, from which, indeed, some of the best can with difficulty be distinguished. Among the third and fourth class wines are those of Pauillac, St. Julien de Regnac, St. Estephe, Canon, St. Emilion, the wines of Haut Medoc, &c. These have each some distinguishing peculiarity; but it requires a *connoisseur* to discriminate between the cognate varieties. In good years the quality is very superior. The aroma of the first growths is seldom fully developed till after they have been kept 8 or 9 years: but the secondary qualities come to perfection a year or two sooner. The colour often grows darker as the wine advances in age, in consequence of the deposition of a portion of its tartar: but, when well made, and thoroughly fined, it seldom deposits any crust.

(See the valuable work of Dr. Henderson, *on Ancient and Modern Wines*, p. 184., and *Jullien, Topographie de Vignobles*, pp. 202—212.)

Bordeaux wines are very rarely exported in a state of purity. We have given in the article BORDEAUX some account of the treatment to which those shipped for England are subjected, and to it we beg to refer the reader.

There is generally a very good supply of claret in bond in the docks in London. Its price varies from about 12*l.* per hogshead for the inferior to 50*l.* and 60*l.* per hogshead for the superior growths. What are called cargo or shipping clarets may be bought at from 5*l.* to 10*l.* per hogshead. The finest case claret sells in bond at about 50*s.* per dozen; but parcels of very well flavoured wine may be bought in bond at 15*s.* or 16*s.*

Champagne,—so called from the province of France of which it is the produce,—is one of the most deservedly esteemed of the French wines. The wines of Champagne are divided into the 2 grand classes of white and red wines; and each of these again into still and sparkling: but there is a great variety in the flavour of the produce of different vineyards. Sillery is universally allowed to be the best of the still wines. It is dry, of a light amber colour, has considerable body, and a charming aroma. "Le corps," (says M. Jullien) "le spiritueux, le charmant bouquet, et les vertus toniques dont il est pourvu, lui assurent la priorité sur tous les autres."—(*Topographie de tous les Vignobles*, p. 30.) Dr. Henderson agrees with Jullien, in considering it as one of the wholesomest of the Champagne wines. The sparkling wines are, however, the most popular, at least in this country. Of these, the wine of Ay, 5 leagues south from Rheims, is, perhaps, the best. It is lighter and sweeter than Sillery, and has an exquisite flavour and aroma. That which merely creams on the surface (*demi-mousseux*) is preferred to the full frothing wine (*grand-mousseux*). Being bright, clear, and sparkling, it is as pleasing to the eye as it is grateful to the palate.

"Cernis micanti concolor ut vitro
Latex in auras, gemmeus aspici,
Scintillet exultim; utque dulces
Naribus illecebras propinet
"Succi latentis proditor halitus!
Ut spuma motu lactea turbido
Crystallinum lætis referre
Mox oculis properet nitorem."

Hautvilliers, about 4 leagues from Rheims and 1 from Epernay, used formerly to produce wine that equalled, and sometimes surpassed, the wine of Ay. But it is no longer cultivated with the same care; so that, though still very good, it now only ranks in the 2d class.

The best of the red wines of Champagne are those of Verzy, Verzenay, Maily, Bouzy, and St. Basle. "Ils ont une belle couleur, du corps, du spiritueux, et surtout beaucoup de finesse, de sève, et de bouquet."—(*Jullien*, p. 27.) The Clos St. Thierry, in the vicinity of Rheims, produces wine which, according to Jullien, unites the colour and the aroma of Burgundy to the lightness of Champagne.

The province of Champagne produces altogether about 1,100,000 hectolitres of wine; of which, however, the finest growths make but a small part. The principal trade in wine is carried on at Rheims, Avise, and Epernay. The vaults in which the vintages are stored are excavated in a rock of calcareous tufa to the depth of 30 or 40 feet. Those of M. Moet, at Epernay, are the most extensive, and few travellers pass through the place without going to see them. The briskest wines (*grands-mousseux*) keep the worst.—(*Jullien*, p. 34.)

Burgundy.—The best wines of this province, though not so popular in England as those of Champagne, probably because they are very apt to be injured by a sea-voyage, enjoy the highest reputation. "In richness of flavour and perfume, and all the more delicate qualities of the juice of the grape, they unquestionably rank as the first in the world; and it was not without reason that the dukes of Burgundy, in former times, were designated as the *princes des vons vins*."—(*Henderson*, p. 161.) M. Jullien is not less decided:—"Les vins des premiers crus, lorsqu'ils proviennent d'une bonne année, réunissent, dans de justes proportions, *toutes les qualités qui constituent les vins parfaits*; ils n'ont besoin d'aucun mélange, d'aucune préparation pour attendre leur plus haut degré de perfection. Ces opérations, que l'on qualifie dans certains pays de *soins qui aident* à la qualité, sont toujours nuisibles aux vins de Bourgogne."—(p. 104.)

Romané-Conti, Chambertin, the Clos Vougeôt, and Richebourg are the most cele

brated of the RED wines of Burgundy. Chambertin was the favourite wine of Louis XIV. and of Napoleon. It is the produce of a vineyard of that name, situated 7 miles south from Dijon, and furnishing each year from 130 to 150 puncheons, from an extent of about 65 acres. It has a fuller body and colour, and greater durability, than the Romané, with an aroma nearly as fragrant.

The white wines of Burgundy are less numerous, and, consequently, less generally known, than the others; but they maintain the highest rank among French white wines, and are not inferior to the red either in aroma or flavour.

The entire annual produce of wine in Burgundy and Beaujolais may at present be estimated, at an average, at nearly 3,500,000 hectolitres, of which about 750,000 suffice for the consumption of the inhabitants. Since the Revolution, the cultivation of the vine has been greatly extended in the province. Many of the new vineyards having necessarily been planted in comparatively unfavourable situations, a notion has been gaining ground that the wines of Burgundy are degenerating. This, however, is not the case. On the contrary, the quantity of *bons crus*, instead of being diminished, has increased considerably; though, as the supply of inferior wines has increased in a still greater degree, the fine wines bear a less proportion to the whole than they did previously to the Revolution. — (*Jullien*, p. 90.)

The principal trade in Burgundy is carried on at Dijon, Gevrey, Châlons-sur-Saône, &c.

Besides the above, France has a great variety of other excellent wines. Hermitage, Sauterne, St. Péry, &c. are well known in England; and deservedly enjoy, particularly the first, a high degree of reputation.

Account of the Quantities and Value of the Wines exported from France in 1852; distinguishing between those of the Gironde and those of other Departments, and between those exported in Casks and Bottles; and specifying the Quantities of those sent to each Country and their total Value.—(*Administration des Douanes* for 1852, p. 241.)

This makes a total export of 2,419,604 hectolitres, worth 95,403,464 fr., or 3,816,000*l*. About ten years ago the exports did not exceed 1,500,000 hectolitres, so that there has been a large increase in the interval. And were France to adopt a liberal commercial policy, it is not easy to say to how great an extent her exports of wine, in the production of which she is immeasurably superior to every other country, might be increased.

Exclusive of the above, there were exported from France, in the same year, 18,96[illegible] hectolitres of *vins de liqueurs*, valued at 2,001,836 francs.

The total produce of the vineyards of France is estimated at about 35,000,000 hectolitres (770,000,000 Imp. gallons), worth 540,000,000 francs (21,600,000*l.*). We beg to refer the reader to the article BORDEAUX, for an account of the influence of the French system of commercial policy on this great department of industry.

Dispute as to the comparative Merit of Champagne and Burgundy. — The question, whether the wines of Champagne or Burgundy were entitled to the preference, was agitated during the reign of Louis XIV. with extraordinary keenness. The celebrated Charles Coffin, rector of the University of Beauvais, published, during this controversy, the classical ode, partly quoted above, in which Champagne is eulogised, and its superiority vindicated, with a spirit, vivacity, and delicacy worthy of the theme. The citizens of Rheims were not ungrateful to the poet; but liberally rewarded him with an appropriate and munificent donation of the wine he had so happily panegyrised. Gréneau wrote an ode in praise of Burgundy; but, unlike its subject, it was flat and insipid, and failed to procure any recompence to its author. The different pieces in this amusing controversy were collected and published in octavo, at Paris, in 1712.— (See *Le Grand d'Aussy, Vie Privée des Français*, tom. iii. p. 39., and the *Biographie Universelle*, tom. ix. art. *Coffin* (*Charles*).) Erasmus attributes the restoration of his health to his having drunk liberally of Burgundy; and has eulogised it in the most extravagant terms. An epistle of his, quoted by Le Grand d'Aussy, shows that Falstaff and he would have spent an evening together more agreeably than might have been supposed: — "Le premier qui enseigna l'art de faire ce vin (Bourgogne), ou qui en fit present, ne doit-il point passer plutôt pour nous avoir donné la vie que pour nous avoir gratifié d'une liqueur." — (*Vie Privée des Francaise*, tom. iii. p. 9.)

Consumption of French Wine in England. Discriminating Duties. — Owing to the intimate connection subsisting between England and France for several centuries after the Conquest, the wines of the latter were long in almost exclusive possession of the English market: but the extension of commerce gradually led to the introduction of other species; and in the reigns of Elizabeth and James I. the dry white wines of Spain seem to have been held in the highest estimation. This, however, was only a temporary preference. Subsequently to the Restoration, the wines of France regained their former ascendancy. In 1687 their importation amounted to 15,518; in 1688, to 14,218; and in 1689, to 11,106 tuns. It is exceedingly doubtful whether so much as a single pipe of port had ever found its way to England previously to this period. — (*Henderson*, p. 313.); and it is most probable that the wines of France would have continued to preserve their ascendancy in our markets, had not their importation been artificially checked.

The trade with France had occasionally been prohibited previously to the accession of William III.; but it was not until 1693 that any distinction was made between the duties payable on French and other wines. But Louis XIV. having espoused the cause of the exiled family of Stuart, the British government in the irritation of the moment, and without reflecting that the blow aimed at the French would infallibly recoil upon themselves, imposed, at the period above mentioned, a discriminating duty of 8*l.* a tun on French wines, and in 1697 increased it to 33*l.*! In consequence of this enormous augmentation of duty on French wines, the merchants began to import red wine from Oporto as a substitute for the red wines of Bordeaux, excluded by the high duties. It is probable, however, that these discriminating duties would have been repealed as soon as the excitement which produced them had subsided, and that the trade would have returned to its old channels, had not the stipulations in the famous commercial treaty with Portugal, negotiated by Mr. Methuen in 1703, given them permanence. Such, however, was unluckily the case: for, according to this treaty, we bound ourselves to charge in future 33⅓ per cent. higher duties on the wines of France than on those of Portugal; the Portuguese, by way of compensation, binding themselves to admit our woollens into their markets in preference to those of other countries, at a fixed and invariable rate of duty.

Though very generally regarded at the time as the highest effort of diplomatic skill and address, the Methuen treaty was certainly founded on the narrowest views of national interest, and proved, in no common degree, injurious to both parties, but especially to England. By binding ourselves to receive Portuguese wines for *two thirds* of the duty payable on those of France, we, in effect, gave the Portuguese growers a monopoly of the British market, and thereby attracted too great a proportion of the deficient capital of Portugal to the production of wine; while, on the other hand, we not only excluded one of the principal equivalents the French had to offer for our commodities, and proclaimed to the world that we considered it better to deal with *two* millions of poor beggarly customers, than with *thirty* millions of rich ones, but we also provoked the retaliation of the French, who forthwith excluded most part of our articles from their markets!

The injurious effect of the regulations in the Methuen treaty was distinctly pointed

out by Dr. Davenant and Mr. Hume. The latter, in his *Essay on the Balance of Trade*, published in 1752, says, "Our jealousy and hatred of France are without bounds. These passions have occasioned innumerable barriers and obstructions on commerce, where we are commonly accused of being the aggressors. But what have we gained by the bargain? *We lost the French market for our woollen manufactures*, and transferred the commerce of wine to Spain and Portugal, *where we buy much worse liquor at a much higher price!* There are few Englishmen who would not think their country absolutely ruined were French wine sold in England so cheap, and in such abundance, as to supplant ale and other home-brewed liquors. But, would we lay aside prejudice, it would not be difficult to prove that nothing could be more innocent; perhaps more advantageous. Each new acre of vineyard planted in France, in order to supply England with wine, would make it requisite for the French to take an equivalent in English goods, by the sale of which we should be equally benefited."

In consequence of the preference so unwisely given to the wines of Portugal over those of France.—a preference continued, in defiance of every principle of sound policy and common sense, down to 1831,—the imports of French wine were for many years reduced to a mere trifle; and notwithstanding their increased consumption, occasioned by the reduction of the duties in 1825, the quantity of all sorts retained for consumption in 1852 did not exceed 475,948 gallons; while the consumption of Portuguese wines amounted in the same year to 2,489,350 gallons! This is the most striking example, perhaps in the history of commerce, of the influence of customs duties in diverting trade into new channels, and altering the taste of a people. All but the most opulent classes having been compelled, for a long series of years, either to renounce red wine, or to use port, the taste for the latter has become firmly rooted; the beverage that was originally forced upon us by necessity having become congenial from habit. It was expected when the discriminating duty in favour of port was abolished in 1831 that the excellence of the French wines would speedily regain for them a large portion of that favour in the English market which they formerly enjoyed. But though apparently reasonable, this expectation has not been realised. (See *post.*)

Madeira—so called from the island of that name—is a wine that has long been in high estimation in this and other countries. Plants of the vine were conveyed from Crete to Madeira in 1421, and have succeeded extremely well. There is a considerable difference in the flavour and other qualities of the wines of Madeira: the best are produced on the south side of the island. Though naturally strong, they receive an addition of brandy when racked from the vessels in which they have been fermented, and another portion is thrown in previously to their exportation. This is said to be required to sustain the wine in the high temperature to which it is subjected in its passage to and from India and China, to which large quantities of it are sent; it being found that it is mellowed, and its flavour materially improved, by the voyage. It does not, however, necessarily follow that the wines which have made the longest voyages are always the best. Much must obviously depend on the original quality of the wine; and many of the parcels selected to be sent to India are so inferior, that the wine, when brought to London, does not rank so high as that which has been imported direct. But when the parcel sent out has been well chosen, it is very much matured and improved by the voyage; and it not only fetches a higher price, but is in all respects superior to the direct importations. Most of the adventitious spirit is dissipated in the course of the Indian voyage.

Madeira wines may be kept for a very long period. "Like the ancient vintages of the Surrentine hills, they are truly *firmissima vina*, retaining their qualities unimpaired in both extremes of climate, suffering no decay, and constantly improving as they advance in age. Indeed, they cannot be pronounced in condition until they have been kept for 10 years in the wood, and afterwards allowed to mellow nearly twice that time in bottle; and even then they will hardly have reached the utmost perfection of which they are susceptible. When of good quality, and matured as above described, they lose all their original harshness, and acquire that agreeable pungency, that bitter sweetishness, which was so highly prized in the choicest wines of antiquity; uniting great strength and richness of flavour with an exceedingly fragrant and diffusible aroma. The nutty taste, which is often very marked, is not communicated, as some have imagined, by means of bitter almonds, but is inherent in the wine."—(*Henderson*, p. 253.)

The wines of Madeira have latterly fallen into disrepute in England. The growth of the island, when greatest, was very limited—not exceeding 20,000 pipes, of which a considerable quantity went to the West Indies and America. Hence, when Madeira was a fashionable wine in England, every sort of deception was practised with respect to it, and large quantities of spurious trash was disposed of for the genuine vintage of the island. This naturally brought the wine into discredit; so that sherry has been for several years the fashionable white wine. It is difficult, however, to imagine that adulteration was ever practised to a greater extent upon Madeira than it is now practised upon sherry. It is not, therefore, improbable, that a reaction may take place in favour of Madeira. The quantity entered for home consumption in 1827 amounted to

308,295 gallons, whereas the quantity entered for home consumption in 1852 amounted to only 69,730 gallons.

Malmsey, a very rich luscious species of Madeira, is made from grapes grown on rocky grounds exposed to the full influence of the sun's rays, and allowed to remain on the vine till they are over-ripe.

The trade in Madeira wine is carried on at Funchal, the capital of the island, in lat. 32° 37′ N., lon. 17° 6′ W. *Weights and measures* same as at Lisbon. Madeira is said to have suffered very severely from the disease that has recently attacked the vine.

Teneriffe wine — so called from the island of that name — resembles Madeira, and is not unfrequently substituted in its stead; but it wants the full body and rich flavour of the best growths of Madeira.

German Wines. — The wines of Germany imported into England are principally produced on the banks of the Rhine and Moselle. The Rhine wines constitute a distinct order by themselves. They are drier than the French white wines, and are characterised by a delicate flavour and aroma, called in the country *gāre*, which is quite peculiar to them, and of which it would, therefore, be in vain to attempt the description. A notion prevails, that they are naturally acid; and the inferior kinds no doubt are so; but this is not the constant character of the Rhine wines, which in good years have no perceptible acidity to the taste, at least not more than is common to them with the growths of warmer regions. Their chief distinction is their extreme durability. The wines made in warm dry years are always in great demand, and fetch very high prices.

The Johannisberger stands at the head of the Rhine wines. It has a very choice flavour and perfume, and is characterised by an almost total want of acidity. The vineyard is the property of Prince Metternich. The Steinberger ranks next to the Johannisberger. It is the strongest of all the Rhenish wines, and in favourable years has much flavour and delicacy.

The produce of certain vineyards on the banks of the Moselle is of superior quality. The better sorts are clear and dry, with a light pleasant flavour and high aroma; but they sometimes contract a slaty taste from the strata on which they grow. They arrive at maturity in 5 or 6 years; though, when made in a favourable season, they will keep twice that time, without experiencing any deterioration. — (*Henderson*, p. 226.)

Tokay — so called from a town in Hungary, near which it is produced, on the Theiss, 44 m. N. N. W. Debreczin. It is the finest of all the liqueur wines. It consists of three varieties, viz. the *Essence*, flowing spontaneously from the ripest grapes, and corresponding with the *Mustum sponte defluens antequam calcentur uvæ* of the ancients; the *Ausbruch*, obtained by pressing the grapes with the hand, a small quantity of good new wine, or must, being at the same time poured over them; and the *Maslas*, or inferior variety, produced by pouring a larger quantity of less choice must over the same berries, and subjecting them to the action of the press. Of these varieties the first, which is made only in very small quantities, is in the highest degree sweet and luscious, and is more sought for as a rarity, than as being pleasant to the palate. It is on the Ausbruch that the reputation of Tokay depends. Mr Paget says, "It is sweet, rich, but not cloying; strong, full-bodied, but mild, bright, and clear; and has a peculiar flavour of most exquisite delicacy. I never tasted it in perfection but at private tables, and that only twice; I could then have willingly confessed it the finest wine in the world." The Maslas, or inferior variety, is a much thinner wine, rather sweet, with a preponderating flavour of the dried grape. Mr. Paget estimates the entire produce of the Tokay vineyards in ordinary years at about 250,000 eimers, of about 16 bottles each. The best Ausbruch is very dear; and but little that is genuine is seen in England. (*Paget's Travels in Hungary*, i. 481.; *Henderson*, p. 228.; *Jullien*, p. 446.)

Italian Wines. — The Sicilian white wine called Marsala, from the town (the ancient Lilybœum) whence it is shipped, and near which it is made, is now pretty largely consumed in England; the entries for home consumption having increased from 79,686 gallons in 1823, to 387,750 in 1852; an extraordinary increase, particularly when it is considered that during the same period the consumption of most sorts of wine has been nearly stationary. Latterly, however, it has been rather declining. Marsala is a dry wine: the best qualities closely resembling the lighter sorts of Madeira; but the increased demand for it seems to have been owing as much to its cheapness as to any peculiarity of quality. It is, however, when good, an agreeable dinner wine. Marsala has been brought to its present state of perfection and repute by the care and exertions of 2 Englishmen, the Messrs. Woodhouse, established in Sicily, who have an extensive factory in the neighbourhood of Marsala. The wine is shipped in large quantities for America; whence a considerable quantity is again conveyed to the West Indies, where it is not unfrequently disposed of as real Madeira.

With the exception of Marsala, very little wine either of Sicily or Italy is imported into England. The wines of those countries are, indeed, without, perhaps, a single ex-

ception, very inferior to those of France. The natives bestow no care upon the culture of the vine; and their ignorance, obstinacy, and want of skill in the preparation of wine, are said to be almost incredible. In some districts, as in Tuscany and parts of Naples, the art is, no doubt, better understood and practised than in others; the *Montepulciano* of the former, said, by Redi (*Bacco in Toscana*) to be *d' ogni vino il re*, and the *Lacrima Christi* of the latter, being the most celebrated varieties. But the lacrima is better known by name than in reality, it being made in small quantities, and mostly reserved for the royal cellars. (*Henderson*, p. 239.) And, despite the superior quality of those now mentioned, had not the Falernian, Cecuban, and other famous ancient wines, been incomparably better than the best of those that are at present produced, they never would have elicited the glowing panegyrics of Horace.

Wines of Greece and Cyprus. — The soil in most parts of Greece and of the Grecian islands is admirably fitted for the growth of the vine; and, in antiquity, they produced some of the choicest wines. But the rapacity of the Turks, and the insecurity of person and property that has always prevailed under their miserable government, has effectually prevented the careful cultivation of the vine; and has occasioned, in many places, its total abandonment. It may, however, be fairly presumed, now that Greece has emancipated herself from the iron yoke of her oppressors, that the culture of the vine will attract some portion of that attention to which it is justly entitled; and that, at no distant period, wine will form an important article of export from Greece.

Nowhere, perhaps, has the destructive influence of Turkish barbarism and misgovernment been so apparent as in Candia and Cyprus. While these 2 renowned and noble islands were possessed by the Venetians, they supplied all Europe with the choicest dessert wines. Bacci affirms, that towards the end of the 16th century, Candia sent annually 200,000 casks of malmsey to the Adriatic; whereas at present it hardly produces sufficient to supply the wants of its few impoverished inhabitants. — (*Henderson*, p. 243.) The wines of Cyprus, particularly those produced from the vineyard called the Commandery, from its having belonged to the Knights of Malta, were still more highly esteemed than those of Crete. In the earlier part of last century, the total produce of the vintage of the island was supposed to amount to above 2,000,000 gallons, of which nearly $\frac{1}{3}$ was exported; but now the wine grown and exported does not amount to $\frac{1}{10}$th part of these quantities! The oppression of which they have been the victims has reduced the peasantry to the extreme of indigence. The present population of the island is not supposed to exceed 60,000,—a number insufficient to have peopled one of its many ancient cities; and small as this number is, it is constantly diminishing by the inhabitants availing themselves of every opportunity of emigrating.—(See *Geog. Dict.* art. *Cyprus.*)

Cape Wines. — Of the remaining wines imported into England those of the Cape of Good Hope form the largest portion; the quantity retained for home consumption in 1852 being 242,619 Imperial gallons. But the consumption of Cape wine was formerly much more considerable, having amounted in 1827, when it was less heavily taxed in comparison with other wines than at present, to 698,434 galls. The famous Constantia wine is the produce of 2 contiguous farms of that name, at the base of Table Mountain, between 8 and 9 miles from Cape Town. The wine is very rich and luscious; though, according to Henderson, it yields in point of flavour and aroma to the muscadine wines of Languedoc and Roussillon. But, with this exception, most part of the Cape wines brought to England have an earthy disagreeable taste, are often acid, want flavour and aroma, and are, in fact, altogether execrable. And yet this trash, being the produce of a British possession, enjoys peculiar advantages in our markets; for while the duty on Cape wine is only 2*s.* 11*d.* a gallon, that on all other wines is 5*s.* 9*d.* The consequences of this unjust preference are doubly mischievous: in the first place, it forces the importation of an article of which little is directly consumed, but which is extensively employed as a convenient menstruum for adulterating and degrading sherry, Madeira, and other good wines; and, in the second place, it prevents the improvement of the wine; for, while the legislature thinks fit to give a bounty on the importation of so inferior an article, is it to be supposed that the colonists should exert themselves to produce any thing better? It is not easy to imagine a more preposterous and absurd regulation. The act enforcing it should be entitled, an act for the adulteration of wines in Great Britain, and for encouraging the growth of bad wine in the Cape colony.

Consumption of Wine in Great Britain. Duties. — We have repeatedly had occasion, in the course of this work, to call the reader's attention to the injurious operation of unequal and exorbitant duties. Perhaps, however, the trade in wine has suffered more from this cause than any other department of commerce. We have already endeavoured to point out some of the effects resulting from the inequality of the duties, or from the preference so long given to the inferior wines of Portugal and Spain over the superior wines of France. But the exorbitancy of the duties was, if possible, still more objectionable than the partial principle on which they were imposed. It appears from the subjoined Table, that during the 9 years ending with 1794, when the duty on French wines was 4*s.* 10*d.*, and on Portuguese 3*s.* 1$\frac{3}{4}$*d.* per imp. gallon, the consumption in Great Britain amounted, at an average, to 7,021,770 gallons a year, producing 900,000*l.* of revenue. It is probable, had the increase taken place *gradually*, that these duties might have been greatly increased without any material diminution of con-

sumption. But in 1795 and 1796 they were raised to 10*s.* 6*d.* per gallon on French and 6*s.* 1*d.* per gallon on Portuguese and Spanish wine; and the consequence of this sudden and inordinate increase, as exhibited in the Table, was, that the consumption fell from above 7,000,000 gallons in 1795 to 4,189,710 gallons in 1796, and to 5,449,710 in 1797! But this unanswerable demonstration of the ruinous effect of heavy and sudden additions to the duties did not prevent them being raised, in 1804, to 13*s.* 9*d.* on French, and to 8*s.* 10*d.* on Portuguese and Spanish wine. They continued at this rate till 1825; and such was their influence, that notwithstanding the vast increase of wealth and population since 1790, and the general improvement in the style of living, the total consumption of wine, during the 3 years ending with 1824, amounted, at an average, to only 4,827,383 gallons a year, being 697,507 gallons under the annual consumption of the 9 years ending with 1794! It may, therefore be truly said, making allowance for the increase of population, that the consumption of wine in Great Britain fell off full fifty per cent. between 1790 and 1824.

On Mr. Robinson (now Lord Ripon) becoming Chancellor of Exchequer, he resolved upon the effectual reduction of the wine duties; and took, in 1825, nearly 50 per cent. from their amount; and notwithstanding the spirit duties were at the same time reduced in a still greater degree, the consumption of wine in Great Britain has been increased in ordinary years from about 4,500,000 to about 6,300,000 Imperial gallons, while there has been no loss of revenue. We are, therefore, justified in affirming that this measure has been very successful, and that it affords a valuable example of the superior productiveness of low duties.*

The duties, as reduced by Mr. Robinson, were 7*s.* 3*d.* per Imperial gallon on French wines, 4*s.* 10*d.* per do. on all other foreign wines, and 2*s.* 5*d.* on those of the Cape of Good Hope. They continued on this footing till the equalisation act (1 & 2 Will. 4. c. 30.), which imposed a duty of 5*s.* 6*d.* per Imperial gallon on all foreign wines, and 2*s.* 9*d.* on those of the Cape, to which 5 per cent. was added in 1840.

But the equalisation effected by this act should not have been brought about by adding any thing to the duties on port, sherry, &c., but by reducing those on French wines to their level. The subjoined Tables show that the consumption of wine in the U. Kingdom was about stationary from 1826 to 1831; and the addition of 8*d.* a gallon, that was then made to the duties on all sorts of foreign wine except French, from which 1*s.* 9*d.* was deducted, appears to have sensibly affected the consumption of 1832. Considering, indeed, the increasing wealth and population of the U. Kingdom, and the more generally diffused use of wine, the stationary amount of the quantities retained for consumption is not a little surprising. A good deal is, we believe, ascribable to adulteration, and more, probably, to a change of habits. The duties are, also, perhaps, too high. But they are more objectionable from the mode in which they are assessed than from their amount. It is against all principle to impose the same duty on inferior and cheap wines, worth only 10*l.* a hogshead, as on the choicest Burgundy and Champagne, worth 60*l.* or 70*l.* a hogshead. Its injustice would not be exceeded, were the same duty charged on small beer that is charged on gin! The effect of this apparently equal, but really *most unequal* duty, is to exclude low priced wines from the English markets. Commercially speaking, Bordeaux is nearer London than Paris: and but for this system, the cheap wines of the Gironde, Languedoc, and Provence might be bought here at a less price than in most parts of France. But, how desirable soever, it would be all but impossible to assess an *ad valorem* duty on wine. It is frequently no easy matter to distinguish between different descriptions of wine, and it is still more difficult to distinguish between different varieties of the same wine, though they may differ greatly in value. There can, in truth, be little doubt that any attempt to lay an *ad valorem* duty on wine would occasion such an amount of fraud as would greatly overbalance any advantage of which it might be productive.

A proposal has recently been made, which has met with considerable support, for reducing the duty on all wines to 1*s.* a gallon. It is contended that a reduction of this extent would not occasion any permanent loss of revenue, inasmuch as it would have the effect, in no very lengthened period, of increasing the consumption to five or six times its present amount! But we greatly doubt whether such would be the case. A reduction of the duty to the extent supposed would not have any considerable influence in reducing the price of the finer descriptions of wine; and it is very questionable whether the inferior and low priced wines that are now excluded, would, though there were no duty, be very generally introduced into this country. The better opinion seems to be that beer would continue, as at present, to be preferred by the bulk of the population; and if so, the measure would have little other influence than to occasion a reduction of revenue.

Besides, if the wine duties were reduced to 1*s.* a gallon, and the consumption to

* An article in the Edinburgh Review, No. 80., contributed to bring about this measure. See also an excellent tract on the *Wine Trade*, by Mr. Warre, published in 1824.

increase to the extent that has been anticipated, there would certainly be a serious decline in the consumption of malt and spirits, and, consequently, in the revenue derived from them. And to do justice to all parties, to the growers of barley and the distillers, as well as the importers of wine, it would be necessary to make a corresponding reduction in the duties on malt and spirits. Unless this were done, a reduction of the wine duties to 1*s.* a gallon would be really equivalent to a bounty or premium on the consumption of wine. But there should be no favouritism in taxation; and, however desirable, the substitution of one sort of stimulus for another is not to be effected by encroaching on that equality of taxation which should be a fundamental principle in every sound system of finance.

Unless, therefore, some means be discovered of fairly and easily assessing the wine duties on an *ad valorem* principle, little probably would be gained by disturbing the present arrangement. A reduction of the duties to 3*s.* a gallon, that is, to about 6*d.* a bottle, has been suggested; and if they are to be interfered with, this would seem to be the most judicious plan. A duty of this amount would not be felt on the superior wines; and while it would be no great check to the consumption of the secondary growths, it would not give an undue stimulus to the use of wine.

Consumption of Wine in Ireland. Duties.—In 1790, the duties on wine consumed in Ireland were considerably below the level of those imposed in Great Britain, and the average annual quantity of all sorts retained for home consumption in that country amounted to about 1,160,000 Imperial gallons, producing about 138,000*l.* a year revenue. Had those to whom the government of Ireland was intrusted possessed any knowledge of the merest elements of finance, or of the condition of the Irish people, they would not have attempted to add to the public revenue by augmenting the duties on wine. Owing to the limited number of the middle classes in Ireland, an increase of duty could not be expected to be productive; and though it had yielded 50,000*l.*, or even 100,000*l.* a year additional revenue, that would have been no compensation for the injury it was sure to do in checking the diffusion of that taste for luxuries and enjoyments so essential to the improvement of the people. But those who had to administer the affairs of Ireland were insensible to such considerations; and never doubted that 2 and 2 make 4 in the arithmetic of the customs as well as of Cocker! Such, indeed, was their almost incredible rapacity, that in the interval between 1791 and 1814, they raised the duty on French wine from 33*l.* 7*s.* a tun to 144*l.* 7*s.* 6*d.*; and that on port from 22*l.* 4*s.* 8*d.* to 95*l.* 11*s.*! This was a much more rapid increase than had taken place in England; and as the country was far less able to bear even the same increase, the consequences were proportionally mischievous. In 1815, the quantity of wine retained for home consumption in Ireland had declined, notwithstanding the population had doubled, to 608,000 Imperial gallons, or to about *half* the quantity consumed in 1790; and in 1824, the consumption had fallen to 467,000 gallons, while the revenue only amounted to 185,000*l.*!

The reduction of the duties in 1825 nearly *doubled* the consumption of wine directly imported into Ireland, and added considerably to the revenue; but since 1814, when the duties on wine in Great Britain and Ireland were equalised, it has not been possible to state the consumption of wine in either with accuracy, on account of the transhipments from the former to the latter. It is, however, quite certain that the consumption of wine in Ireland, partly in consequence of the high duties, and partly of a change in the mode of living, does not now (1853) amount, as compared with the population, to half its amount in 1790.

Adulteration of Wine.— We have already alluded to this practice. It was prosecuted to a very great extent previously to the reduction of the duties in 1825, and is still very far from being suppressed. It has been affirmed, but we are inclined to suspect the statement of exaggeration, that at this moment more than *a third* part of all the sherry consumed in London is the produce of the *home presses!* Indeed wines are every day offered for sale at prices at which every one conversant with the trade knows they, could not be afforded were they genuine. Mr. Fleetwood Williams has given, in his pamphlet on the *Wine Trade* (1824), some curious details on this subject.

The increase of the duties in the reigns of William and Anne first gave birth to this discreditable fraternity — (see a paper by Addison in the *Tatler*, No. 131.) But though adulteration be promoted by, it does not wholly depend on the duties; but will continue so long as the materials used in adulteration are cheaper than the wine, or article adulterated.

The only security against being imposed upon, is to deal with respectable houses largely engaged in the trade; to whom a reputation for selling good wine is of ten times more importance than any thing they could expect to make by adulteration.

Measures.— According to the system of wine measures that prevailed down to 1826, the gallon contained 231 cubic inches: the tierce, 42 gallons; the puncheon, 84 gallons; the hogshead, 63 gallons; the pipe or butt, 126 gallons; and the tun, 252 gallons. But in the new system of measures introduced by the act 5 Geo. 4. c. 74., the Imperial standard gallon contains 277,274 cubic inches; so that the tierce = 35 (very nearly) Imperial gallons; the puncheon = 70 (very nearly) do.; the hogshead = 52½ (very nearly) do.; the pipe or butt = 105 (very nearly) do.; and the tun = 210 (very nearly) do.—(See WEIGHTS AND MEASURES.)

A very great quantity of wine is sold to the consumer in dozens; much more, indeed, than is sold in any other way; and yet there is no regulation as to the size of bottles,—a defect which has occasioned a great deal of abuse. No one doubts the propriety of making all gallons, bushels, &c. of the same capacity; and why should not similar regulations be enforced in the case of measures so universally used as bottles?

No abatement of duties made on account of any damage received by wine.—(16 & 17 Vict. c. 107. § 110.)

Wine from a British possession must be accompanied by a certificate of its origin.— (16 & 17 Vict. c. 107. § 84.)

Wine for Officers of Navy.— For the quantity of duty-free wine to be allowed to officers of the navy, and the regulations under which it is to be allowed, see *antè*, p. 707.

Regulations as to mixing, bottling, &c. in Warehouses.— It shall be lawful with the sanction of the commissioners of customs, and after notice given by the respective importers or proprietors, to draw off any wine or any spirits into reputed quart or pint bottles for exportation only; and to draw off and mix brandy with any wine, not exceeding the proportion of 10 gallons brandy to 100 gallons wine; and also to fill up any casks of wine or spirits from any other casks of the same respectively secured in the same warehouse; and also to rack off any wine from the lees, and mix any wines of the same sort, erasing from the cask all import brands, unless the whole of the wine so mixed be of the same brand; and also to take such samples as may be allowed by the commissioners of customs, with or without entry, and with or without payment of duty, except as the same may eventually become payable as on a deficiency of the original quantity.— (16 & 17 Vict. c. 107. § 105.) Geropiga may be mixed with other wines under the same regulations, and in the same proportions as brandy.

We have borrowed the first part of the following comprehensive table from the valuable Circular of Thomas George Shaw, Esq., wine merchant. The latter years are taken from Parliamentary papers.

Account of the Quantities of the different Descriptions of Wine entered for Consumption from 1784 down to 1852, specifying the Rates of Duty levied on each, the Total Amount of Duty, &c.

1840	5 9	5 9	5 9	5 9	Eq a'.

Until 1814, duties were charged per tun, in accordance with which our calculations have been made, and the rate per tun, and per old gallon, reduced to the rate per Imperial gallon, throughout; and, although differing at the earlier periods from other statements, will, we believe, be found perfectly correct.

The official documents of the years 1784 and 1785 are evidently so imperfect that we do not state the "total gallons."

Average Annual Revenue from Wine, with the Number of Gallons consumed, the Population, and the Consumption per Individual, in the U. K. during the 65 years ending with 1849.

Period.	Average of Years.	Average of Gallons.	Average of Revenue.	Average of Population.	Bottles per Individual per An.	Duty on Port.		Duty on French.

Prior to 1821 the quantities are calculated from the annual importations, deducting the exportations; after, and including 1821, from the custom returns of "quantities retained for home consumption."

The great apparent increase in "French" in the years 1850-6 7-8, is owing to the large quantity of Masdeu (a wine resembling Port) introduced in those years.

Account of the Quantities of the different Varieties of Wine imported and retained for Home Consumption in the U. Kingdom, in 1857.

WOAD (Ger. *Waid*; Du. *Weede*; Fr. *Pastel, Guéde, Vouéde*; It. *Guadone, Guado, Glastro*; Sp. *Pastel, Glasto*), the *Isatis tinctoria* of botanists, a biennial plant, with a fusiform fibrous root, and smooth branchy stem, rising from 3 to 5 feet in height. Woad is indigenous to most parts of Europe; and was extensively used from a very remote period, down to the general introduction of indigo, in the dyeing of blue. It is still cultivated to a considerable extent in France; but in this country its cultivation is chiefly restricted to a few districts in Lincolnshire. After being bruised by machinery, to express the watery part, it is formed into balls, which ferment and fall into a dry powder, which is sold to the dyer. Woad is now seldom employed without a mixture of indigo. By itself, it is incapable of giving a bright and deep blue colour; but the colour which it does give is very durable. The best methods of conducting the fermentation and preparation of woad are still so very ill understood, that the goodness of any parcel of it can never be ascertained till it be actually used; so that it has the disadvantage of being purchased under the greatest uncertainty as to its true value. At the proper age, indigo plants yield about 30 times as much colouring matter, and of a far superior quality, as an equal weight of woad; so that there is no prospect that any improvement that may be made in its preparation will ever render it, either in goodness or cheapness, a rival of the former. — (*Loudon's Ency. of Agriculture; Bancroft on Colours*, vol. i. p. 167.) We have previously — (see INDIGO) — given some account of the efforts made by the woad growers to prevent the use of indigo.

WOOD. See TIMBER.

WOOL (Ger. *Wolle*; Du. *Wol*; Da. *Uld*; Sw. *Ull*; Fr. *Laine*; It. and Sp. *Lana*; Port. *Lã Láa*; Rus. *Wolna, Scherst*; Pol. *Welna*; Lat. *Lana*), a kind of soft hair or down. The term is not very well defined. It is applied both to the fine hair of animals, as sheep, rabbits, some species of goats, the vicuna, &c.; and to fine vegetable fibres, as cotton. In this article, however, we refer only to the wool of sheep, — an article which has continued, from the earliest period down to the present day, to be of primary importance, having always formed the principal part of the clothing of mankind in most temperate regions.

Species of Wool. — It has been customary in this country to divide wool into 2 great

classes — long and short wools; and these again into subordinate classes, according to the fineness of the fibre.

Short wool is used in the cloth manufacture; and is, therefore, frequently called clothing wool. It may vary in length from 1 to 3 or 4 inches; if it be longer, it requires to be cut or broken to prepare it for the manufacture.

The *felting* property of wool is known to every one. The process of hat making, for example, depends entirely upon it. The wool of which hats are made is neither spun nor woven; but locks of it, being thoroughly intermixed and compressed in warm water, cohere and form a solid tenacious substance.

Cloth and woollen goods are made from wool possessing this property; the wool is carded, spun, woven, and then, being put into the fulling mill, the process of felting takes place. The strokes of the mill make the fibres cohere; the piece subjected to the operation contracts in length and breadth, and its texture becomes more compact and uniform. This process is essential to the beauty and strength of woollen cloth. But the long wool of which stuffs and worsted goods are made is deprived of its felting properties. This is done by passing the wool through heated iron combs, which takes away the laminæ or feathery part of the wool, and approximates it to the nature of silk or cotton.

Long or combing wool may vary in length from 3 to 8 inches. The shorter combing wools are principally used for hose, and are spun softer than the long combing wools; the former being made into what is called hard, and the latter into soft worsted yarn.

The fineness of the hair or fibre can rarely be estimated, at least for any useful purpose, except by the wool sorter or dealer, accustomed by long habit to discern those minute differences that are quite inappreciable by common observers. In sorting wools, there are frequently 8 or 10 different species in a single fleece; and if the best wool of one fleece be not equal to the finer sort, it is thrown to a 2d, 3d, or 4th, or to a still lower sort, of an equal degree of fineness with it. The best English short native fleeces, such as the fine Norfolk and Southdown, are generally divided by the wool sorter into the following sorts, all varying in fineness from each other: — viz. 1. Prime; 2. Choice; 3. Super; 4. Head; 5. Downrights; 6. Seconds; 7. Fine Abb; 8. Coarse Abb; 9. Livery; 10. Short coarse or breech wool. The relative value of each varies, according to the greater demand for coarse, fine, or middle cloths.

The softness of the fibre is a quality of great importance. It is not dependent on the fineness of the fibre; and consists of a peculiar feel, approaching to that of silk or down. The difference in the value of 2 pieces of cloth made of 2 kinds of wool equally fine, but one distinguished for its softness and the other for the opposite quality, is such, that, with the same process and expense of manufacture, the one will be worth from 20 to 25 per cent. more than the other. Mr. Bakewell showed that the degree of softness depends principally on the nature of the soil on which sheep are fed: that sheep pastured on chalk districts, or light calcareous soils, usually produce hard wool: while the wool of those that are pastured on rich, loamy, argillaceous soils, is always distinguished by its softness. Of the foreign wools, the Saxon is generally softer than the Spanish. Hard wools are all defective in their *felting* properties.

In clothing wool, the colour of the fleece should always approach as much as possible to the purest white; because such wool is not only necessary for cloths dressed white, but for all cloths that are to be pyed bright colours, for which a clear white ground is required to give a due degree of richness and lustre. Some of the English fine woolled sheep, as the Norfolk and Southdown, have black or grey faces and legs. In all such sheep there is a tendency to grow grey wool on some part of the body, or to produce some grey fibres intermixed with the fleece, which renders the wool unfit for many kinds of white goods; for though the black hairs may be too few and minute to be detected by the wool sorter, yet when the cloth is stoved they become visible, forming reddish spots, by which its colour is much injured. The Herefordshire sheep, which have white faces, are entirely free from this defect, and yield a fleece without any admixture of grey hairs.

The cleanness of the wool is an important consideration. The Spanish wool, for example, is always scoured after it is shorn; whereas the English wool is only imperfectly washed on the sheep previously to its being shorn. In consequence, it is said that while a pack of English clothing wool of 240 lbs. weight will waste about 70 lbs. in the manufacture, the same quantity of Spanish will not waste more than 48 lbs. Cleanness, therefore, is an object of much importance to the buyer.

Before the recent improvements in the spinning of wool by machinery, great length and strength of staple was considered indispensable in most combing wools. The fleeces of the long woolled sheep fed in the rich marshes of Kent and Lincoln used to be reckoned peculiarly suitable for the purposes of the wool-comber: but the improvements alluded to have effected a very great change in this respect; and have enabled the manufacturer to substitute short wool of 3 inches staple, in the place of long combing wool, in the preparation of most worsted articles. A great alteration has, in consequence, taken place in the proportion of long to short wool since 1800; there having been in the interim, according to Mr. Hubbard's calculations—(see *post*),—an increase of 132,053 packs in the quantity of the former produced in England, and a decrease of 72,820 in the quantity of the latter.

Whiteness of fleece is of less importance in the long combing than in clothing wool, provided it be free from grey hairs. Sometimes, however, the fleece has a dingy brown colour, called a *winter stain*, which is a sure indication that the wool is not in a thoroughly sound state. Such fleeces are carefully thrown out by the wool sorter; being suitable only for goods that are to be dyed black. The fineness of heavy combing wool is not of so much consequence as its other qualities.

The Merino or Spanish breed of sheep was introduced into this country about the close of the last century. George III. was a great patron of this breed, which was for several years a very great favourite. But it has been ascertained that, though the fleece does not much degenerate here, the carcase, which is naturally ill formed, and affords comparatively little weight of meat, does not improve; and as the farmer, in the kind of sheep which he keeps, must look not only to the produce of wool, but also to the butcher market, he has found it his interest rather to return to the native breeds of his own country, and to give up the Spanish sheep. They have, however, been of considerable service to the flocks of England; having been judiciously crossed with the Southdown, Ryeland, &c.

Deterioration or Change in the Character of British Wool.— It appears to be sufficiently established, by the evidence taken before the House of Lords in 1828, and other authorities, that a considerable deterioration, or rather, perhaps, change, has taken place in the quality of British wool, particularly during the 30 preceding years. The great object of the agriculturist has been to increase the weight of the carcase and the quantity of the wool; and it seems very difficult, if not quite impossible, to accomplish this without injuring the fineness of the fleece. Mr. Culley says, that the Herefordshire sheep, that produce the finest wool, are kept lean, and yield 1½ lb. each; he adds, "if they be better kept, they grow large and produce more wool, but of an inferior quality." This would seem to be universally true. The great extension of the turnip husbandry, and the general introduction of a larger breed of sheep, appears, in every instance, to have lessened the value of the fleece. Speaking of the Norfolk fleeces, Mr. Fison, a wool sorter, says, that 25 years ago the weight was 2½ lbs. a fleece, and that now it is 3 lbs. or 3½ lbs.—(*Report*, p. 356.) But according to a Table furnished by the same gentleman, containing the results of his experience, it appears that of 15 tods, or 420 lbs., of clothing wool grown in Norfolk in 1790, 200 lbs. were *prime*, while, in 1828, the same quantity of Norfolk wool only yielded 14 lbs. prime! —(*Ibid.* p. 207.) The statements of other witnesses are to the same effect.—(*Ibid.* pp. 388. 640. and 644.) According to the estimate in Mr. Luccock's *Treatise on English Wool*, which has always enjoyed the highest reputation, the produce of all sorts of wool in England, in 1800, was 384,000 packs, of 240 lbs. a pack. But Mr. Hubbard, a very intelligent and extensive wool-stapler at Leeds, has shown, that, supposing Mr. Luccock's estimate of the number of sheep to be correct, the quantity of wool produced in 1828 could not, owing to the greater weight of the fleece, be estimated at less than 463,169 packs; and it is now (1844) believed to amount to fully 500,000 packs. It is, therefore, probable, notwithstanding the decline in the price of wool, that, taking into account the greater weight of the carcase, and the greater weight of the fleece, sheep produce more at present to the farmer than at any former period.

Number of Sheep in Great Britain.—It is not possible to form any accurate estimate either of the number of sheep or of the quantity of wool annually produced. With the exception of Mr. Luccock's, most of the statements put forth with respect to both these points seem much exaggerated. But Mr. L.'s estimate, which is considerably under any that had previously appeared, was drawn up with great care; and is supposed to approach near to accuracy. According to Mr. Luccock, the

Number of long woolled sheep in England and Wales in 1800, was	4,153,308	
of short woolled ditto	14,854,299	
Total number shorn		19,007,607
Slaughter of short woolled sheep per annum	4,221,748	
Carrion of ditto	211,037	
Slaughter of long woolled ditto	1,180,413	
Carrion of ditto	59,020	
Slaughter of lambs	1,400,560	
Carrion of ditto	70,028	
		7,140,156
Total number of sheep and lambs		26,147,763

In some parts of England there has been an increase in the number of sheep since 1800, and in others they have decreased. But we have been assured by competent judges, that, on the whole, the number has not materially varied in the interim.

During the last half century a very decided increase has taken place in the number of sheep in Scotland, and a very great improvement in the breed, particularly in the Highlands. In this district, many of the proprietors have let their estates in large farms to *store farmers*, who have introduced the Cheviot breed of sheep, instead of the small black-faced heath breed that was formerly the only one to be met with. We may remark, by the way, that a good deal of unmerited odium has attached to the patrons of this system; for, though it be true that, in a few instances, the peasantry were rudely ejected from their little possessions, there can be no doubt that it has, on the whole, been decidedly advantageous. Besides rendering large tracts of country more valuable to the proprietors and the public generally, the condition and habits of the peasantry have been materially improved. Instead of loitering away more than half their time, as was their former practice, they have now either become the servants of the large farmers, or have resorted to towns and villages, and been metamorphosed into industrious tradesmen, fishermen, &c. A very small proportion of the whole has emigrated; and the country is more populous at present than before the sheep farming system began.

In the *General Report of Scotland* (vol. iii. Appen. p. 6.), the number of sheep is estimated at 2,850,000; and allowing for the increase that has taken place since 1814, we may, perhaps, estimate the total number of sheep in that part of the empire at this moment at 3,500,000. And in consequence of the rapid extension, during the last dozen years, of the practice of turnip-feeding, both the weight of the carcase and of the fleece have been largely increased.

According to Mr. Wakefield, there is not a single flock of breeding sheep in the whole province of Ulster. —(*Account of Ireland*, vol. i. p. 341.) And though there be considerable flocks in Roscommon and other counties, we believe that, if we estimate the whole number of sheep in Ireland at 2,000,000, we shall be a good deal beyond the mark.

On the whole, therefore, if we are right in these estimates, the total number of sheep in Great Britain and Ireland may be taken at about 32,000,000. This estimate is 10,000,000 under that given by Dr. Colquhoun for 1812; but that learned person assigns no grounds whatever for his estimate, which is utterly inconsistent with all the really authentic information on the subject. It is curious enough to observe the German statistical writers referring to Colquhoun's statements, as if they were of standard authority. They would be about as near the mark, were they to quote the "Arabian Nights" in proof of any disputed historical fact.

Number of Sheep and Quantity of Sheep's Wool produced in England, according to Mr. Luccock's Tables, revised by Mr. Hubbard, and made applicable to 1828.

County.	1800. Number of Short Wool Sheep.	1800. Weight of Fleece.	1800. Number of Packs.	1800. Number of Long Wool Sheep.	1800. Number of Packs.	1828. Weight of Fleece.	1828. Number of Packs of Short Wool.	1828. Number of Packs of Long Wool.

N.B. — The wool from slaughtered sheep and carrion not mentioned in this Table; but allowed for above.

British Trade in Wool. — From 1660 down to 1825, the export of wool was strictly prohibited. A notion grew up towards the end of the 17th, and continued to gain ground during the first half of last century, that the wool of England was superior to that of every other country; that long wool could not be produced anywhere else; and that if we succeeded in keeping the raw material at home, we should infallibly command the market of the world for our woollen manufactures. In consequence, innumerable statutes were passed, the enactments in some of which were the most arbitrary and severe that can be imagined, to prevent the clandestine exportation of wool. Mr. John Smith was one of the first who, in his excellent work, entitled *Memoirs of Wool* *, exposed the injustice and absurdity of this system, by proving that whatever advantages the manufacturers might gain by preventing the exportation of wool, were more than lost by the agriculturists. But in despite of Mr. Smith's reasonings, which were enforced by many later writers, and which experience had proved to be in all respects accurate, the prohibition of the exportation of wool was continued till 1825, when Mr. Huskisson happily succeeded in procuring the abolition of this miserable remnant of a barbarous policy. The improvement of machinery, by enabling short or clothing wool to be applied to most of those purposes for which long or combing wool had been exclusively appropriated, had annihilated the only apparently tenable argument on which the prohibition of exportation had ever been vindicated; and even this, it will be observed, applied only to a small proportion of the whole wool produced in England.

Down to 1802, the importation of foreign wool into Great Britain had been quite free; and, being the raw material of an important manufacture, the policy of allowing it to be imported free of duty is obvious. In 1802, however, a duty of *5s.* 3*d.* a cwt. was laid on all foreign wool imported. In 1813, this duty was raised to 6*s.* 8*d.*; and in 1819, Mr. Vansittart raised it to the enormous amount of 56*s.* a cwt., or to 6*d.* per lb. Had English wool sufficed for all the purposes of the manufacture, such a duty would have been less objectionable; but the very reverse was the case. The use of foreign wool had become, owing to the deterioration, or rather, perhaps, to the change in the character, of British wool, and other circumstances, quite indispensable to the prosecution of the manufacture: and as our superiority over the foreigner in several departments of the trade was by no means decided, it is plain that the imposition of a duty which amounted to about 50 per cent. upon the price of a considerable quantity of the wool we were obliged to import, must, had it been persevered in, have ruined the manufacture. It occasioned, indeed, during the period of its continuance, a considerable decline of the exports of woollens, and was productive of other mischievous effects, from which the manufacture suffered for a considerable period after it was repealed.

The evidence as to the absolute necessity of employing foreign wool, taken before the Lords' committee, was as decisive as can well be imagined. Mr. Gott, of Leeds, one of the most extensive and best informed manufacturers in the empire, informed the committee, that, in his own works, he used only foreign wool. On being asked whether he could carry on an export trade to the same extent as at present, if he manufactured his cloth of British wool, Mr. G. replied, that, in certain descriptions of cloth, "*he could not make an article that would be merchantable at all for the foreign market, or even for the home market, except of foreign wool.*" We subjoin a few additional extracts from the evidence of this most competent witness.

"Can you give the committee any information with respect to the competition that now exists between foreigners and this country in woollen cloths?"—"I think the competition is very strong. In some instances the foreigner has, probably, the advantage; and in others, the superiority of the British manufacture, I think, has greatly the advantage; that would apply, I should say, particularly to the fine cloths of Great Britain compared with foreign cloths; in some descriptions of low cloths, the foreigners are nearly on a footing, and in some instances, perhaps, superior to us."

"Speaking of the finer cloths, is the competition such as to render an additional duty on the importation of foreign wool likely to injure the export trade?"—"*I have no doubt,*

* This learned and accurate work contains a great deal of information with respect to the progress of manufactures and commerce in England.

speaking on my oath, that it would be fatal to the foreign cloth trade of the country. I would say further, that it would be equally injurious to coarse manufactures of all kinds made of English wool. The competition now with foreigners is as nearly balanced as possible; and the disturbing operation of attacks of that description would necessarily enable the foreigner to buy his wool cheaper than we should do it in this country: the result would be, that foreigners would, by such a premium, be enabled to extend their manufactures, to the exclusion of British manufactures of all descriptions."

In another part of his evidence, Mr. Gott says,—"If 2 pieces of cloth at 10*s.* a yard were put before a customer, one made of British wool, the other of foreign wool, one would be sold, and the other would remain on hand: I could not execute an order with it. If any person sent to me for cloth of 7*s.* or 8*s.* a yard, and it were made of English wool, it would be sent back to me, and I should resort to foreign wool or foreign mixed with British, to execute that order."

On Mr. Gott being asked whether, in his opinion, the price of British wool would have been higher, had the duty of 6*d.* per lb. on foreign wool been continued, he answered,—"My opinion is, that the price of British wool would have been less at this time; the demand for British wool would have been very much less. *British manufactures would have been shut out of every foreign market;* and the stock of wool would have accumulated, as it will do if ever that duty be imposed again."—(*Mr. Gott's Evidence*, pp. 292, 293.)

The view taken by Mr. Gott of the effect of the importation of foreign wool on the price of British wool was supported by the concurrent testimony of all the manufacturing witnesses examined by the committee. Blankets, flannels of all sorts, baizes, carpets, bearskins, &c. are made principally of English wool; and the command of foreign wool enables the manufacturers to use a considerable quantity of English wool in the manufacture of certain descriptions of cloth, which, if made entirely of it, would be quite unsaleable. On Mr. Goodman, a wool-stapler of Leeds, being asked whether, if a duty were laid on foreign wool, it would force the use of English wool in the manufacture of cloths, from which it is now excluded, he answered,—"Certainly not: we could not get people to wear such a cloth; they want a better, finer cloth; it is so much handsomer in its wear, and so much more durable."—(*Report*, p. 241.) Mr. Francis, of Heytesbury, declared, that there was no demand for cloth made wholly of British wool; that it was principally applicable to the manufacture of blankets, baizes, &c.; and that the exclusion of foreign wool would only injure the manufacture, without raising the price of British wool.—(p. 268.) Statements to the same effect were made by Mr. Webb (p. 270.), Mr. Sheppard (p. 294.), Mr. Ireland (p. 319.), and, in short, by every one of the witnesses conversant with the manufacture.

The history of the manufacture since 1828 has completely confirmed the accuracy of the statements made by Mr. Gott and the other witnesses. Very large quantities of foreign wool have been imported during the interval; but the price of British wool has, notwithstanding, maintained its proper level; and has, in fact, been at an average considerably higher since the reduction of the duty on foreign wool than previously.

Foreign Wool imported into England.—A very great change has taken place, within the course of the present century, both as respects the quantity of foreign wool imported, and the countries whence it is derived. Previously to 1800, our average imports of wool did not much exceed 3,000,000 lbs., mostly brought from Spain; the wool of which long maintained a high character. In 1800, our imports amounted to near 9,000,000 lbs.; and they have since gone on gradually increasing, till they now amount to between 55,000,000 and 75,000,000 lbs.! Instead, however, of being principally derived from Spain, as was the case down to 1814, the greater part by far of this immense supply of foreign wool is at present furnished by Germany, the Australian colonies, and the East Indies. The late king of Saxony, when elector, introduced the breed of Merino sheep into his dominions, and exerted himself to promote the growth of this valuable race of animals. His praiseworthy efforts have been crowned with the most signal success. The Merino sheep seem to succeed better in Saxony and other German states than in Spain; and have increased so rapidly, that the Spanish wool trade has become insignificant compared with that of Germany! The importations of German wool were quite trifling during the war—amounting, in 1812, to only 28 lbs.; but since the peace they have increased beyond all precedent. In 1814, they amounted to 3,432,456 lbs.; in 1820, they were 5,113,442 lbs.; in 1825, they rose to 28,799,661 lbs.; but this being a year of overtrading, they declined in 1826 to 10,545,232 lbs. Subsequently, however, they recovered from this depression, and, in 1836, amounted to 31,766,194 lbs. They have since, however, sunk very rapidly, principally in consequence of the rapidly increasing imports of colonial wool.

The breed of sheep that was carried out to New South Wales and Van Diemen's Land has succeeded remarkably well; and Australia is already, perhaps, the principal wool-growing country of the world. The imports into Great Britain have increased

The re-exports of foreign wool amounted in 1858 to 26,587,428 lbs. In 1857 the re-exports amounted to 36,356,348 lbs., but that was much above the average.

The price of Colonial Wool in London in April, 1859, was as follows, viz.:—

Australian.			s. d.	s. d.
Clothing and combing, superior	-	- per lb.	0 to 2	9
Fair and good	-	- „	1 8 „ 2	8
Inferior	-	- „	1 3 „ 1	7
Scoured	-	- „	1 8 „ 2	11

New Zealand	-	- „	1 2 „ 1	11
Grease	-	- „	0 7½ „ 0	9½

with extraordinary rapidity. In 1833 they amounted to 3,516,869 lbs., in 1839, to 10,128,774 lbs., and in 1858 to 51,104,560 lbs. The imports of wool from India only began in 1833, when they amounted to the inconsiderable quantity of 3,721 lbs.; but such has been their increase in the interval, that in 1858 they amounted to 17,333,507 lbs. Of late years Russia has become of primary importance among the wool exporting countries, especially from her ports on the Black Sea. We said in our last edition that provided tranquillity were maintained in S. Africa, the probability was that it would in no very lengthened period rival N. South Wales as a wool exporting country. This anticipation has been more than realised, the imports having increased from 2,197,143 lbs. in 1844, to 16,597,504 lbs. in 1858! Alpaca, and other wools of that sort, come from Peru; goats' wool comes principally from Turkey, but the best is that of Thibet.

WOOLLEN MANUFACTURE, the art of forming wool into cloth and stuffs. This has always ranked as an important branch of national industry; and until surpassed by the cotton manufacture, was decidedly the most important of all the manufactures carried on in England.

Rise and Progress of the British Woollen Manufacture. Exports. — There can be no doubt that the arts of spinning wool, and manufacturing the yarn into cloth, were introduced into England by the Romans, the inhabitants being previously clothed only in skins. From the period of the Romans quitting England, down to the 10th century, there are no notices of the manufacture; and those relating to the period from the 10th to the 13th century are but few and imperfect. It is certain, however, that the manufacture of broad cloths was established soon after the year 1200, if not previously.—(*Smith's Memoirs of Wool*, i. 17.) But the woollen manufactures of Flanders, being at this period, and long afterwards, in a comparatively advanced state, English wool was exported in large quantities to Bruges and other Flemish cities, whence fine cloths and other products were brought back in exchange. Edward III. took the most judicious measures for improving the English manufacture by inviting over Flemish weavers, fullers, dyers, and others, and protecting them from the assaults of the rabble. Shortly after the first immigration of Flemings, or in 1337, an act was passed, prohibiting the wear of any cloths made beyond sea, and interdicting the export of English wool.—(*Ibid.* i. 25.) But in these turbulent times such restraining acts were little better than a dead letter; and this, indeed, was soon after repealed.—(*Ibid.* i. 32. 39.) From this remote period the manufacture has always been regarded as of primary importance, and has been the object of the especial solicitude of the legislature. It may be doubted, however, whether it has derived any real advantage from the numberless statutes that have been passed in the view of contributing to its advancement. With the exception indeed of the prohibition of the export of English wool, which was finally put a stop to in 1660, the other acts, being mostly intended for the regulation of the manufacture, could not be otherwise than mischievous; and the benefit derived by the manufacturers from the prohibition was more apparent than real; inasmuch as it occasioned a diminished growth of wool, at the same time that it was impossible to prevent its clandestine exportation. Mr. Smith has proved that the manufacture made a far more rapid progress during the reign of Elizabeth, when wool might be freely carried out of the kingdom, than it ever did during any equal period subsequent to the restriction on exportation. Foreign wool began to be imported in small quantities in the 13th century.

At first, the manufacture seems to have been pretty equally distributed over the country. In an insurrection that took place in 1525, more than 4,000 weavers and other tradesmen are said to have assembled out of Laneham, Sudbury, and other towns in Suffolk. The manufacture had been previously introduced into Yorkshire. In 1533 an act was passed (34 & 35 Hen. 8. c. 10), reciting, "that the city of York afore this time had been upholden principally by making and weaving of coverlets, and the poor thereof daily set on work in spinning, carding, dyeing, weaving, &c.;" and the manufacture, having spread into other parts, was "thereby debased and discredited;" and enacting, as a remedy for this evil, that henceforth "none shall make coverlets in Yorkshire, but inhabitants of the city of York!" This may be taken as a fair specimen of the commercial legislation of the time. Indeed, it was enacted, nearly at the same period, that the manufacture should be restricted, in Worcestershire, to Worcester and 4 other towns. Worsted goods, so called from Worsted, now an inconsiderable town in Norfolk, where the manufacture was first set on foot, were produced in the reign of Edward II., or perhaps earlier; but Norwich soon after became, and, notwithstanding the competition and superior advantages of Bradford, is still a principal seat of this branch of the manufacture. In an act of Henry VIII. (33 Hen. 8. c. 16.) worsted yarn is described as "the private commodity of the city of Norwich." In 1614 a great improvement took place in the woollen manufacture of the West of England, by the invention of what is called medley or mixed cloth, for which Gloucestershire is still famous. During the

reign of Charles II., there were many, though unfounded, complaints of the decay of the manufacture; and, by way of encouraging it, an act was passed (30 Car. 2. st. i. c. 3), ordering that all persons should be buried in woollen shrouds! This act, the provisions of which were subsequently enforced, preserved its place on the statute book for more than 130 years!

Towards the end of the 17th century, Mr. Gregory King and Dr. Davenant — (*Davenant's Works*, Whitworth's ed. ii. 233)—estimated the value of the wool shorn in England at 2,000,000*l.* a-year: and they supposed that the value of the wool (including that imported from abroad) was quadrupled in the manufacture: making the entire value of the woollen articles annually produced in England and Wales 8,000,000*l.*, of which about 2,000,000*l.* were exported. In 1700 and 1701, the official value of the woollens exported amounted to about 3,000,000*l.* a-year. Owing to the vast increase of wealth and population, the manufacture must have been very greatly extended during last century; but the increase in the amount of exports was comparatively inconsiderable. At an average of the 6 years ending with 1789, the official value of the exports was 3,544,160*l.* a-year, being only about 540,000*l.* above the amount exported in 1700. The extraordinary increase of the cotton manufacture soon after 1780, and the extent to which cotton articles then began to be substituted for those of wool, though it did not occasion any absolute decline of the manufacture, no doubt contributed powerfully to check its progress. In 1802 the official value of the exports rose to 7,321,012*l.*, being a larger amount than any to which they attained for several subsequent years. In 1836 the declared value of the exports rose to 7,639,354*l.*, but it again fell back. The exports during the 3 years ending with 1852 have been nearly stationary, their average amount being 8,562,688*l.* a-year. Although, therefore, it be not true, as has sometimes been contended, that the manufacture, taken as a whole, has declined, it has not increased rapidly; and may, indeed, be regarded as being in a nearly stationary state.

Value of the Manufacture. Number of Persons employed. — The most discordant estimates have been given as to both these points. For the most part, however, they have been grossly exaggerated. In a tract published in 1739, entitled *Considerations on the Running* (Smuggling) *of Wool*, the number of persons engaged in the manufacture is stated at 1,500,000, and their wages at 11,737,500*l.* a-year. Dr. Campbell, in his *Political Survey of Great Britain*, published in 1774, observes,—"Many computations have been made upon this important subject, and, amongst others, one about 30 years since, which, at that time, was thought to be pretty near the truth. According to the best information that can be obtained, there may be from 10,000,000 to 12,000,000 sheep in England, some think more. The value of their wool may, one year with another, amount to 3,000,000*l.*; the expense of manufacturing this may probably be 9,000,000*l.*, and the total value 12,000,000*l.* We may export annually to the value of 3,000,000*l.* though one year we exported more than 4,000,000*l.* In reference to the number of persons who are maintained by this manufacture, they are probably upwards of 1,000,000. Sanguine men will judge these computations too low, and few will believe them too high."—(ii. 158.) But the moderation displayed in this estimate was very soon lost sight of. In 1800, the woollen manufacturers objected strenuously to some of the provisions in the treaty of union between Great Britain and Ireland, and were allowed to urge their objections at the bar of the House of Lords, and to produce evidence in their support. Mr. Law (afterwards Lord Ellenborough), the counsel employed by the manufacturers on this occasion, stated in his address to their Lordships, on information communicated to him by his clients, that 600,000 packs of wool were annually produced in England and Wales, worth, at 11*l.* a pack, 6,600,000*l.*; that the value of the manufactured goods was 3 times as great, or 19,800,000*l.*; that not less than 1,500,000 persons were immediately engaged in the operative branches of the manufacture; and that the trade collaterally employed about the same number of hands.—(*Account of the Proceedings of the Merchants, Manufacturers, &c.*, p. 34.)

It is astonishing that reasonable men, conversant with the manufacture, should have put forth such ludicrously absurd statements. We have already seen that the quantity of wool produced in England and Wales, in 1800, did not really amount to 400,000 packs; and the notion that *three* out of the *nine* millions of people then in the country were directly and indirectly employed in the manufacture, is too ridiculous to deserve notice, though it was generally acquiesced in at the time.—(See *Middleton's Survey of Middlesex*, 2nd ed. p. 644.; *Adolphus's British Empire*, iii. 236, &c.)

Mr. Stevenson, who is one of the very few writers on British statistics to whose statements much deference is due, gave the following estimate of the value of the woollen manufactured goods annually produced in England and Wales, and of the interest, &c. of the capital, and the number of persons employed in the manufacture:

Total value of manufactured articles		£18,000,000
Value of raw material	£6,000,000	
Interest on capital, sum to replace its wear and tear, and manufacturers' profits	2,400,000	
Wages of workmen	9,600,000	
		£18,000,000

Number of people employed, 480,000, or perhaps 500,000.

But even this estimate requires to be materially modified. Taking Scotland into account and allowing for the increase of population and of exportation since Mr. Stevenson's estimate was made, the total value of the various descriptions of woollens annually produced in Great Britain may, at present, be moderately estimated at from 25,000,000*l.* to 27,000,000*l.*, or 26,000,000*l.* at a medium. We have further been assured by high practical authorities, that Mr. Stevenson's distribution of the items is essentially erroneous; and that assuming the value of the manufacture to be 26,000,000*l.*, it is made up nearly as follows: —

Total value of manufactured articles		£26,000,000
Raw material, 110,000,000 lbs. British wool, at 1*s.* 3*d.* per lb., and 60,000,000 do. foreign at 2*s.*	12,875,000	
Wages	7,725,000	
Oil, dye stuffs, soap, &c.	1,200,000	
Profits, sum to replace wear and tear of capital, &c.	4,200,000	
		£26,000,000

But this estimate is exclusive of the value of shoddy stuffs, which may perhaps amount to 2,000,000*l.* or thereby.

The wages of the workpeople amount to about 30*l.* a year, making the total number employed (ex those in the shoddy trade) about 257,500.

Mr. Baines, M. P., has, in his valuable account of the woollen manufactures of the U.K. (*Statistical Journal*, xxiii., p. 33.) given the following elaborate estimate of its value (ex the worsted manufactures) in 1858.

(1.) Raw Material :—		
75,903,666 lbs. Foreign and colonial wool	£4,717,492	
80,000,000 „ British wool, at 1*s.* 3*d.* per lb.	5,000,000	
45,000,000 „ Shoddy and mungo :— 30,000,000 lbs. shoddy, at 2½*d.* per lb. 15,000,000 lbs. mungo, at 4½*d.* per lb.	609,370	
Cotton and cotton warps, $\frac{1}{30}$th of the wool	206,537	
200,903,666 lbs.		
(2.) Dye-wares, oil, and soap		£1,500,000
(3.) Wages—150,000 workpeople, at 12*s.* 6*d.* per week		4,875,000
(4.) Rent, wear and tear of machinery, repairs, coal, interest on capital, and profit, 20 per cent. on the above		3,381,680
Total		£20,290,079

Account of the Quantities and Values of the Woollen and Worsted Manufactures and Woollen Yarn of British Produce exported from the U. Kingdom in each of the 7 Years ending with 1858.

Worsted stuffs	2,735,804	3,106,609	2,565,474	2,568,451	2,833,541	3,325,761	3,325,751
Other kinds	298,452	500,291	415,403	474,615	684,254	647,699	513,506
Total . . .	8,730,934	10,172,182	9,120,759	7,718,374	9,500,428	10,703,375	9,776,944
Woollen and worsted yarn . . .	1,430,140	1,456,786	1,557,612	2,026,095	2,889,642	2,941,800	2,966,923

The U. States, the Hanse Towns, Holland and Belgium, but especially the first, are by far the largest markets for our woollen and worsted goods. British N. America, Australia, and China also, take considerable quantities. Yarn is principally sent to the Hanse Towns, Holland, Russia, Hanover, and Belgium.

In 1820 the total exports of yarn amounted to only 3,924 lbs., and in 1825 to 76,961 lbs., whereas in 1858 it amounted to no fewer than 2,966,923 lbs., an increase all but unparalleled in the history of industry.

Account of the Declared Value of the Woollen Manufactures, exclusive of Woollen and Worsted Yarn, exported from the U. Kingdom in the under-mentioned Years.

1820	£5,586,158	1835	£6,840,511	1850	£8,588,690
1825	6,185,648	1840	5,527,853	1851	8,577,183
1830	4,728,666	1845	7,698,118	1852	8,725,695

The different progress of the exports of manufactured goods and yarn depends, no doubt, on various causes; but principally, we believe, on the change, previously noticed, that has taken place in the character of our wool, which fits it much better than

formerly for being made into worsted yarn, which is almost the only description of yarn that is exported. The operation of this change is evinced in a still more striking manner by comparing the export of cloth, properly so called, with that of stuffs, in the undermentioned years.

	1816.	1826.	1840.	1857.
Exports of cloth, pieces - - -	636,368	384,508	215,746	695,063
„ stuffs „ - - -	593,308	1,138,588	1,718,617	2,568,462

It is obvious that this declining or stationary amount on the one hand, and continued and rapid increase on the other, must have been occasioned by the operation of some powerful and permanent cause; and none such can be assigned other than the decreasing suitableness of British wool for being made into cloth, and its increasing suitableness for being made into worsted yarn and stuffs. We do not think that the duty on wool had, when it existed, much influence either one way or the other.

Latterly the stuff trade has made great progress. This has been mainly occasioned by the change of fashion in this and other countries, by which stuffs made of a mixture of cotton and worsted and cotton and silk have been largely substituted for cloths, and the home and foreign demand for them proportionally increased. In so far, indeed, as the extraordinary extension of the stuff trade depends on this change, it cannot, perhaps, be regarded as resting on any very solid foundation. But it is on the whole abundantly obvious that the export trade in cloth has declined; and that it is only in the stuff trade and in the production of yarn that we have decided superiority over foreigners. For an account of the recent history of the woollen trade, see the 2nd vol. of *Bischoff's History of the Woollen and Worsted Manufactures*, a useful work formed on the plan of *Smith's Memoirs of Wool*, but neither so learned nor so able.

Shoddy and Mungo Trade.—The greater number, perhaps, of our readers may never have heard of that branch of the woollen manufacture called the *shoddy and mungo trade*, which has grown up of late years, and is now of very considerable value and importance. It is principally carried on at Batley, where it originated, and at Dewsbury, which has become the head-quarters of the business. Cloths, whether of shoddy or mungo, are made either wholly or in part of old, or worn, wool; the former, or these called shoddy, consisting of the wool of soft goods, such as stockings, flannels, &c.; and the latter, or those called mungo, consisting of the wool of hard goods, that is of the different descriptions of cloth. The latter is more valuable than the former, the price of shoddy averaging about 2½*d.* per lb., whereas the mean price of mungo is about 5*d.* per do. The old cloths or rags having been collected, and subjected to various processes, are torn to pieces by the aid of powerful machinery, and reduced to their original state of wool; and this wool, being respun, either with or without an admixture of fresh wool, is again made into cloth. Formerly this sort of cloth was used only for padding and such like purposes; but now it is made into blankets, flushings, druggets, carpets and table covers, cloth for pilot and Petersham great coats, &c. The clothing of the army, and the greater part of that of the navy, consists in part of the same material, which in fact is occasionally worn by everybody. Large quantities of shoddy cloth are exported. Great improvements have been effected of late years, not only in the fabric of the cloth, but also in the dyes: this is especially seen in the cloth for soldiers' uniforms, which is no longer of a brick-dust colour, but makes a much nearer approach to scarlet. The beautiful woollen table covers are made wholly of old wool, being printed by *aqua fortis* from designs drawn in London and Manchester, and cut on holly and other blocks on the spot.

It must, however, be observed that, though the cloth made from old, may look as well as that made from new, wool, it has neither the strength nor tenacity of the latter. It is seldom, however, that old wool is used singly; generally it is mixed up with new wool in proportions varying from 10 to 50 or 60 per cent., according to the purposes to which it is to be applied; and if the old wool be not in excess, the capacity of the cloth for wear is but little affected.

No honest manufacturer will, of course, substitute old for new wool in the manufacture of any sort of goods without apprising his customers of the fact. But this is all that he is required to do, and there cannot be a doubt that, speaking generally, the substitution of old for new wool is, in very many cases, highly advantageous.

The analogy between this manufacture and that of paper is so striking, that it must force itself on the attention of every one; the vilest and most worthless materials being converted in both into the most beautiful and useful fabrics. The shoddy trade is, in fact, one of the triumphs of art and civilisation.

"The manufacture," says Mr. Baines, "has forced its way, and made Batley, Dewsbury, and the neighbourhood, the most prosperous parts of the woollen district. There are now in Batley alone 50 rag machines in 35 mills, producing no less than 12,000,000 lbs. of rag-wool per annum; and I am assured, on good authority, that three

times this quantity is made in the district. The rags are gathered from all parts of the kingdom, as well as imported regularly from the Continent, America, and Australia. There is now, also, a considerable manufacture of the shoddy, or rag-wool, in Germany, and it is believed that no less than nine or ten million pounds weight were imported last year."

WRECK, in navigation, is usually understood to mean any ship or goods driven ashore, or found floating at sea in a deserted or unmanageable condition. But in the legal sense of the word in England, *wreck* must have come to land; when at sea, it is distinguished by the barbarous appellations of *flotsam, jetsam,* and *lagan.* — (See FLOTSAM.)

In nothing, perhaps, has the beneficial influence of the advance of society in civilisation been more apparent than in the regulations with respect to the persons and property of shipwrecked individuals. In most rude and uncivilised countries, their treatment has been cruel in the extreme. Amongst the early Greeks and Romans, strangers and enemies were regarded in the same point of view. — (*Hostis apud antiquos, peregrinus dicebatur. — Pomp. Festus;* see also *Cicero de Offic.* lib. i. c. 12.) Where such inhospitable sentiments prevailed, the conduct observed towards those that were shipwrecked could not be otherwise than barbarous; and in fact they were, in most instances, either put to death or sold as slaves. But as law and good order grew up, and commerce and navigation were extended, those who escaped from the perils of the sea were treated in a way less repugnant to the dictates of humanity: and at length the Roman law made it a capital offence to destroy persons shipwrecked, or to prevent their saving the ship; and the stealing even of a plank from a vessel shipwrecked or in distress, made the party liable to answer for the whole ship and cargo. — (*Pand.* 47. 9. 3.)

During the gloomy period which followed the subversion of the Roman empire, and the establishment of the northern nations in the southern parts of Europe, the ancient barbarous practices with respect to shipwreck were every where renewed. Those who survived were in most countries reduced to servitude; and their goods were every where confiscated for the use of the lord on whose manor they had been thrown. — (*Robertson's Charles V.*, i. note 29.) But nothing, perhaps, can so strongly evince the prevalence and nature of the enormities, as the efforts that were made, as soon as governments began to acquire authority, for their suppression. The regulations as to shipwreck in the Laws of Oleron are, in this respect, most remarkable. The 35th and 38th articles state, that "pilots, in order to ingratiate themselves with their lords, did, like faithless and treacherous villains, sometimes willingly run the ship upon the rocks, &c.;" for which offence they are held to be accursed and excommunicated, and punished as thieves and robbers. The fate of the lord is still more severe. "He is to be apprehended, his goods confiscated and sold, and himself fastened to a post or stake in the midst of his own mansion house, which being fired at the four corners, all shall be burned together; the walls thereof be demolished; the stones pulled down; and the site converted into a market place, for the sale only of hogs and swine, to all posterity." The 31st article recites, that when a vessel was lost by running on shore, and the mariners had landed, they often, instead of meeting with help, "were attacked by people more barbarous, cruel, and inhuman, than mad dogs; who, to gain their monies, apparel, and other goods, did sometimes murder and destroy these poor distressed seamen. In this case, the lord of the country is to execute justice, by punishing them in their persons and their estates; and is commanded to plunge them in the sea till they be half dead, and then to have them drawn forth out of the sea and stoned to death."

Such were the dreadful severities by which it was attempted to put a stop to the crimes against which they were directed. The violence of the remedy shows better than any thing else how inveterate the disease had become.

But the fact that divines did not scruple to prostitute religious worship by praying that the adjacent coasts might be enriched with shipwrecks, affords, perhaps, the most striking proof of the barbarism of the times referred to. And incredible as it may seem, this practice was continued down to a comparatively recent epoch. "Cependant il y a encore en Allemagne des pays où la coutume de confisquer les biens naufragés n'est point encore abolie. Il y a même des endroits ou les ministres predicateurs ne font pas difficulté de prier Dieu en chaire qu'il se fasse bien des naufrages sur leurs côtes. Et ces prieres, Thomasius a entrepris sérieusement de les justifier; mais par des raisons si singulieres, qu'elles ne valoient pas la peine que Barbeyrac a prise de les refuter."—(*Valin, Commentaire sur l'Ordonnance de* 1681, ii. 586. See also *Puffendorff,* "*Droit de la Nature et des Gens,*" *par Barbeyrac,* ii. 706.)

The law of England, like that of other modern countries, adjudged wrecks to belong to the king. But the rigour and injustice of this law was modified so early as the reign of Henry I., when it was ruled, that if any person escaped alive out of the ship, it should be no wreck. And after various modifications, it was decided, in the reign

of Henry III., that if goods were cast on shore, having any marks by which they could be identified, they were to revert to the owners, if claimed any time within a year and a day. By the statute 27 Edw. 3. c. 13., if a ship be lost and the goods come to land, they are to be delivered to the merchants, paying only a reasonable reward or SALVAGE (which see) to those who saved or preserved them. But these ancient statutes, owing to the confusion and disorder of the times, were very ill enforced; and the disgraceful practices previously alluded to continued to the middle of last century.

A statute of Anne (12 Ann. st. 2. c. 18.), confirmed by the 4 Geo. 1. c. 12., in the view of putting a stop to the atrocities in question, orders all head officers and others of the towns near the sea, upon application made to them, to summon as many hands as are necessary, and send them to the relief of any ship in distress, on forfeiture of 100*l.*; and in case of any assistance given, salvage is to be assessed by 3 justices, and paid by the owners. Persons secreting any goods cast ashore are to forfeit treble their value; and if they wilfully do any act by which the ship is lost or destroyed, they are guilty of felony without benefit of clergy. But even this statute seems not to have been sufficient to accomplish the end in view; and in 1753, a new statute (26 Geo. 2. c. 19.) was enacted, the preamble of which is as follows:—"Whereas, notwithstanding the good and salutary laws now in being against plundering and destroying vessels in distress, and against taking away shipwrecked, lost, or stranded goods, many wicked enormities have been committed, to the disgrace of the nation, and the grievous damage of merchants and mariners of our own and other countries, be it," &c.: and it is then enacted, that the preventing of the escape of any person endeavouring to save his life, or wounding him with intent to destroy him, or putting out false lights in order to bring any vessel into danger, shall be capital felony. By the same statute, the pilfering of any goods cast ashore is made petty larceny.

We regret, however, to have to state that the plunder of shipwrecked property is still by no means uncommon on the British coasts. The committee on shipwrecks in 1843 state, that "there is on many parts of the coast a want of that moral principle which should inculcate a just regard for the rights of such property. It is looked upon as a chance gift, which every one has a right to scramble for as he can, notwithstanding the laws which have been passed, from the earliest period, to prevent or punish such depredations. The plunder of shipwrecked property on the coasts has been carried on to an enormous extent, and this seems to have arisen from there having been no persons on the spot, when a wreck had taken place, to look after the property." The committee state, that the establishment of the coast-guard has done much to repress these abuses. The latter, however, cannot legally interfere, except when the castaway articles are subject to custom duties; and the committee suggest that all abandoned property should be vested in the government in trust for those to whom it may belong, as is done in France and Holland.—(*Report of Committee* of 1843, p. viii.)

Since this report was published the law in regard to shipwreck and salvage has been twice consolidated and embodied; first, in the act 9 & 10 Vict. c. 99, and more recently in the Mercantile Shipping Act of 1854, the 17 & 18 Vict. c. 104. The reader will find in the art. SALVAGE a full account of the rules and regulations laid down in the last-mentioned statute in regard to that important subject; and we now beg to subjoin those which have reference to the conduct to be pursued in regard to wrecks.

Inquiries to be instituted in Cases of Wreck and Casualty.—In any of the cases following, viz.,

Whenever any ship is lost, abandoned, or materially damaged on or near the coasts of the U. K.:
Whenever any ship causes loss or material damage to any other ship on or near such coasts:
Whenever by reason of any casualty happening to or on board of any ship on or near such coasts loss of life ensues:

Whenever any such loss, abandonment, damage or casualty happens elsewhere, and any competent witnesses thereof arrive or are found at any place in the U. K.

It shall be lawful for the inspecting officer of the coast guard or the principal officer of customs residing at or near the place where such loss, abandonment, damage, or casualty occurred, if the same occurred on or near the coasts of the U. K., but if elsewhere at or near the place where such witnesses as aforesaid arrive or are found or can be conveniently examined, or for any other person appointed for the purpose by the B. of Trade, to make inquiry respecting such loss, abandonment, damage, or casualty: and he shall for that purpose have all the powers given by this act to inspectors appointed by the said Board.—§ 432.

Formal Investigation before Justices.—If it appear to such officer or person as aforesaid, either upon or without any such preliminary inquiry, that a formal investigation is requisite or expedient, or if the B. of Trade so directs, he shall apply to any 2 justices or to a stipendiary magistrate to hear the case; and such justices or magistrate shall thereupon proceed to hear and try the same, and shall for that purpose, so far as relates to the summoning of parties, compelling the attendance of witnesses, and the regulation of the proceedings, have the same powers as if the same were a proceeding relating to an offence or cause of complaint upon which they or he have power to make a summary conviction or order, or as near thereto as circumstances permit; and it shall be the duty of such officer or person to superintend the management of the case, and to render such assistance to the said justices or magistrate as is in his power; and, upon the conclusion of the case, the said justices or magistrate shall send a report to the B. of Trade, containing a full statement of the case and of their or his opinion thereon, accompanied by such report of or extracts from the evidence, and such observations (if any) as they or he may think fit.—§ 433.

Power to appoint Nautical Assessor.—In cases where nautical skill and knowledge are required, the B. of Trade shall have the power, either at the request of such justices or magistrate, or at his own discretion, to appoint some person of nautical skill and knowledge to act as assessor to such justices or magistrate; and such assessor shall, upon the conclusion of the case, either signify his concurrence in their report by signing the same, or if he dissent therefrom shall signify such dissent and his reasons therefor to the B. of Trade.—§ 434.

Stipendiary Magistrate to be Member of Local Marine Board, and to be paid.—In places where there is a Local Marine Board, and where a stipendiary magistrate is a member of such board, all such investigations shall, whenever he happens to be present, be made before such magistrate; and there shall be paid to such magistrate in respect of his services under this act such remuneration, whether by way of annual increase of salary or otherwise as H. M.'s secretary of state for the home department, with the

consent of the B. of Trade, may direct; and such remuneration shall be paid out of the mercantile marine fund. — § 435.

Costs of such Investigations. — The said justices or magistrate may make such order with respect to the costs of any such investigation or any portion thereof as they or he may deem just, and such costs shall be paid accordingly, and shall be recoverable in the same menner as other costs incurred in summary proceedings before them or him; and the B. of Trade may, if in any case it thinks fit so to do, pay the expense of any such investigation, and may pay to such assessor such remuneration as it thinks fit. — § 436.

Investigations in Scotland. — In the case of any such investigation being held in Scotland, the B. of Trade may remit the same to the lord advocate to be prosecuted in such manner as he may direct, and in case he so requires, with the assistance of such persons of nautical skill and knowledge as the B. of Trade may appoint for the purpose. — § 437.

Master or Mate may be required to deliver Certificate, &c. — Such justices or magistrate as aforesaid may, or in Scotland such person or persons as is or are directed by the lord advocate to conduct the investigation may, if they or he think fit, require any master or mate possessing a certificate of competency or service whose conduct is called in question or appears to them or him likely to be called in question in the course of such investigation, to deliver such certificate to them or him, and they or he shall hold the certificate so delivered until the conclusion of the investigation, and shall then either return the same to such master or mate, or, if their report is such as to enable the B. of Trade to cancel or suspend such certificate under the powers given to such B. by this act, shall forward the same to the B. of Trade, to be dealt with as such board thinks fit; and if any master or mate fail so to deliver his certificate when so required, he shall incur a penalty not exceeding 50*l.* — § 438.

B. of Trade Superintendents of Wreck, with power to appoint Receivers. — The B. of Trade shall throughout the U. K. have the general superintendence of all matters relating to wreck; and it may with the consent of the commissioners of H. M.'s Treasury appoint any officer of customs or of the coast guard, or of the inland revenue, or, when it appears to such board to be more convenient, any other person, to be a receiver of wreck in any district, and to perform such duties as are herein mentioned, and shall give due notice of every such appointment. — § 439.

Admiral not to interfere with Wreck. — No admiral, vice-admiral, or other person, under whatever denomination, exercising admiralty jurisdiction, shall as such, by himself or his agents, receive, take, or interfere with any wreck except as herein mentioned. — § 440.

Duty of Receiver when any Ship is stranded or in Distress. — Whenever any ship or boat is stranded or in distress at any place on the shore of the sea or of any tidal water within the limits of the U. K., the receiver of the district within which such place is situate shall, upon being made acquainted with such accident, forthwith proceed to such place, and upon his arrival there he shall take the command of all persons present, and assign such duties to each person, and issue such directions, as he may think fit with a view to the preservation of such ship or boat, and the lives of the persons belonging thereto, and the cargo and apparel thereof; and if any person wilfully disobeys such directions, he shall forfeit a sum not exceeding 50*l.*; but it shall not be lawful for such receiver to interfere between the master of such ship or boat and his crew in matters relating to the management thereof, unless he is requested so to do by such master. — § 441.

Powers of Receiver in case of Accident to any Ship or Boat.—The receiver may, with a view to such preservation as aforesaid of the ship or boat, persons, cargo, and apparel, do the following things; (that is to say,)

(1.) Summon such number of men as he thinks necessary to assist him:
(2.) Require the master or other person having the charge of any ship or boat near at hand to give such aid with his men, ship, or boats as may be in his power:
(3.) Demand the use of any waggon, cart, or horses that may be near at hand:

And any person refusing without reasonable cause to comply with any summons, requisition, or demand so made, shall for every such refusal incur a penalty not exceeding 100*l.*; but no person shall be liable to pay any duty of assessed taxes in respect of any such waggon, cart, or horses by reason of the user of the same under this section.—§ 442.

Articles washed on Shore, or lost, &c., to be delivered to Receiver.—All cargo and other articles belonging to such ship or boat, that may be washed on shore, or otherwise be lost or taken from such ship or boat, shall be delivered to the receiver; and any person, whether he is the owner or not, who secretes or keeps possession of any such cargo or article, or refuses to deliver the same to the receiver or to any person authorised by him to demand the same, shall incur a penalty not exceeding 100*l.*; and it shall be lawful for such receiver or other person as aforesaid to take such cargo or article by force from the person so refusing to deliver the same. — § 443.

Receiver to suppress Plunder and Disorder by Force.—Whenever any such accident occurs to any ship or boat, and any person plunders, creates disorder, or obstructs the preservation of such ship, boat, lives, or cargo, it shall be lawful for the receiver to cause such person to be apprehended, and to use force for the suppression of any such plundering, disorder, or obstruction, with power to command all H. M.'s subjects to assist him in the use of such force; and if any person is killed, maimed, or hurt by reason of his resisting the receiver in the execution of the duties hereby committed to him, or any person acting under his orders, such receiver or other person shall be free and fully indemnified as well against the Queen's Majesty, her heirs and successors, as against all persons so killed, maimed, or hurt. — § 444.

Certain Officers to exercise Power of Receiver.—During the absence of the receiver from the place where any such accident as aforesaid occurs, or in places where no receiver has been appointed under this act, the following officers in succession, each in the absence of the other, in the order in which they are named, viz., any principal officer of customs or of the coast guard, or of inland revenue, and also any sheriff, justice of the peace, commissioned officer on full pay in the naval service of H. M., or commissioned officer on full pay in the military service of H. M., may do all matters and things hereby authorised to be done by the receiver, with this exception, that with respect to any goods or articles belonging to any such ship or boat, the delivery up of which to the receiver is herein required, any officer so acting shall be considered as the agent of the receiver, and shall place the same in the custody of the receiver; and no person so acting as substitute for any receiver shall be entitled to any fees payable to receivers, or be deprived by reason of his so acting of any right to salvage to which he would otherwise be entitled. — § 445.

Power in case of a Ship being in Distress to pass over adjoining Lands with Carriages.—Whenever any accident as aforesaid occurs to any ship or boat, all persons may, for the purpose of rendering assistance to such ship or boat, or saving the lives of the persons on board the same, or the cargo or apparel thereof, unless there be some public road equally convenient, pass and repass either with or without carriages or horses over any adjoining lands, without being subject to interruption by the owner or occupier, so that they do as little damage as possible, and may also, on the like condition, deposit on such lands any cargo or other article recovered from such ship or boat; and all damage that may be sustained by any owner or occupier in consequence of any such passing or repassing or deposit as aforesaid shall be a charge on the ship, boat, cargo, or articles in respect of or by which such damage was occasioned, and shall, in default of payment, be recoverable in the same manner as salvage is hereby made recoverable; and the amount payable in respect thereof, if disputed, shall be determined in the same manner as the amount of salvage is hereby in case of dispute directed to be determined. — § 446.

Penalty on Owners, &c., of Land refusing to allow Carriages, &c. to pass over their Land.—If the owner or occupier of any land over which any person is hereby authorised to pass or repass for any of the purposes herein-before mentioned does any of the following things, (that is to say,)

(1.) Impedes or hinders any such person from so passing or repassing, with or without carriages, horses, and servants, by locking his gates, refusing, upon request, to open the same, or otherwise however:
(2.) Impedes or hinders the deposit of any cargo or other article recovered from any such ship or boat as herein-before mentioned:
(3.) Prevents such cargo or other article from remaining so deposited for a reasonable time, until the same can be removed to a safe place of public deposit;

He shall for every such offence incur a penalty not exceeding 100*l.*—§ 447.

Power of Receiver to institute Examination, &c.—Any receiver, or in his absence any justice of the peace, shall as soon as conveniently may be, examine upon oath (which oath they are hereby respectively empowered to administer) any person belonging to any ship which may be or may have been in distress on the coasts of the U. K., or any other person who may be able to give any account thereof or of the cargo or stores thereof, as to the following matters; viz.:

(1.) The name and description of the ship.
(2.) The name of the master and of the owners.
(3.) The names of the owners of the cargo.
(4.) The ports or places from and to which the ship was bound.
(5.) The occasion of the distress of the ship.
(6.) The services rendered.
(7.) Such other matters or circumstances relating to such ship, or to the cargo on board the same, as the receiver or justice thinks necessary.

And such receiver or justice shall take the examination down in writing, and shall make two copies of the same, of which he shall send one to the B. of Trade, and the other to the secretary of the committee of Lloyd's in London, and such last-mentioned copy shall be placed by the said secretary in some conspicuous situation for the inspection of persons desirous of examining the same; and for the purposes of such examination every receiver or justice as aforesaid shall have all the powers given by this act to inspectors appointed by the B. of Trade.—§ 448.

Original or certified Copy of Examination to be primâ facie Evidence.—Any examination so taken in writing as aforesaid, or a copy thereof, purporting to be certified under the hand of the receiver or justice before whom such examination was taken, shall be admitted in evidence in any court of justice, or before any person having by law or by consent of parties authority to hear, receive, and examine evidence, as *primâ facie* proof of all matters contained in such written examination.—§ 449.

Rules to be observed by Persons finding Wreck.—The following rules shall be observed by any person finding or taking possession of wreck within the U. K.; viz.:

(1.) If the person so finding or taking possession of the same is the owner, he shall as soon as possible give notice to the receiver of the district within which such wreck is found, stating that he has so found or taken possession of the same; and he shall describe in such notice the marks by which such wreck is distinguished.
(2.) If any person not being the owner finds or takes possession of any wreck, he shall as soon as possible deliver the same to such receiver as aforesaid.
And any person making default in obeying the provisions of this section shall incur the following penalties; (that is to say,)
(3.) If he is the owner and makes default in performing the several things, the performance of which is hereby imposed on an owner,
He shall incur a penalty not exceeding 100*l.*
(4.) If he is not the owner and makes default in performing the several things, the performance of which is hereby imposed on any person not being an owner,
He shall forfeit all claim to salvage.
He shall pay to the owner of such wreck, if the same is claimed, but if the same is unclaimed then to the person entitled to such unclaimed wreck, double the value of such wreck (such value to be recovered in the same way as a penalty of like amount); and
He shall incur a penalty not exceeding 100*l.*—§ 450.

Receivers to seize concealed Wreck.—If any receiver suspects or receives information that any wreck is secreted or in the possession of some person who is not the owner thereof, or otherwise improperly dealt with, he may apply to any justice of the peace for a warrant, and such justice shall have power to grant a warrant, by virtue whereof it shall be lawful for the receiver to enter into any house or other place wherever situate, and also into any ship or boat, and to search for, and to seize and detain any such wreck as aforesaid there found; and if any such seizure is made in consequence of information that may have been given by any person to the receiver, the informer shall be entitled by way of salvage to such sum not exceeding in any case 5*l.* as the receiver may allow.—§ 451.

Notice of Wreck to be given by Receiver.—Every receiver shall within 48 hours after taking possession of any wreck cause to be posted up in the custom house of the port nearest to the place where such wreck was found or seized a description of the same and of any marks by which it is distinguished, and shall also, if the value of such wreck exceeds 20*l.*, but not otherwise, transmit a similar description to the secretary of Lloyd's aforesaid; and such secretary shall post up the description so sent, or a copy thereof, in some conspicuous place, for the inspection of all persons desirous of examining the same.—§ 452.

Goods perishable or of small Value may be sold immediately.—In cases where any wreck in the custody of any receiver is under the value of 5*l.*, or is of so perishable a nature or so much damaged that the same cannot, in his opinion, be advantageously kept, or if the value thereof is not sufficient to defray the charge of warehousing, the receiver may sell the same before the expiration of the period after mentioned, and the money raised by such sale, after defraying the expenses thereof, shall be held by the receiver for the same purposes and subject to the same claims for and to which the article sold would have been held and liable if it had remained unsold.—§ 453.

Where any Lord of the Manor or other Person is entitled to unclaimed Wreck, Receiver to give him Notice.—In cases where any admiral, vice-admiral, lord of the manor, or other person is entitled for his own use to unclaimed wreck found on any place situate within a district for which a receiver is appointed, such admiral, vice-admiral, lord of the manor, or other person shall deliver to such receiver a statement containing the particulars of his title, and the address to which notices are to be sent; and upon such statement being so delivered, and proof made to the satisfaction of the receiver of the validity of such title, it shall be his duty, whenever he takes possession of any wreck found at any such place, to send within 48 hours thereafter a description of the same and of any marks by which it is distinguished, directed to such address as aforesaid.—§ 454.

Payments to be made to Receiver.—There shall be paid to all receivers appointed under this act the expenses properly incurred by them in the performance of their duties, and also in respect of the several matters specified in the table annexed to this act, such fees, not exceeding the amounts therein mentioned, as may from time to time be directed by the B. of Trade; and the receiver shall have the same lien and be entitled to the same remedies for the recovery of such expenses and fees as a salvor has or is entitled to in respect of salvage due to him; but, save as aforesaid, no receiver appointed under this act shall, as such, be entitled to any remuneration whatsoever.—§ 455.

Sums payable to Receiver to be determined by B. of Trade.—Whenever any dispute arises in any part of the U. K. as to the amount payable to any receiver in respect of expenses or fees, such dispute shall be determined by the B. of T., whose decision shall be final.—§ 456.

Application of Fees.—All fees received by any receiver appointed under this act, in respect of any services performed by him as receiver, shall be carried to and form part of the Mercantile Marine Fund, and a separate account thereof shall be kept, and the monies arising therefrom shall be applied in defraying any expenses duly incurred in carrying into effect the purposes of this act, and in such manner as the B. of T. directs.—§ 457.

For the regulations as to salvage, see art. SALVAGE.

In case of Shipwrecked Property being plundered by a tumultuous Assemblage, Hundred to be liable in Damages.—Whenever any ship or boat is stranded or otherwise in distress on or near the shore of any sea or tidal water in the U. K., and such ship or boat, or any part of the cargo or apparel thereof, is plundered, damaged or destroyed by any persons riotously and tumultuously assembled together, whether

on shore or afloat, full compensation shall be made to the owner of such ship, boat, cargo, or apparel, as follows; viz.:

In England by the inhabitants of the hundred, wapentake, ward, or district in the nature of a hundred, by whatever name denominated, in or nearest to which the said offence is committed, in manner provided by the 7 & 8 G. 4. c. 31. in case of the destruction of churches and other buildings by a riotous assemblage, or as near thereto as circumstances permit:

In Ireland by the inhabitants of the county, county of a city or town, barony, town or towns, parish or parishes, in or nearest to which such offence is committed, in manner provided by the 3 & 4 W. 4. c. 37. s. 72. for the recovery of satisfaction and amends for the malicious demolition of or injury to churches, chapels and other buildings used for religious worship, according to the usage of the United Church of England and Ireland, or as near thereto as circumstances permit.

In Scotland, by the inhabitants of the county, city or borough in or nearest to which such offence is committed, in manner provided by the 1 G. 1. st. 2. c. 5. with respect to prosecutions for repairing the damages of any churches and other buildings, or as near thereto as circumstances permit.

Penalty for plundering in Cases of Shipwreck, &c.—Every person who does any of the following acts, viz.:

(1.) Wrongfully carries away or removes any part of any ship or boat stranded or in danger of being stranded or otherwise in distress on or near the shore of any sea or tidal water, or any part of the cargo, or apparel thereof, or any wreck; or

(2.) Endeavours in any way to impede or hinder the saving of such ship, boat, cargo, apparel or wreck; or

(3.) Secretes any wreck, or obliterates or defaces any marks thereon;

Shall, in addition to any other penalty or punishment he may be subject to under this or any other act or law, for each such offence incur a penalty not exceeding 50*l.*; and every person, not being a receiver or a person herein-before authorised to take the command in cases of ships being stranded or in distress, or not acting under the orders of such receiver or person, who, without the leave of the master, endeavours to board any such ship or boat as aforesaid, shall for each offence incur a penalty not exceeding 50*l.*; and it shall be lawful for the master of such ship or boat to repel by force any such person so attempting to board the same.—§ 478.

Penalty for selling Wreck in Foreign Ports. — If any person takes into any foreign port or place any ship or boat stranded, derelict, or otherwise in distress on or near the shore of the sea or of any tidal water situate within the limits of the U. K., or any part of the cargo or apparel thereof, or anything belonging thereto, or any wreck found within such limits as aforesaid, and there sells the same, he shall be guilty of felony, and be subject to penal servitude for a term not exceeding 4 years. — § 479.

Regulations to be observed by Dealers in Marine Stores. — Every person dealing in buying and selling anchors, cables, sails, or old junk, old iron, or marine stores of any description, shall conform to the following regulations, viz.,

(1.) He shall have his name, together with the words, "Dealer in Marine Stores," painted distinctly in letters of not less than 6 inches in length on every warehouse or other place of deposit belonging to him.

If he does not he shall incur a penalty not exceeding £20.

(2.) He shall keep a book or books fairly written, and shall enter therein an account of all such marine stores as he may from time to time become possessed of, stating, in respect of each article, the time at which and the person from whom he purchased or received the same, adding, in the case of every such last-mentioned person, a description of his business and place of abode.

If he does not he shall incur for the first offence a penalty not exceeding £20, and for every subsequent offence a penalty not exceeding £50.

(3.) He shall not, by himself or his agents, purchase marine stores of any description from any person apparently under the age of sixteen years.

If he does so he shall incur for the first offence a penalty not exceeding £5, and for every subsequent offence a penalty not exceeding £20.

(4.) He shall not cut up any cable, or any similar article, exceeding 5 fathoms in length, or unlay the same into twine or paper stuff, on any pretence whatever, without obtaining such permit and publishing such notice of his having so obtained the same as is after mentioned.

If he does so he shall incur for the first offence a penalty not exceeding £20, and for every subsequent offence a penalty not exceeding £50.

Manner of obtaining Permit to cut up Cables. — In order to obtain such permit as aforesaid a dealer in marine stores shall make a declaration before some justice of the peace having jurisdiction over the place where such dealer resides containing the following particulars, viz.,

(1.) A statement of the quality and description of the cable or other like article about to be cut up or unlaid.

(2.) A statement that he purchased or otherwise acquired the same *bonâ fide* and without fraud, and without any knowledge or suspicion that the same had been come by dishonestly.

(3.) A statement of the name and description of the person from whom he purchased or received the same.

And it shall be lawful for the justice before whom any such declaration is made, or for the receiver of the district in which such dealer in marine stores resides, upon the production of any such declaration as aforesaid, to grant a permit authorising him to cut up or unlay such cable or other like article.—§ 481.

Permit to be advertised before Dealer proceeds to act thereon. — No dealer in marine stores who has obtained permit as aforesaid shall proceed to cut up or unlay any cable or other like article until he has for the space of one week at the least before doing any such act published in some newspaper published nearest to the place where he resides one or more advertisements notifying the fact of his having obtained a permit, and specifying the nature of the cable or other article mentioned in the permit, and the place where the same is deposited, and the time at which the same is intended to be cut up or unlaid; and if any person suspects or believes that such cable or other article is his property, he may apply to any justice of the peace for a warrant; and such justice of the peace may, on the applicant making oath, or, if a person entitled to make an affirmation, making an affirmation in support of such his suspicion or belief, grant a warrant by virtue whereof the applicant shall be entitled to require the production by dealer as aforesaid of the cable or other article mentioned in the permit, and also of the book of entries before directed to be kept by every dealer in marine stores; and, upon such cable or other article and book of entries being produced, to inspect and examine the same; and if any dealer in marine stores makes default in complying with any of the provisions of this section, he shall for the first offence incur a penalty not exceeding 20*l.*, and for every subsequent offence a penalty not exceeding 50*l.* — § 482.

Manufacturers to place Marks on Anchors. — Every manufacturer of anchors shall, in case of each anchor which he manufactures, mark in legible characters on the crown and also on the shank under the stock his name or initials, with the addition of a progressive number and the weight of such anchor; and if he makes default in doing so he shall for each offence incur a penalty not exceeding 5*l.* — § 483.

Foreign Goods found derelict to be subject to the same Duties as on Importation. — All wreck, being foreign goods brought or coming into the U. K. or the Isle of Man, shall be subject to the same duties as if the same were imported into the U. K. or the Isle of Man respectively; and if any question arises as to the origin of such goods, they shall be deemed to be the produce of such country as the commissioners of customs may upon investigation determine.—§ 499.

Goods saved from Ships wrecked to be forwarded to their original Destination. — The commissioners of customs and excise shall permit all goods, wares, and merchandise saved from any ship stranded or wrecked on its homeward voyage to be forwarded to the port of its original destination, and all goods, wares, and merchandise saved from any ship stranded or wrecked on its outward voyage to be returned to the port at which the same were shipped; but such commissioners are to take security for the due protection of the revenue in respect of such goods, wares, and merchandise.—§ 500.

Number of Shipwrecks. — The loss of property by shipwreck is very great. It appears from an examination of *Lloyd's List* from 1793 to 1829, that the losses in the British mercantile navy only amounted, at an average of that period, to about 557 vessels a year, of the aggregate burden of about 66,000 tons, or to above 1-40th part of its entire amount in ships and tonnage. The following accounts contain notices of late disasters:—

The Wreck Register furnishes the following details with regard to losses at sea in some late years. During the five years ending with 1856, the wrecks and casualties were :—

Wrecks and Casualties.	Wrecks.	Collisions.	Total.	Total Lives Lost.
1852	958	57	1,015	820
1853	759	73	832	989
1854	893	94	987	1,549
1855	894	247	1,141	469
1856	837	316	1,153	521
Total	4,341	787	5,128	4,348

The number of casualties in each month of 1856 are thus given in the *Register* for that year :—

	Vessels.		Vessels.
January	149	Brought forward	610
February	154	August	51
March	96	September	98
April	74	October	99
May	57	November	129
June	32	December	166
July	48	Total	1,153
	610		

Representing 229,936 tons, and employing 10,014 hands, of whom 521 perished.

In 1857 the wrecks and casualties were :—

	Vessels.
Totally wrecked	384
Totally lost in collision	53
Seriously damaged	482
Damaged seriously by collisions	224
Total	1,143

The number of disasters for the year is at the rate of more than three per diem.

The number of wrecks in each month of 1857 is thus given :—

	Vessels.		Vessels.
January	281	Brought forward	687
February	64	August	75
March	166	September	65
April	76	October	135
May	33	November	94
June	34	December	86
July	33	Total	1,143
	687		

In this year 532 hands perished.

In 1858 there were 1,170 wrecks, of which 404, including 50 sunk by collision, were total losses. Happily only 340 lives were lost.

Estimating the vessels totally lost with those that have been abandoned and broken up, at 500 a year, and 200 tons burden at an average, and their value, including that of their cargoes, at 20*l.* a ton, the entire loss would amount to 2,000,000*l.*, to which a further and considerable sum must be added to repair the injury done to those ships which have escaped with less, though still serious injury. Hence, apart from the loss of life, which varies from about 500 to 800 and 1000 hands a year, the avoidance or diminution of wrecks is a matter of no little importance.

This result might, in some degree, be effected by building better and stronger ships, supplying them with improved compasses, &c., and by opening harbours of refuge on the parts of the coast where these disasters mostly occur. No doubt, however, the abuse of insurance, with the carelessness, ignorance, and drunkenness of the masters and crews are the great sources of loss; and nothing will do so much to obviate these as the plan now adopted of making the grant of a certificate of fitness, after undergoing an examination by a public board, indispensable to enable any individual to be appointed to the command of a ship (*ante*, p. 852.). Provided always that the examination be properly conducted, if not it will be worse than useless.

During the last war with France, 32 ships of the line went to the bottom, besides 7 fifty-gun ships, 86 frigates, and a vast number of smaller vessels. And the losses sustained by the navies of France, Spain, Holland, Denmark, &c., must have very greatly exceeded those of ours. Hence, as Sir Charles Lyell has observed, it is probable that a greater number of monuments of the skill and industry of man will, in the course of ages, be collected together in the bed of the ocean, than will be seen at one time on the surface of the continents.—(*Principles of Geology*, 7th edit. p. 728.)

Y.

YARD, a long measure used in England, of 3 feet, or 36 inches. (See WEIGHTS AND MEASURES.)

YARN (Ger. *Garn*; Du. *Garen*; Fr. *Fil*; It. *Filato*; Sp. *Hilo*; Port. *Fio*; Rus. *Prasha*), wool, cotton, flax, &c., spun into thread. We export very large quantities of yarn. See arts. COTTON, LINEN, &c.

Z.

ZAFFER, or ZAFRE. After the sulphur, arsenic and other volatile parts of cobalt have been expelled by calcination, the residuum is sold, mixed or unmixed with fine sand, under the above name. When the residuum is melted with siliceous earth and potash, it forms a kind of blue glass, known by the name of smaltz—(see SMALTZ),

—of great importance in the arts. When smaltz is ground very fine, it receives in commerce the name of *powder blue*. Zaffer, like smaltz, is employed in the manufacture of earthenware and China, for painting the surface of the pieces a blue colour. It suffers no change from the most violent fire. It is also employed to tinge the crystal glasses, made in imitation of opaque and transparent precious stones, of a blue colour. It is almost wholly brought from Germany. In 1857 the imports of zafre amounted to 607 cwt., the exports being only 4 cwt. A duty of 1*s.* a cwt. on its being imported was repealed in 1846.

ZEA, INDIAN CORN, or MAIZE. See MAIZE.

ZEDOARY (Ger. *Zittwer*; Fr. *Zédoaire*; It. *Zedoaria*; Sp. *Cedoaria*; Arab. *Judwar*; Hind. *Nirbisi*), the root of a plant which grows in Malabar, Ceylon, Cochin-China, &c., of which there are 3 distinct species. It is brought home in pieces of various sizes, externally wrinkled, and of an ash colour, but internally of a brownish red. Those roots which are heavy and free from worms are to be chosen; rejecting those which are decayed and broken. The odour of zedoary is fragrant, and somewhat like that of camphor; the taste biting, aromatic, and bitterish, with some degree of acrimony. It was formerly employed in medicine; but is scarcely ever used by modern practitioners. —(*Milburn's Orient. Com.*)

ZINC, OR SPELTER (Ger. *Zink*; Fr. *Zinc*; It. *Zinco*; Sp. *Zinco, Cinck*; Rus. *Schpiauter*; Lat. *Zincum*), a metal of a brilliant white colour, with a shade of blue, composed of a number of thin plates adhering together. When this metal is rubbed for some time between the fingers, they acquire a peculiar taste, and emit a very perceptible smell. It is rather soft; tinging the fingers, when rubbed upon them, with a black colour. The specific gravity of melted zinc varies from 6·861 to 7·1, the lightest being esteemed the purest. When hammered, it becomes as high as 7·1908. This metal forms, as it were, the limit between the brittle and the malleable metals. Its malleability is by no means to be compared with that of copper, lead, or tin: yet it is not brittle, like antimony or arsenic. When struck with a hammer, it does not break, but yields, and becomes somewhat flatter; and by a cautious and equal pressure, it may be reduced to pretty thin plates, which are supple and elastic, but cannot be folded without breaking. When heated to about 400°, it becomes so brittle that it may be reduced to powder in a mortar. It possesses a certain degree of ductility, and may, with care, be drawn out into wire. Its tenacity is such, that a wire whose diameter is equal to $\frac{1}{10}$th of an inch is capable of supporting a weight of about 26 lbs. Zinc has never been found in a state of purity. The word zinc occurs for the first time in the writings of Paracelsus, who died in 1541; but the method of extracting it from its ores was not known till the early part of last century.—(*Thomson's Chemistry.*) The compounds of zinc and copper are of great importance.—(See BRASS.)

Manufacture of Zinc, &c.— The material used by the English manufacturer is blende, or black jack, (sulphuret of zinc): it is commonly found with lead, and is procured of the best quality in Flintshire and the Isle of Man. Besides its employment in the manufacture of brass, bell metal, and other important compounds, zinc has of late years been formed into plates, and applied to many purposes for which lead was formerly used, such as the roofing of buildings, the manufacture of water-spouts, dairy pans, &c. Foreign zinc, being less brittle, is better fitted for rolling than that of England.

The duties on spelter, which were formerly prohibitory, were reduced in 1832 to 2*l.* a ton on that formed into plates, or cakes, and to 10*s.* on what is crude. The duty on the latter, after being farther reduced in 1842 to 1*s.* per ton, was repealed in 1845. In consequence of these reductions, considerable quantities are now imported, partly for home use, and partly for re-exportation to India and other countries. Foreign zinc is principally made in Upper Silesia; whence it is conveyed by an internal navigation to Dantzic, Stettin, and Hamburgh. The freight from the latter to Hull and London is nominal merely; the wool-ships being glad to take it as ballast. Hainault, near Namur, has also some part of the spelter trade. A good deal of spelter is shipped from Hamburgh, for France and America.

Zinc is produced in the province of Yunan in China; and previously to 1820, large quantities of it were exported from that empire to India, the Malay Archipelago, &c. But about that time the free traders began to convey European spelter (principally German) to India; and being, though less pure, decidedly cheaper than the Chinese article, it has entirely supplanted the latter in the Calcutta market. In 1850 the exports of foreign and native spelter from this country for India amounted respectively to 569 and 1,740 tons; in addition to which considerable quantities were exported from Amsterdam, Rotterdam, &c.

In 1857 we imported 13,834 tons crude, and 4,167 tons rolled spelter. By far the largest portion was brought from Prussia by the channel of the Hanse Towns, and partly, also, from Belgium. The exports during the same year amounted to 4,504 tons, principally from the E. Indies and Australia.

SUPPLEMENT.

ADELAIDE, a city of S. Australia, cap. of the British colony of that name, about 7 m. S. S. E. from its port, an inlet on the E. side of St. Vincent's Gulph, lat. 34° 57′ S., long. 138° 38′ E. Though founded so recently as 1844, and not well situated, this is a well-built, prosperous town. Some of the houses, and most part of the principal buildings, are of brick and stone. Pop. in 1855, 18,259.

The river Torrens, on which Adelaide is built, loses itself in a marsh before reaching the sea, so that the city is about 7 m. distant from its port, an inlet of St. Vincent's Gulph. This inland situation is a serious drawback on the trade of the city; and it would seem that a mistake was committed in not building it on, or much nearer to, the coast. This, we are aware, has been denied, though, as we think, upon very unsatisfactory grounds. There appears, indeed, to be but little doubt that in no very lengthened period most part of the commerce of the town will be transferred to the port; and that it will be preferred as a residence by all commercial people. In the rainy season the Torrens is much flooded, though it seldom overflows its banks, which are steep and lofty; but in the dry season it has no current, its bed being then formed into a series of pools or tanks.

Port Adelaide, 7 m. N.N.W. from the city, in a low and marshy situation, consists of a number of dwelling houses and warehouses, some of which are of stone with wharves, partly belonging to government, and partly to the South Australian Company. The inlet of the sea, forming the harbour, opposite the entrance to which a light vessel is moored, stretches from the gulph, from which it is separated by a narrow neck of land, for about 8 m. southward, surrounding Torrens Island. At its mouth is a sandy bar with 8 ft. water at ebb and 16 ft. at flood tide; this depth being considerably increased during S. and S. W. winds. Ships of 400 or 500 tons may, consequently, pass the bar in safety, and once over, there is depth enough for the largest ships to the head of the harbour. (*Dutton, S. Australia*, p. 112.) Large vessels are, however, obliged to lie in mid-channel; but projects were recently on foot for improving the harbour, either by carrying out piers into the deep water, or by establishing a new port about 2 m. nearer to the harbour's mouth, where the water in-shore is deeper, and the situation affords greater facilities for the accommodation of shipping. Port Adelaide has a custom-house; but vessels are exempted from all port charges in this and in the other ports of the colony.

Sailing Directions for Port Adelaide. — After making Kangaroo Island, steer E. ¼ N. through Investigator's Straits, between that island and Althorp Island. Should the wind be from the eastward, you will find no difficulty in beating through the straits, nor anything in the way more than is pointed out in Flinder's chart. If bound up Gulph St. Vincent, great care is requisite to avoid Troubridge shoal, situate on the west side of the entrance, as the flood tide through Backstairs passage sets strong (particularly on the change and full of the moon) directly upon the shoal; therefore coming from the westward the course should not be altered until Point Marsden bears S. W. by W. ½ W.; when you will be about 10 miles from *the highland, inside* Cape Jervis, named in Flinder's chart North West Bluff, when you may shape your course for the light-vessel N. N. E. 40 miles distant. For about six leagues up the gulph the land is high and bold, but above that the shore becomes very low with hammocks of sand upon it, and the same description of coast prevails to the head of the gulph. After passing the high coast land the water shoals far out, and in some instances, when within the distance of 10 miles from the light, five fathoms will be found at a distance of four miles from the beach. Be careful of your soundings, particularly at night, and in running up to the light keep as nearly as you can in between five and six fathoms water, not approaching inside five, as within that depth the water shoals suddenly; and if you keep outside six fathoms, you may pass to the westward of the light and not see it. In these soundings you will make the light ahead, which may be seen 12 miles from the deck of a ship. The shoal — called the Bar — at the entrance of the port, bears N. E. one mile from the light-vessel. When you are within a proper distance a boat will be sent to you from the light-vessel with a pilot and to receive all mails and letters. Should you sight the light in the early part of the night, you may anchor anywhere to the southward of it in six fathoms, or keep underweigh until daylight, taking care to be to the southward of the light, and as near it as possible in the morning, as the tide answers early. Where the light-vessel is moored, in lat. 34° 44′ S., there anchorage is safe, but a good full scope of chain is required, never less than 50 fathoms, and, if it blow, a full chain. Never let go the second anchor if you can avoid it; rather give more chain, as your vessel will ride much easier with one anchor down than two.

When bound down the gulph steer from the light-vessel S. S. W., which will keep you in sight of the land on the east side of the gulph, and out of the influence of the tide through Backstairs passage, until you are to the southward of Troubridge shoal; but on no account shape a course that you may fancy will enable you to weather the shoals, thereby laying the ship's broadside exposed to *a rapid tide running* directly upon it, until you are sufficiently to the southward to shape your course down *the strait*.

In beating down the gulph never exceed a distance of 10 miles from the larboard shore (as the opposite side is shoal), and be careful when standing in to have a cast of the lead, as it is shoal a considerable distance off until you get down to the highland. In some places to the northward of Holdfast-bay there are not more than five fathoms, at a distance of four miles from the beach, and the water shoals very quickly within that depth; but where the high land fronts the sea the shore is

steep except a reef that lies a mile off, about three miles to the southward of Holdfast-bay. The flag-staff at Holdfast-bay is in lat. 34° 58′ 28″ S. In moderate weather endeavour to be as close to the land as possible by sunset, when you will be certain of the wind off the land, which will lead you down the coast. Do not allow yourself to be thrown off until you are well down with Cape Jervis, and to the southward of Troubridge shoal, which is an extensive flat, and only in the middle shows a patch of about 200 yards at high water.

Ships bound down Investigator's Straits, meeting a strong westerly wind, and wishing to anchor, will find good holding ground close in on the east side of Point Marsden, in six fathoms of water. Vessels coming from the eastward through Backstairs passage, and bound up the gulf, should night be approaching, must keep on the north side of the passage, and haul round Cape Jervis, all that coast being quite bold. When the gulph is open shape a course N. by E. ½ E. for the light-vessel.

The trade of Adelaide is already extensive; and will continue to increase with the increase of the population and trade of the colony, of which it is the grand emporium. The colony is better suited for tillage than any other portion of the continent, and the exports of flour and grain are become of the first importance. The mines of copper, lead, &c., discovered in the vicinity of Adelaide, are of the richest description, and the ores furnished by them form a principal article of export. In 1852, the imports of copper ore into this country from S. Australia, chiefly from the Burra-Burra mine, amounted to 8,582 tons. The discovery of the gold fields, by attracting many of the labourers from the copper mines, gave a serious check to the progress of the latter; but they have since fully recovered from their depression. In 1856, 2,250 tons copper, worth 248,460*l.*, and 9,468 tons copper ore, worth 156,351*l.* were exported. The exports of flour during the same year were estimated at 22,372½ tons of the value of 496,317*l.*, being considerably more than the value (412,163*l.*) of the wool exported. The total value of the exports was 1,398,367*l.*

Free List.—Animals living, baggage of passengers, printed books, bullion and coin, coals, coke, and other fuel, plants and trees, garden seeds and roots, specimens illustrative of natural history, pictures and prints, works of art, wool, tallow, raw skins and hides, bark, gum, bales for wool, ore bags.

ADEN, a seaport town of Southern Arabia, in the possession of the U. Kingdom, on the Indian Ocean, 118 m. E. from the Straits of Babelmandeb, lat. 12° 46′ 15″ N., long. 45° 10′ 20″ E. It stands on the E. side of a promontory, projecting S. into the ocean, called the Peninsula of Aden. This peninsula, which terminates in a lofty mountain, bearing a striking resemblance to the rock of Gibraltar, is connected with the mainland by a low isthmus about 400 yards in breadth. On the N. and W. the town is overhung by steep and craggy rocks, on which are the remains of old fortifications. The east or outward harbour of Aden, formerly (and apparently at a recent period) large and commodious, is now partly filled up with sand. But the harbour on the W. side of the town, between the promontory on which it stands and another parallel thereto, is a magnificent basin, capable of accommodating the largest fleets. It has a contracted entrance, which might easily be fortified, so as to make it inaccessible to a hostile squadron. From this harbour the approach to the town is over a low ridge of the mountain, the road being in parts cut through the rock.

The site of this town, the best adapted for trade on the whole coast of Arabia, and the key of the Red Sea, has always made it a point of primary importance in the direct trade between Europe and the East. It became at a very early period a celebrated emporium (the *Arabiæ emporium* of Ptolemy). After the Romans obtained possession of Egypt, and Hippalus (A. D. 50) had discovered the direct route to India, they destroyed Aden lest it should fall into hostile hands, and interfere with their monopoly of this lucrative traffic. — (*Vincent's Commerce, &c. of the Indian Ocean*, ii. 327. 528.) It is not known when or by whom it was rebuilt; but from the 11th till the 16th century it was the great, or rather the exclusive, *entrepôt* of Eastern commerce. The discovery of the passage by the Cape of Good Hope was the first great blow to its importance. Simultaneously with the appearance of the Portuguese in India, the Turks, under Solyman the Magnificent, took possession of various Arabic ports, Aden among the number. They erected the fortifications, the ruins of which excite the admiration of every traveller, and which repelled the attacks of the famous Portuguese General, Albuquerque. From this date, however, Aden rapidly declined; nor did the expulsion of the Turks, which took place about the middle of last century, retard its downfall. Its ruin was more complete than could have been anticipated; for its convenient harbours and plentiful supply of water make it, apart from other considerations, a most desirable port.

When first occupied by the British it had not more than 100 houses, with a parcel of wretched huts, and from 3,000 to 4,000 inhabs. It had indeed the ruins of several cisterns and reservoirs cut in the solid rock, and of aqueducts for conveying water from the mountains of the interior, which fully testified its former greatness. But within the last dozen years a vast change has taken place, and the ancient prosperity of Aden bids fair to be again restored. Hotels for the accommodation of passengers by the steamers have been erected; and the population of the vicinity, attracted by the security afforded by the English flag, have flocked to the place, which has now (1858) from 25,000 to 30,000 inhabs.! Some defensive works have already been constructed, and others projected, which, if completed, will make it, (which it should be,) the Gibraltar of the Red Sea.

While its commanding position, excellent port, and abundant supply of water, make Aden an important station in the route from India to Europe by the Red Sea, it is no less favourably situated for becoming an *entrepôt* for the contiguous countries of Arabia and Africa. It owed its former consequence mainly to its natural advantages, and these it still retains. And it can hardly fail again to become an important emporium, and to be of the greatest utility to the surrounding continents. The climate, though hot, is not unhealthy.

The abundant supply of water, for which Aden is remarkable among Arabic towns, is drawn from the ravines and gulleys of the surrounding mountains; and from the land springs, which are abundant on the sea-shore. — (See *Geographical Dictionary*, art. ADEN, and other authorities there quoted.)

We borrow from a report of Captain R. L. Playfair the following details with respect to the trade of Aden, in 1857-8.

"From the occupation by the British in 1839 until 1850, customs' dues were levied in Aden as in India, but it was found that the trade of the new settlement did not increase as rapidly as had been anticipated, and fell far short of the anticipated proportions.

"The remedy for this evil lay in making the port free, which was done in 1850. The result is striking. During the 7 years which preceded the opening of the port, the total agg. value of trade, including imports and exports, was Rs. 1,30,95,578, that of the last year exceeding the first by Rs. 10,17,268. During the 7 years immediately after the port had been opened, the value of trade amounted to Rs. 4,21,97,937, the last year exceeding the first by Rs. 59,07,448.

"In 1844-5 the value of trade was Rs. 14,90,972, in 1857-8 it amounted to Rs. 1,14,55,523, in other words, during the comparatively short space of 13 years, it had increased eightfold, the value of this increase being almost a million sterling per annum.

"The following is a summary of the trade for the official year ending 31st May, 1858.

"Imports: —			Exports: —		
Goods	Rs. 47,78,677		Goods	Rs. 28,36,374	
Treasure	„ 22,41,798		Treasure	„ 15,98,674	
		70,20,475			44,35,048
				Total Rs.	1,14,55,523

"Alkali, an impure carbonate of potash, is manufactured in large quantities in the immediate vicinity of Aden, from the salsolaceous plants which everywhere abound; it is principally used in Aden, but a small quantity is exported.

"Coals form by far the largest item in the column of imports, amounting to nearly ½ of the whole, excluding treasure. In this, owing to the increased steam communication with Aden, there is an advance of rupees 23,351. It is a question whether this item should be exhibited in the trade returns, as it is entirely used by the steamers which ply between Suez and India, Mauritius and Australia.

"Coffee is an important article of trade, and it is satisfactory to observe that there has been a very large increase both in the imports and exports of this commodity, amounting to nearly 6 lacs of rupees. The coffee imported into Aden is principally brought from the Red Sea for exportation to Bombay, France, and America. The difference between the imports and exports, amounting to about 4½ lacs of rupees, indicates the quantity which has reached Aden overland, direct from the coffee country. The total value of the transactions in coffee (Rs. 16,81,834) represents an amount of nearly 60,000 cwt. The best coffee comes from the neighbourhood of Andiam. The trees are cultivated in terraces on the sides of the mountains; for the most part they are watered only by the rain, but some are irrigated from cisterns built to contain rain water; the latter yield crops twice a year, but the second is seldom thoroughly ripe, and is always inferior to the first.

"Cotton is imported from India chiefly for consumption in the country—a very small portion is exported. It is cultivated to a certain extent, but not in sufficient quantities to meet the demand for it.

"Ghee.—There has been a large decrease in ghee; it is difficult to account for this satisfactorily, but the actual is not so great as the apparent decrease. During the entire season of 1855–6 a great part of the Somali coast, including the part of Bera whence most of the ghee is obtained, was blockaded in consequence of an outrage committed upon a British expedition sent there by the government of Bombay. The Somali traders were unable during that year to command a market for their ghee, and in the following season brought the produce of two years to Aden. Thus the exports and imports in 1857–8 must, in this instance, be considered as compared with produce of the two previous years.

"The great outlet for the commerce of Africa is Berbera, situated in Africa, due south of Aden. It is rather an encampment than a town, the inhabitants during the annual fair, or from October to April, living in huts of reeds, mats, and sticks; at other times it is deserted. Nevertheless, it has been a great mart of trade from the earliest ages; in the time of the author of the Periplus, or shortly before the Christian æra, it was much frequented by Greek and Egyptian merchants, who purchased their commodities cheaper there than in the Sabean markets.

"The annual fair is one of the most interesting sights on the coast. Tribes the most remote and diverse meet here for a short time, to be again scattered in all directions; bungalows from Muscat, Soor, Bussora, Baberain, Porebunder, Mandavie, and Bombay, meet those from Aden and the ports in the Red Sea. A perfect babel of confusion reigns, and disputes, which are settled by the spear and dagger, are of daily occurrence; but amidst all this turmoil, the traders are unmolested; each under the protection of his chosen 'Abban' barters the produce of his country for the gums and valuable merchandise of Africa; none are more successful than the fat and wealthy Banians, who by their superior capital, cunning, and influence, rapidly distance all competitors.

"The chief articles of trade which reach Aden from Berbera, are sheep and cattle in great abundance. Indeed, this settlement is entirely supplied with meat from the African coast, ghee and coffee from the neighbourhood of Hurrur, various descriptions of grains and resins, ostrich-feathers, and ivory.

"A similar trade is carried on between Adeff and various other ports on the African coast, but Berbera is the principal emporium.

"During 1857-8 the number of square-rigged sailing-vessels which visited the port, excluding steamers of all descriptions (of which, on an average, about one arrives in every two days), was 161, of the aggregate tonnage of 85,561. Of these 121 were under British colours, 12 American, 14 French, 2 Hamburg, 3 Prussian, 6 Arab, 1 Dutch, 1 Swedish, and 1 Sardinian. With an unimportant decrease under the head of Swedish vessels, there has been a steady increase in the tonnage of every nation, amounting in all to 11,909 tons.

"To this must be added country craft, of which 1,120 vessels, with an aggregate burden of 24,841 tons, arrived during the past year.

"The foregoing comprises the exterior trade of Aden. A large quantity of Arabian produce is, in addition to this, introduced by the daily kaffilas. Of this there is no very accurate return. During the past year 112,803 camel-loads of grain, fodder, vegetables, fruit, coffee, &c., were introduced for the supply of the market.

"If we estimate the produce brought into Aden from the interior at twice the value of the merchandise taken back, which experience has proved to be considerably under the truth, the entire value of trade in 1857-8 will be about as follows:—

"Exterior exports	- -	44,35,048	Exterior imports	- -	70,20,475
Interior do.	- -	2,14,743	Interior do.	- -	4,29,486
		46,49,791			74,49,961
				Total Rs.	1,20,99,752

Or nearly one million and a quarter sterling."

BANKS OF GERMANY.—We borrow from *Hunt's* valuable *Commercial Magazine* the following statements with respect to certain German banks:—

Banks of Germany.—The Bank Royal of Prussia was founded at Berlin in 1765, upon the model of that of Hamburg. So it existed until 1846, when it was re-organised under a new charter, by which more extension was given to its operations. In accordance with this new constitution, which has been in force since the 1st January last, the issue of notes has been carried to fifteen *millions* of thalers (the thaler equal to 2*s.* 10½*d.* sterling). In 1850 this issue is to be raised to twenty-one millions of thalers. The capital of the bank is always to be, in proportion with the notes in circulation, two-sixths in silver, three-sixths in bills discounted, and the rest in loans on securities. The bank notes are from twenty-five to fifty thalers each. The share of the government in the bank amounts, at most, to 500,000 thalers. The shareholders are entitled to an annual interest of 3¼ per cent. upon the capital, and, after deduction of the sum set apart for the reserve or rest, which is not to exceed 30 per cent. of the capital, one moiety of the surplus profits is apportioned to them in addition, and the other goes to the treasury. The bank has branches in a great number of cities, as Breslau, Königsberg, Dantzic, Stettin, Magdeburg, Munster, Cologne, Memel, Posen, Stolpe, Elberfeld, Treves, Aix-la-Chapelle, Dusseldorf, Coblentz, Minden, Erfurt, Frankfort-sur-Oder, Stralsund, Kostin, Liegnitz, and Oppeln, and thus forms a vast network of financial operations through all the kingdom.

The private bank of the noblesse of Pomerania was founded at Stettin, in 1824, by an association of noble proprietors, with a capital of 1,000,000 thalers. After the crisis of 1830, this capital was carried to 1,534,500 thalers. The operations of this bank embrace discount, loans upon lodgments of merchandise, loans upon public and private securities, current accounts, and deposits with interest. Formerly, it issued promissory notes to bearer; but this privilege was withdrawn from it in 1835. There is a circulation of about ninety millions of thalers of mortgage notes in Prussia (these are, in fact, for one hundred and five millions). They have been issued, at different periods, by associations of proprietary nobles of various parts of the kingdom, and carry interest at 3½ per cent.

The National Bank of Vienna was founded in 1815, to re-establish order in the finances of Austria, and more particularly for the re-purchase or the conversion of the paper money in circulation, the value of which was become almost nominal. The different creations of shares have raised its capital to about 89,000,000 florins. This capital is divided into 50,621 shares of 1,500 florins each. The actual operations of the bank are discount; the issue of bank notes, a privilege which it enjoys exclusively throughout the Austrian empire; loans upon deposits, and negotiations of loans. The bank pays an

annual interest of 6 per cent. upon the primitive capital, and a dividend, after deduction of the reserve fund. Its privilege, or charter, extends to the year 1866. It has branches at Prague, Brünn, Troppau, Ogen, Temeswar, Kashan, Lemberg, Trieste, Innspruck, Goritz, Linz, and Hermstadt.

The Bank of Extraordinary Credit of Vienna was constituted in 1846 by imperial decree, and has for its object to devote a part of the sums destined for the redemption of the national debt, to the purchase of certain shares in railway and other enterprises, in order to sustain useful undertakings, and communicate a greater impulse to them.

The Loan and Exchange Bank of Bavaria was founded at Munich, in 1835, by shares, under the surveillance and control of the government. It is privileged for ninety-nine years. The original capital was 10,000,000 florins, with liberty of increase to 20,000,000 florins. In 1846, there was a new emission of shares of 500 florins. The nett profits are divided as follows:—Three per cent. as dividend to the shareholders, and, of the surplus, three-fourths as extra dividend, and the remaining fourth carried to the reserve, until it shall reach to one-tenth of the capital. Three-fifths of the capital are employed in loans on mortgage. The other operations are discounts, loans on securities and ingots; the issue of bank notes, whose amount is limited to four-tenths of the capital, and three-fourths of it to be covered by a value of double the sum in mortgage credits or in silver. The bank has a branch at Augsburg.

The Royal Bank of Bavaria, first established at Ansbach, and now at Nuremberg, is one of the oldest establishments of the kind. Its operations are discounts, deposits, loans upon personal and other securities. The government is entitled to half the profits. It has branches at Ansbach and Bamberg.

The Royal Bank of the Court of Wurtemburg, founded in 1802 at Stuttgardt, limits its operations to discounts and loans.

The Bank of Leipsic was founded in 1839, under the auspices of the government, with a capital of 1,500,000 thalers, divided into shares of 250 thalers, receiving 3 per cent. interest. Its operations are deposits, loans, and discounts. It has the right of issuing notes of 20 and 100 thalers each, of which two-thirds should be guaranteed by values to the amount in specie or ingots.

There exists, besides, at Dresden, a loan bank, which makes advances to land proprietors and farmers for the payment of taxes, tithes, &c. Leipsic has also an institution of this kind under the name of "Union of Credit for the hereditary lands of the Saxon nobility."

BELGIUM (Treaty of Commerce with).

Treaty of Commerce and Navigation between Her Britannic Majesty and the King of the Belgians.
(Signed at London, October 27. 1852.)

Art. 1. There shall be reciprocal liberty of commerce between all the dominions of the two high contracting parties; and the subjects of each of them shall, throughout the whole extent of the territories of the other, enjoy the same rights, privileges, liberties, favours, immunities, and exemptions, in matters of commerce, which are or may be enjoyed by native subjects.

2. In regard to the duties depending on the nationality of vessels, it is agreed, that goods of every kind, without distinction as to origin, imported into Belgium directly from the United Kingdom of Great Britain and Ireland, its colonies and possessions, under the British flag, shall enjoy the same exemptions, repayments, bounties, or other favours, as if imported under the Belgian flag, and shall not pay respectively any other duties, nor be subject to any other formalities than if imported under the Belgian flag; except in the case which is provided for in Article 5. hereinafter.

3. In regard to the duties depending upon the place from whence vessels have come, it is agreed that goods of every kind, without distinction as to origin, imported into Belgium directly from the United Kingdom of Great Britain and Ireland, its colonies and possessions, under the British flag, shall be admitted at the same rate of duty as if imported under the Belgian flag from the place or in the manner most privileged under the General Tariff of Belgium; except in regard to the goods and in the cases specified in Article 5. hereinafter.

It is understood that the goods to which the present and the preceding Article apply, must have been actually laden in the ports of the United Kingdom of Great Britain and Ireland, or of its colonies and possessions.

4. Goods of every kind, without distinction as to origin, imported into Belgium from elsewhere than the United Kingdom of Great Britain and Ireland, its colonies and possessions, under the British flag, shall enjoy the same exemptions, bounties, or other favours, as if imported under the Belgian flag, and shall not be subject to any other formalities, nor pay any other duties, than if imported under the Belgian flag; except in regard to the goods and in the cases specified in Article 5. hereinafter.

5. The stipulations of the three preceding Articles shall not be applicable to the goods and in the cases hereinafter specified, (that is to say):—

1. So far as relates to the stipulations of Articles 3. and 4.,
   In regard to furniture-woods and dye-woods, rice, sugar, coffee, tobacco, cotton, only when the importation shall take place under the Belgian flag directly from a transatlantic country.
   And as regards fruits, olive oil, raw sulphur, only when the importation shall take place under the Belgian flag directly from the place of production.
2. So far as relates to the stipulations of Articles 2, 3, and 4.
   In regard to salt.
   But with regard to salt, His Majesty the King of the Belgians engages,
   1st. To reduce immediately by two-thirds the duty actually levied on raw salt imported from the United Kingdom of Great Britain and Ireland, under the British flag.
   2nd. To assimilate spring salt imported from the United Kingdom of Great Britain and Ireland into Belgium to raw salt, as regards duty of customs, duty of excise, exemption from excise in case it is destined for manufactories and warehousing. In order to enjoy this advantage spring salt must be accompanied by a certificate delivered by a Belgian consular agent, proving its origin from an English mineral spring.
   3rd. To take off the prohibition which applies to the transit through the Belgian territory of salt imported under the British or the Belgian flag.

6. Goods imported from a transatlantic country, under the British flag, shall pay the same duties, whether they shall have been laden in a transatlantic warehousing port, or in the transatlantic country of production.

7. The repayment, by Belgium, of the duty levied by the government of the Netherlands on the navigation of the Scheldt, under the 3rd paragraph of Article 9. of the treaty of the 19th April, 1839, is guaranteed to British vessels.

8. Goods of every kind, the importation of which into the ports of the United Kingdom of Great Britain and Ireland, its colonies and possessions, is or shall be legally permitted in British vessels, may likewise be imported in Belgian vessels, without being subject to any other or higher duties, of whatever denomination, than if such goods were imported in national vessels.

9. In all that regards exportations, without distinction as to place from whence arriving or as to destination, and in all that regards the bounties, facilities, and drawbacks which the legislation of the two countries has established, or may hereafter establish, the two high contracting parties reciprocally insure to each other national treatment.

10. Articles of every kind arriving from Great Britain, or forwarded to that country, and crossing Belgium by the railroads of the State, shall be exempt from all transit duty: and the prohibition, which in Belgium still applies to the transit of some of those articles, is removed.

The only exceptions to this general rule are in regard to gunpowder and iron; and in regard to the transmission to France of linen thread and tissues, and of coal.

It is understood that the senders will have to conform, generally, and without distinction of nationality to the regulations which are or may be prescribed by the Belgian administration for the prevention of fraud upon the excise.

Belgian commerce shall enjoy in the United Kingdom of Great Britain and Ireland, with regard to transit, the treatment of the most favoured nation.

11. It is expressly understood, that the preceding articles are not applicable to the coasting trade, which each contracting party reserves to itself, and will regulate according to its own laws.

Neither are they applicable to the exemptions from duty, nor to the bounties which may be granted in the dominions of the high contracting parties to national fishery, carried on according to the regulations of each country. With this exception, the two flags shall be assimilated in regard to the importation of fish of all kinds.

12. No duties of tonnage, harbour, lighthouse, pilotage, quarantine, or other similar or corresponding duties, of whatever nature or under whatever denomination, levied for the profit or in the name of the government, public functionaries, communes, corporations, or establishments of whatever kind, shall be imposed in the ports of either country, upon the vessels of the other country, from whatever port or place arriving, which shall not be equally imposed in the like cases on national vessels.

13. All vessels which according to the laws of Great Britain are to be deemed British vessels, and all vessels which according to the laws of Belgium are to be deemed Belgian vessels, shall, for the purposes of this treaty, be deemed British vessels and Belgian vessels respectively.

14. In all that regards the stationing, the loading, and unloading of vessels in the ports, basins, docks, roadsteads, harbours, or rivers of the two countries, no privilege shall be granted to national vessels, which shall not be equally granted to vessels of the other country; the intention of the contracting parties being, that in this respect, also, the respective vessels shall be treated on the footing of perfect reciprocity.

15. The vessels of each of the two countries shall be at liberty either to discharge the whole of their cargo at one of the ports of the dominions of the other contracting party, or to discharge part of their cargo at one port, and then to proceed with the remainder to other ports of the said dominions, according as the captain, proprietor, or other person duly authorised to act in the port as agent for the vessel and cargo shall consider advisable.

16. If any vessel of war or merchant vessel of either of the two countries should be wrecked upon the coasts of the other, such vessel, or any parts thereof, and all furniture and appurtenances belonging thereunto, as well as all goods and merchandise which shall be saved therefrom, or the proceeds thereof, if sold, shall be faithfully restored to the proprietors or to their agents, on being claimed by them. In case there should be no such proprietors or agents upon the spot, the said articles and goods, or the proceeds thereof, as well as all the papers found on board of any such vessel, shall be delivered to the British or Belgian consul in whose district the wreck shall have taken place: and such consul, proprietors, or agents, shall not be called upon to pay any charge but the expenses incurred in the preservation of the property, and the rate of salvage which would be equally payable in the like case of a wreck of a national vessel. The goods and merchandise saved from the wreck shall not be subject to the established duties, unless cleared for consumption.

17. Each of the high contracting parties shall have the right to name consuls for the protection of trade in the dominions and territories of the other party; and the consuls who may be so appointed shall enjoy, within the territories of each party, all the privileges, exemptions, and immunities which are or may be granted in those territories to agents of the same rank and character appointed by or authorised to act for the government of the most favoured nation.

Before any consul can act as such, he must, however, in the usual form be approved and admitted by the government of the country to which he is sent; and each of the two high contracting parties shall have the right to except from the residence of consuls any particular places which either of them may judge proper to be excepted.

18. The subjects of either of the two high contracting parties residing in the dominions of the other, shall have the same liberty as natives to manage their own affairs themselves, or to commit them to the management of any other persons, as brokers, factors, agents, or interpreters; they shall not be restrained in their choice, and shall not be obliged to pay any salary or remuneration to any person whom they shall not choose to employ in those capacities: buyers and sellers being at perfect liberty to bargain together, and to fix the price of any goods or merchandise imported or destined for exportation, on condition of observing the regulations and the customs' laws of the country.

19. The present treaty shall be in force for 7 years from the 1st day of January, 1852*; and further, until the end of 12 months after either of the two contracting parties shall have given notice to the other of its intention to terminate the same; each of the contracting parties reserving to itself the right of giving such notice to the other at the end of the said term of 7 years, or at any subsequent time.

20. The present treaty shall be ratified, and the ratifications shall be exchanged in London before the 1st day of January, 1852.

In witness whereof, the respective plenipotentiaries have signed the same, and have affixed thereto the seals of their arms.

Done at London, the 27th day of October, in the year of our Lord 1851.

(L. S.) PALMERSTON.
(L. S.) HENRY LABOUCHERE.
(L. S.) SYLVAIN VAN DE WEYER.

Additional Article. — The Ionian Islands being under the protection of her Britannic Majesty, the subjects and vessels of those islands shall enjoy in the dominions of his Majesty the King of the Belgians, all the advantages which are granted to the subjects and vessels of Great Britain by the Treaty of Commerce and Navigation signed this day between her Majesty the Queen of the U. Kingdom of Great Britain and Ireland and his Majesty the King of the Belgians, as soon as the government of the Ionian Islands shall have agreed to grant to the subjects and vessels of his Majesty the King of the Belgians the same advantages which are granted in those islands to the subjects and vessels of her Britannic Majesty: it being understood, that in order to prevent abuses, every Ionian vessel claiming the benefits of that treaty shall be furnished with a patent signed by the Lord High Commissioner of her Britannic Majesty, or by his representative.

The present additional Article shall have the same force and effect as if it had been inserted, word for word, in the Treaty of Commerce and Navigation signed this day. It shall be ratified, and the ratifications shall be exchanged at the same time as the ratifications of the treaty.

In witness whereof the respective plenipotentiaries have signed the same, and have affixed thereto the seals of their arms.

Declaration made on the Exchange of the Ratification of the preceding Treaty.

1. British spring salt shall be considered as raw salt, on importation into Belgium, only in those cases in which the legislation of Belgium permits the granting of exemption from excise. Those cases, in the present state of things, are:

a. Destination to manufactories of chemical productions.

b. Destination to the manuring of land.

* Altered to April, 10, 1852, by the annexed declaration.

c. Destination to the feeding of cattle.
d. Destination to the curing of fish.

2. If French salt refined in Belgium should, after the 10th of August, 1852, continue to enjoy a deduction of more than 7 per cent. from the general duty of excise, British salt refined in Belgium shall, from and after the same date, enjoy a deduction from the excise, which shall not be inferior by more than 7 per cent. to the deduction granted to French salt.

3. The British flag is assimilated to the French flag in regard to the transport of salt from France into Belgium.

4. There shall be annexed to the present declaration an explanation of the conditions necessary in order that British salt may enjoy the advantages conceded to it, and of the formalities which must be complied with for the same purpose.

The undersigned further declare that the treaty of the 27th October, 1851, shall be carried into operation on either side, from and after the 10th of April, 1852.

The ratifications of the treaty of the 27th of October, 1851, are exchanged subject to the stipulations of the present declaration, which shall be considered as forming an integral part of the said treaty.

Explanation annexed to the above Declaration.

In order that British spring salt may enjoy the advantages which are conceded to it, it must be—

1. Accompanied by a certificate of origin delivered by the Belgian consular agent residing in the locality of its production.

2. Declared, on its entry into Belgium, for one of those destinations which enjoy exemption from excise; and the formalities prescribed for such cases by the law of Belgium must be fulfilled. Those formalities shall be for British spring salt the same as for the raw salt of other countries destined for the same uses.

On compliance with these two conditions, British spring salt shall be admitted free of import duty, if imported under the Belgian flag, and at the duty of fr. 1·40 per 100 kilogrammes, if imported under the British flag; and it shall, moreover, be exempted from duty of excise.

Persons shall be at liberty to warehouse British spring salt on the same conditions which are imposed on the warehousing of raw salt properly so called; and in that case, the formalities above specified shall not be required until it is taken out of bond.

British spring salt forwarded in transit by the railways of the state of Belgium, either directly, or through the bonded warehouses of the country, and whether imported by British ships or by Belgian ships, shall be free from all duty of import, excise, or transit, as well as from all process of alteration; subject, however, to the measures to be taken by the Belgian administration for the prevention of fraud; which measures shall be the same for British salt as for all other salt.

CHAMPAGNE. — An official report, made by the directors of the indirect taxes for the department of Marne, furnishes the following information as to the trade in champagne between the 1st of April, 1846, and the 1st of April, 1847. The produce is distributed among the arrondissements of Chalons, Epernay, and Rheims. On the 1st of April last there were, in the cellars of the wholesale dealers, 18,815,367 bottles of this wine, viz.: Chalons, 4,604,237 bottles; at Epernay, 5,710,753; and at Rheims, 8,500,377. The number of bottles sold and delivered between the 1st of April, 1846, and the 1st of April, 1847, were, at Chalons, 2,497,355; at Epernay, 2,187,553; at Rheims, 4,090,577; making a total of 8,775,485 bottles. These quantities were thus distributed: —

	To go abroad.	To other Depôts.	Within the Depôt.
	Bottles.	*Bottles.*	*Bottles.*
From Chalons	1,074,214	755,175	669,066
Epernay	806,663	586,425	994,465
Rheims	2,831,038	1,215,766	43,773
Total	4,711,915	2,555,366	1,707,304

COAL.

Account of the total Exports of Coal from the U. Kingdom in 1858, distinguishing the Coal Fields from which the Coal was exported, and the Countries to which sent, and the Quantities sent to each.

Countries.	Northern Ports.	Yorkshire Ports.	Liverpool.	Severn Ports.	Scotch Ports.	Total.

COLLISION (Fr. *Abordage*), in a general sense, is the act of any two or more bodies coming forcibly together; but in commercial navigation it means the shock of two ships coming into sudden and violent contact at sea, by which one or both may be more or less injured.

From the great increase of navigation, the risk of accidents by collision at sea has been proportionally augmented. And it is, therefore, of much importance, 1st, to adopt such measures as may be most likely to prevent their occurrence; and 2nd, to determine by whom a loss, when it does occur, should be borne.

In regard to the first and most essential of these objects, it is effected in part, at least, by whatever contributes to the general improvement and security of navigation. At common law, every master of a ship is bound to keep a proper watch at sea, especially in channels much frequented by shipping, and to use every precaution to avoid coming into contact with other vessels. But this matter has been judged too important to be left wholly to depend on the good sense and care of individuals; and with a view to the securing of attention to the subject, and to the obviating of the confusion that would unavoidably arise were shipmasters left to follow their own ideas with respect to it, rules and regulations have been laid down in regard to the courses to be steered when ships are passing each other, the signals to be made during fogs, the number and description of the lights to be exhibited at night, and other particulars. In 1840 the Trinity House promulgated a rule of this sort; and though not in itself law, masters not complying with its instructions were held to be guilty of unseamanlike conduct, and the owners were made responsible for the consequences. Regulations similar to those contained in the Trinity rule have since been enacted by the legislature. The existing statute law on the subject is embodied in the following clauses of the Merchant Shipping Act of 1854, the 17 & 18 Vict. c. 104., as follows, viz.:

Regulations as to Lights and Fog Signals. — The following rules shall be observed with regard to lights and fog signals, viz.:

(1.) The Admiralty shall from time to time make regulations requiring the exhibition of such lights, by such classes of ships, whether steam or sailing ships, within such places and under such circumstances, as they think fit, and may from time to time revoke, alter, or vary the same:

(2.) The Admiralty may, if they think fit, make regulations requiring the use of such fog signals, by such classes of ships, whether steam or sailing ships, within such places and under such circumstances as they think fit, and may from time revoke, alter, or vary the same:

(3.) All regulations made in pursuance of this section shall be published in the London Gazette, and shall come into operation on a day to be named in the Gazette in which they are published, and the Admiralty shall cause all such regulations to be printed, and shall furnish a copy thereof to any owner or master of a ship who applies for the same, and production of the Gazette containing such regulations shall be sufficient evidence of the due making and purport thereof:

(4.) All owners and masters shall be bound to take notice of the same, and shall, so long as the same continue in force, exhibit such lights, and use such fog signals, at such times, within such places, in such manner, and under such circumstances as are enjoined by such regulations, and shall not exhibit any other lights or use any other fog signals, and in case of default the master, or the owner of the ship, if it appears that he was in fault, shall for each occasion upon which such regulations are infringed incur a penalty not exceeding 20*l*.—§ 295.

Rule as to Ships meeting each other.— Whenever any ship, whether a steam or sailing ship, proceeding in one direction, meets another ship, whether a steam or sailing ship, proceeding in another direction, so that if both ships were to continue their respective courses they would pass so near as to involve any risk of a collision, the helms of both ships shall be put to port so as to pass on the port side of each other; and this rule shall be obeyed by all steam ships and by all sailing ships whether on the port or starboard tack, and whether close-hauled or not, unless the circumstances of the case are such as to render a departure from the rule necessary in order to avoid immediate danger, and subject also to the proviso that due regard shall be had to the dangers of navigation, and, as regards sailing ships on the starboard tack close-hauled, to the keeping such ships under command.—§ 296.

Rule for Steamers in narrow Channels. — Every steam ship, when navigating any narrow channel, shall, whenever it is safe and practicable, keep to that side of the fair-way or mid-channel which lies on the starboard side of such steam ship.—§ 297.

If Collision ensues from Breach of the above Rules, Owner not to be entitled to recover.—If in any case of collision it appears to the court before which the case is tried that such collision was occasioned by the non-observance of any rule for the exhibition of lights or the use of fog signals issued in pursuance of the powers before contained, or of the foregoing rules as to the passing of steam and sailing ships, the owner of the ship by which such rule has been infringed shall not be entitled to recover any recompence whatever for any damage sustained by such ship in such collision, unless it is shown to the satisfaction of the court that the circumstances of the case made a departure from the rule necessary.—§ 298.

Breaches of such Rules to imply wilful Default. — In case any damage to person or property arises from the non-observance by any ship of any of the said rules, such damage shall be deemed to have been occasioned by the wilful default of the person in charge of the deck of such ship at the time, unless it is shown, to the satisfaction of the court, that the circumstances of the case made a departure from the rule necessary.—§ 299.

Under the authority given them by the Merchant Shipping Act, the Lords of the Admiralty have issued the following regulations, which are now (1859) in force:

Admiralty Notice respecting Lights and Fog Signals to be carried and used by Sea-going Vessels, to prevent Collision. — By the Commissioners for executing the Office of Lord High Admiral of the United Kingdom of Great Britain and Ireland, &c.

By virtue of the power and authority vested in us, we hereby revoke, as from and after the 30th day of September, 1858, the regulations made and published by us on

the 1st day of May, 1852, relating to the lights to be carried by sea-going vessels to prevent collision: and we hereby make the following regulations, and require and direct that the same be strictly observed and carried into effect on and after the 1st day of October, 1858.

Steam Vessels.— All sea-going vessels, when under steam, shall, between sunset and sunrise, exhibit the following lights:

1. A bright white light at the foremast head.
A green light on the starboard side.
A red light on the port side.

2. The mast-head light shall be so constructed as to be visible on a dark night, with a clear atmosphere, at a distance of at least 5 miles, and shall show a uniform and unbroken light over an arc of the horizon of 20 points of the compass, and it shall be so fixed as to throw the light 10 points on each side of the ship, viz., from right ahead to 2 points abaft the beam on either side.

3. The green light on the starboard side and the red light on the port side shall be so constructed as to be visible on a dark night, with a clear atmosphere, at a distance of at least 2 miles, and show a uniform and unbroken light over an arc of the horizon of 10 points of the compass, and they shall be so fixed as to throw the light from right ahead to 2 points abaft the beam on the starboard and on the port sides respectively.

4. The side lights are to be fitted with inboard screens projecting at least 3 feet forward from the light, so as to prevent the lights from being seen across the bow.

5. Steam vessels under sail only, are not to carry their mast-head light.

Fog Signals.— All sea going steam vessels, whether propelled by paddles or screws, when their steam is up, and when under way, shall in all cases of fog use as a fog signal a steam whistle, placed before the funnel at not less than 8 feet from the deck, which shall be sounded once at least every 5 minutes; but when the steam is not up, they shall use a fog horn or bell, as ordered for sailing ships.

Sailing Vessels.—1. All sea-going sailing vessels, when under way or being towed shall between sunset and sunrise exhibit a green light on the starboard side and a red light on the port side of the vessel, and such lights shall be so constructed as to be visible on a dark night, with a clear atmosphere, at a distance of at least 2 miles, and shall show a uniform and unbroken light over an arc of the horizon of 10 points of the compass, from right ahead to 2 points abaft the beam on the starboard and on the port sides respectively.

2. The coloured lights shall be *fixed* whenever it is practicable so to exhibit them; and shall be fitted with inboard screens projecting at least 3 feet forward from the light, so as to prevent the lights being seen across the bow.

3. When the coloured lights cannot be fixed (as in the case of small vessels in bad weather), they shall be kept on deck between sunset and sunrise, and on their proper sides of the vessel, ready for instant exhibition, and shall be exhibited in such a manner as can be best seen on the approach of, or to, any other vessel or vessels, in sufficient time to avoid collision, and so that the green light shall not be seen on the port side, nor the red light on the starboard side.

Fog Signals.—All sea-going sailing vessels, when under way, shall, in all cases of fog, use when on the starboard tack a fog horn, and when on the port tack shall ring a bell. These signals shall be sounded once at least every 5 minutes.

Sailing Pilot Vessels are to carry only a white light at the mast-head, and are to exhibit a flare-up light every 15 minutes, in accordance with Trinity House regulation.

Vessels at Anchor.—All sea-going vessels when at anchor in roadsteads or fairways shall between sunset and sunrise exhibit where it can best be seen, but at a height not exceeding 20 feet above the hull, a white light in a globular lantern of 8 inches in diameter, and so constructed as to show a clear, uniform, and unbroken light all round the horizon, at a distance of at least 1 mile.

Given under our hands this 24th day of February, 1858, &c.

It may, however, be proper to state that neither this nor any rule of the sort is to be regarded as inflexible, or to be followed at all hazards. The safety of the ship is the paramount consideration, and no master is justified in abiding by a rule, when by doing so he plainly incurs danger. A. may be in his proper course, but if by pursuing it he will run a great risk of coming into collision with B., who is upon a wrong course, he is bound to alter his course so as to avoid a collision. The fact of one master being ignorant, careless, or in fault, is no reason why another should not use every means in his power to provide for the safety of his ship, and, consequently, of the lives and property entrusted to his care.

The conditions under which cases of collision take place differ extremely. Thus, 1st, it may be merely accidental, or be occasioned by circumstances beyond the power of control, as by the violence of the wind or waves dashing or impelling the ships together, without blame being imputable to either party; or 2nd, it may be owing to the culpable negligence or misconduct of one party; or 3rd, both parties may be to blame. In adjudicating upon losses growing out of collisions that have taken place under such different circumstances, the conclusions must also be very different.

With respect to the first class of cases there is little apparent difficulty: wherever a loss is occasioned by a storm, a fog, or other accidental circumstance, without any blame being ascribable to either party, it would appear to be equitable that it should be borne by the sufferer. And this principle having been embodied in the Roman

law, was subsequently ingrafted into that of England. (*Marshall on Insurance*, cap. 12. § 2.) But other authorities, to whom the greatest deference is due, contend that the loss arising from accidental collisions, however it may affect the parties, should be equally divided between them; and this, in fact, is the rule followed in most maritime states. (*Ordonnance* of 1681, lib. iii. tit. xii. art. 10., with the observations of Valin.) It, also, is the rule sanctioned by the law of England in cases where both parties are to blame, but where the blame cannot be discriminated. Those cases in which the blame is clearly ascribable to either party present no difficulty.

The leading doctrines of the law of England with regard to collisions have been clearly and succinctly stated by Lord Stowell. "In the first place," says his lordship, "a collision may happen without blame being imputable to either party, as when the loss is occasioned by a storm or any other *vis major*. In that case the misfortune must be borne by the party on whom it happens to light; the other not being responsible to him in any degree. Secondly, a misfortune of this kind may arise where both parties are to blame, where there has been a want of due diligence or of skill on both sides: in such a case the rule of law is, that the loss must be apportioned between them, as having been occasioned by the fault of both of them. Thirdly, it may happen by the misconduct of the suffering party only; and then the rule is, that the sufferer must bear his own burden. Lastly, it may have been the fault of the ship which ran the other down, and in this case the innocent party would be entitled to an entire compensation from the other."—(2 *Dodson's Admiralty Reports*, 83.)

We may add, that the rule of the equal division of the damage where both vessels are to blame has been, since Lord Stowell's time, fully recognised and finally established by a decision of the House of Lords, on an appeal from Scotland.

Various authorities have spoken disparagingly of the rule now referred to, and have called it a *judicium rusticorum*. And it would, no doubt, be very desirable in cases of collision where both parties are to blame, that the neglect or culpability of each should be accurately determined, and the damages assessed accordingly. But from the obscurity in which such cases are almost always involved, and the conflicting testimony brought forward by the different parties, the difficulties in the way of this being done are usually quite insuperable; and it is better to adopt a rule which, though, perhaps, less equitable in principle, is fairer in its application than any other that could be adopted. Of its expediency, there can, indeed, be no reasonable doubt. The observations of Valin are, in this respect, quite conclusive. "C'étoit," says he, "le moyen le plus propre à rendre les capitaines ou maîtres des navires extrêmement attentifs à eviter tout abordage, surtout ceux des bâtimens foibles et plus susceptibles d'être incommodés par le moindre choc, en leur rendant toujours présent la crainte de supporter la moitié du dommage qu'ils en pourroient recevoir. Et si l'on dit qu'il auroit été plus simple et plus court de laisser pour le compte particulier d'un chacun le dommage qu'il auroit reçu, comme provenant d'un cas fortuit; la réponse est qu'alors les capitaines des gros navires n'auroient plus craint de heurter les bâtimens d'une beaucoup moindre force que le leurs: rien donc de plus juste que la contribution par moitié."—(*Commentaire sur l'Ordonnance de* 1681, ii. 179. ed. 1776.)

In apportioning the damage in cases where both parties have been in fault, the question occurs, whether the damage done to the cargo shall be taken into account or left out in the estimate on which the apportionment is to be made. This knotty point has been differently decided in different countries. But the rule which limits the liability of owners to the value of the ship and freight, applies to cases of damage by collision. (See art. OWNERS.) For further observations on this curious and important subject, in addition to Valin and the other authorities already referred to, the reader may consult the chapter on collision added by Mr. Serjeant Shee to his edition of Lord Tenterden's work on the Law of Shipping, and the chapter on the same subject in Maude and Pollock's Treatise on the Law of Merchant Shipping.

Number of Collisions at Sea.—A statement has been prepared by Mr. John A. Rucker, underwriter, giving a classification of the number of collisions at sea, reported in Lloyd's lists during the five years from 1845 to 1849 inclusive. It thence appears that the annual numbers were 603, 564, 699, 633, and 565; so that there was a decrease in 1849, notwithstanding the increased traffic of that year. The total collisions of the five years amounted to 3,064. Of these 279 were cases in which a vessel was sunk, run down, or abandoned; 189 were cases in which there was serious damage; 686 in which the damage, although less, was still considerable; and 1,910 in which it was only slight. The average of steamers in contact with steamers during each year is about 11; of steamers in contact with sailing vessels about 37; of sailing vessels in contact with steamers 36; and of sailing vessels in contact with sailing vessels 533. (For further and later details see WRECK.)

COLONIES.

GRIMSBY (GREAT). A borough and sea-port, in the county of Lincoln, on the S. side of the æstuary of the Humber, which at this point is about 7 m. across, 7 m. W. from the lighthouse on Spurn Head, which is in lat. 53° 34′ 44″ N., long. 0° 7′ 9″ E. The long, low, narrow, hooked tongue of land which terminates in the Head protects a capacious roadstead, with good holding ground, extending to within a mile of the new works at Grimsby, and well known as a harbour of refuge to those who navigate the North Sea. The entrance to the river is marked by the lighthouse on Spurn Head, and by two light-ships in the Channel. Grimsby has, in consequence, the double advantage of a secure roadstead and of proximity to the open sea. The utility of this new harbour is evident from the scarcity of ports along this portion of the coast of England; for, if we except the leading port of Hull, which also lies on the Humber, but 15 m. further inland, there is no other port with docks but that of Grimsby, between Hartlepool in Durham and King's-Lynn in Norfolk, a distance of fully 150 m.

Grimsby is a borough of considerable antiquity, and was formerly a port of such importance that in the reign of Edward III. it sent 11 ships to the siege of Calais. Owing, however, to the gradual filling up of its harbour, it latterly sunk into comparative insignificance. In 1802 a new harbour was constructed; but being accessible only at high water, it was not productive of all the advantages that were expected. But, in 1846, a new harbour, on a larger scale, accessible at all times of the tide, was commenced; and in anticipation of its being finished, Grimsby was made the terminus of two important railways.

The old dock or floating basin, constructed in 1802, measures about 17 acres; but being placed at the high-water margin of a flat shore, and being consequently accessible only towards high water, it is of very limited utility.

To secure a proper depth of water at the entrance of the new works was an object of the first importance; and to attain it they have been projected ⅔ of a mile into the æstuary in advance of the old dock, reclaiming at the same time and enclosing 130 acres of land.

The new works comprise a wet dock of upwards of 25 acres in extent, with two entrance locks, having in front a tidal basin of 15 acres. The latter, formed by two timber piers, which are together about 2,000 feet in length, is provided with landing slips. It has a depth of 9 feet at low water springs, and of 12½ feet at low water neaps; the rise of tide at the former being about 18, and at the latter about 12 feet. The facility of ingress and egress afforded by this basin is especially useful to steamers, which, as they usually convey passengers or light merchandise, do not require to enter a dock. Here they lie afloat alongside the piers at all times of the tide.

The new dock, opened in May, 1852, is entered from the basin by two locks, furnished with double sets of gates for ebb and flood tides, the larger of which, constructed (by special agreement with the government) to admit the largest class of war steamers, is of the following dimensions, viz. — Length between the gates 300 feet; breadth from wall to wall 70 feet; depth of water on cill, at low water spring tide, 7 feet; depth of water on cill, at low water neap tides, 10½; depth of water on cill, at high water spring tide, 25½; depth of water on cill, at high water neap tides, 22½ feet. At half tide the average depth of water on the cill of this lock is 16 to 17 feet, and at three-quarters tide 20 to 22 feet.

The smallest or second lock is designed for general purposes. Its length between the gates, 200 feet; breadth, from wall to wall, 45 feet; and its cill, being 9 inches below that of the large lock, it has, at half tide, a depth of 17 to 18 feet water; and, at three quarters tide, of 21 to 22 feet. The lock gates, worked by hydraulic machinery, are opened and closed with ease and rapidity.

The water area of the new dock amounts, as already stated, to upwards of 25 acres, including a timber pond at its upper end; it has never less than 25 feet depth of water at its entrance, shoaling gradually to 20 feet at the timber pond. The dock is filled with fresh water, a circumstance of considerable advantage to steamers. Wharfs or quays extend on both sides of the docks, upwards of 3,600 feet in length. They are traversed by railways, so that trains may be at once loaded from the ships, and the goods forwarded to their destination. The sheds and bonding warehouses erected close to the quays are extensive and convenient.

From the proximity of Grimsby to the mouth of the Humber, both sailing and steam vessels can get to sea from it with the greatest facility. It would seem, indeed, to be well fitted, not only for a commercial port, but, also, for a station for government steamers, and other ships of war, in the event of our being engaged in hostilities with any of the Northern powers. Grimsby is 190 miles from Rotterdam, with which it has regular steam communication, and 220 miles from Antwerp.

A graving dock, for the repair of ships, is to be provided in connection with the wet dock; and it is further intended to open a channel of communication between the old and the new dock, which will add greatly to the utility and value of the former.

But, after all, the value of Grimsby as a commercial port will principally depend on its facilities of communication with the interior. And these are of the most extensive description. A direct branch of the Great Northern Railway, from Peterborough, passing through Boston and the E. parts of Lincoln, and thus opening a rich agricultural country, brings Grimsby within 154 m. distance, or 4 or 5 hours' travelling, of London. The line of the Manchester, Sheffield, and Lincolnshire Railway Company, who are the proprietors of the works at Grimsby, unites it with Manchester (dist. 117 m.) and Sheffield. It intersects in its course two trunk lines to the North, viz. the Midland and the Great Northern.

The agricultural district of Lincolnshire and the Midland counties, the manufacturing and mineral districts of Lancashire and Yorkshire, and the metropolis, are thus brought into direct and easy communication with a port that offers especial advantages for the trade with Holland, the Elbe, and the Baltic; and which is, indeed, extremely well situated for traffic, whether East, North, or South.

A Table of the Rates and Duties charged at the Grimsby Docks, on Vessels trading between the Port of Grimsby and any of the after-mentioned Places, and on Vessels entering the Docks, for Shelter or Repairs.

	s.	d.		s.	d.
For every vessel trading between the port of Grimsby and any port or place in Denmark, Sweden, or Norway, below Elsinore, or in Germany, Holland, Flanders, France, to the Eastward of Ushant inland, the Islands of Guernsey and Jersey, per registered ton -	0	1	For every vessel coming into the docks in ballast to be laid up (such vessel not having made the last preceding voyage from the said port of Grimsby, and paid duty accordingly upon her departure from the said docks, and not being regularly employed in the trade of the said port), for every ton, the sum of - - - -	0	2
For every vessel trading between the port of Grimsby and any port or place in the Baltic Seas, and all other ports or places above the Sound, or between the said port and any island or place or port of Europe to the Westward of Ushant without the Straits of Gibraltar, per registered ton -	0	1½	For each such vessel which shall remain more than six weeks, the further charge per ton per month of - - - - -	0	1
For every vessel trading between the port of Grimsby, and any port or place in the West Indies, North and South America, Africa, Greenland, or any place to the Eastward of the North Cape of Norway, all places within the Straits of Gibraltar, and all islands and places in the Ocean to the Southward of Cape St. Vincent, not before named, per registered ton - - -	0	2	For every vessel exceeding fifty tons burthen entering the said docks for repairs, shelter from storms, or from any other accidental cause, per ton - - - - -	0	1½
Dock rent is not charged on vessels trading as above-named until they have been ten months in the dock; the rate is then one halfpenny per ton per month.			For every such vessel, if remaining more than seven days, the further sum, per ton per week of -	0	0½
			For every vessel not exceeding fifty tons burthen, so entering the said docks, the sum of - -	5	0
			For each such vessel remaining in the docks more than twenty-four hours, the further sum per ton per week of - - - - -	0	0½
			N.B.—Vessels making use of the Grimsby Docks are not subject to corporation dues of any kind.		

GUTTA PERCHA, a vegetable product, in various respects similar to caoutchouc or India rubber, but much harder and less elastic, obtained from trees found in the forests of Borneo, Malacca, Singapore, &c. It does not appear to have been known to the British public previously to 1843; but it has since been largely imported, and is now used for a great variety of purposes. On being immersed in boiling water, or heated, it becomes plastic, and is easily moulded into any shape, recovering, when cold, its original hardness. Being impervious to water, it has been extensively employed in the manufacture of soles for shoes; it is also made into whips, frames for pictures, and mirrors, driving straps for machinery, pipes for conveying water, and various other articles.

The trees from which it is usually obtained, called the Percha (whence its name) and Tuban, are of a large size, being 60 or 70 feet in height, and from 2 to 3 feet in diameter. It might, no doubt, be obtained by periodically bleeding the trees; but the natives cut them down, and then make incisions in the bark, whence the gum exudes into cocoa-nut shells, or other rude instruments placed for its reception. It is stated in an article on Gutta Percha in the Journal of the Indian Archipelago (No. I. p. 24.), that 6,918 piculs (8,235 cwt.) were shipped from Singapore for England in the

interval between the 1st of July, 1845, and the 1st of July, 1847; and that to obtain this quantity, estimating the average produce of a tree at 10 catties (13¾ lb.), no fewer than 69,180 trees must have been sacrificed! It is imported in the shape of blocks and scraps like leather clippings. It is usually adulterated with sawdust, leaves, and other impurities; but these, being merely entangled in its fibres, may easily be separated from the gutta by immersing or softening it in boiling water, and then picking them out.—(See Journal referred to above, and Low's "Sarawak," &c., p. 50.) During 1857 the imports and re-exports of gutta percha respectively amounted to 17,420 and 959 cwts.

INDIA.

Account of the Public Debt of India as it stood on the 1st of May, 1834 and the 1st of May, 1858, showing separately the Amount of each Loan and the Rate of Interest borne by the same; and of all Sums received and of all Sums paid off in respect of such Loans; and also of all Sums transferred from one Loan to another during the Period above referred to (converted into Sterling Money at the Rate of 2s. per Co.'s Rupee).

Deposits, including the Carnatic and other funds	4,979,010							5,869,374
Total Indian debt at interest £	37,827,715							£ 60,704,084

N.B. At this moment (August, 1859), the debt of India is probably not under, if it do not considerably exceed, 100,000,000*l.*, and the chances are that it will increase rather than diminish, and that eventually it will have to be defrayed by the people of Britain!

IRON TRADE OF SCOTLAND.—This is now one of the greatest branches of industry carried on in the northern portion of the U. Kingdom. It is chiefly confined to the western counties, the great majority of the smelting furnaces and malleable works being in Lanark and Ayr. Glasgow is its central mart.

Notwithstanding its present magnitude, the smelting and manufacture of iron in Scotland is of very recent origin. So late as 1830 there were only 16 blast furnaces in Scotland, the produce of which scarcely reached 40,000 tons. In 1858 there were 132 in full blast, producing 945,000 tons of pig iron, which, at the average price for the year (which was unusually low), represents a value of 2,554,000*l.* Of this quantity there were consumed and exported foreign and coastwise, 810,000 tons. The shipments were as under:—

To Germany, Holland, Denmark, Sweden, and Norway	121,304	tons
France	52,381	,,
Italy	12,294	,,
Spain, Portugal, and other European countries	19,929	,,
United States, and British North America	60,403	,,
South America, India, Australia, &c.	8,160	,,
Total foreign	274,471	,,
Coastwise, and per rail to England	282,529	,,
	557,000	,,
Consumed in local founderies and malleable iron works in and about Glasgow	253,000	,,
	810,000	

With the exception of a small work at Wilson town, which was unsuccessfully attempted there at a somewhat remote period, almost nothing was done in the manufacture of malleable iron till 1839, and even so late as 1842 the produce did not exceed 35,000 tons. During the year 1854, however, the production of malleable iron reached 122,400 tons, and taking the average price of all sorts, including plates for shipbuilding, to have been 10*l.* per ton, the gross amount of the produce would be 1,224,000*l.* The number of men employed in this branch was about 4,000, and the rate of wages paid about 18*s.* In 1858 there was a falling off in the production.

(We are indebted for the foregoing statements to our learned friend, Dr. Strang, Chamberlain of the city of Glasgow, distinguished by his skill in and attention to statistical inquiries.)

The well-informed brokers, Messrs. William Connal and Co., of Glasgow, give the following account of the production, &c., of iron in Scotland during the 14 years ending with 1858. It substantially agrees with and supports the statements of Dr. Strang.

Production, &c. of Iron in Scotland.

KEY-WEST. A small island from 4 to 5 m. in length, by 1 in width; 56 m. S. W. from Cape Sable in Florida. It is one of the Florida keys, or of that extensive circular range of low islands, banks, and reefs, which fences the coast of Florida, and forms the northern boundary of the Gulph Stream, from the Tortugas islands on the W. round to Cape Florida on the N. A lighthouse erected on the S. W. point of the island, lat. 24° 32′ 32″ N., long. 81° 48′ 30″ W., has a fixed light elevated 67 ft. above the level of the water. The town of Key-West, near the N. W. part of the island, has about 1,600 inhabs., and an excellent harbour, with about 25 ft. water. A safe passage, about 6 m. in length, leads by Key-West from the Gulph Stream to the Gulph of Mexico. It has 12 ft. water at ebb tide, and vessels from the N. bound for New Orleans, Mobile, &c., or from the latter for the former, by passing through it, avoid the delay and danger of the more westerly passage round the Tortugas.

Owing to the frequent accidents to shipping from coming in contact with the banks and reefs in this dangerous vicinity, the American government has organised an establishment at Key-West for the assistance of ships in distress, and made it the seat of an admiralty court for the adjudication of claims for salvage. The former consists of above 20 licensed vessels, with crews of about 10 men each. These are kept constantly cruising about on the look-out for ships in distress or wanting pilots; and as their emolument principally depends on the fees they obtain for their assistance, it may be fairly assumed that it will be rendered with the greatest alacrity. But the desirable thing is to hinder vessels from getting on shore, the assisting them when in that predicament being, though an important, a secondary consideration. The latter, however, and not the former, is the main object which the licensed cruisers of Key-West have in view; and it would be preferable, could means be devised, for making their remuneration depend rather on their success in preventing disasters than, as at present, in mitigating their influence. This, however, is by no means easily done. Shipwrecks will, perhaps, be more effectually prevented by increasing the number of lighthouses, light-vessels, and sea-marks, along the edges of the islands and reefs, than in any other way. We subjoin an account of the ships wrecked, the sums awarded as salvages by the court of Key-West, &c., in each of the 14 years ending with 1857.

Years.	Number of Vessels.	Salvage.	Expenses.	Value of Vessels and Cargoes.
1844	29	$93,712	$169,065	$725,000
1845	26	69,592	105,709	737,000
1846	56	122,592	231,423	1,597,600
1847	37	109,000	200,600	1,624,000
1848	42	125,800	206,500	1,282,000
1849	47	127,870	219,160	1,505,000
1850	30	122,831	200,860	929,800
1851	34	75,852	165,085	941,500
1852	23	80,112	163,000	675,000

KURRACHEE, a sea-port of British India at the N. W. extremity of the coast of Sinde, lat. 24° 51′ N., long. 67° 2′ E. Population of town and suburbs in 1853, 22,227. It derives almost all its importance from its being the only safe sea-port on the coast of Sinde, and from its adaptation to serve as the grand W. emporium of the vast territories traversed by the Indus. In this respect it bids fair entirely to supersede Tattah, mentioned in the body of this work. It is situated about 22 miles E. from Cape Monze, on a level piece of ground at the extremity of the Brahooic mountains. The harbour, which is spacious and secure, has a bar at its mouth, on which there are

from 16 to 18 feet water at high-water ordinary tides, and from 20 to 21 feet or upwards at high-water springs. And allowing for the difference in the statements with respect to the depth of water on the bar, still there can be no question that the harbour has been safely entered by ships of from 700 to 800 tons burden or upwards; and it is accessible at all times of the year, even during the season of the monsoons. It appears, indeed, to be sufficiently established that with a properly organised pilot establishment, and the employment for one or more years of two or three powerful steam dredging machines to deepen or remove the bar, the port would be constantly available for ships of from 800 to 1,000 tons.

A railway, certainly the most important for its length (110 miles) of any in India, is now in progress, or is, most probably, completed from Kurrachee to Hyderabad on the Indus, the point at which the latter becomes available for large ships, and from which it may be navigated, for about 570 miles, by steamers built for the purpose. There is, consequently, every prospect of Kurrachee becoming one of the most important of the Eastern emporiums. It would be useless to dwell on the all but boundless extent, the great natural riches and the immense capacities of improvement, of the countries watered by the Indus, and its affluents. And it may fairly be doubted, taking these circumstances into account, whether the anticipations of those who contend that the commerce of Kurrachee is destined, at some future and not very remote period, to equal that of N. Orleans, the emporium of the Mississippi, be really so very wide of the mark, as at the first blush of the matter they may seem to be. It is seen by the subjoined returns, that even at present its trade is far from inconsiderable.

It has two routes to Tattah; and it has been said that there is a water communication between Kurrachee and the Indus; but this has been denied, and is, most probably, a mistake. No doubt, however, it would be easy, from the nature of the ground, to cut a canal between them, and this may, at some future period, be an expedient measure. In the meantime, however, the railway, by bringing Kurrachee into contact as it were with Hyderabad, and the deep water of the Indus, has made it the port of the latter. The telegraph wires from Aden to India are to be carried in the first instance to Kurrachee.

At present the exports consist principally of horses, saltpetre, rice, wheat, and other grain; ghee or clarified butter; oil and oil seeds; wool, which has rapidly increased, and is now by far the most important article; indigo; munjeet or madder; drugs, &c. But when the navigation of the Indus is begun, Kashmere shawls, silk, and a great variety of the most valuable articles will be added to the list of exports.

The imports consist of cotton stuffs and twist, iron, hardware, and machinery; spices, wines, &c.

Account of the Values (in Rupees) of the Principal Articles imported into and exported from Kurrachee in 1855–56 and 1856–57.

Imports.	1855–56.	1856–57.	Imports.	1855–56.	1856–57.
Apparel	Rs. 1,62,181	Rs. 1,01,765	Spices	Rs. 1,57,155	Rs. 2,49,945

Total Rs.	62,89,137	68,56,655	60,44,403	73,48,571

We have been indebted for these details, partly to the art. Kurrachee in Thornton's excellent *Gazetteer of India*, but more to the work of Mr. Andrew on the *Indus and its Provinces*. The latter has too much the appearance of having been written to recommend the Sinde railway and the undertakings connected with it. But, despite this circumstance, it contains a great deal of most valuable information, and well deserves the attention of those who take any interest in the state and prospects of the fertile and extensive countries of which it treats.

LABUAN, a small island off the N. W. coast of Borneo, a dependency on the British crown, about 6 m. distant from the nearest point of the mainland, and 30 m. N. from the city of Borneo or Bruni, lat. 5° 12′ N., long. 115° 19′ 36″ E. It is from 25 to 30 m. in circuit, flat, and covered with wood. The anchorage, on the S. side of the island, is protected by a greater and three smaller islands; and the town of Victoria has been commenced at the embouchure of a rivulet in a small bay, at the head of the anchorage. Coal of good quality is found on the island, and it is well supplied with fresh water. It was ceded by the Sultan of Borneo to Great Britain in 1844; and Sir James Brooke, who negotiated its cession, was afterwards appointed its governor. When it came into our possession it was uninhabited; but its situation is such that, provided it be moderately healthy, it can hardly fail to become an important emporium. It lies near the best route for shipping from the Straits of Singapore to China, and, while it is extremely well situated for carrying on trade with the W. and N. coasts of Borneo and the Philippine Islands, it will serve as a harbour of refuge, and as a convenient station for the steamers and other ships of war required to put down the piracy that has been, to the great injury of commerce, carried on to so great an extent from the ports and rivers of Borneo, and of some of the adjacent islands. In this respect its abundant supply of coal will be of the greatest service. In war the possession of Labuan will give us the entire command of the Chinese sea. (Brooke's Journal, and a paper by Mr. Craufurd in Keppel's Borneo, ii. p. 144. and p. 209.)

Borneo, or Bruni, on the adjacent shore of the mainland, the residence of the Sultan of Borneo Proper, has been termed the Venice of the East. It contains from 30,000 to 40,000 inhabitants, mostly Malays, and really seems as if it floated on the waves. It is situated on an æstuary, and though built with little regard to regularity, it is intersected crosswise by two main streets, which divide it into four portions, one only of which stands on dry land. The houses in the other three parts are of wood built on piles, which support them above the water, with streets, if so they may be called, to admit the passage of canoes. The steamer which conveyed Sir James Brooke to Borneo, when Labuan was ceded, anchored in the main street in the centre of the town! "The greatest novelty at Bruni," says Mr. Marryat, from whom we have borrowed these details, "is the floating bazaar. There are no shops in the city, and the market is held every day in canoes. These come in at sunrise every morning from every part of the river, laden with fresh fruit, tobacco, pepper, and every other article which is produced in the vicinity; a few European productions, such as handkerchiefs, check-cotton prints, &c., also make their appearance. Congregated in the main street, the canoes are tacked together, forming lanes through which the purchasers in their own canoes paddle, selecting and bargaining for goods with as much convenience as if the whole were transacted on *terra firma*. Iron is here so valuable that it is used as money. One hundred flat pieces an inch square are valued at a dollar, and among the lower classes these iron pieces form the sole coin. They are unstamped, so that any person appears to be at liberty to cut his own iron into money; but whether such is really the case, I cannot vouch." (Marryat's *Borneo, &c.*, p. 113.)

But though deficient in iron, the gold mines of Borneo are said to be of the richest description. Sir Stamford Raffles estimated that in his time about 32,000 Chinese labourers were employed in these mines on the W. coast of Borneo; and it is not easy to say how productive they might become, were the miners in a condition to prosecute their undertakings in safety, and to bring the resources of science and capital to their aid. Antimony is also found in abundance in Borneo, especially in the district of Sarawak, of which Sir James Brooke is rajah; and the diamonds of Borneo rival those of India and Brazil. But independently of its coal, and of its precious and other metals, its vegetable products might alone furnish the materials of an extensive commerce. The sago palm grows in great perfection in many parts of the island, and sago is largely exported in a rough state to Singapore. The areca nut, rattans, gutta percha, gum-benjamin, camphor, birds' nests, &c., are also considerable articles of export; and sugar, pepper, and all the products of tropical regions, might, with a little care, be raised to any extent in most parts of this vast island. The numbers and ferocity of the savages by whom it is occupied, present, indeed, innumerable obstacles to its improvement. But civilisation is beginning to make its way amongst them; and, though probably slow, its progress cannot well be arrested.

LAGUNA DI TERMINOS, OR LAGUNA DI CARMEN, a sea-port on the S. shore of the Gulph of Mexico, State of Yucatan, lat. 18° 38′ 44″ N., long. 91° 51′ 22″

W. It derives its name from being situated about 1 mile within the S.W. extremity of Carmen island, on the most westerly of the straits or entrances leading into the basin or lagoon of Terminos. Population about 3,000.

The port, which is secure and one of the best on the gulph, has from 12 to 14 feet water over the bar at the entrance to the lagoon. Vessels of greater draught load and unload by means of lighters, outside the bar, in from 3 to 4 fathoms, with good holding ground.

To enter the Port.—Run in over the bar with Xicalango Point, bearing by compass S. ¾ E., till Point Sacatal bears S.E. ¼ S., and then steer for it; and when the north side of the island begins to shut in haul up for the anchorage off the town. The lead is a safe guide on the W. side of the channel, but not on the E.

The chief trade of the town consists in the shipping of logwood, known in foreign markets by the name of Campeachy wood, from its having been originally cut down in the vicinity of that port and shipped from it. But Campeachy has ceased to be an *entrepôt* for logwood. It is now principally cut down on the mainland adjoining the lagoon of Terminos; and being thence conveyed to Laguna in coasting schooners, is sent from it to all parts of the world.

Vessels arriving with cargoes must bring a general manifest and invoice in triplicate, certified by the Mexican consul at the port of departure. Those arriving from a foreign port in ballast, must produce a clearance either from the Mexican consul or the authorities of the place from whence they came, showing that they bring no cargo.

Pilotage 1 dollar 75 cents per foot; other port charges, such as harbour master's fees, anchorage, board of health, &c., about 25 dollars each vessel. Ships arriving direct from a foreign port pay 1 dollar 50 cents per ton for tonnage dues.

Statement of the Exportation of Dyewoods from the Port of Laguna di Terminos during the Years 1850, 1851, and 1852, specifying also the Vessels in which they were shipped and the Ports to which they belonged.

We are indebted for this article to a gentleman of Laguna.

MELBOURNE, the cap. of the British colony of Victoria, formerly Port Phillip in Australia, occupying the S. E. portion of that continent, stretching through 9 degs. of long., from Cape Howe on the E. to the Glenelg river on the W. The town is situated on the N. bank of the Yarra-Yarra river, about 9 m. (following its windings) from its mouth in the basin of Port Phillip, lat. 37° 49′ 5″ S., lon. 144° 58′ 35″ E. It was founded in 1837, and extends along the banks of the river. In 1851 it had a pop. of 23,000; and such has been the immigration consequent on the discovery of the gold fields, that inc. suburbs it had on the 24th April, 1854, 71,188 inhabs., and in the interval this number is said to have been sometimes exceeded. A considerable portion, however, of this immense population is to be regarded as migratory only, and as residing in town merely till their ultimate destination has been decided upon. The sudden increase of population raised house rents to an unparalleled height; and for some considerable time a large proportion of the population was not housed, but encamped under tents! But partly through the extraordinary stimulus which was thus given to building, and partly through the mercantile failures consequent to the overtrading of 1853 and 1854, there has been a very heavy fall of rents, which do not now (1858) exceed half their amount in 1852. The site of the town is unfortunate; for the river being obstructed by a bar and shallows, it is not generally navigable for vessels of more than 60 tons burden; and it has the further disadvantage of being low, and liable to be flooded by the overflowing of the river during the wet season. Melbourne was, also, till lately, very ill supplied with fresh water. But this defect has been remedied by the construction of works that do credit to the colony. The reservoirs are of great magnitude, so as to afford an adequate supply in periods of drought. It has been proposed to facilitate the trade of the town by removing the bar at the mouth of the river, and deepening its channel; but this would be a very expensive undertaking, and one of which the success would be not a little doubtful. The excavation of a ship canal from

the deep water in the bay to Melbourne has also been proposed; and it, probably would be the preferable plan; but in the meantime a railway has been completed, which has obviated many of the inconveniences which were experienced. It seems, however, not unlikely that the trade of the town, and the greater part, perhaps, of its population, will ultimately centre at Williamstown, a village a few miles distant, on a headland extending into the bay, opposite to which all large vessels coming to Melbourne are obliged to anchor. The principal objection to Williamstown is the scarcity and bad quality of the fresh water; but this objection might, perhaps, be obviated by sinking wells, or conveying hither a supply of water from some of the adjacent streams, as has been done at Melbourne.

In consequence of the discovery in 1851 of the extraordinarily rich gold-fields situated in this colony, its progress has been since quite unprecedented. The population, for example, which amounted to about 90,000 in 1851, had increased to above 232,000 in 1854, and to 485,769 in 1858, of whom 308,983 were males, and only 176,786 females. The trade, navigation, &c., of the colony have increased in something like the same proportion. But it is a curious fact that the production of gold appears to have attained its maximum in 1852, and has not been so great since.

Account of the Total Value of Imports into and Exports from Victoria in 1854, 1855, and 1856, with the Amounts from and to each Country.

Port Fairy	15	2,425	16	3,198
Port Albert	102	16,575	108	17,412
Warrnambool	9	955	4	550
Total	1,920	538,609	1,959	538,362

It is seen from these Tables that the imports of flour, grain, butter, &c., are very large indeed. And notwithstanding the extension of agriculture, it is probable that this will continue to be the case for many years to come. The general inferiority of the land, and still more the extravagantly high price that is set upon it, are the principal causes of this state of things.

Consumption of Spirits.—Despite the heavy duty (10*s.* a gallon) on spirits, their consumption in the colony is very considerable; though not greater, perhaps, than might, under the circumstances, have been anticipated.

An Account of the Deliveries of Spirits for Home Consumption at Melbourne, for the 12 Months ending with November, 1858.

SCALE OF COMMERCIAL CHARGES,

Adopted at a Special General Meeting of the Melbourne Chamber of Commerce, 15th May, 1854.

COMMISSIONS:

On cash payments when not in funds	5 per cent.
On cash payments when in funds	2½ ,,
On purchase and shipment of gold-dust	1 ,,
On purchase and shipment of gold-dust, if drawn against	2½ ,,
On the amount of invoice in either case.	
On purchase and shipment of merchandise and on other purchases when not in funds	5 ,,
Ditto ditto when in funds	2½ ,,
On private sales, including the purchase of bills for remittance	5 ,,
On guarantee of sales, including remittances	5 ,,
On goods received for sale and reshipped, and on consignments of merchandise withdrawn, on invoice value	2½ ,,
On debts, rents, and other accounts collected, recovered, and remitted	5 ,,
On granting of letters of credit	2½ ,,
On letters of credit acted upon, an additional charge of	2½ ,,
On freight or charter procured for vessels, and freight or passage-money collected	5 ,,
On freight paid at port of departure	2½ ,,
On ship's disbursements and outfits when not in funds	5 ,,
Ditto ditto when in funds	2½ ,,
On guarantee of captains' drafts on owners, taken for balance of ships' disbursements	5 ,,
On money obtained on bottomry or respondentia	5 ,,
On insurance effected, or orders written for insurance, on the assured value	½ ,,
On insurance losses, partial or total, settled, or on premiums recovered	5 ,,

All sales of goods understood to be guaranteed, unless there be special orders to the contrary.

Guarantee on security for contracts	5 per cent.
Acting as trustee on assignments	5 ,,
On advances on produce for shipment	2½ ,,
Auctioneer's commission and brokerage to be charged when incurred.	
Advances and current accounts not liquidated at the end of the season, March 31st, the balance to be charged as a fresh advance, subject to a commission of	5 ,,

INTEREST:

On advances for duty, freight, and lighterage, and on accounts current per annum	10 ,,

CHARGES:

For passing accounts with the government for emigrant ships	£21 0*s*
For entering ship inwards at the Custom House, when the original port of departure is Australia, Van Diemen's Land, or New Zealand	£2 2*s*.
For clearing ship outwards when the port of destination is in the same places as above	£2 2*s*.
For entering ship inwards from other ports	£5 5*s*.
For clearing ship outwards	£5 5*s*.
For attending delivery of cargo from lighters, and giving notice to consignees	15*s*. per day
Fee for each surveyor within the city	£1 1*s*.
Fee for survey of hatches and stowage of cargo	£1 1*s*.
Fee for survey of hull of vessel	£5 5*s*.
On wool, for receiving, weighing, marking, and delivering	½d. per lo.
In addition to the tare on wool, an allowance for draft of	1 lb. per cwt.

Pilotage Rates.

	Sailing Vessel.	Steamer.	Maximum.	Minimum.
From without the Heads to Melbourne or Geelong, and *vice versâ*, per ton	*s. d.* 1 3	*s. d.* 0 10	£ 100	£ 15
From within the Heads to Melbourne or Geelong, and *vice versâ*, per ton	0 9	0 6	60	10
Into, or out of, Port Albert, per ton	0 9	0 6	60	5
Into, or out of, all other ports	0 6	0 4	40	4
Between Melbourne and Geelong	0 6	0 4	40	4

The above rates include two removes by the pilot.

EXEMPTIONS.

All ships belonging to Her Majesty, all ships outfitting to or refitting from the fisheries, all ships employed in the coasting trade, all ships regularly trading between any port of Victoria and of any of the colonies of New South Wales, Van Diemen's Land, New Zealand, Western and South Australia, (the master of such ship holding a certificate from the Pilot Board that he is competent to act as pilot to such trader,) unless the services of a pilot shall have been actually received; and all ships not having actually received the services of a pilot.

TARIFF OF VICTORIA.

Passed 8th December, 1854.

Ale, porter, spruce, and other beer, cider, and perry, the gallon, 6*d*.
Cigars, 3*s*. the pound.
Coffee and chicory, the pound, 2*d*.

Molasses and treacle, 5*s.* the hundred weight.
Spirits or strong waters of any strength, not exceeding strength of proof by Sykes' hydrometer, and so in proportion for any greater or less strength than the strength of proof, the gallon, 10*s.*
Spirits, cordials, liqueurs, or strong waters, sweetened or mixed with any article, so that the degree of strength cannot be ascertained by Sykes's hydrometer, the gallon, 10*s.*
Spirits, perfumed, the gallon, 10*s.*
Sugar, raw and refined, and sugar-candy, the hundred weight, 6*s.*
Tea, the pound, 6*d.*
Tobacco and snuff, the pound, 2*s.*
Wine, the gallon, 2*s.*
All other goods, wares, and merchandise, free.
Gold, the oz., when exported, 2*s.* 6*d.*

GUNPOWDER.

All vessels arriving in the ports of Victoria, having gunpowder on board exceeding 30 pounds, shall hoist the Union Jack at the main, and remain at an anchor outside the regular anchorage off the point, until such gunpowder be landed.

Twelve hours after anchorage allowed for landing whatever gunpowder there may be on board, whether as cargo or stores, at the appointed magazine.

Gunpowder to be landed or removed only between sunrise and sunset, at the expense of the proprietor or importer, and under the supervision of the inspector of water police, who, upon application, sends an officer in charge of powder boat.

The basin of Port Phillip, which receives the Yarra-Yarra and other rivers, is a large circular bay, or inlet of the sea, whence the colony derived its former name. It has a narrow entrance, not more than $1\frac{3}{4}$ m. in width, partly occupied with rocks and shoals. A lighthouse has been erected near the extremity of Point Lonsdale, near the W. side of the entrance, lat. 38° 16′ S., long. 140° 40′ E., and another on Point Gellibrand, near the head of the bay, between Williamstown and the mouth of the Yarra-Yarra river, lat. 37° 52′ S., long. 144° 55′ E. The bay is about 40 m. in depth from S. to N., and where widest is about 40 m. from E. to W. It is said to cover an area of above 800 sq. m., and might accommodate all the navies of all the countries in the world.

The whole trade of the colony, which is already very extensive, and is continuing to increase, is at present carried on from this basin. And from its advantageous situation, and its stretching so far inland, it is probable it will always continue to engross the largest share of the trade, though, no doubt, it will be partly, also, carried on from other ports. Geelong, at the head of a deep bay on the W. side of the basin, had on the 30th April, 1854, a population of 20,115, and a very considerable trade. For farther details see the *Victoria Commercial and Nautical Almanac* for 1855, a very meritorious publication.

Prospects of the Colony. — Of these it would be hazardous to speak with much confidence. The produce of gold, which amounted to above 4,247,000 oz. in 1852, amounted to only 2,421,000 oz. in 1853. But it is impossible to say whether the decline will be permanent, or whether the produce will not again rise to or above its old level. The excitement caused by the discovery of the gold fields was not confined to the colonists or the diggers, but acted with such force on the commercial world that the value of the imports into Victoria, which amounted to 1,056,437*l.* in 1851, rose to 15,182,530*l.* in 1856–7. And this excessive importation occurring simultaneously with a diminished supply of gold, a ruinous revulsion necessarily followed, accompanied by an all but universal bankruptcy, and a vast sacrifice of property.

These, however, are but evanescent difficulties. The system that has been adopted in regard to the disposal of the land, and the results to which it has led, are the grand difficulties with which the colony has to contend. It is impossible, indeed, to condemn too severely our policy in this respect, both in this and our other colonies. It is fitted only to injure them, and to turn the tide of emigration from their shores to the U. States. To set a price of 20*s.* an acre upon the unoccupied pasture lands of Australia, several acres of which are required to feed a single sheep, may be regarded as the triumph of political quackery. While, however, it prevented the sale of land, it necessarily led to its being let in vast tracts at low rents with certain rights of pre-emption, and to its being exclusively occupied by squatters; and through the discovery of the gold fields and the influx of population, these parties have become a leading class. There can, it is affirmed, be no doubt that their interests are opposed to those of the bulk of the colonists; and it is believed that under the constitution lately given to the colony they will command a majority in the legislature.

In consequence of this preposterous system, which, in a colony where large fortunes have been made, has restricted the purchase of lands to a very small part of their extent, the country can in no proper sense of the word be said to be occupied. The population has no power of diffusing itself over the surface, but is congregated into the large towns of Melbourne, Geelong, and the camps at the diggings. There are neither villages, farms, nor farm steadings. A man of moderate means may as soon think of getting land in Middlesex as in Victoria. And hence it is that the vast majority of those who make money in the colony hasten to leave it; some proceeding to England, and many to the U. States, where they may invest the whole or a portion of their earnings in superior lands sold for the low price of $1\frac{1}{4}$ dollar an acre. We do not presume to cast the horoscope of a policy which has such results; but we hardly suppose that, even in this region of anomalies, a suicidal system of this sort can be immortal.

MOROCCO. — Convention of commerce and navigation between Her Britannic Majesty and the Sultan of Morocco:—

Article 1. There shall be reciprocal freedom of commerce between the British dominions and the dominions of the Sultan of Morocco. The subjects of Her Britannic Majesty may reside in and trade to any port of the territories of the Sultan of Morocco to which any other foreigners are or shall be admitted.

They shall be permitted to hire houses, and to build houses, stores, or warehouses, as stipulated in Article 4. of the general treaty of this date.

They shall enjoy full protection for their persons and properties, as specified in Article 4. of the general treaty; they shall be allowed to buy from, and to sell to, whom they like, all articles not prohibited in Article 2. of this convention, either by wholesale or retail, at all places in the Moorish dominions, without being restrained or prejudiced by any monopoly, contract, or exclusive privilege of purchase or sale whatever, except the articles of export and those of import enumerated in Article 2.; and they shall, moreover, enjoy all other rights and privileges which hereafter may be granted to any other foreigners, subjects or citizens of the most favoured nation.

The subjects of the Sultan of Morocco shall, in return, enjoy in the dominions of Her Britannic Majesty the same protection and privileges which are or may be enjoyed by the subjects or citizens of the most favoured nation.

2. The Sultan of Morocco engages to abolish all monopolies or prohibitions on imported goods, except tobacco, pipes of all kinds used for smoking, opium, sulphur, powder, saltpetre, lead, arms of all kinds, and ammunition of war; and further to abolish all monopolies of agricultural produce, or of any other article whatsoever in the dominions of the Sultan, except leeches, bark, tobacco, and other herbs used for smoking in pipes.

3. No tax, toll, duty, or charge whatsoever, beside the export duty hereinafter mentioned, shall, under any pretext or on any account, be imposed by any person whatsoever, in any part of the dominions of Morocco, upon or in respect of any goods or produce whatsoever which may have been purchased for exportation by or on behalf of any British subject; but the said goods or produce, when so purchased, shall be conveyed from any place in Morocco to, and embarked from, any port therein, absolutely free and exempt from all other taxes, tolls, duties, or charges whatsoever. No permit, or any similar document, shall be requisite to enable them to be so conveyed or embarked, nor shall any officer or subject of the Sultan offer any impediment to, or lay any restriction on, the conveyance or embarkation of such goods (except those goods or produce which the Sultan of Morocco shall prohibit from being exported, as arranged in Article 5.), or on any pretext demand or receive any money in respect or on account of such goods; and should any such officer or subject act contrary to this stipulation, the Sultan shall immediately punish with severity the governor, officer, or other subject who shall have been guilty of such misconduct, and render full justice to British subjects for all injuries or losses which they may duly prove themselves to have suffered thereby.

4. The subjects of Her Britannic Majesty within the dominions of His Majesty the Sultan shall be free to manage their own affairs themselves, or to commit those affairs to the management of any persons whom they may appoint as their broker, factor, or agent; nor shall such British subjects be restrained in their choice of persons to act in such capacities; nor shall they be called upon to pay any salary or remuneration to any person whom they shall not choose to employ; but those persons who shall be thus employed, and who are subjects of the Sultan of Morocco, shall be treated and regarded as other subjects of the Moorish dominions. Absolute freedom shall be given in all cases to the buyer and seller to bargain together, and no interference on the part of the Sultan's officers shall be permitted. Should any governor or other officer interfere in the bargains between British and Moorish subjects, or place any impediments in the lawful purchase or sale of goods or merchandise imported into, or to be exported from, the Sultan's dominions, His Sherifian Majesty shall severely punish the said officer for such misconduct.

5. Should the Sultan of Morocco at any time think proper to prohibit the exportation of any kind of grain or other article of commerce from his dominions, British subjects shall in no manner be prevented from embarking all the grain or other articles which they may have in their magazines, or which may have been bought previously to the said prohibition; but they shall be allowed to continue to export all they may have in their possession, during the term of six months from the time the prohibition was publicly made known; but on the day when the order of the Sultan of Morocco regarding the prohibition shall arrive, and shall be published to the merchants, British subjects shall, within the term of two days, declare and give proofs of the amount of produce they shall possess in their stores, on which the prohibition is imposed, and they shall also present legal certificates regarding the amount of the said produce which they shall have bought in the interior or elsewhere, previously to the promulgation of the order for the prohibition. No prohibition, either as to the exportation or importation of any article, shall apply to British subjects, unless such prohibition shall apply to subjects of every other nation.

6. Merchandise or goods, except the articles enumerated in Article 2., imported by British subjects in any vessel, or from any country, shall not be prohibited in the territories of the Sultan of Morocco, nor be subject to higher duties than are levied on the same kind of merchandise or goods imported by the subjects of any other foreign power, or by native subjects, after the date of this Convention.

All articles, except those enumerated in Article 2., the produce of Morocco, may be exported therefrom by British subjects in any vessels, on as favourable terms as by the subjects of any other foreign country, or by native subjects.

7. In consideration of the favourable terms upon which the produce of Morocco is admitted into the territories of Her Britannic Majesty, and with a view to the extension of commercial intercourse between Great Britain and Morocco, for their mutual advantage, His Majesty the Sultan of Morocco hereby agrees that the duties to be levied on all articles imported into the territories of His Majesty by British subjects, shall not exceed ten per cent. in cash on their value, at the port of their disembarkation; and that the duties to be levied on all articles exported from the territories of His Majesty by British subjects, shall not exceed in amount the duties marked in the following tariff: —

TARIFF OF EXPORTS.

The Sultan of Morocco has the right of prohibiting any article of exportation; but when a prohibition on any article shall be imposed, it shall be in conformity with what is arranged in Article 5.; but upon the exportation of articles the prohibition of which shall be taken off, the duties noted in the tariff shall alone be paid. With regard to wheat and barley, should the Sultan think proper to prohibit the exportation of these articles, but should desire to sell to merchants the grain which belongs to government, it shall be sold at the price the Sultan thinks proper to impose. Should the Sultan augment or diminish the price of the grain, there shall be granted to the purchaser for exporting that which he shall have bought, the term stated in Article 5.; but should the grain be free for exportation, the duties imposed thereon shall be in conformity with what is stated in the tariff.

Should the Sultan of Morocco think proper to reduce the duties on articles of exportation, His Majesty shall have the right of doing so, on condition that British subjects shall pay the lowest duty that shall be paid by any other foreign or native subjects.

8. Should a British subject, or his agent, desire to convey by sea, from one port to another in the dominions of the Sultan of Morocco, goods upon which the ten per cent. duty has been paid, such goods shall be subject to no further duty, either on their embarkation, or disembarkation, provided they be accompanied by a certificate from a Moorish administrator of customs.

9. If any article of Moroquine produce, growth, or manufacture, except the articles enumerated in Article 2, be purchased for exportation, the same shall be conveyed by the British merchant, or by his agent, free of any kind of charge or duty whatsoever, to a convenient place of shipment. Subsequently, on exportation, the export duty according to the tariff in Article 7. shall alone be paid on it.

10. No anchorage, tonnage, import, or other duty or charge, shall be levied in the dominions of the Sultan of Morocco on British vessels, or on goods imported or exported in British vessels, beyond what is, or may be, levied on national vessels, or on the like goods imported or exported in national vessels; they shall not, however, exceed in amount the rates of the following scale, viz.:

Six moozoonats per ton shall be levied upon every British vessel (except steam-vessels) that does not exceed 200 tons in measurement. Upon every vessel (not a steam-vessel) measuring more than 200 tons, the following charge shall be made, viz., 6 moozoonats per ton shall be paid for 200 of her tons, and 2 moozoonats per ton for the remainder. Should the administrator of customs have any doubt regarding the tonnage of a British vessel, as declared by the master, the British consul or vice-consul shall, on appeal being made to him, cause the ship's papers, whereon the tonnage is formally stated, to be exhibited. The same charges shall be made in all the ports of Morocco except Rabat and Laraiche, at which ports 4 moozoonats per ton shall be paid for pilotage into the river, should the vessel enter the river, and 4 moozoonats per ton for pilotage out of the river; 3 moozoonats per ton shall also be levied upon each vessel entering the river, on account of anchorage. Should a vessel, however, not enter the river, the same charges shall be levied upon her as those which are paid at the other ports. At Mogadore, 4 moozoonats per ton shall be paid on British vessels for pilotage on their entering the port only, and 6 moozoonats per ton for anchorage.

Should the master of a British vessel require, at any other port, a pilot, he shall pay for him at the rate of 2 moozoonats per ton; but this charge shall not be exacted except when the master of a vessel requires a pilot.

The sum of 16 dollars shall be levied, on account of anchorage, on a steam-vessel entering a port in the Moorish dominions for the purpose of discharging or embarking cargo. If, afterwards, the said steam-vessel proceed from that port to any other port or ports in the Moorish dominions, and on her arrival at the latter embark or discharge cargo, the aforesaid charge of 16 dollars for anchorage shall again be levied; but if the said steam-vessel, on her return voyage, should enter a Moorish port at which the said anchorage dues shall have already been paid, no further charge on account of anchorage shall be levied upon her unless the said steam-vessel depart on a second voyage to a Moorish port, or unless during her return voyage she shall have touched at any port other than a port of the Moorish dominions, in which case the aforesaid charge of 16 dollars shall again be levied. The charge, however, for anchorage on a steamer of 150 tons burthen, or less, shall not exceed what is due from a sailing-vessel of the same size.

The masters of all vessels shall pay, in addition to the aforesaid charges, the following sums to officers of the ports, but no other payments shall be demanded of them; viz.:—

A vessel measuring 25 tons or less, 20 ounces; a vessel exceeding 25 and not over 50 tons, 40 ounces; a vessel exceeding 50 and not over 100 tons, 60 ounces; a vessel exceeding 100 and not over 200 tons, 80 ounces; a vessel exceeding 200 tons, 100 ounces.

In addition to these charges, the master of every British vessel visiting the port of Tetuan shall pay 10 ounces for the messenger who shall convey the ship's papers from the port of Marteen to Tetuan; 5 ounces to the trumpeter who shall announce the arrival of the vessel; and 3 ounces to the public crier; but no other payments shall be demanded at the port of Tetuan. No charge for anchorage shall be levied on account of British vessels which may enter the ports of Morocco for the purpose of seeking shelter from the weather, and which do not embark or discharge cargo, nor shall any charge for anchorage be levied upon fishing-vessels.

And, in like manner, no anchorage, tonnage, import, or other duty or charge, shall be levied in the British dominions on Moorish vessels, or on goods imported or exported in Moorish vessels, beyond what is or may be levied on national vessels, or on the like goods imported or exported in national vessels.

11. Should British subjects desire to embark in or discharge goods from vessels arriving in the ports of Morocco, they shall employ the Moorish government boats for that purpose; but if within two days after the arrival of a vessel the Moorish government boats are not placed at their disposal for the aforesaid purpose, the British subjects shall have the right of employing private boats, and shall not pay, in such case, to the port authorities more than one half of what would have been paid, had they employed the government boats. This regulation shall not be applicable to the ports of Tangier and Tetuan, inasmuch as there is a sufficient number of government lighters at those two ports.

The charges now paid for lighterage at the different ports of Morocco shall not be augmented, and the administrator of customs at each port of Morocco shall deliver to the British vice-consul a tariff of the charges now demanded for lighterage.

12. The articles of this convention shall be applicable to all the ports in the empire of Morocco; and should His Majesty the Sultan of Morocco open the ports of Mehedea, Agadeer, or Wadnoon, or any other ports within the limits of His Majesty's dominions, no difference shall be made in the levying of duties, or anchorage, between the said ports and other ports in the Sultan's dominions.

13. If a British subject be detected in smuggling into the Moroquine territories goods of any description, the goods shall be confiscated to the Sultan; and such British subject shall, on conviction before the British consul-general, consul, vice-consul, or consular agent, be liable to be fined in an amount not exceeding treble the amount of duties leviable on such goods, or in case of goods not admitted to importation, treble the value of the goods at the current price of the day; and failing payment of such fines, such British subject shall, on conviction before the British consul-general, consul, vice-consul, or consular agent, be liable to be imprisoned; or, without being fined, any British subject on conviction as aforesaid may be imprisoned, but in either case for a time not exceeding one year, in such place as the consul-general, consul, vice-consul, or consular agent may determine.

14. In order that the two high contracting parties may have the opportunity of hereafter treating and agreeing upon such other arrangements as may tend still further to the improvement of their mutual intercourse, and to the advancement of the interests of their respective subjects, it is agreed that at any time after the expiration of five years from the date of the exchange of the ratifications of the present convention of commerce and navigation, either of the high contracting parties shall have the

right to call upon the other to enter upon a revision of the same; but until such revision shall have been accomplished by common consent, and a new convention shall have been concluded and ratified, the present convention shall continue and remain in full force and effect.

Done at Tangier, the 9th of December, in the year 1856, corresponding to the Moorish date of the 10th of Rabbea the second, in the year 1273.

NICARAGUA (SAN JUAN DE), a seaport town at the mouth of the river of the same name, state of Costa Rica, on the W. shore of the Caribbean Sea, lat. 10° 55′ N.; long. 83° 43′ W. The port is excellent, and is considered the best on this side of the coast. Till lately the town was quite inconsiderable, and consisted of little else than a cluster of huts; but latterly it has no doubt been improved.

This place has risen into importance from its being at the W. extremity of a proposed line of water communication between the Caribbean Sea and the Pacific Ocean. This line is to consist partly of the river San Juan, flowing from the Lake of Nicaragua E. to the sea at San Juan, partly of the lake, and partly of a canal to be constructed from the latter to the Pacific Ocean. This project has been often mooted; but the discovery of the extraordinary mineral riches of California, and the consequent emigration to and intercourse with that country, have given it an incomparably greater interest than it formerly possessed. The country appears to present greater facilities for effecting this great work than any other part of Central America, except the Isthmus of Darien or Panama. The river San Juan, about 90 m. in length, is said to have been occasionally navigable throughout its entire course for sea-going vessels, till the Spaniards, to protect themselves from the attacks of the buccaneers, sunk vessels loaded with stone in its bed. In consequence of the interruption thus given to the stream, a considerable portion of the water was carried off by a new channel called the Rio Colorado. (*Chevalier, L'Isthme de Panama, &c.*, p. 84.) The San Juan is still, however, navigated, though with much difficulty, in the rainy season, by steamers and other vessels drawing little water.

The lake itself has deep water throughout, and is adapted for ships of the largest burden. The distance between its S.W. shore and the Gulph of Papagayo, on the Pacific, is only 29,880 yards, or 15¾ m.; and though the intervening country be laid down in many maps as mountainous, the greatest actual height of any part of it above the level of the lake is only 19 ft.; at least, such is the result given by a series of 347 levels, about 100 yds. apart, taken in 1781. (*Thompson's Guatemala, Append.* pp. 512—520.) The surface of the lake is 128 ft. 3 in. (Engl.) above the level of the Pacific; an ascent which might be overcome by a succession of locks. The difference in the level of the two oceans, formerly supposed to be so serious an obstacle to the undertaking, is said by Humboldt not to exceed 20, or, at most, 22 ft. (*Nouv. Espagne*, i. 223. ed. 1825.) At its western extremity, the Lake of Nicaragua is connected by a small river, the Tipitapa, with the Lake of Leon or Managua. The latter, 55 m. in length by nearly 30 in breadth, is also said to have deep water throughout. And the plan which appears to be at present preferred is, to make the channel uniting these two lakes navigable, and to excavate a canal from the latter to the port of Realejo on the Pacific. Mr. Squier, late *chargé d'affaires* for the U. States at Nicaragua, has published the following statements in regard to this route.

Length of the route by Lake Nicaragua, &c. across the American Continent from the Atlantic to the Pacific Ocean:—

River San Juan	90 m.
Lake Nicaragua, necessary to be traversed	110 „
River Tipitapa	18 „
Lake Managua or Leon	55 „
From Lake Managua to Realejo	40 „
	303 m.

Height of the various lakes to be passed, and the elevation of land:—

	Above Atlantic.	Ab. Pacific.
Height of Lake Nicaragua	147 ft. 9 in.	128 ft. 3 in.
„ Managua	176 5	156 11
Highest point of land to be passed	231 11	212 5

But great doubts are entertained whether this or any other route by the Lake of Nicaragua can be made practicable for moderate-sized vessels, that is, for vessels of from 400 to 500 tons and upwards. The river San Juan runs from end to end through a dense and unhealthy jungle. No labourers are to be had in the country, and it affords nothing for the subsistence of those that may be imported from a distance. And though, one should think, it would be no very difficult matter to clear it of the obstructions made to oppose the buccaneers, it is plain from the difference of level between the Lake of Nicaragua and the Atlantic, that others of a much more formidable character must be in the way, and that a great deal of lockage would be required to enable vessels of any considerable burden to reach the lake. And after it has been reached, many difficulties have to be surmounted. And that they may be surmounted,

and a navigable channel formed between the two oceans, is not, certainly, impracticable; but we are persuaded that it is visionary to imagine that ships of 1,000 or 1,200 tons should ever, as has been stated, get across the Continent by its means; and on whatever scale it may be made, the anticipations of advantage to result from it will, we apprehend, be found to be greatly exaggerated. The construction of a railway or canal, or both, across the Isthmus of Panama, a distance of less than 40 m., appears to be a far less doubtful and more practicable project, and we believe, also, will be infinitely more serviceable. *See* PANAMA (ISTHMUS OF).

On the 19th of April, 1850, the British and American governments entered into a treaty binding themselves to promote the construction of a ship canal between the Caribbean Sea and the Pacific Ocean, by way of the Lake of Nicaragua; and renouncing at the same time any exclusive right to or control over such canal.

The port of REALEJO, on the Pacific, lat. 12° 34′ N., long. 87° 4′ W., to which it is proposed to bring the canal from Lake Leon, is said to be one of the best that is anywhere to be met with. It is protected by a long narrow island, which forms a natural breakwater. We borrow from the "Times" the following notice of this harbour, derived from a late resident there:—

"I may confidently say that the port of Realejo is, at least, as good a port as any in the known world. I have seen Portsmouth, Rio de Janeiro, Port Jackson, Talcujana, Callao and Guayaquil, and to all these I consider it decidedly superior. It is a salt-water creek, into which several small streams of water empty themselves. The entrance is protected by an island about two miles long, which leaves at each end a channel where ships can enter the harbour, but extending opposite the mainland, forming the port in such a manner as to protect it entirely from any wind that could possibly blow, and also entirely breaking the swell which enters the outer bay of Conchagua from the ocean. The north entrance is about a quarter of a mile wide, and that at the south of the island rather narrower, both being entirely free from rocks or hidden dangers, and having in no part less than five fathoms depth of water. At one of these openings vessels can at all times enter with a leading wind, from whatever quarter it may blow. The inside consists of a noble basin of water, nowhere less than four fathoms deep, with a bottom of mud, where two hundred ships of the line might lie at all times in the most perfect security. One of the branches of the creek extends inland to within three leagues of the Lake of Leon or Managua. The intermediate country is a gentle slope, where undoubtedly should enter one of the ends of the canal to connect the Pacific and Atlantic oceans. The difficulties to be encountered in crossing the chain of hills between the Lake of Nicaragua and San Juan del Sud would be entirely avoided by bringing the canal through the Lake of Leon (connected as it is with that of Nicaragua by a river that might be rendered navigable at a moderate cost) into the above-named branch of the Realejo harbour, thus securing the great advantage of an excellent harbour at each end of the canal, besides many others which are certainly not to be met with either at Panama, Tehuantepec, or any other place.

"The town of Realejo is about two leagues distant from the part of the creek where vessels lie; but there is sufficient depth for small vessels to come within a mile of the town, and a very little labour would make it accessible to large ships; but an enlightened government would probably prefer moving the town to the opposite side of the reach, where vessels lie, where there is a site extremely suitable for the purpose, and where a quay might easily be erected capable of accommodating any number of ships. In the time of the Spanish government several vessels, some of 300 to 400 tons, were built at Realejo; where the wood is very superior and durable.

"The port of San Juan del Sud, to which place it was proposed to bring the canal, seems inferior to Realejo in most respects. The Gulph of Papagayo, where the port is situated, is very difficult to enter for a sailing vessel for five months in the year."

OPORTO.

The port charges, including tonnage duties, on a vessel of 300 tons, amount to about 50 dollars. Vessels sailing without a cargo pay for lights 200 reis per cent., instead of 50 reis, in order to encourage the export trade. Commission 2½ per cent., and *del credere* 2½ per cent.

PILOT REGULATIONS.—These were published at Oporto in 1841. They declare that the navigation over the bar of the Douro must be conducted by pilots regularly appointed, and their number shall be nineteen of the first and second classes, besides supernumerary pilots.

The outward and inward pilotage of every vessel over the bar to be confined to the nineteen pilots of the first and second classes; the pilotage in the river by the supernumerary pilots.

Pilots are prohibited to stipulate for the sum to be received when they board vessels in distress, and are bound to give immediate assistance, under pain, in case of the slightest delay, of suspension from their functions; or, in case of misconduct, to more severe punishment.

The pilots are obliged to reside at St. Joas de Foz; and all vessels, except small craft, are bound to take over the bar a supernumerary pilot.

When a supernumerary pilot is on board a vessel exercising his functions, and cannot bring it into port, he must remain on board such vessel; the master or owner of which to pay him the whole of his due, and a ration per day, until he is landed at Oporto. In case of dispute, the Portuguese consuls are required to make the foreign master fulfil the above regulation.

The pilotage rates for the entrance or the departure of vessels, in ordinary cases, are fixed as follows:—

	Reis.	*Dolls. Cts.*
Small craft	800 =	0 90
Fishing boats	1,200 =	1 36
Steam vessels	2,400 =	2 71
Sloops	3,500 =	3 96
Three masted schooners and brigs	4,000 =	4 52
Also to each pilot boat (including the crew)	2,400 =	2 71
To each supernumerary pilot boat	1,200 =	1 36
To each pilot, per day, outside the bar	800 =	0 90

The gratification to pilots is optional. The remuneration due, in extraordinary cases, to pilot boats outside the bar, to be rated in accordance to the difficulty of the pilotage and the danger incurred.

The first pilot, and in his absence the second, will be charged to hold council with the others as to the possibility of the entrance or departure of the vessels, and decide by the majority of voices. A pilot who, in the execution of the decision of the council, does not conform to such decision, will immediately be suspended from his functions, and be respon-

sible for all indemnifications, and subject also to corporeal punishment.

When an accident happens on account of a pilot refusing to conform to the above results, the pilot cannot demand, for his defence, the opposition of the captains or proprietors of vessels to the free exercise of his functions, except this opposition was manifested with violence; in which case the pilot must immediately protest, so as to cover his responsibility.

The first pilot is bound to sound the bar at least every fourteen days, and to make known the result to the intendant of the marine, as well as any change that may take place in the river.

Any pilot losing a vessel, in consequence either of intemperance or incapacity, will be punished according to the full extent of the law. Every pilot is bound to have by him the regulations of signals appropriated for the service of the Douro.

PANAMA, a city and sea-port of Colombia, on the Pacific, 38 m. S. E. Chagres, lat. 8° 56′ N., long. 79° 31′ 2″ W. Pop. 7000? It stands on a rocky peninsula, projecting into the bay of Panama, and has an imposing aspect from the sea. Its streets are well ventilated, and it is said to be cleaner than most Spanish American cities. It is encircled by irregular and not very strong fortifications, constructed at different periods. The houses are partly of wood, straw, and other fragile materials; but many are substantially built of stone, the larger having court-yards, or *patios*, in the old Spanish style; and no doubt it has been much improved within the last two or three years. Its roadstead is one of the finest in the world. There are a number of islands a short distance from the main land, which afford secure anchorage for ships of any burden, and from which supplies of provisions, including excellent water, may easily be obtained. The tides daily rise and fall from 20 to 27 ft., so that it is peculiarly well fitted for the repair and building of ships.

Previously to 1740, when the trade with the Pacific first began to be carried on round Cape Horn, Panama was the principal entrepôt of trade between Europe and W. America. From that period, however, it fell off; and its decay was peculiarly rapid after the independence of S. America, and the opening of the other ports of the Pacific. But since the occupation of California by the Americans, and especially since the discovery of the auriferous deposits in that country, it has again rapidly increased. And now that a railway is carried across the isthmus, it will in all probability attain to greater commercial distinction than ever. At present (1859) great numbers of steamers are employed in the trade between Panama and San Francisco, Vancouver s Island, &c.

Passage across the Isthmus of Panama or Darien.—Latterly, or since the discovery of the mineral riches of California, the isthmus has become a great thoroughfare, vast numbers of individuals having crossed from the port of Chagres on the Caribbean Sea to Panama on the Pacific Ocean, and conversely.

The port of Chagres is within the mouth of the river of that name, in lat. 9° 18′ 6″ N., long. 79° 59′ 2″ W. A bar at the mouth of the river has only from 10 ft. to 12 ft. water, though within the bar the river deepens to from 4 to 6 fathoms. It is probable that the bar might be deepened without much difficulty, and a canal might be cut from the bottom of the bay of Manzanilla to the river, from which it is only 3 m. distant. A short while ago the town (if so it might be called) was a mere cluster of huts, unhealthy, and without any accommodation for passengers. But having latterly become one of the starting points in the nearest and shortest route from the E. to California, it has been greatly improved.

A railway from or near Chagres, at the bottom of Manzanilla bay to Panama, a distance of about 34 or 35 miles, has been constructed by a joint stock company of New York, and reflects great credit on American enterprise and perseverance. The difficulties to be overcome were of a very formidable description, partly from the nature of the ground, which not unfrequently consisted of deep marshes, but more from the luxuriance and strength of the vegetation through which it was necessary to penetrate, and the heat, moisture, and unhealthiness of the climate. Unluckily, the desire to accomplish their task in the shortest time and at the least expense, tempted the engineers to execute the work in a superficial manner, substituting bridges, viaducts, pillars, &c., of wood for those of stone, mortar, and iron. In a country where the decomposition of vegetable matter is so very rapid, this was as false and spurious a species of economy as can well be imagined. Already many miles of the railway have had to be repaired, or rather reconstructed, by the substitution of *lignum vitæ* and other hard woods for the softer ones that were first used. This, however, will do little more than palliate the evil; and there can be no doubt that eventually stone and iron bridges and viaducts will have to be used instead of wooden ones everywhere along the line.

Trains take about 3 hours in passing from sea to sea; but were the railway properly finished, the passage might be performed in less than 2 hours. A station, called Aspinwall, has been erected on Manzanilla island in the Caribbean Sea. But it is extremely unhealthy, and there is little prospect of its ever becoming a place of much importance.

But supposing (which is not the case) that this railway were everything that could be desired, still it is plain that the grand desideratum is the carrying across the isthmus of a water communication between the Atlantic and Pacific Oceans. We do not mean by this a canal suitable only for coasters, or vessels of comparatively small burden. Such a channel would be of little use, except to the countries contiguous to its termini.

What is really wanted is a canal that will admit ships of the largest burden, and bound on the longest voyages. The advantages that would result from having the isthmus perforated by such a channel cannot be easily exaggerated. No other project that appears to be within the limits of possibility, perhaps not even the carrying of a ship canal across the Isthmus of Suez, would give so great a stimulus to commerce and navigation. It would remove the barrier which renders the navigation between the eastern and western coasts of America so tedious and difficult. And, by doing this, it would enable ships from Europe to reach the latter and the Pacific in less than half the time they do at present, while it would greatly facilitate the voyage to Australia and China.

And a grand project of this sort is on foot. It is proposed to cut a canal that shall admit ships of 1,000 tons burden and upwards, between Porto Escoces (lat. 8° 5′ N., long. 77° 21′ W.), near Point Caledonia, in the Gulph of Darien, on the Caribbean Sea, and the Rio Savana, which falls into the Gulph of San Miguel, on the Pacific. The intervening space (about 38 or 40 miles) is said to be comparatively flat; the ports at each extremity are easy of access, and have deep water; and it is proposed that the canal should be constructed throughout on the same level, and have no locks. The cost of the project is estimated at from 12 to 15 millions sterling. And considering the vast importance of such a work to the U. States, to this country, and, indeed, to all maritime nations, this expense, heavy as it may appear, should be reckoned a subordinate matter. Were the country through which it is to pass in the possession of England or the U. States, it would, most probably, have been undertaken. But the unsettled state of Central America, and the knotty questions that might eventually arise as to the property and management of the canal, are serious obstacles to its being proceeded with.—(See for ample details on this interesting subject the work of Dr. Cullen, entitled *Isthmus of Darien Ship Canal.* The learned doctor is, probably, a little too sanguine in favour of the project, but despite this excusable bias, his work is instructive and valuable.)

PAPAL DOMINIONS (TRADE WITH.)—The *Gazette* of the 6th January, 1853, contained the following declaration on the part of Great Britain, establishing a system of perfect reciprocity in trade and navigation with the Papal States. The declared value of our exports to these States amounted in 1858 to 409,475*l.*; and were they reasonably well governed their trade would be greatly increased.

Declaration.—The undersigned, her Britannic Majesty's Chargé d'Affaires at the court of Tuscany, having received from his Eminence the Cardinal Antonelli, Secretary of State to his Holiness Pope Pius IX., the assurance that no other or higher duties or charges are levied in the ports of the Papal States on British vessels than are payable on national vessels, nor on goods imported or exported in British vessels than are payable on the like goods imported or exported in national vessels, has received the commands of H. Majesty to declare:

1. That no duties of tonnage, harbour, lighthouse, pilotage, quarantine, or other similar or corresponding duties, of whatever nature or under whatever denomination, levied in the name or for the profit of the government, public functionaries, corporations, or establishments of whatever kind, shall be imposed in British ports upon Papal vessels, from whatever port or place arriving, which shall not be equally imposed in the like cases on national vessels, and that no duty, charge, restriction, or prohibition shall be imposed upon, nor any drawback, bounty, exemption, or allowance withheld from, goods imported into or exported from British ports in Papal vessels, which shall not be equally imposed upon or withheld from such goods, when so imported or exported in national vessels.

2. That no other or higher duties shall be imposed on the importation into the dominions of her Britannic Majesty of any article the growth, produce, or manufacture of the Papal States, than are or shall be payable on the like article being the growth, produce, or manufacture of any other foreign country. That no other or higher duties or charges shall be imposed in the British dominions on the exportation of any article to the Papal States, than such as are or may be payable on the exportation of the like article to any other foreign country; and that no prohibition shall be imposed upon the importation of any article the growth, produce, or manufacture of the Papal States into the British dominions, nor upon the exportation of any article from the British dominions to the Papal States, unless such prohibition shall extend to all other nations.

3. That Papal vessels shall be at liberty to import into British ports any article legally importable, and to export from British ports any article legally exportable, on payment of the same duties, and with a right to the same bounties and drawbacks as are or may be payable or allowable in respect of the same articles if imported or exported in national vessels.

4. That all vessels which, according to the laws of the Papal States, are to be deemed Papal vessels, shall, for the purposes of this declaration, be deemed Papal vessels.

5. That the following stipulations shall not apply to the coasting trade, which is reserved exclusively to national vessels.

6. That if any ship of war or merchant vessel of the Papal States shall be wrecked on the coasts of the British dominions, such ship or vessel, or any parts thereof, and all furniture and appurtenances belonging thereunto, and all goods and merchandise which shall be saved therefrom, or the produce thereof, if sold, shall be faithfully restored to the owners, upon being claimed by them or by their duly authorised agents. If there are no such owners or agents on the spot, then the said ships or parts of ships, furniture, appurtenances, goods, and merchandise, or the proceeds thereof, if sold, as well as all papers found on board such wrecked ships or vessels, shall be delivered to the Papal consul or vice-consul in whose district the wreck may have taken place, upon being claimed by him; and such consul, vice-consul, owners, or agents shall pay only the expenses incurred in the preservation of the property, together with the salvage or other expenses which would have been payable in the like cases of a wreck of a national vessel. The charge for such salvage and other expenses shall be made and settled immediately, subject to such right of appeal on the part of the person paying the same, as may exist in the British dominions. The goods and merchandise saved from the wreck shall not be subject to duties unless cleared for consumption, in which case they shall be liable to the same duties as if they had been imported in a British ship.

7. That the foregoing concessions are granted on condition of a perfect and entire reciprocity in favour of British vessels in the ports of the Papal States. They shall come into operation from and after the date of the present declaration, and shall remain in force for seven years, and further until the expiration of 12 months after notice shall have been given by the British government, or by the Papal government, for terminating such reciprocal arrangement.

In witness whereof the undersigned has signed the present declaration, destined to be exchanged against a similar declaration on the part of his Eminence the Cardinal Secretary of State, and has affixed thereto the seal of his arms.

Done at Florence, the 17th day of November, 1853.

P. CAMPBELL SCARLETT.

The "similar declaration" of Cardinal Antonelli is given with the foregoing in the *Gazette*. It is the exact counterpart of that made by Mr. Scarlett.

PARTNERSHIPS WITH LIMITED LIABILITY.—We have previously made (see COMPANIES) some general remarks on this subject, to which we would beg to refer the reader. We there endeavoured to show the extremely objectionable nature of such partnerships, and that there was nothing in the circumstances peculiar to this country which either required or excused their introduction. The opinion of the greater, if not the better informed part of the public being, however, for a while at least strongly in their favour, they were established by the Act 19 & 20 Vict. c. 47., amended by the 20 & 21 Vict. c. 14.

A schedule is annexed to the first of these statutes, which comprises a summary of the various proceedings connected with the formation and management of companies with limited liability, of which we beg to annex a copy.

Memorandum of Association of the "Eastern Steam Packet Company, Limited."

1st. The name of the company is "The Eastern Steam Packet Company, limited."

2d. The registered office of the company is to be established in England.

3d. The objects for which the company is established are, "the conveyance of passengers and goods in ships or boats between such places as the company may from time to time determine, and the doing all such other things as are incidental or conducive to the attainment of the above object."

4th. The liability of the shareholders is "limited."

5th. The nominal capital of the company is 200,000*l.* divided into 1000 shares of 200*l.* each.

WE, the several persons whose names and addresses are subscribed, are desirous of being formed into a company, in pursuance of this memorandum of association, and we respectively agree to take the number of shares in the capital of the company set opposite our respective names.

Dated the 22d day of November 1856.

Witness to the above signatures,

A.B., No. 13, Hute Street, Clerkenwell, Middlesex.

Regulations for Management of a Limited Liability Company.

Shares.—No person shall be deemed to have accepted any share in the company unless he has testified his acceptance thereof by writing under his hand, in such form as the company from time to time directs.

The company may from time to time make such calls upon the shareholders in respect of all monies unpaid on their shares as they think fit, provided that 21 days' notice at least is given of each call, and each shareholder shall be liable to pay the amount of calls so made to the persons and at the times and places appointed by the company.

A call shall be deemed to have been made at the time when the resolution authorising such call was passed.

If before or on the day appointed for payment any shareholder does not pay the amount of any call to which he is liable, then such shareholder shall be liable to pay interest for the same at the rate of 5*l.* per cent. per annum from the day appointed for the payment thereof to the time of the actual payment.

The company may, if they think fit, receive from any of the shareholders willing to advance the same all or any part of the monies due upon their respective shares beyond the sums actually called for; and upon the monies so paid in advance, or so much thereof as from time to time exceeds the amount of the calls then made upon the shares in respect of which such advance has been made, the company may pay interest at such rate as the shareholder paying such sum in advance and the company agree upon.

If several persons are registered as joint holders of any share, any one of such persons may give effectual receipts for any dividend payable in respect of such share.

The company may decline to register any transfer of shares made by a shareholder who is indebted to them.

Every shareholder shall, on payment of such sum, not exceeding one shilling, as the company may prescribe, be entitled to a certificate, under the common seal of the company, specifying the share or shares held by him, and the amount paid up thereon.

If such certificate is worn out or lost, it may be renewed, on payment of such sum, not exceeding one shilling, as the company may prescribe.

The transfer books shall be closed during the 14 days immediately preceding the ordinary general meeting in each year.

Transmission of Shares.—The executors or administrators of a deceased shareholder shall be the only persons recognised by the company as having any title to his share.

Any person becoming entitled to a share in consequence of the death, bankruptcy, or insolvency of any shareholder, or in consequence of the marriage of any female shareholder, or in any way other than by transfer, may be registered as a shareholder upon such evidence being produced as may from time to time be required by the company.

Any person who has become entitled to a share in any way other than by transfer may, instead of

being registered himself, elect to have some person to be named by him registered as a holder of such share.

The person so becoming entitled shall testify such election by executing to his nominee a deed of transfer of such share.

The deed of transfer shall be presented to the company, accompanied with such evidence as they may require to prove the title of the transferror, and thereupon the company shall register the transferree as a shareholder.

Forfeiture of Shares. — If any shareholder fails to pay any call due on the appointed day, the company may, at any time thereafter, during such time as the call remains unpaid, serve a notice on him, requiring him to pay such call, together with any interest that may have accrued by reason of such nonpayment.

The notice shall name a further day, and a place or places, being a place or places at which calls of the company are usually made payable, on and at which such call is to be paid: it shall also state that in the event of nonpayment at the time and place appointed the shares in respect of which such call was made will be liable to be forfeited.

If the requisitions of any such notice as aforesaid are not complied with, any share in respect of which such notice has been given may be forfeited by a resolution of the directors to that effect.

Any share so forfeited shall be deemed to be the property of the company, and may be disposed of in such manner as the company thinks fit.

Any shareholder whose shares have been forfeited shall notwithstanding be liable to pay to the company all calls owing upon such shares at the time of the forfeiture.

Increase in Capital. — The company may, with the sanction of the company previously given in general meeting, increase its capital.

Any capital raised by the creation of new shares shall be considered as part of the original capital, and shall be subject to the same provisions in all respects, whether with reference to the payment of calls, or the forfeiture of shares on nonpayment of calls, or otherwise, as if it had been part of the original capital.

General Meetings. — The first general meeting shall be held at such time, not being more than 12 months after the incorporation of the company, and at such place, as the directors may determine.

Subsequent general meetings shall be held at such time and place as may be prescribed by the company in general meeting; and if no other time or place is prescribed, a general meeting shall be held on the first Monday in February in every year, at such place as may be determined by the directors.

The above-mentioned general meetings shall be called ordinary meetings; all other general meetings shall be called extraordinary.

The directors may, whenever they think fit, and they shall upon a requisition made in writing by any number of shareholders holding in the aggregate not less that one-fifth part of the shares of the company, convene an extraordinary general meeting.

Any requisition so made by the shareholders shall express the object of the meeting proposed to be called, and shall be left at the registered office of the company.

Upon the receipt of such requisition the directors shall forthwith proceed to convene a general meeting: if they do not proceed to convene the same within 21 days from the date of the requisition, the requisitionists, or any other shareholders holding the required number of shares, may themselves convene a meeting.

Seven days' notice at the least, specifying the place, the time, the hour of meeting, and the purpose for which any general meeting is to be held, shall be given by advertisement, or in such other manner, if any, as may be prescribed by the company.

Any shareholder may, on giving not less than 3 days' previous notice, submit any resolution to a meeting beyond the matters contained in the notice given of such meeting.

The notice required of a shareholder shall be given by leaving a copy of the resolution at the registered office of the company.

No business shall be transacted at any meeting except the declaration of a dividend, unless a quorum of shareholders is present at the commencement of such business; and such quorum shall be ascertained as follows; that is to say, if the shareholders belonging to the company at the time of the meeting do not exceed 10 in number, the quorum shall be 5; if they exceed 10 there shall be added to the above quorum 1 for every 5 additional shareholders up to 50, and 1 for every 10 additional shareholders after 50, with this limitation, that no quorum shall in any case exceed 40.

If within 1 hour from the time appointed for the meeting the required number of shareholders is not present, the meeting, if convened upon the requisition of the shareholders, shall be dissolved: in any other case it shall stand adjourned to the following day, at the same time and place; and if at such adjourned meeting the required number of shareholders is not present, it shall be adjourned sine die.

The chairman (if any) of the board of directors shall preside as chairman at every meeting of the company.

If there is no such chairman, or if at any meeting he is not present at the time of holding the same, the shareholders present shall choose some one of their number to be chairman of such meeting.

The chairman may, with the consent of the meeting, adjourn any meeting from time to time and from place to place, but no business shall be transacted at any adjourned meeting other than the business left unfinished at the meeting from which the adjournment took place.

At any general meeting, unless a poll is demanded by at least 5 shareholders, a declaration by the chairman that a resolution has been carried, and an entry to that effect in the book of proceedings of the company, shall be sufficient evidence of the fact without proof of the number or proportion of the votes recorded in favour of or against such resolution.

If a poll is demanded in manner aforesaid the same shall be taken in such manner as the chairman directs, and the result of such poll shall be deemed to be the resolution of the company in general meeting.

Votes of Shareholders. — Every shareholder shall have one vote for every share up to 10; he shall have an additional vote for every 5 shares beyond the first 10 shares up to 100, and an additional vote for every 10 shares held by him beyond the first 100 shares.

If any shareholder is a lunatic or idiot he may vote by his committee, curator bonis, or other legal curator; and if any shareholder is a minor he may vote by his guardian, tutor, or curator, or any one of his guardians, tutors, or curators, if more than one.

If one or more persons are jointly entitled to a share or shares the person whose name stands first in the register of shareholders as one of the holders of such share or shares, and no other, shall be entitled to vote in respect of the same.

No shareholder shall be entitled to vote at any meeting unless all calls due from him have been paid, nor until he shall have been possessed of his shares 3 calendar months, unless such shares shall have been acquired or shall have come by bequest, or by marriage, or by succession to an intestate's estate, or by the custom of the city of London, or by any deed of settlement after the death of any person who shall have been entitled for life to the dividends of such shares.

Votes may be given either personally or by proxies: a proxy shall be appointed in writing under the hand of the appointor, or if such appointor is a corporation, under their common seal.

No person shall be appointed a proxy who is not a shareholder, and the instrument or mandate

appointing him shall be deposited at the registered office of the company not less than 48 hours before the time of holding the meeting at which he proposes to vote; but no instrument or mandate appointing a proxy shall be valid after the expiration of 1 month from the date of its execution.

Directors.—The number of the directors, and the names of the first directors, shall be determined by the subscribers of the memorandum of association.

Until directors are appointed, the subscribers of the memorandum of association shall for all the purposes of this act be deemed to be directors.

Power of Directors. — The business of the company shall be managed by the directors, who may exercise all such powers of the company as are not by this act or by the articles of association, if any, declared to be exercisable by the company in general meeting, subject nevertheless to any regulations of the articles of association, to the provisions of this act, and to such regulations, being not inconsistent with the aforesaid regulations or provisions, as may be prescribed by the company in general meeting; but no regulation made by the company in general meeting shall invalidate any prior act of the directors which would have been valid if such regulation had not been made.

Disqualification of Directors.—The office of director shall be vacated,—

If he holds any other office or place of profit under the company;

If he becomes bankrupt or insolvent;

If he is concerned in or participates in the profits of any contract with the company;

If he participates in the profits of any work done for the company:

but the above rules shall be subject to the following exceptions: that no director shall vacate his office by reason of his being a shareholder in any incorporated company which has entered into contracts with or done any work for the company of which he is director; nevertheless he shall not vote in respect of such contract or work; and if he does so vote his vote shall not be counted, and he shall incur a penalty not exceeding 20*l*.

Rotation of Directors. — At the first ordinary meeting after the incorporation of the company the whole of the directors shall retire from office; and at the first ordinary meeting in every subsequent year one-third of the directors for the time being, or if their number is not a multiple of three then the number nearest to one-third, shall retire from office.

The one-third or nearest number to retire during the first and second years ensuing the incorporation of the company shall, unless the directors agree among themselves, be determined by ballot: in every subsequent year the one-third or other nearest number who have been longest in office shall retire.

A retiring director shall be re-eligible.

The company at the general meeting at which any directors retire in manner aforesaid shall fill up the vacated offices by electing a like number of persons.

If at any meeting at which an election of directors ought to take place no such election is made, the meeting shall stand adjourned till the next day, at the same time and place; and if at such adjourned meeting no election takes place, the former directors shall continue to act until new directors are appointed at the first ordinary meeting of the following year.

The company may from time to time, in general meeting, increase or reduce the number of directors, and may also determine in what rotation such increased or reduced number is to go out of office.

Any casual vacancy occurring in the board of directors may be filled up by the directors, but any person so chosen shall retain his office so long only as the vacating director would have retained the same if no vacancy had occurred.

Proceedings of Directors. — The directors may meet together for the despatch of business, adjourn, and otherwise regulate their meetings as they think fit, and determine the quorum necessary for the transaction of business: questions arising at any meeting shall be decided by a majority of votes: in case of an equality of votes the chairman, in addition to his original vote, shall have a casting vote: a director may at any time summon a meeting of the directors.

The directors may elect a chairman of their meetings, and determine the period for which he is to hold office; but if no such chairman is elected, or if at any meeting the chairman is not present at the time appointed for holding the same, the directors present shall choose some one of their number to be chairman of such meeting.

The directors may delegate any of their powers to committees consisting of such member or members of their body as they think fit: any committee so formed shall, in the exercise of the powers so delegated, conform to any regulations that may be imposed on them by the directors.

A committee may elect a chairman of their meetings: if no such chairman is elected, or if he is not present at the time appointed for holding the same, the members present shall choose one of their number to be chairman of such meeting.

A committee may meet and adjourn as they think proper: questions at any meeting shall be determined by a majority of votes of the members present; and in case of an equal division of votes the chairman shall have a casting vote.

All acts done by any meeting of the directors, or of a committee of directors, or by any person acting as a director, shall, notwithstanding that it be afterwards discovered that there was some defect in the appointment of any such directors or persons acting as aforesaid, or that they or any of them were disqualified, be as valid as if every such person had been duly appointed and was qualified to be a director.

The directors shall cause minutes to be made in books provided for the purpose,—

(1.) Of all appointments of officers made by the directors;

(2.) Of the names of the directors present at each meeting of directors and committees of directors;

(3.) Of all orders made by the directors and committees of directors; and,

(4.) Of all resolutions and proceedings of meetings of the company, and of the directors and committees of directors,

and any such minute as aforesaid, if signed by any person purporting to be the chairman of any meeting of directors, or committee of directors, shall be receivable in evidence without any further proof.

The company, in general meeting, may, by a special resolution, remove any director before the expiration of his period of office, and appoint another qualified person in his stead. The person so appointed shall hold office during such time only as the director in whose place he is appointed would have held the same if he had not been removed.

Dividends.—The directors may, with the sanction of the company in general meeting, declare a dividend to be paid to the shareholders in proportion to their shares.

No dividend shall be payable except out of the profits arising from the business of the company.*

The directors may, before recommending any dividend, set aside out of the profits of the company such sum as they think proper as a reserved fund to meet contingencies, or for equalising dividends, or for repairing, or maintaining, the works connected with the business of the company, or any part

* But in § 14 of the Act, on which this abstract is founded, it is laid down, that if the directors shall declare and pay any dividend when the company is known to them to be insolvent, they shall be liable for all the then existing debts of the company. But nothing is said in regard to dividends not being payable except out of profits.

thereof; and the directors may invest the sum so set apart as a reserved fund upon such securities as they, with the sanction of the company, may select.

The directors may deduct from the dividends payable to any shareholder all such sums of money as may be due from him to the company on account of calls or otherwise.

Notice of any dividend that may have been declared shall be given to each shareholder, or sent by post or otherwise to his registered place of abode, and all dividends unclaimed for 3 years, after having been declared, may be forfeited by the directors for the benefit of the company.

No dividend shall bear interest as against the company.

Accounts.—The directors shall cause true accounts to be kept,—

Of the stock in trade of the company;

Of the sums of money received and expended by the company, and the matter in respect of which such receipt and expenditure takes place; and,

Of the credits and liabilities of the company:

Such accounts shall be kept, upon the principle of double entry, in a cash book, journal, and ledger: the books of account shall be kept at the principal office of the company, and, subject to any reasonable restrictions as to the time and manner of inspecting the same that may be imposed by the company in general meeting, shall be open to the inspection of the shareholders during the hours of business:

Once at the least in every year the directors shall lay before the company in general meeting a statement of the income and expenditure for the past year, made up to a date not more than 3 months before such meeting.

The statement so made shall show, arranged under the most convenient heads, the amount of gross income, distinguishing the several sources from which it has been derived, and the amount of gross expenditure, distinguishing the expense of the establishment, salaries, and other like matters: every item of expenditure fairly chargeable against the year's income shall be brought into account, so that a just balance of profit and loss may be laid before the meeting; and in cases where any item of expenditure which may in fairness be distributed over several years has been incurred in any one year the whole amount of such item shall be stated, with the addition of the reasons why only a portion of such expenditure is charged against the income of the year.

A balance sheet shall be made out in every year, and laid before the general meeting of the company, and such balance sheet shall contain a summary of the property and liabilities of the company arranged under the heads appearing in the form annexed to this table, or as near thereto as circumstances admit.

A printed copy of such balance sheet shall, 7 days previously to such meeting, be delivered at or sent by post to the registered address of every shareholder.

Audit.—The accounts of the company shall be examined and the correctness of the balance sheet ascertained by 1 or more auditor or auditors to be elected by the company in general meeting.

If not more than 1 auditor is appointed, all the provisions herein contained relating to auditors shall apply to him.

The auditors need not be shareholders in the company: no person is eligible as an auditor who is interested otherwise than as a shareholder in any transaction of the company; and no director or other officer of the company is eligible during his continuance in office.

The election of auditors shall be made by the company at their ordinary meeting, or, if there are more than one, at their first ordinary meeting in each year.

The remuneration of the auditors shall be fixed by the company at the time of their election.

Any auditor shall be re-eligible on his quitting office.

If any casual vacancy occurs in the office of auditor, the directors shall forthwith call an extraordinary general meeting for the purpose of supplying the same.

If no election of auditors is made in manner aforesaid the Board of Trade may, on the application of one-fifth in number of the shareholders of the company, appoint an auditor for the current year, and fix the remuneration to be paid to him by the company for his services.

Every auditor shall be supplied with a copy of the balance sheet, and it shall be his duty to examine the same, with the accounts and vouchers relating thereto.

Every auditor shall have a list delivered to him of all books kept by the company, and he shall at all reasonable times have access to the books and accounts of the company: he may, at the expense of the company, employ accountants or other persons to assist him in investigating such accounts, and he may in relation to such accounts examine the directors or any other officer of the company.

The auditors shall make a report to the shareholders upon the balance sheet and accounts, and in every such report they shall state whether, in their opinion, the balance-sheet is a full and fair balance sheet, containing the particulars required by these regulations, and properly drawn up so as to exhibit a true and correct view of the state of the company's affairs, and in case they have called for explanations or information from the directors, whether such explanations or information have been given by the directors, and whether they have been satisfactory; and such report shall be read, together with the report of the directors, at the ordinary meeting.

Notices.— Notices requiring to be served by the company upon the shareholders may be served either personally, or by leaving the same or sending them through the post in a letter addressed to the shareholders at their registered places of abode.

All notices directed to be given to the shareholders shall, with respect to any share to which persons are jointly entitled, be given to whichever of the said persons is named first in the register of shareholders; and notice so given shall be sufficient notice to all the proprietors of such share.

All notices required by this act to be given by advertisement shall be advertised in a newspaper circulating in the district in which the registered office of the company is situate.

	£	s.	d.
Table of fees.—For registration of a company whose nominal capital does not exceed 1,000*l.*	5	0	0
For every 1,000*l.* of nominal capital, or part of 1,000*l.*, after the first 1,000*l.* and up to 100,000*l.*, an additional fee of	0	5	0
For every 1,000*l.* or part of 1,000*l.* after the first 100,000*l.* an additional fee of	0	1	0
For registration of any increase in the capital of a company, for every 1,000*l.* or part of 1000*l.* up to 100,000*l.* in the whole	0	5	0
For every 1,000*l.* or part of 1,000*l.* beyond the first 100,000*l.*, an additional fee of	0	1	0
For registration of any existing company, except such companies as are by this act exempted from payment of fees in respect of registration under this act, the same fee as is charged for registering a new company.			
For registering any document hereby required or authorised to be registered, other than the memorandum of association	0	5	0
For making a record of any fact hereby authorised or required to be recorded by the registrar of companies, a fee of	0	5	0

N.B. We have not thought it necessary to lay before the reader any abstract of that part of the statute (19 & 20 Vict. c. 47) which refers to the winding up of companies, and to the legal proceedings connected therewith. Such abstract would we think have been of little or no use; for in such cases lawyers must be employed, and not merely the exact words of the statute, but also the interpretation given to them by the courts of law, must be referred to. It is most probable too that the law on this subject will be speedily modified. At present it is in a most discreditable state. It should be rendered not only clearer and more precise, but more in accordance with sound principles. The act 20 & 21 Vict. c. 14. principally refers to the winding up of companies.

Form of Balance Sheet referred to above.

Dr. Balance Sheet of Co. made up to 18 . Cr.

Capital and Liabilities.			£ s. d.	£ s. d.	Property and Assets.			£ s. d.	£ s. d.

Debts considered good for which the Company hold no security.		
						8.	Debts considered doubtful and bad. Any debt due from a director or other officer of the Company to be separately stated.		
					V. Cash and Investments		Showing:		
						9.	The nature of investment and rate of interest.		
						10.	The amount of cash, where lodged, and if bearing interest.		
VI. Reserve Fund -		Showing: The amount set aside from profits to meet contingencies.							
VII. Profit & Loss - -		Showing: The disposable balance for payment of dividend, &c.							
Contingent Liabilities -		Claims against the Company not acknowledged as debts. Monies for which the Company is contingently liable.							

It may be supposed, perhaps, to be needless, after the statements we have already laid before the reader (see art. COMPANIES), to make any further remarks upon this subject. But the system is in all respects so objectionable, and has already led, and must continue to lead, to such mischievous results, that we may be excused for making one or two additional statements with respect to it.

Objections to Companies with Limited Liability.— In countries like France, where the people are mostly in narrow circumstances, and unaccustomed to, and afraid of, speculative enterprises, there may perhaps be some ground for permitting the formation of partnerships *en commandite*. And if they were confined to undertakings that admitted of being carried on according to a system of routine, such as railways, canals, fire and life insurances, gas-works, and so forth, we do not know that they would be open to much objection. But in a country like this, where capital is abundant, and where all enterprises, however hazardous, that promise anything like a reasonable return are eagerly undertaken, all extraordinary inducements to make capitalists come forward are unnecessary, and therefore objectionable. We admit, indeed, that in the case of companies of the special class now alluded to, though nothing be gained, there is no great hazard of much being lost by the shareholders being endowed with the privilege of limited liability. Such companies are not easily perverted to improper purposes; and though the capital of the shareholders may be unprofitably expended, yet, as it is most commonly laid out on visible, permanent, and sometimes valuable works, there is a fund on which the creditors, in the event of the concern failing, may fall back. But modifying circumstances of this sort have very rarely any place in companies formed for conducting ordinary industrial or commercial businesses. In their case the entire capital of the association may be lost or embezzled, without a farthing being left to the creditors. And it is, moreover, if anything can be, a contradiction and an absurdity to suppose that ordinary industrial pursuits can be so well managed by great associations of any sort, whether the partners be indefinitely responsible or not, as they will be by individuals or small associations. The latter act on their own account, and reap all the advantages of superior skill, attention, and economy, at the same time that they are indefinitely responsible for all the losses they may incur, and for all the mistakes into which they may fall, whether in the contrivance or the execution of their projects.

But though great public companies be unsuitable for the conduct of all save routine businesses, the fair presumption, or rather we should say, the certainty is, that those in which the responsibility of the partners is limited, will be much more unsuitable, and more productive of mischievous results, than those in which there is no such limitation. It must, indeed, be conceded, that, despite the heavy responsibility under which the partners in ordinary associations or partnerships now act, they too often display an inexcusable degree of foolhardiness. It is probable, indeed, that the late experience of the ruin that may result from placing too much confidence in directors will lead to an improvement in this respect, and that the character and conduct of these functionaries will be more carefully inquired into. But without insisting farther on considerations of this sort, if parties will every now and then be careless of their interests, and forget or decline to adopt the necessary precautions to guard against abuse and loss when everything they have is staked on the result, their carelessness, it is obvious, will be immeasurably increased when they may limit their liability at pleasure, and speculate without any fear of the consequences. Can any one doubt that, under such circumstances, wild projects of all sorts will be very greatly increased; and that the number of those extensive bankruptcies which are productive of so much misery will be largely augmented? To suppose the contrary is to suppose what is plainly contradictory. It is equivalent to supposing that a man cares as much for 1,000*l.* as for 5,000*l.* or 10,000*l.*, or any greater sum; or is as anxious about a small part as about the whole of his fortune, how large soever it may be.

The affairs of not a few of the non-liability companies that have been set on foot in England during the last two or three years, have already come before the courts of law; and if we took these for samples of the others, we should have to regard them as little better then mere swindling engines. But it would not be fair to conclude from the instances referred to that such was their uniform character. A good many have no doubt been honestly got up; and the greater number of these being for routine purposes, such as the supply of towns with water and gas, it may be assumed that they will be fairly conducted, and will succeed. But there are very many of a totally different character. And it would be childish to suppose that in any case the same consideration will be given either to their formation in the first instance, or to their future management, that would be given were the partners indefinitely liable. Hence, while the system operates to the prejudice even of the best schemes, it holds out every temptation to set on foot projects with the intention of deceiving and victimising the public.

The contrivers of the new system tell us that, whatever it may really be, it is at all events popular with the public; and in proof of this, they refer to the great number of companies that have been already formed with limited liability. But no such reference was needed to enable any one to foresee that if a plan were set on foot to enable parties to contract debts without being bound to pay them, it would be eagerly grasped at. Gambling-houses are at present prohibited; but if they were to be licensed, does any one doubt that numbers of them would be opened in most considerable towns? And we should be told that this was a conclusive proof that the prohibition of gambling was disapproved by the public, and that it required the healthy excitement furnished by the newly opened places of entertainment! But whatever may be the case with this or that institution, one should think that the former facilities for swindling might have sufficed, without giving them further encouragement.

But however powerful the deleterious influence of the non-liability system (for such it is when the shares are paid up) on the formation and conduct of companies, we are assured that it will be more than countervailed by the greater caution it will infuse into those who may deal with them. The names and the number of shares held by the partners in such associations, and the magnitude of their capital, or of the "fund" to which their creditors have to look, are all to be made known; so that those who transact business with them will be really aware of what they have to depend upon. But we take leave to say that they will have no such knowledge. Suppose that a non-liability company had a capital of 50,000*l.* or 100,000*l.*, and that it was wholly paid up when it was established: it may have been greatly reduced, or wholly lost, in the next or in any subsequent year; and yet, as the public can know nothing, or nothing certain, of its losses, and may, on the contrary, suppose it has been successful, its credit may not be impaired, and it may go on extending its business and adding to its obligations after it is really insolvent. Ordinary partnerships, unless they consist of parties of very questionable solvency or character, have seldom any considerable difficulty in obtaining large amounts of credit; and companies, it matters not of whom composed, which are reported to have some 10,000*l.*, 20,000*l.*, or 50,000*l.* of paid-up capital, will be sure to obtain loans to a much greater extent and with still greater readiness. In their case we have a kind of authorised guarantee for the possession of wealth. And this, it will

be said, precludes all room for distrust; so that, unless we had access to peculiar sources of information, it might be not a little dangerous to question the solidity of such an association. And yet the whole thing may be a snare and a delusion. The assurance, whether official or otherwise, that a certain amount of capital has been paid up, is really not worth a farthing. But the chances are, that it will, notwithstanding, serve its purpose with the million. It will make that appear to them to be gold which may not even be copper, and enable parties without a shilling to borrow large sums, and to trade or speculate on the means of others. In such cases the public is helpless. There is nothing on which it can rely; and when the imposture is discovered by the bursting of the bubble, no one is to be responsible for anything.

However it may be accounted for, there is nothing that is so lavishly and inconsiderately bestowed as credit. Frequently, indeed, it is rather thrust upon than given to individuals and firms. And it would be ludicrous to suppose that this is a case in which we can place any dependence on the caution of the public. The only real security is in the discretion, good sense, and, more than all, in the unlimited liability of the partners. They know, or may know, what they are worth, and what they are about, which no one else can know. And in the vast majority of cases they farther know that they will be bankrupts and beggars unless they act prudently and circumspectly. Hence our late legislation is precisely the reverse of what it ought to have been. Instead of diminishing, we should have increased the responsibility of partners, by abstaining from all interference with their indefinite liability, and giving additional stringency to the bankruptcy laws.

That increased caution on the part of the public which it is said will be a result of the new system is really, therefore, no better than moonshine. It can have no practical influence. The only security which in such matters is worth a pinch of snuff consists in the responsibility of partners. It is not to those who deal with this or that house, but to the houses themselves—to the guarantees under which they have been placed—that we must look for protection against foolhardiness and fraud.

It may therefore be reasonably concluded, that in ordinary businesses,—that is, in all businesses for carrying on branches of agriculture, manufacture, or trade,—partnerships with limited liabilities can be neither more nor less than unmixed nuisances. If honestly conducted, they must fail in their competition with private parties; and if otherwise, they will only add to the means, which were already sufficiently extensive, of wasting capital and fleecing the public.

In the scheme laid down by Providence for the government of the world there is no shifting or narrowing of responsibilities, every man being personally answerable for all his actions. But the advocates of limited liability proclaim in their superior wisdom that the scheme of Providence may be advantageously modified, and that debts and obligations may be contracted which the debtors, though they have the means, shall not be bound to discharge. Borrow, say they, as much as you please, and pay as little as you like,—the less, it would seem, the better! And can it be doubted that the adventurous, the needy, the unprincipled, and the desperate, will be eager to avail themselves of such extraordinary privileges? The reckless speculation, and the consequent bankruptcy and ruin, that have on former occasions overspread the kingdom have been trifling compared with the revulsions which may be anticipated, should the new system be allowed to spread its roots and scatter its seeds on all sides. Even the soberest individuals may be tempted to embark in hazardous projects; for, by limiting the risk, they in great measure secure themselves against loss by failure, at the same time that they reap all the advantages of success. Were Parliament to set about devising means for the encouragement of speculation, over-trading, and swindling, what better could it do than to carry out the non-liability system?

But we shall perhaps be told that these results, though apparently probable, cannot happen, inasmuch as Parliament has provided, by the Joint Stock Companies Act, the 19 & 20 Vict. c. 47. s. 14. that in the event of the directors of a company declaring and paying a dividend when the company is known by them to be insolvent, they are to repay the same out of their own pockets.* Perhaps the reader may be inclined to think that those who are disposed to trust to a security of this sort are rather easily satisfied. A body of directors who would, under any circumstances, declare a dividend when they knew that the concern over which they presided was bankrupt, will not be kept in the right path by the threat now referred to. The declaration of dividends when there is nothing to divide is not the way in which dishonest directors would be most likely to defraud their constituents and the public. They would make loans to

* This is the statement in the body of the act; but in the "regulations for the management of companies" attached to it (see *ante*, p. 1466.), we are told that "no dividend shall be payable, except out of the profits arising from the business of the company." We of course do not presume to decide whether this or the other statement be the more correct; but their contradictory nature affords a curious illustration of the slovenly slipshod style in which the most important statutes are often compiled.

each other, or if that be prohibited or apt to excite suspicions, they may do the same thing indirectly by the intervention of third parties. The capital and credit of the institution may be perverted, abused, and dissipated in a thousand ways before the circumstance becomes known to the public.

Some who are friendly to the principle of limited liability, but who are at the same time aware of the abuses to which it cannot fail to lead if the liability be limited to the mere amount of the shares, say that they would not object to its increase. It has, in consequence, been proposed to fix the liability at double or treble the amount of the shares; so that when a limited company failed, the subscribed capital of which had been fully paid up, the partners would not, as is now the case, be relieved of all responsibility, but would be obliged to make a further payment, if that were required, equal to the amount of their shares, or to double that amount, as might be decided upon. This plan has been enforced in Canada and in some other countries. And it is undoubtedly a very great improvement upon the system existing here; for, while it raises the character of the partners in limited associations, and makes them more careful in regard to the individuals they choose for directors, and more disposed to watch their proceedings, it makes them contribute to the entire or partial relief of those whom they might otherwise have involved in total ruin. If, therefore, the system is to be continued, we should strongly recommend that the liability of the partners should be raised to at least double the amount of their shares. This would add to its solidity, and divest it of some of its worst features.

But, after all, this is only paltering with or mitigating an evil which should be cut up by the roots. Every sound principle is outraged when a man who has the means of paying his just debts does not pay them. Whether they are contracted by himself directly, or in company with others, is of no importance. He is in either case bound to pay them; and to pass laws to protect him in declining to pay them is to give a legislative sanction to dishonesty and villany.

It is alleged, however, that these representations are fallacious; that it is a manifest encroachment on the great principle of the freedom of industry to hinder individuals from engaging in partnerships under such conditions as they may choose to lay down; that in the event of these conditions being publicly declared, and everybody made aware of what they are, they cannot be justly objected to; for as it is optional to deal or not deal with the association, those who dislike the conditions upon which it is established may keep aloof from it. But sophistry of this sort is too transparent to deceive any one, and might, in truth, be employed to excuse almost any sort of jugglery or delusion. The question is not whether limited liability be consistent with this or that abstract principle, but what are its practical results — what its probable influence over that public well-being, to promote which either is or should be the object of all legislation? It is with its operation in this respect, and with it only, that we have to deal. Now, if there be one principle which more than another conduces to the public advantage, and may be said to constitute the foundation of all dealings between man and man, it is the obligation to discharge one's debts and engagements. And it is the bounden duty of government strictly to enforce the rule of unlimited liability, unless in cases, if such there be, when it can be clearly made out that the public interests will be better promoted by its relaxation or suspension. If a case of this sort be satisfactorily established, then undoubtedly the rule referred to should be waived in as far as it is concerned. But we entirely deny that, when tried by this test, it either has been or can be shown that partnerships *en commandite* are publicly advantageous. On the contrary, we have seen that they are in the last degree injurious, and that their extensive introduction must necessarily give an immense stimulus to fraud and reckless speculation.

In dealing with ordinary firms or associations, people trust, or believe they may trust, to the reputation for skill and integrity, and to the presumed wealth, of one or more of the partners. Such presumptions are not, indeed, always to be depended upon. In these, as in other matters, people may be misled by appearances, and may place an unmerited degree of confidence in earnest though insincere professions and promises. But how deceptive soever, the presumptions or indications referred to afford not merely the best, but the only guarantees that can really be had for upright conduct. Most people engaged in business, as hitherto carried on, are impressed with the well-founded conviction that their interests will be best promoted by their preserving an unblemished reputation; and when they act under the heaviest responsibility, the chances are ten to one that they will behave discreetly and honourably. But we have no such guarantees for the conduct of the partners of a society *en commandite*. Character is in their case of little, or rather of no consequence. Instead of being responsible, they are all, or may be all, but irresponsible. A, who is worth 50,000*l.* or 100,000*l.*, has not more, perhaps, than some 1,000*l.* or 2,000*l.* vested in the society. Whether he lose or gain by

such investment is a matter about which he probably cares very little. Most likely he has joined the association that he might engage, without fear or apprehension, in the boldest speculations. But whether this be or be not his object, it is an insult to common sense to suppose that associations of this description will be as carefully and skilfully conducted as those in which the partners are indefinitely liable for their proceedings.

It would be the easiest thing imaginable, were it at all necessary, to corroborate the previous statements by illustrations drawn from the United States, where the principle of limited liability has been long established. But these must be familiar to almost all our readers. Everybody knows that, notwithstanding the peculiarly favourable circumstances under which the Americans are placed, from their free institutions, their enterprising character, the lowness of their public burdens, and the boundless extent of their fertile and unoccupied lands, bankruptcy is ten times more prevalent among them than in England. The revulsions by which we are sometimes visited, though sufficiently severe, are gentle in the extreme compared with those that periodically devastate the United States. In various instances, one of which is of very recent occurrence, every banking company in the Union has stopped payment, while great numbers have been totally destroyed. And it is the same with associations of all sorts. A spirit of overtrading, or a determination, at all hazards, to "go a-head," is universally prevalent, and bears there, as here, its legitimate harvest of bankruptcy and disaster. So much so, indeed, is this the case, and such and so violent are the convulsions referred to, that it is no exaggeration to affirm that monied fortunes and personal property are more secure in Austria and Russia than in the United States. The national character has suffered through this miserable system. Those repudiations which have so justly damaged the credit of the Americans originated in their attempting to limit their responsibilities in their public as well as in their private capacity. And it could hardly, indeed, be expected that people who may contract debts to their neighbours which they are not bound to pay should be disposed to make an exception in the case of their foreign creditors.

We sometimes hear the rather unwarrantable assertion, that, unless their liability be limited, neither the poorer nor the richer classes are generally disposed to engage in extensive partnerships! But if it really had the effect of tempting the poorer classes to engage in them, that alone would be a very sufficient reason why all associations with limited liability should be suppressed. The condition of these classes will never be improved by withdrawing their attention from the businesses to which they have been bred, and in which they are engaged, to fix it on joint-stock adventures. The spirit of gambling and speculation is already quite enough diffused, without seeking to spread its baneful influence among the lower classes. Nothing should be done which it is possible to avoid to divert their attention from the pursuits of sober persevering industry. Their surplus earnings may be far more beneficially invested in savings-banks, in loans, and in contributions to friendly societies, than in joint-stock adventures.

And while, on the one hand, it would be very wrong to tempt by immunities of any sort the labouring classes to engage in such schemes, it is, on the other, quite superfluous in the case of their richer brethren. They are already much too prone to embark in them. Even in those businesses, the hazard of which is extreme, there is no good reason for exempting those by whom they are carried on from the fullest responsibility. If the demand for gunpowder were doubled, the supply would very shortly be increased in an equal degree. Wherever there is extra risk it is compensated by extra profits; and, practically, it is not found that the cost of gunpowder, or of any like article, is in any degree increased from capitalists being disinclined to face the hazard of its production.

Cautious men are content with moderate profits, and encounter only moderate risks; while those who are sanguine and adventurous, whether they be rich or poor, eagerly grasp at the highest profits, and to realise them do not hesitate to run the greatest hazards. Now, there is nothing surely to object to or amend in this. And yet the whole doctrine of limited responsibility proceeds on the contrary assumption — on the principle, if we may so call it, that profit and risk shall be divorced from each other; that speculators may undertake adventures, having, on the one hand, the chance of making unlimited profits if they turn out well, and on the other, of escaping, though they may ruin others, with a comparatively trifling loss if they turn out ill. In that peculiar class of cases in which it would seem at the first blush of the matter that limited responsibility would be least objectionable, it will be found to be most pernicious; for it will give an unnatural stimulus to what certainly does not require it, that is, to hazardous enterprises and desperate adventures.

On the whole, nothing but mischief can be legitimately anticipated from the establishment of partnerships with limited liability, or *en commandite*. It was not by the aid of

the principles which they involve, by shirking responsibility, and evading the risks inseparable from all undertakings, that we have attained to our pre-eminence in character, in wealth, and in manufacturing and commercial industry. But are we well assured that the adoption of a contrary system will not mark the æra of our decline?

Application of Limited Liability to Banking.—The limited liability system was not applied in the outset to the business of banking. But this exemption was of short continuance, a statute having been passed in the course of 1858, 21 & 22 Vict. c. 91., which authorised banking companies, not issuing notes, to be established with limited liability. It was successfully alleged in defence of this measure that there should be no exception to the general rule; and that Parliament having introduced the system of limited liability into other businesses, was bound, in consistency, to extend it to banking. But if this sort of reasoning is to have any influence in such matters, it would not justify merely, but require, that the system should be extended to all companies, however small the number of partners, and even to all individuals. Why is a privilege to be conceded to ten or twelve persons, and denied to six, to four, or to one? Where, may we ask, is the justice of such a proceeding? Why should not Mr. A. be permitted to limit his liability; to declare, *à priori*, that whatever debts he may contract, he shall be liable only to the extent of some 500*l.* or 1,000*l.*; and that it is to this "fund," and not to his estates, his factories, or his consols, that his creditors have exclusively to look? But everybody knows, or ought to know, that there is something more than mere logical sequence to be attended to in public affairs. When a law has been enacted which affects certain businesses or certain individuals, the question, whether it should be extended to others, depends in no degree on hypothetical notions about the symmetry of legislation, but on the fact whether it is a beneficial law, and whether it is fitted to promote the interests of those to whom it is proposed to extend its operation. When the cook has ascertained that a particular sauce is good for the goose, she may then, but not till then, think of applying it to the gander. But limited liability is not a sauce which is suitable for anything. It has not a single good quality to recommend it; and instead of being extended, the sphere of its operation should be contracted as much as possible. In so far, however, as banks are concerned, we incline to think that its extension to them will not have much influence either one way or other; for we cannot believe it possible, if an ordinary bank limit its liability, that half-a-dozen individuals will be found foolhardy enough to entrust their money to its keeping. If they do, they will well deserve the fate which may be expected to await them — that is, to lose their entire deposits. If such bank attempt, as it will probably do, to allure loans by the offer of a comparatively high rate of interest, that will make its ruin more certain and immediate, and is a bait that will be swallowed by those only whose ignorance is even greater than their voracity. We therefore have little doubt that the device of limited liability will be rejected by such banking companies as have any pretensions to character, or that have any wish to possess and deserve any portion of the public confidence. We subjoin an abstract of the act referred to.

Repeal of so much of 20 & 21 *Vict. c.* 49. *as prohibits Banking Companies from being registered with Limited Liability.*— So much of the joint stock banking companies act, 1857, as prohibits a banking company from being formed under that act with limited liability, or prohibits an existing banking company from being registered under that act with limited liability, shall be repealed, subject to the following proviso, that no banking company claiming to issue notes in the U. K. shall be entitled to limited liability in respect of such issue, but shall continue subject to unlimited liability in respect thereof, and that, if necessary, the assets shall be marshalled for the benefit of the general creditors, and the shareholders shall be liable for the whole amount of the issue, in addition to the sum for which they would be liable as shareholders of a limited company.—§ 1.

Registration of Banking Companies.— The registration of a banking company under the joint stock banking companies act, 1857, or under any other act, shall not prejudice the right of such company to register itself again as a limited company under the said joint stock banking companies act, 1857, and the acts incorporated therewith.—§ 2.

On Re-registration with Limited Liability Notice to be given to Customers.— Provided that every company so registering itself again as a limited company, and every existing banking company which shall register itself as a limited banking company, shall, at least 30 days previous to obtaining a certificate of registration with limited liability, give notice that it is intended so to register the same to every person and partnership firm who shall have a banking account with the company, and such notice shall be given either by delivering the same to such person or firm, or leaving the same or putting the same into the post addressed to him or them at such address as shall have been last communicated or otherwise become known as his or their address to or by the company; and in case the company shall omit to give any such notice as is herein-before required to be given, then as between the company and the person or persons only who are for the time being interested in the account in respect of which such notice ought to have been given, and so far as respects such account and all variations thereof down to the time at which such notice shall be given, but not further or otherwise, the certificate of registration with limited liability shall have no operation.—§ 3.

Banking Company to annex a Statement to their Memorandum of Association.— Every limited joint stock banking company shall, before it commences business, or, if a banking company at the time carrying on business with unlimited liability, before it avails itself of the provisions of this act, and also on the 1st of February and 1st of August in every year during which it carries on business, make a statement in the form contained in the schedule hereto annexed, or as near thereto as circumstances will admit, and a copy of such statement shall be put up in a conspicuous place in the registered office of the company, and in every branch office or place where the banking business of the company is carried on; and if

default is made in due compliance with the provisions of this section, each director shall be liable to a penalty not exceeding 5*l.* for every day during which such default continues, and such penalties shall be recovered in a summary manner.—§ 4.

How Limited Banking Companies are to be wound up. — Limited joint stock banking companies shall be wound up in the same manner and under the same jurisdiction as that in and under which joint stock banking companies other than limited are required to be wound up by the joint stock banking companies act, 1857.—§ 5.

Schedule referred to in the foregoing Act. — Form of Statement to be published by a Limited Joint Stock Banking Company.

The liability of the shareholders is limited.
The capital of the company is 1,000,000*l.*, divided into 10,000 shares of 100*l.* each.
The number of shares issued is 10,000.
Calls to the amount of 20*l.* per share have been made, under which the sum of 180,000*l.* has been received,
The liabilities of the company on the first day of January (or July) were,

	£ s. d.
Notes issued	
Deposits not bearing interest	
Deposits bearing interest	
Seven day and other bills	
Total	

The assets of the company on that day were,

Government securities	
Bills of exchange	
Loans on mortgage	
Other loans	
Bank premises	
Other securities, exclusive of unpaid calls on shares	
Total	

Dated the 1st of August, 1859.

PERNAMBUCO, a city and sea-port of Brazil, inferior only to Rio Janeiro and Bahia in commercial importance: cap. prov. of its own name, on the Atlantic, at the mouth of the Capabaribe, 210 m. N. E. Bahia; lat. of light-house 8° 3′ 25″ S., long. 34° 52′ W. Population estimated, 1857, at from 100,000 to 120,000.

It consists of the separate towns of Olinda, Recife, Boa-Vista, and St. Antonio; the first of which is on the mainland, and the others lie S. from it on a succession of low sandy banks, separated by salt-water creeks and different arms of the river, but connected with each other by two bridges. Recife, or Pernambuco proper, the most southerly, about 4 m. S. W. Olinda, is defended by the principal forts, and comprises the dock-yard and the large merchants' warehouses. In St. Antonio are the governor's palace, formerly the Jesuits' convent; the treasury, town-hall, prison, barracks, with convents, churches, and several good squares. A long embankment connects this town with the mainland. Boa-Vista is extensive, but irregularly laid out; it has one handsome street, and comprises the residences of many of the richer inhabitants of the city, with gardens, various churches and convents, &c. Olinda, though beautifully situated, is in a state of decay, having been deserted by many of its population for Recife and other parts of the city.

The harbour of Pernambuco is defended from the swell of the ocean by an extensive reef (*recif*), which, according to Koster, continues along the whole coast from Maranham, at a variable distance from the shore, and has numberless breaks, through which ships approach the land. This reef, which is said to be of coral, "is scarcely 16 ft. broad at top; it slopes off more rapidly than the Plymouth breakwater, to a great depth on the outside, and is perpendicular within to many fathoms."—(*Graham, in Modern Traveller*, xxx. 228.) This natural breakwater forms the harbour; for though at high water the waves beat over it, they strike the quays and buildings of the town with diminished force. Along the sandy neck of land between Olinda and Boa-Vista, however, which is not covered by the reef, the surf is very violent; but the harbour itself is quite safe for vessels that are well found and well moored. It consists of two parts: the Poco, capable of receiving vessels of 400 tons and upwards, entered across a bar on which there are from 17 ft. to 30 ft. water; and the Mosqueiras, much better protected than the former, but on the bar of which there are but 7 ft. water at ebb tide. Vessels trading with Pernambuco should not, however, draw more than from 10 ft. to 12 ft. water.—(*Blunt's American Coast Pilot*, 519.) The harbour is defended by several strong military works, the principal being the stone forts of Do Buraco and Do Brum. The lighthouse on a reef at the entrance to the harbour has a revolving light.

Exports.—The great articles of export consist of sugar, cotton, hides, rum, rice, tobacco, &c. Of these, sugar, which is by far the most important, amounts to about 50,000 tons a year, the exportation from the province being about 70,000 tons; cotton from the city, 7,000,000 lbs; with large quantities of hides, &c. Total value of provincial exports about 1,400,000*l.* or 1,500,000*l.* a year.

Imports.—The principal articles imported from Europe and America may be classed as follows: namely, from

"*Great Britain.*—Manufactures of cotton, linen, wool, silk, and the different mixtures of these staples, hardware, machinery, arms, earthenware, codfish, butter, coals, &c. *France.*—Manufactures of silks, wine, perfumery, bijouterie, butter, &c. *United States.*—Manufactures of cotton, flour, tea, ice, &c. *Spain.*—Wine and fruits. *Portugal.*—Wine, fruits, hams, and sausages. *Sweden.*—Iron, pitch, tar, and planks. *Denmark.*—Pitch, tar, and planks. *Sardinia.*—Perfumery, flour, paper, and olive oil. *Prussia.*—Wine and planks. *Hanse Towns.*—Manufactures of cotton and linen, cordage, gin, &c. *Buenos Ayres.*—Dried beef.

"The annual average value of the imports for the last six years has been 1,558,443*l.* 3*s.*; and of those from Great Britain nearly a million, their total value, in 1855, having amounted to 964,674*l.* 16*s.*

"This commerce was carried on by 482 vessels, of 122,882 tons, and 5,779 men. Of these, 208 vessels of 56,468 tons and 2,696 men, were British. In addition to these, 520 vessels, of 44,276 tons and 3,643 men, are engaged in the coasting trade."

"Although the whole revenue of the country is derived from its custom-houses, the laws relating to commerce in Brazil are extremely liberal. The rare occasions upon which foreigners may have well-grounded causes of complaint arise rather from vexations caused by subordinate authorities, than from defects in the laws themselves. Indeed, throughout Brazilian legislation there is a mildness and absence of severity well worthy of imitation. The tariff is based upon an *ad valorem* duty of 30 per cent., and no exclusive privileges are afforded to native vessels, either in regard to duties or port charges. The sole exception to this rule is, the prohibition to foreign vessels to engage in the coasting trade. The amount

of import duties received within the Consulate, during the last 5 years, reaches the annual average of 450,000*l.*"—(*From the excellent Report of Mr. Cowper, Consul at Pernambuco.*)

In 1858, 287 British ships, of the aggregate burden of 72,046 tons, entered, and 294 do., aggregate burden 72,867 tons, cleared from Pernambuco. Total entries during the same year, 680 ships, aggregate burden 170,894 tons; total clearances, 692 ships, burden 171,912 tons.

We subjoin, from a late official return, the following statement with regard to the province of Pernambuco.

The sugar produced in the province of Pernambuco amounts to about 80,000 tons a year, of which 60,000 are exported to foreign countries, 5,000 coastwise, and 15,000 are retained for home consumption. There are about 1,000 Eugenhos or sugar estates; 257 of which have been established within the last 10 years; they average in extent about 2 sq. miles, and their crops vary from 200 tons as a maximum to 30 as a minimum, or at an average of about 75 tons each; very few Eugenhos possess 150 slaves, and the smallest not more than 10 or 12; the average number of slaves employed on each Eugenho is about 50, so that 50,000 may be said to be here employed in sugar cultivation. They are badly treated and hard worked.

Pernambuco has many of the privileges of a sovereign state; it has its own president, provincial and municipal chambers, levies a portion of its own taxes, and maintains a militia which cannot be removed from the province. It sends 4 senators and 15 representatives to the Imperial Government; elected, the former for life, and the latter for 4 years, by almost universal but indirect suffrage. The Imperial revenue levied within the province in 1849-50 amounted to 542,423*l.* 10*s.* 5*d.*; in 1850-51, to 690,526*l.* 5*s.* 1*d.*, and as these sums are derived chiefly from imports and exports, and no additional duties have been imposed, the increase is a proof of its commercial prosperity.

Provincial taxes are levied upon sugar, coffee, tobacco, cattle, horses, spirits, passports, licences for potteries, saw mills, cigar shops, auctions, &c., upon houses, legacies, inheritances, slaves, the tolls of bridges, &c. &c. Total amount, in 1850-51, 173,997*l.* 5*s.* 0*d.*

PORTO-RICO. — We subjoin a statement of the rates of anchorage and pilotage dues in the various ports of the island of Porto-Rico, both for the entry and clearing of vessels, as fixed in 1848.

PORT OF SAN JUAN.

Anchorage Dues.

	Piastres.	*Reals.*
National and foreign vessels, entry	3	0
Ditto, departure	3	0
Coasters, entry and departure	11	6
Long-voyage vessels and foreigners compelled to cast anchor, entry and departure	6	0
Non-decked vessels of more than eight tons, or sailing beyond the jurisdiction of the district, arrival and departure	0	4
Office fee for expediting all vessels, foreign or native	1	0

Pilotage Dues.

Every national or foreign vessel, entry fee	4	0
Ditto, departure fee	4	0
For pilot-boat	2	0
For every sailor, 1 piastre, together	7	0
For every movement of the vessel in port	2	0

PORTS OF MAYAGUEZ, PONCE GUIANA, NAGUABO, AGUADILLA, AND THEIR SUB-DISTRICTS.

Anchorage Dues.

	Piastres.	*Reals.*
National and foreign vessels, on coming in	3	0
Ditto, on going out	3	0
Coasters coming in and going out	0	6
Long voyage vessels, foreign and national, when compelled to put in, entry and departure	6	0
Certificate of expedition	1	2
Open boats of more than 8 tons, when going beyond the jurisdiction of the district	0	4
For the boat for the naval visit, when it does not belong to the Local Administration or the Board of Health	1	4

Pilotage Dues.

National or foreign vessels, in or out	6	0
For the pilot boat	1	0
For the sailors	3	0

N.B. 1. Long-voyage vessels, which, either for convenience or otherwise, shall pass from one port to another, after being furnished with the requisite permission, must pay at every port they enter the same dues as for a fresh arrival.

2. Coasters, which shall take merchandise to any of the neighbouring islands, will be charged the same as vessels of the long voyage. If previous to their sailing for their destination, they are ordered to put into one or more of the national ports, they will be required to pay at the port to which they are first bound the same dues as those imposed upon vessels of the long voyage; but at any intervening ports the dues payable by coasters; and lastly, at the port they last quit for the neighbouring island, the dues payable by vessels of the long voyage.

3. Vessels compelled to enter by circumstances, and belonging to one of the ports of colony, will only pay on their departure the pilotage dues, and for the assistance that may have been rendered them. Those which are forced to enter, and shall have completed their entire or partial discharge or shall have taken passengers, will have to pay all the other dues.

4. Vessels which are off, and shall send a boat on shore either for information or to receive or deliver letters, will pay no dues.

5. When a vessel is off and in sight, the pilot is bound to hail it; if the master can dispense with his services, he will be required to pay only one-half of the ordinary pilot dues upon his entry into the port.

RAILWAYS.

Table showing for the Railways in the principal European States and in America at the end of the year 1853, the Length of Railway open, the Total Capital expended, and the Capital expended per Mile, together with the Receipts, the Working Expenditure, and the Nett Receipts during the Year reduced to a Mileage Rate, and the Proportion per Cent. which the Working Expenses bear to the Receipts, and which the Nett Receipts bear to the Total Capital expended.—(*Report on Railways*, 1858.)

Name of Railway.	Mean Length of Line open.	Capital expended.		Receipts.			Total Expenditure in working Railways.	Nett Receipts.	Per mile of Line open.			Proportion per Cent. of working Expenses to Receipts.	Proportion per Cent. of Nett Receipts to Capital expended.
		Total.	Per Mile of Line open.	From Passengers.	From Goods, &c.	Total.			Receipts.	Expenditure.	Nett Receipts.

Considered as a financial speculation, the railways in France in 1853 have produced the largest receipts and nett receipts per mile, and the greatest amount of interest, in proportion to the total capital expended.

Considered as a means of transport, the greatest number of passengers were conveyed in England, and the largest amount of goods in France, during that year.

Considered as an *economical* means of transport, which is to be estimated by the average fare per mile charged per passenger and per ton of goods,—for the former it is found to be the lowest in the Grand Duchy of Baden, the highest in Great Britain; and for the latter, the lowest in France, and the highest in the German States.

ROSES (OIL, ESSENCE, OR ATTAR OF), an oil obtained by distilling the leaves of damask roses. It is limpid, of a light orange colour, and has an extremely grateful and powerful perfume. This, which is the most expensive article of Oriental luxury, used to be principally made at Tunis and Ghazipore in India. But though it be still very extensively produced at these places, and more especially at the latter, what may be called the foreign demand for the oil is now almost wholly supplied by the districts of Eski Zara and Hassanlik in Bulgaria. There the culture of roses is carried on upon a very large scale. Inasmuch, however, as it is said to require about 300,000 roses to yield an ounce of oil, the quantity produced does not exceed 4,500 lbs. in a good and 3,000 do. in an ordinary year. The genuine article fetches an enormous price; and is in consequence very generally, or rather, we should say, uniformly adulterated. When the adulteration is effected by means of the oil of geraniums and other fine volatile oils, the fraud is not easily detected except by *connoisseurs*, unless the foreign matter be in excess. Sometimes it is alleged that attar of roses has been sold as genuine when above 80 per cent. of other oils was mixed up with it. That which is hawked about the streets of Constantinople and Smyrna is seldom anything better than olive oil scented with roses. Some of the more expert dealers in the article will tell within 2 per cent. the foreign oil in any parcel given them to examine. The value of the exports of this curious product from Turkey has been estimated at from 400,000 to 500,000 dollars a year.—(*Blanqui, Voyage en Bulgarie*, p. 230.; *Hunt's Commercial Magazine*, November, 1853.)

SAN FRANCISCO, a city and sea-port of the U. States, in California, on the S. promontory, dividing the great bay of San Francisco from the Pacific, inside the bay, and a short way to the S. of its entrance. The latter, now called the Golden Gate, little more than a mile in width, has, on its S. side, an old Spanish fort, or *presidio*, in lat. 37° 48′ 30″ N., long. 122° 27′ 23″ W. Having passed the fort the course to the town is nearly E. for 3 to 4 m., and then S. and W., about as much more. The city is situated at the bottom of a bay, skirted by extensive flats, some of which are now being formed into docks. Its growth has been quite extraordinary. In the early part of 1848, it consisted only of a few rude cabins; whereas it has now an exchange, a theatre, a custom-house, sundry churches and other public buildings, with great numbers of private houses, many of which are of wood, but many also, of *adobe* (sun-dried) and burnt bricks, with a vast number of attached tents and booths. And while such is the metamorphosis on shore, her waters, which were formerly quite deserted, are crowded with ships and steamers from all parts of the world! San Francisco is indebted, as every one knows, for this all but miraculous transformation, to the discovery of gold deposits in the beds of the tributaries of the San Joaquin and Sacramento rivers, which fall into her bay, and in the quartz of the contiguous mountains.

To obviate the shallowness of the water close to the town a wharf 2,300 feet in length has already been projected into the bay, and to it all sorts of vessels are safely moored. The construction of extensive docks has, also, been commenced; and every effort is being made to provide the accommodation necessary for the rapidly increasing trade of the town.

San Francisco stands on a sandy level; and, during the wet season, when it is most crowded, the streets were at first mere puddles, into which carriages sunk to the axles; while, in the dry season, the annoyance from dust was all but intolerable. But these inconveniences have been to a great extent obviated by flooring the streets, or covering them with stout planks, a process which has been carried to a great extent, and has had the most complete success. The city has suffered much from fires, by which, indeed, it has been repeatedly laid waste. These, however, have been speedily repaired; and, in a few weeks, no traces are seen of the most destructive conflagrations. According, however, as houses of brick or stone are substituted for those of wood and for tents, fires will become less frequent and less destructive.

The pop. of San Francisco is the most motley that can be imagined; for, though Americans predominate, a large admixture is to be seen of adventurers from all parts of the world. Gambling is very prevalent; and is, perhaps, carried on to a greater extent here, during the rainy season, than in any other place either of the New or the Old World. But this is the natural result of the circumstances under which the pop. has been brought together; and the passion has abated, and will, no doubt, continue to

abate, as the circumstances in which it originated change or lose their influence. Lynch law was here reduced to a system, and carried to a greater extent than anywhere else. And, despite the abuses to which it unavoidably leads, it is the general opinion that it could not have been dispensed with. A sense of its necessity led, not only to its being adopted, but to its being generally approved. And though once frightfully numerous, yet considering the many desperate characters in the place, the temptations in their way, and the weakness of the civil power, it is believed that crimes would have been still more abundant but for the promptitude and severity of the punishment with which they are mostly followed.

Nowhere in the world was there so great a disparity between the sexes as in San Francisco, there formerly being at least from 3 to 5 men for one woman. But this disparity is materially lessened, and with it some of the worst features in the condition of the population.

The population of the city differs widely at different periods, being crowded in the wet, and comparatively deserted in the dry season. Though by far the largest and most important town in the State, it is not its capital. That distinction has been conferred on San José, because of its more central situation.

The newspaper press is as active and flourishing in San Francisco as in the other great cities of the Union. The *Alta California*, and some of the other papers, display considerable ability.

The bay of San Francisco, though, as already stated, it has a narrow entrance, expands within into one of the noblest basins that is anywhere to be met with, having a coast line of about 275 m. The town has already become the seat of a very extensive trade, and will, most likely, be the grand emporium of the vast territory belonging to the U. States on the Pacific. The trade with China, Australia, the Eastern Archipelago, and the Polynesian islands, is already very extensive, and several ships have been fitted out for the whale-fishery, though, latterly, it has declined. At present, however, the principal trade of the city is with Panama, Vancouver's Island, and other ports along the W. coast of America, and with E. America and Europe by Cape Horn.

For some years after the discovery of the gold fields, and the consequent influx of immigrants, almost the whole of the corn, flour, and other articles required for the subsistence of the population, had to be imported, and their prices were often quite extravagant. But now, thanks to the excellence of the soil and climate, and the easy terms on which land may be acquired, the progress of agriculture has been such that, besides supplying the home demand, considerable quantities of these articles are exported, at the same time that their prices have become comparatively moderate. Thus the barrel of flour, which cost in 1852 no less than 40 dolls., had fallen in April this year (1859) to 9 dolls.; and the barrel of beef and pork had in the same period fallen, the former from 17 to 12½ dolls. and the latter from 54 to 21 dolls. It is a mistake to suppose that the prosperity of California is dependent on its supplies of gold. These, no doubt, gave it at the outset an extraordinary stimulus: but though they were to fall off, or entirely to cease, the advantageous situation of the State, its mild temperature, its great natural riches, and aptitude for all sorts of industry, would ensure its continued prosperity.

The gold deposits were discovered late in May or early in June, 1848, and since then the immigrants arrived by sea and the exports of gold have been: —

Years.	Passengers Arrived.	Gold Exported.	Years.	Passengers Arrived.	Gold Exported.
1849 - -	91,405	$4,921,250	1855 - -	29,198	$43,080,211
1850 - -	36,462	27,676,546	1856 - -	28,119	48,887,543
1851 - -	27,182	42,582,695	1857 - -	22,990	48,592,715
1852 - -	66,958	46,586,134	1858 - -	43,259	47,452,307
1853 - -	33,235	57,351,024			
1854 - -	47,531	51,528,653	Total -	426,567	418,438,906

But in addition to the exports by sea large quantities of gold, of which no account is taken, are conveyed away by parties returning to the Eastern States, China, Mexico and Europe; and a branch mint is now also established in the city. And taking these and other circumstances into account, it is certain that to get the total of gold we may safely add 20 or 25 per cent. to the shipments.

In January, 1849, the population of the State was estimated at 26,000, whereas in 1858 it was as follows, viz.: —

Males between 18 and 45 years .	185,000	Foreigners—French . .	15,000	Chinese . . .	33,687
Males over 45 years, or disabled .	42,500	English . .	2,000	Coloured . . .	2,000
Females, white . . .	85,000	Irish . .	10,000	Indian . . .	65,000
Children between 4 and 18 years	85,000	Germans . .	10,000		
Children under 4 years . .	18,500	Mexicans . .	15,000	Total population .	538,002
		Various . .	15,000		
Total American population	365,315		67,000		

The exports of Californian produce, ex gold, from San Francisco have been :—

Port Charges. — Pilotage outside Farralones, $10 ; inside Farralones, $8 per foot; — tonnage dues, 4 cents per ton; dockage, 3 to 6 cents per ton per day; stevedore's charges, 75 cents per ton; shipping men $5 each; ballast, — rough stone, $2 25 per ton; cobblestone, $2 75; sand, $1 50. Water, 1½ cents per gallon. Day labour, $5. Port warden, $40 to 75.

Rate of Interest on Money. — By an act passed March 13, 1850, the rate of interest on money was fixed at 10 per cent. where there was no special contract, but "parties may agree in writing for the payment of any rate of interest whatever on money due, or to become due on any contract. Any judgment rendered on such contract shall conform thereto, and shall bear the interest agreed upon."

Rates of Commission, Charges, &c., adopted by the Chamber of Commerce at San Francisco, California, Dec. 3, 1851.

Schedule First.

Rates of Commission, on business with Foreign Countries and with the Atlantic States, when no special arrangement exists : —	
Commission on the sale of merchandise, with or without guarantee	*per cent.* 10
Commission on purchase and shipment of merchandise with funds in hand	5
Do. do. without do.	10
Commission on goods received on consignment and afterwards withdrawn — on invoice cost	5
Commission for indorsing bills	2½
Commission for purchase or sale of vessels	5
Commission for purchase or sale of specie, gold dust, or bullion	1
Commission for collecting	5
Commission for collecting general claims	5
Commission for entering, clearing, and transacting ship's business on vessels with cargoes from foreign ports — dolls.	200
Do. do. from United States ports do.	50
Do. do. on vessels in ballast do.	50
Commission for collecting and remitting moneys on sums over 400 dolls.	5
Commission for collecting and remitting delayed or litigated accounts	10
Commission for receiving and paying or remitting moneys from which no other commission is derived	2½
Commission for landing and re-shipping goods from vessels in distress — on invoice value, or in its absence, on market value	5
Commissions for receiving, entering at custom-house, and forwarding goods, on invoice amount	2½
Commission for effecting marine insurance, on amount insured	1

Schedule Second.

Rates of Commission on business within the State, where no special agreement exists.	
Commission on the sale of merchandise, with or without guarantee,	*per cent.* 10
Commission on purchase and shipment of goods, with funds or security in hand	
Commission on purchase and shipment of goods, without funds or security in hand	10
Commission on purchase or sale of specie, gold dust, or bullion	1

Weighing.—1½ cts. per 112 lbs.

Gauging.—Casks, 6 cts. each; casks and baskets, 4 cts. each; ale, porter, &c., ½ cts. per dozen bottles.

Measuring.—Coal, 90 cts. per 100 bushels; chalk, brimstone, &c., 90 cts. per 100 bushels; salt, 75 cts. per 100 bushels; potatoes, seeds, grain and all other measurable articles, 40 cts. per 100 bushels.

Measuring.—Marble, mahogany, cedar wood, &c. the actual expense incurred.

Note.—The expenses of weighing, gauging, measuring, &c., are chargeable to the importer in the following cases, viz.:

1. When the importer states, at the time of making his entry, his wish to have the actual quantity ascertained, for the purpose of having the duty liquidated thereon.

2. When the importer states, at the time of making his entry, his wish to have the duties assessed on the quantity specified in the invoice, and the actual quantity is ascertained to exceed that so specified. Under these circumstances, the penalty will also be enforced.

3. When there is no invoice, or when the invoice does not specify the quantity contained in each package.

4. When application is made for allowance for damage or deficiency.

Also.—For marking spirits, wines, &c., 2½ cts. per package.—Issuing certificates (spirits only) 25 cts. per package, when requested by importer.

We have borrowed most part of these statements from a valuable article on San Francisco in *Hunt's Commercial Magazine* for July, 1850.

SARDINIA.—We subjoin a copy of the Treaty of Commerce and Navigation between Her Majesty and the King of Sardinia, signed at London, 27th February, 1851.

Her Majesty the Queen of the United Kingdom of Great Britain and Ireland, and His Majesty the King of Sardinia, being desirous of giving to the commercial relations between the countries which Providence has placed under their care the utmost possible development; and being persuaded that this desirable object can be obtained only by removing every impediment to commerce and navigation; they have resolved reciprocally to secure to their respective subjects, by means of a treaty, the full extent and consequence of the benefits resulting from the two legislative acts respectively passed in England on the 26th of June, 1849, for the amendment of the Navigation Laws, and in the Sardinian States on the 6th of July, 1850, for the abolition of differential duties, have agreed upon the following articles:—

Article 1. There shall be reciprocal liberty of commerce between all the dominions of the two high contracting parties; and the subjects of each of them shall, throughout the whole extent of the territories of the other, enjoy the same rights, privileges, liberties, favours, immunities, and exemptions, in matters of commerce, which are or may be enjoyed by native subjects.

2. All merchandise and articles of commerce, the produce or manufacture either of the kingdom of Sardinia or of any other country, which are or may be legally importable into the ports of the United Kingdom of Great Britain and Ireland, its colonies and possessions, in British vessels, may likewise be imported into those ports in Sardinian vessels, without being liable to any other or higher duties, of whatever denomination, than if such merchandise or productions were imported in British vessels; and reciprocally, all merchandise and articles of commerce, the produce or manufacture either of the United Kingdom of Great Britain and Ireland, its colonies and possessions or of any other country, which are or may be legally importable into the Kingdom of Sardinia in Sardinian vessels, may likewise be imported into those ports in British vessels, without being liable to any other or higher duties, of whatever denomination, than if such merchandise or productions were imported in Sardinian vessels.

The said reciprocal equality of treatment shall take effect without distinction, whether such merchandise come directly from the place of origin, or from any other place.

3. The same reciprocal equality of treatment shall take effect in regard to all that concerns exportation and transit, without distinction as to origin or destination; and also in regard to bounties, facilities, and drawbacks, which are or may hereafter be granted by the legislation of the two countries.

4. Her Majesty the Queen of the United Kingdom of Great Britain and Ireland engages that the commerce of Sardinian subjects in the dominions of Her Britannic Majesty shall not suffer any interruption, nor be in any manner affected by any monopoly, contract, or exclusive privilege of sale or purchase, so that Sardinian subjects shall have full and entire liberty to sell and buy wherever they may think fit, and in any manner which may be deemed convenient by the seller or buyer, and without being subject to any prejudice in consequence of any such monopoly, contract, or exclusive privilege of sale or purchase: and His Majesty the King of Sardinia engages that a like freedom from restraint in regard to sale and purchase shall be enjoyed by British subjects in the Sardinian dominions, the existing crown monopolies of tobacco, salt, gunpowder, ball and shot, and playing cards, being excepted.

5. No duties of tonnage, harbour, lighthouse, pilotage, quarantine, or other similar or corresponding duties, of whatever nature or under whatever denomination, levied in the name of or for the profit of the government, public functionaries, *communes*, corporations, or establishments of whatever kind, shall be imposed in the ports of either country upon the vessels of the other country, from whatever port or place arriving, which shall not be equally imposed in the like cases on national vessels; and in neither country shall any duty, charge, restriction, or prohibition, be imposed upon, nor any drawback, bounty, or allowance, be withheld from, any goods imported into or exported from such country in vessels of the other, which shall not be equally imposed upon or withheld from such goods, when so imported or exported in national vessels.

6. All vessels which according to the laws of Great Britain are to be deemed British vessels, and all vessels which according to the laws of the Kingdom of Sardinia are to be deemed Sardinian vessels, shall, for the purposes of this treaty, be deemed British vessels and Sardinian vessels respectively.

7. In all that regards the stationing, the loading, and unloading of vessels in the ports, basins, docks, roadsteads, harbours, or rivers of the two countries, no privilege shall be granted to national vessels

which shall not be equally granted to vessels of the other country; the intention of the contracting parties being that in this respect also the respective vessels shall be treated on the footing of perfect reciprocity.

8. The vessels of each of the two countries shall be at liberty either to discharge the whole of their cargo at one of the ports of the dominions of the other contracting party, or to discharge part of their cargo at one port, and then to proceed with the remainder to other parts of the said dominions, according as the captain, proprietor, or other person duly authorised to act in the port as agent for the vessel and cargo shall consider advisable.

9. It is expressly understood that the preceding articles do not apply to the coasting trade, which each contracting party reserves to itself, and shall regulate according to its own laws.

10. If any vessel of war or merchant vessel of either of the two countries should be wrecked upon the coasts of the other, such vessel, or any parts thereof, and all furniture and appurtenances belonging thereunto, as well as all goods and merchandise which shall be saved therefrom, or the proceeds thereof, if sold, shall be faithfully restored to the proprietors or to their agents, on being claimed by them. In case there should be no such proprietors or agents upon the spot, the said articles and goods, or the proceeds thereof, as well as all the papers found on board of any such vessel, shall be delivered to the British or Sardinian consul in whose district the wreck shall have taken place; and such consul, proprietors, or agents, shall not be called upon to pay any charge but the expenses incurred in the preservation of the property, and the rate of salvage which would be equally payable in the like case of a wreck of a national vessel. The goods and merchandise saved from the wreck shall not be subject to the established duties, unless cleared for consumption.

11. In all that relates to duties of customs and of navigation, the two high contracting parties engage that any privilege, favour, or immunity which either of them may grant to any other power, shall be also and at the same time extended to their respective subjects, gratuitously, if the concession in favour of that other state shall have been gratuitous, or on giving a compensation as nearly as possible of equal value and effect, to be adjusted by mutual agreement, if the concession shall have been conditional.

It is, however, expressly agreed, that the reduction in the duties of customs which have been conceded by Sardinia to Belgium by the treaty concluded with that power at Turin on the 24th of January, 1851, and which are specified in the table annexed to the present treaty, shall, from and after the 1st of June, 1851, be extended to Great Britain, in compensation for the advantages granted to Sardinia by the present treaty.

12. Each of the high contracting parties shall have the right to name consuls for the protection of trade, to reside within the dominions and territories of the other party; and the consuls who may be so appointed shall enjoy, within the territories of each party, all the privileges, exemptions, and immunities which are or may be granted in those territories to agents of the same rank and character appointed by or authorised to act for the government of the most favoured nation.

Before any consul can act as such, he must, however, in the usual form, be approved and admitted by the government of the country to which he is sent; and each of the two high contracting parties shall have a right to except from the residence of consuls any particular places which either of them may judge proper to be excepted.

13. The subjects of each of the high contracting parties may freely dispose by will, donation, or otherwise, of all the property which they may legally acquire and possess in the territories of the other; and their lawful representatives, although subjects of the other contracting party, may succeed to such property either by will or *ab intestato*, and may, in due course of law, take possession of the same, either in person, or by persons acting on their behalf; and they may dispose of the same at their pleasure, paying only such imposts, taxes, or duties, as the inhabitants of the country in which such property is situated are liable to pay in similar cases.

In case of the absence of any representatives, the same rule shall be observed as is prescribed in the like case with regard to the property of natives of the country, until the owner shall have made the necessary arrangements for taking possession of the property.

If any dispute should arise between different claimants with respect to the right which they may have to the property, such disputes shall be decided by the judges according to the laws of the country in which the property is situated and without further appeal than is provided for by those laws.

14. The subjects of either of the two high contracting parties residing in the dominions of the other shall have the same liberty as natives to manage their own affairs themselves, or to commit them to the management of any other persons, as brokers, factors, agents, or interpreters; they shall not be restrained in their choice, and shall not be obliged to pay any salary or remuneration to any person whom they shall not choose to employ in those capacities; buyers and sellers being at perfect liberty to bargain together, and to fix the price of any goods or merchandise imported or destined for exportation, on condition of observing the regulations and customs laws of the country.

15. The present treaty shall be in force for twelve years from the date of the exchange of the ratifications thereof; and further, until the end of twelve months after either of the two contracting parties shall have given notice to the other of its intention to terminate the same; each of the contracting parties reserving to itself the right of giving such notice to the other at the end of the said term of twelve years, or at any subsequent time.

PALMERSTON.
HENRY LABOUCHERE.
V. E. D'AZEGLIO.

Declaration made on the Exchange of the Ratifications of the preceding Treaty.

The Ionian Islands being under the protection of Her Britannic Majesty, the subjects and vessels of those islands shall enjoy, in the dominions of His Majesty the King of Sardinia, all the advantages which by the above-mentioned treaty are granted to the subjects and vessels of Great Britain, as soon as the government of the Ionian Islands shall have agreed to grant to the subjects and vessels of His Sardinian Majesty the same advantages which are granted in those islands to the subjects and vessels of Her Britannic Majesty; it being understood that, in order to prevent abuses, every Ionian vessel claiming the benefits of that treaty shall be furnished with a patent signed by the Lord High Commissioner, or by his representative.

TERRA JAPONICA. The commercial name of catechu (cutch) and gambir, described in the DICTIONARY under the former name. It is there stated that it is obtained by boiling the wood of the trees of which it is a product. But cutch is, also, obtained direct from the tree by tapping in the same way as caoutchouc (India rubber). Terra japonica gives out the large portion of tanoin which it contains more readily than oak bark or most other substances, and is, therefore, preferred by those tanners who work on the quick process. Latterly, also, it has been extensively used as a dye,
